The Air Force in Transition

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an address delivered by Gen. Carl A. Spaatz, of the Army Air Forces, at Belleville, Ill., on January 8, 1946. General Spaatz was the honored guest at a "Salute to Scott Field" testimonial dinner sponsored by the Belleville Chamber of Commerce.

His address follows:

Coming back to Scott Field revives memories of the days when the air was young, when the old balloon hangar here was a welcome sight to Army airmen. As parent school in World War II for the training of technical personnel it made a large contribution to our victory in the air. It continues to have a role of essential significance for America's air power, turning out first-rate radio mechanics and operators, without which there can be no effective air power. I am happy to join you in the civic salute to Scott Field, which spanned the two World Wars with an unbroken record of service to the Air Force.

Col. Neal Creighton, your commanding officer, was post commandant of Camp Griffith, Bushey Park, headquarters of the Eighth Air Force of USSTAF, and in 1944 of General Eisenhower in the United Kingdom. He kept the post in model condition, opened facilities to keep all ranks happy, and is remembered for his constant effort to promote good will with the British, assisted by Colonel Bailey, also present. During the V-1 period, when flying bombs interrupted work during the day and our sleep at night, Colonel Creighton built sand-bag shelters for us all, and set up a loud speaker warning system, and even signals by bells for my residence some miles distant, so that we were able to get away from flying glass. He was our eyes and ears in that troublesome summer of 1944. This is to tell him that we all appreciated his care.

Present here is Col. Dick Hughes, chief of A-5, USSTAF, whose unerring instinct in the selection of targets was an important key to our success in hitting the enemy in the vital spots where it hurt him most. Colonel Hughes had two main topics of talk in those days—targets and Guernsey cattle near St. Louis.

And we see Col. Ken Bitting who kept our personnel problems down to a minimum. If he were on the same job in the Air Forces now he might lose some of the geniality which he maintained in the hard days of war.

Finally, the Army Air Forces would like to offer in this district a very special tribute of appreciation to your Congressman, Mr. PRICE. His long association with Congressman Ed Schaefer, another highly esteemed friend of the Air Forces, and his tour of duty as an enlisted man in this last war, give him an invaluable background of training and experience for his post in the Military Affairs Committee. In saluting Scott Field, we of the Air Forces also salute Congressman PRICE and his colleagues from Illinois.

I. TIMING IN THE AIR POWER AGE

My subject tonight, which I can only suggest in outline, is the Air Force in transition—transition to its peacetime role as first-line defense.

America has been accustomed to take time for granted.

We developed the comfortable luxury of reliance on a time lag long ago, in the age of steam, when we were beyond the reach of sudden attack by any aggressive power. The habit remains with us.

In the nineteenth century we had time to focus energies on our internal frontier, because the British Navy made us relatively safe. We could afford to keep our Military Establishment small.

We had time in World War I to meet danger because the Allies held the breach until we were psychologically ready. Even so we entered combat in 1918 with many of our weapons supplied us by Britain and France.

And we had time once more after Pearl Harbor because other nations were absorbing the attacks of the Axis. We had 2½ years to build our arsenal and train our manpower for the all-out assault in 1944.

The point is that the American luxury of the time lag, a byproduct of geography and historical circumstance in the age of steam, is gone forever—shattered by the new speed, new range, and new strategy of surprise through air power. The time lag was obliterated by the long-range bomber, by the atomic bomb. America is no longer the young Republic, remote from aggressors. Our hideway is gone; the world closes in.

America emerged from the war with technical, naval, and air superiority of the world. The key position in the world responsibility to keep the peace is thrust upon America, whether we like it or not.

That responsibility can be met only by the dominant medium of the new age—an air force in being, alert to surprise, equipped by the latest in science, and manned by the finest in technical personnel.

That, in turn, is a matter of timing—of changing American thinking from reliance on a time lag, now historically lost, over to reliance on preparation for the split-second exigencies of the age of air power and nuclear energy. That is the mental road to national security. There is no other road.

II. LESSONS IN TIMING

Our past reliance on the traditional time lag gave us some very close calls. We were aided not only by our eventual allies holding the breach until we got ready, but also by the wrong timing of our enemies.

One instance was the Kaiser's declaration of unrestricted submarine warfare on our shipping in World War I. That brought us into the war in April. If that had been delayed until the Germans had enough submarines, in the summer of 1917, America might well have been too late.

Another instance was the premature German air blitz on Britain in 1940, without heavy bombers necessary for such a task. The Spitfire and secret radar saved Britain, and saved the island base for America to join the all-out assault.

Then, our own bad timing. In 1939–40, when the Nazis were demonstrating the effectiveness of air superiority on the Continent, our Air Force had only 1,300 flying officers on active duty, and two flying schools (Randolph and Kelly).

After the blinding shock of Pearl Harbor we galvanized to action and began the race with time in our build-up for battle. Thanks to Britain and Russia, we had time, but not too much. We required two and a half years to get our arsenal and manpower ready for the all-out assault. Our people proved their technical genius in the arsenal, and our commanders proved their strategic genius, as our soldiers, sailors, and fliers proved their valor and élan in battle.

When the smoke blew away German war industries were masses of twisted, useless iron. German cities were blown apart. That was the work of the new weapon—the four-engined bomber, the B-17, the B-24, and the British Lancaster.

Never before in history had a great industrial country been destroyed from within, far from the battle lines on land or sea.

Air power had arrived on the pages of history with a strategy and tactic of its own.

In the Pacific our air power, operating from bases won by the Navy and Army forces, made the invasion of Japan unnecessary. Japan also collapsed from within, in which story the atomic bomb was only the last and most dramatic chapter.

We won the race with time, which began at Pearl Harbor.

But let us not forget that we were again aided by the wrong timing of our enemies. The Germans discovered too late their wrong use of air power, which they had harnessed to the specific needs of their ground troops. They became aware too late of the fatal lack of heavy, four-engined bombers. They diverted plant capacity from their air force to the making of V-1's and V-2's, which were also too late. Had they used the V-1 against shipping in British ports prior to D-day they

would probably have forced postponement of the invasion for another year.

We know, after inspection of their underground installations, that their manufacture of jet fighters, and even jet bombers, could have reached decisive proportions given another 6 months. With the superspeed of the jet fighters, in sufficient numbers, the Germans could have regained air supremacy. In that contingency anything might have happened. Certainly, the end of the war would have been postponed, and the loss of American and British lives would have continued.

We won the race with time. But our air force in being built up by our people in the arsenal, directed by our air commanders, and flown in battle by our gallant youth, fulfilling its war mission to the glory of the American people—that air force in being has become an air force in memory. America reverts once more to the perilous reliance on a time lag which is gone.

That brings me to what I really want to say tonight.

III. TRANSITION FROM WARTIME AIR FORCE TO VOLUNTEER AIR FORCE

We are in a critical interim period between the wartime air force and a volunteer air force not yet settled into form.

1. Disintegration

The Air Force shares with the Army and Navy the deplorable results of hysterical demobilization. At this very moment our overseas air commanders have insufficient usable personnel to carry out the responsibilities assigned, and considered essential, by the Joint Chiefs of Staff.

One factor is that the Air Force, being the first to come into large-scale contact with the enemy, had an early build-up to full strength. Consequently, a greater portion of its personnel became eligible for separation on the point-score basis.

Another factor is that the Air Force needs a higher percentage of trained technicians than do other branches of the Army. The training is longer, and more intensive as to skills. The trained ground and air crews are the backbone of an air force. When they are broken up at a too rapid rate the air force ceases to be an air force in being. It takes 2 years to put an air crew together for combat; it can be blown apart with a stroke of the pen.

We will have only 80,000 selectees left in the Air Force in December 1946. We trained 130,000 selectees as mechanics; there will be only 6,000 of them left in September 1946. We trained 102,000 selectees as armorers; there will be less than 1,500 of them. Of 101,000 radio operators from the selectees we will have only 961. And we cannot give long-period training to the remaining selectees because they would be eligible for separation before completing their course.

2. Reenlistment

We must, therefore, rely on reenlistment of trained technicians in the Regular Army to make up the deficiencies. Our authorized strength in the volunteer Air Force is 400,000, of which 336,000 is enlisted.

Last month the Air Forces had 125,000 enlistees in the Regular Army, 40 percent of the total for the Army. By next December we must have 240,000, in addition to the 90,000 remaining selectees, to bring the Air Force up to its authorized troop basis. Of these, 105,000 must be trained technicians to meet the requirements of 70 groups.

Considering all factors, we must have a rate of enlistment set at 27,000 per month through June 1946 and at 12,000 per month thereafter.

Our special concern must be to make up the required 105,000 trained technical personnel, which can be done only by offering attractive technical careers in the Air Force. Under the pall of political uncertainties we cannot, at the moment, promise much.

IV. REQUIREMENTS FOR AN AIR FORCE IN BEING

Needless to point out, our timing is again wrong, as it was before Pearl Harbor. America is the most prodigal country in the world in the business of wasting talent, and throwing away hard-gained experience.

If we are to regain the Air Force in being, on a voluntary basis, we must prove equal to the task of maintaining such a force in peace as we did in war.

There are two immediate requirements:

1. Recruitment campaign

We must make all-out effort to reenlist trained technical personnel, both ground and air crews to make up the present deficiencies. We must recruit new blood to make up our authorized troops basis.

The Air Force must be recognized as the training school of technicians to meet the civilian demand in America's expanding air power. There should be no uncertainty about technical careers in both the Air Force and in the civil air lines.

2. Unification of the services

The Air Force supports President Truman's plan to unify the three armed services as being the essential requirement of the new era to insure our national security. I need not remind you of the arguments which have filled the press. However, note the factor of timing. Should unification be postponed now and then prove to be inevitable later, as would be certain in our view, then we might find ourselves in the midst of a necessary reorganization at the critical moment when some aggressor power is ready to stage another Pearl Harbor, maybe Pittsburgh, or Chicago, or even St. Louis. The factor of timing will be with us always.

Whether there is to be one Department of National Defense, or three separate Departments, the Air Force must be coequal with the land and sea forces, with an identity of its own to carry out the new strategy dictated by the air-power age.

V. CONCLUSIONS: TIMING IN THE NEW ERA

By way of conclusion, there are 10 points we should keep in mind:

1. Necessity to adjust our thinking to split seconds in timing

America's time lag, the luxury which colored our thinking in the past is gone forever. America, as the richest nation, will be No. 1 on an enemy's target list. The element of surprise must have top priority in national security plans. If war breaks out tomorrow, the Air Force must be ready yesterday.

2. Superiority of offense over defense will continue

At the end of this war the offense had gained an enormous superiority over defense. The Maginot line psychosis has been exploded. The new weapons—jet-propelled aircraft, guided missiles, atomic bombs, airborne armies, etc., give great advantages to mobile elements over static. There is no known answer to the rocket or the atomic bomb once they are launched at the target. Not yet.

3. Air power has come of age, with a strategy and tactics of its own

This was the overwhelming lesson of our mass use of air power in this last war, the Americans operating by day and the British by night.

4. Supersonic speed and vastly extended range change our defense strategy

In the past attacks on us would have been sea-borne part of the way, e. g., Pearl Harbor. Now attacks can come across the Arctic regions and strike deep into the heart of the country. America is wide open at the top. Our frontier is the entire air over the Western Hemisphere clear up to the North Pole.

5. War emergency fades into peace emergency

Future potentials of surprise through the air dictate abandonment of the traditional distinction between war and peace establishments. The only difference will be one of size. There can be no difference in the necessity for constant readiness.

6. New world situation

World responsibility is thrust upon America as a result of this last war. This time there will be no escape, no hideaway. America, for our own security, must have a role analogous to that of the British Navy in the nineteenth century. In the air-power age that responsibility can be met only by an alert air force in being.

7. Timing the build-up; stop disintegration

There must never again be a question of race against time. There will be no time. There is no way to stock pile an air force. There is no way to maintain an air force except with adequate trained technical personnel. The Air Force must be kept built up and ready. The first step is to stop this disastrous disintegration.

8. Necessity for readiness to make a show of force

The Air Force is responsible not only to keep abreast of science and to defend the country but also to be available for a show of force if called upon by the Security Council of the United Nations Organization. To that the United States Government has already agreed.

Before Pearl Harbor we implemented a tragic contradiction. We maintained a diplomatic frontier on the Yangtze River. But our armed frontier, to back up the diplomatic maneuvers, was thousands of miles to the rear, in mid-ocean. Hence, the Japanese flouted international decency, seized Manchuria, and overran China on their own timetable. That impunity set the fashion for the Fascists and Nazis.

Such a contradition weakens the position of our diplomats, and lowers the prestige of the United States. In the air-power age, quick show of force, by international decision, is the prime requisite to enforce peace.

9. Unification; separate air force

There are trends in history which even great nations can defy only at their peril. Such a trend is going on now as we move into the age of advanced air power. The dictate of the new strategy is centralized direction to insure unity of command, to insure mass use of all forces in emergencies, to guard against surprise. The trend dictates a streamlined offensive defense. That can be achieved best through unification of the three armed services, with the Air Force enjoying co-equal status with the land and sea forces. The alternative of a separate Air Force is, in any case, an absolute necessity so that the Air Force can operate to its capacity in its peculiar medium, the air, which has three dimensions.

10. Peace through air power

Air power is the latest instrument devised by man for the spread of civilization. It succeeds the sailing ship, the steamship, the covered wagon, and the railroad in penetrating and opening remote, unsettled areas of the earth. It supplements the automobile and tractor in economic activities, in large-scale agriculture, in forestry, fisheries, etc. It steps up the tempo of transport and communications, to unite nations, and to facilitate the exchange of peoples and ideas, which is the absolutely necessary preliminary step to international understanding for peace.

Air power, properly directed, can prevent that Third World War from ever coming into existence, as the instrument of strategy in peace as well as in war.

The badge of a country's air power is its air force.

America is the most air-minded nation in the world.

The question is: Is our timing again wrong?

We are sure that Scott Field will not lag in contributing technical personnel to these national tasks of America.

And we are sure that the town of Belleville will continue as a model of air-mindedness in the new era.

President's Disapproval of Appropriations Rescission Bill, H. R. 4407

EXTENSION OF REMARKS
OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. CANNON of Missouri. Mr. Speaker, under permission granted today, I include the following memorandum of the President's disapproval of H. R. 4407, dated December 22, 1945:

MEMORANDUM OF DISAPPROVAL

I am withholding my approval of H. R. 4407, "Reducing certain appropriations and contract authorizations available for the fiscal year 1946, and for other purposes."

It is with sincere regret that I am unable to approve this legislation. In response to my communication of September 5, 1945, and in conformity with their own careful plans, the Appropriations Committees of the House and of the Senate held extended hearings and gave mature consideration to the readjustment of Executive programs and finances to the problems of the reconversion period. The Congress has acted expeditiously and considerably to develop the basis for the continuing peacetime operations of the Government. It has demonstrated a fine spirit of economy in reducing appropriations without complicating the delicate adjustment from wartime to peacetime functions, and without sacrificing the basic progress which has been made during the war years in the long-term development of Government activity.

So far as the basic purpose of this bill rescinding appropriations is concerned, I am in thorough agreement with the action of the Congress. Far from wishing to sacrifice the care and effort which have gone into its development, I shall by Executive action preserve the full values of these rescission provisions in the exact terms which the Congress itself has approved. If these provisions stood alone I should gladly approve the bill. I have asked the Director of the Bureau of the Budget to place these rescission amounts in a reserve, nonexpendable status, and so to advise the departments and agencies concerned.

In addition to its effect on appropriations, however, the bill contains provisions which require our system of public employment offices—now unified in a single national system—to be broken up within 100 days, and transferred to operation as 51 separate State and Territorial systems.

While I believe such a transfer should be made at the proper time, I am convinced that this bill requires that it be made at the wrong time, and in the wrong way. Such a dispersion and transfer at this time would immeasurably retard our reemployment program. And as the basis for Federal-State cooperation, in a fundamental program of national importance, the provisions of the bill dealing with the public employment offices are unsound and unwise from any point of view.

So far as the timing of the transfer is concerned, the period designated by this bill—the next 100 days—is the most disadvantageous that could have been chosen. It will result in a disrupted and inefficient employment service at the very time when efficient operation is most vitally needed by veterans, workers, and employers.

Our local public employment offices are now and will be during the next several months, in the midst of the peak work load in their history. This is because the offices are now engaged in counseling and placing millions of applicants who require individualized service. These applicants include able-bodied veterans seeking assistance in their readjustment to civilian life, handicapped veterans requiring even more time and guidance in finding the jobs most suitable for them, and unemployed war workers who are confronted by difficult readjustments because of substantial reductions in job opportunities at their wartime skills and wage rates.

At such a time, any change in management and direction is necessarily disruptive to the service. A change which would replace our present single and unified management by 51 separate managements would be very harmful. Even with every effort by the States to promote a smooth transition, the transfer of some 23,000 employees to new conditions of employment, and the adjustment of operations to the requirements of 51 different State agencies, will inevitably cause confusion and delay.

In my reconversion message of September 6 to the Congress, I pointed out our national responsibilities and problems in connection with reemployment during the reconversion period. During this period, displaced war workers, and the veterans who are returning to civilian life at the rate of more than a million per month, will need and have a right to expect from their National Government an effective job-counseling and placement service. These problems and responsibilities cannot, in a period when millions of veterans and other workers are moving across State lines, be met adequately through 51 separate and independent public employment service systems, linked only by the necessarily remote and indirect influence of a Federal agency financing the State systems through grants-in-aid.

For these reasons, I now repeat my recommendation that the transfer of our public employment offices to State operation be postponed until June 1947. The administration is committed to returning the service to State operation, and that commitment will be carried through. But this is not the time.

Apart from the timing of the transfer, the provisions of H. R. 4407 which govern the basis for Federal-State cooperation in the maintenance of public employment offices do not assure that an adequate service will be available in all States.

The bill provides for the operation of public employment offices by the States under rules and regulations prescribed by the Secretary of Labor to carry out the provisions of the Wagner-Peyser Act. Operating costs would be met entirely by the Federal Government. These provisions of the bill would remain in effect for only a few months—the balance of the current fiscal year.

The bill precludes the granting of funds to any State which is unable, or unwilling, to comply with the provisions of the bill or any requirement of the Secretary of Labor pursuant to the provisions of the bill.

A Federal-State cooperative program for a national system of public employment offices financed entirely by Federal funds must at least provide assurance as to two basic objectives. The Federal Government must be sure that the essential services are being provided through the States' employment offices, and it must know that the offices are being operated with reasonable efficiency. Under such a program, the Federal Government is not interested in prescribing minute or insignificant details concerning the State operation, but it does have a stake in the preservation of reasonable standards.

H. R. 4407 provides no effective protection for this national interest. If any State, for any reason, cannot or does not meet the minimum requirements, Federal grants cannot be made. But at the same time the Federal Government itself is precluded from continuing the operation of public employment office facilities in the State.

This means, in effect, that when there is a substantial failure to provide essential services or to meet minimum standards of efficiency, the Federal Government must choose between two alternatives which are both unsatisfactory. It must either acquiesce in the substandard operation—or, by withholding funds, it must deprive all of the State's employers, workers, and veterans of a service they need and to which they are entitled.

At a time of such acute emergency—when employment offices are needed to provide veterans with the services with which the Congress has required they be provided, and needed also to assist other unemployed workers in securing peacetime jobs—I cannot approve legislation which, under some conditions, may offer only a choice between a substantially substandard service or no service at all.

It seems clear to me that a matter of such grave importance as our public employment system deserves not only permanent legislation, but legislation carefully and separately considered. Issues of such a difficult and vital nature should not be dealt with as riders to appropriation bills.

The fact is that our present legislation governing the operation of our cooperative Federal-State employment service system, enacted in 1933, needs thorough revision in the light of changed conditions. Several bills now pending before both Houses of the Congress—H. R. 4437, S. 1456, and S. 1510—are designed to accomplish this. Enactment of such permanent legislation is essential before a transfer back to State operation can be achieved in an efficient and orderly manner.

Adequate and uniform standards of service must be maintained and proper security for the personnel of the organization itself must be provided in a permanent way, if it is to keep and attract the caliber of personnel able and eager to perform its important tasks.

Only in this way can we provide a sound and permanent basis for Federal-State cooperation in the maintenance of a postwar system of public employment offices which will meet the needs of veterans, employers, workers, and the Nation as a whole.

While I object to the specific measure which this bill proposes to carry out with respect to our employment service, I object even more strongly to the legislative method employed for its enactment. To attach a legislative rider to an appropriation bill restricts the President's exercise of his functions and is contrary to good government.

In view of my past legislative experience, I realize the obligations of the President to the Congress as a coordinate branch of the Government. At the same time, I must be equally aware of the constitutional responsibility of the President to the people, and of the obligation of the Congress to help him discharge that responsibility.

The Constitution has placed upon the President the duty of considering bills for approval or disapproval. It has always been possible for the Congress to hamper the President's exercise of this duty by combining so many subjects into a single bill that he cannot disapprove an objectionable item without holding up necessary legislation.

Partly in order to prevent this practice, it has long been considered a fundamental principle that legislation on a major issue

of policy ought not be combined with an appropriation measure. The present bill directly violates that principle. I am obliged to withhold my approval to some very excellent legisation because of the objectionable practice which has been followed by attaching this rider which I cannot possibly approve.

HARRY S. TRUMAN.

THE WHITE HOUSE, *December 22, 1945.*

Enforcement of the Wagner Act

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. HOOK. Mr. Speaker, in all the clamor and hysteria over troubled industrial relations, largely caused by big industry's sit-down strike against the American people, there have been half-baked demands for a whole battery of laws against labor—against the men and women who work for wages in this country and who are the principal market for the goods that our economy can produce in such abundance.

A few sober voices have pointed out that perhaps we do not need a new law so much as we have need of enforcement of laws already on the books, notably the Wagner Act.

I am glad to be able to state today that the Wagner Act is now being enforced with respect to the costly, tragic, and unnecessary GM sit-down strike against the legally selected representatives of 325,000 General Motors employees.

Mr. Speaker, the NLRB yesterday issued a complaint against the GM Corporation, returnable within 10 days. This complaint is based largely upon the UAW-CIO charge filed November 8 and a supplemental charge dated November 27, alleging that the $2,000,000,000 GM Corporation, after first claiming inability to pay, in its rejection of the union's demands in its October 3 summary rejection of the union's wage demands, subsequently refused to support that claim of inability to pay and in fact changed its whole line of opposition to collective bargaining by setting up the contention that it was not claiming inability to pay and that ability to pay is not relevant to collective bargaining and negotiating a wage agreement with American wage earners.

Personally, it has seemed to me that the Wagner Act might have been enforced with somewhat more dispatch. The GM workers, who have been out on strike since November 21, have been living under jungle law, without the protection of the Wagner Act, until this date. They have suffered substantial loss in wages. They have been willing to make an investment of more than $50,000,000 in what they deem a home-front battle to win a peace of full production, full consumption, and full employment.

UNITED STATES OF AMERICA, BEFORE THE NATIONAL LABOR RELATIONS BOARD, SEVENTH REGION—IN THE MATTER OF GENERAL MOTORS CORP. AND INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT, AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA (UAW-CIO)—CHARGE

Pursuant to section 10 (b) of the National Labor Relations Act, the undersigned hereby charges that General Motors Corp., at 3044 West Grand Boulevard, Detroit 2, Mich., employing 350,000 workers in the manufacture of automobiles, trucks, locomotives, electric refrigerators, engines, and other products and equipment, has engaged in and is engaging in unfair labor practices within the meaning of section 8, subsections (1) and (5), of said act, in that it, by its officers, agents, and employees, pleaded financial inability to pay any wage increase whatsoever, while at the same time refusing to discuss with the union the corporation's ability to pay a wage increase; refusing to disclose any information, essential to collective bargaining over the issue and peculiarly within the employer's knowledge, in the form of data concerning its costs and financial position;

Entered negotiations with an expressly stated predetermination not to permit ability to pay to become a subject of discussion in collective bargaining over wages;

Deported itself in such a manner throughout negotiations as to discourage collective bargaining, by indicating repeatedly that its position would remain unchanged regardless of any facts, reasoning, or argument which might be advanced by the union during the course of negotiations, by absenting from bargaining conferences its authorized representatives competent to commit the corporation to wage agreements, leaving the union representatives to present their case to minor corporation representatives, and in general by indicating its contempt for the entire negotiations;

Addressed letters to its employees (those represented by the union and also those not represented by the union) at the outset of negotiations, emphasizing the futility of negotiations and warning them of the inevitability of a strike; by doing so, interfering with, restraining and coercing employees in the exercise of the rights guaranteed them by section 7 of the act;

In bad faith unduly delayed the inception of negotiations, and after finally commencing negotiations repeatedly refused to discuss the union's case during the course of its presentation;

Made an illusory offer in bad faith imposing conditions it knew the union could not legally fulfill;

Has demonstrated both by direct expression and by action an intent not to reach an agreement.

By the above and other acts, the corporation by its officers and agents has refused and continues to refuse to bargain collectively with the union in violation of section 8, subsection 5, of the act.

By the above and other acts the corporation by its officers and agents has discouraged and sought to discourage membership in, and activity on behalf of, the union of its employees, thus interfering with, restraining, and coercing its employees in violation of section 8, subsection 1, of the act.

The undersigned further charges that said unfair labor practices are unfair labor practices affecting commerce within the meaning of said act.

Name and address of person or labor organization making the charge. (If made by a labor organization, give also the full name, local number, and affiliation of organization, and name and official position of the person acting for the organization.)

INTERNATIONAL UNION, UAW-CIO,
WALTER P. REUTHER,
Detroit, Mich.

Subscribed and sworn to before me this 8th day of November 1945, at Detroit, Mich.

VIOLA F. SMITH,
Notary Public, Wayne County, Mich.

My commission expires September 5, 1947.

UNITED STATES OF AMERICA, BEFORE THE NATIONAL LABOR RELATIONS BOARD, SEVENTH REGION—IN THE MATTER OF GENERAL MOTORS CORP. AND INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA (UAW-CIO)—SUPPLEMENTARY CHARGE

Pursuant to section 10 (b) of the National Labor Relations Act, the undersigned hereby supplements its original charge of November 8 against the General Motors Corp. at 3044 West Grand Boulevard, Detroit 2, Mich., as follows:

The refusal by the General Motors Corp. to accept the procedure of collective bargaining, constituting an unfair labor practice within the meaning of section 8, subsection (1) and (5) of said act, of which the undersigned complained in its original charge of November 8, 1945, led to and directly caused the strike which began November 21 and which is presently continuing in the General Motors Corp. This refusal is in direct contravention of the declared policy of the United States, set forth in section 1 of the act:

"The refusal by employers to accept the procedure of collective bargaining lead to strikes and other forms of industrial strife or unrest, which have the intent or the necessary effect of burdening or obstructing commerce.

"It is hereby declared to be the policy of the United States to eliminate the causes of certain substantial obstructions to the free flow of commerce and to mitigate and eliminate these obstructions when they have occurred by encouraging the practice and procedure of collective bargaining."

The refusal to engage in collective bargaining contained in the General Motors' letter of November 26, issued in reply to the undersigned's wire of November 25 (requesting "further negotiating conferences" between the union and corporation, togther with full participation by United States conciliators, "In the interest of promoting the earliest possible fair settlement of the current wage dispute"), is a direct incitement to a prolongation of this strike, in flagrant violation of the spirit and the letter of the National Labor Relations Act.

The November 26 letter of the corporation states:

"You broke off collective-bargaining negotiations by calling a strike on November 20. With a strike in progress you now request further negotiations with General Motors."

The strike of November 21 was precipitated after the corporation refused to negotiate, refused to engage in collective bargaining—as outlined in the original charge filed with the National Labor Relations Board—refused to permit active participation by United States conciliators, and refused to accept arbitration, either in principle or in the form proposed by the union. No counter proposal for conciliation, mediation, or arbitration was made by the corporation either before or after the strike was called.

It is well-established National Labor Relations Board doctrine that, regardless of the cause of a strike, the fact of its existence in no way removes the legal obligation of an employer to engage in collective bargaining with the representatives of his employees. An act which has as its declared purpose

the removal of a cause of strikes, in the form of refusal to bargain collectively, embodies an even greater obligation to engage in bargaining as a means of terminating strikes which occur as a result of such refusal.

The statement in the corporation letter of November 26 that:

"Unless you are now prepared to modify your unreasonable wage demand, abandon your attempt to negotiate wages on the basis of our past profits, assumed future profits, and our selling prices, and are now prepared to discuss wage demands on their merits, we do not think that anything can be gained by further discussion of the wage issue with your union at this time."

is a statement that the corporation will not discuss the wage issue further unless and until the union stands ready to abandon its right to bargain under the act.

The corporation's obligation to bargain is not discharged by an offer to meet conditional upon union acceptance of limitations created arbitrarily and unilaterally by the corporation. Since the union has repeatedly stated its willingness to scale down its wage demand if the facts show inability to pay, and since the corporation has repeatedly refused to offer even a 1-percent wage increase without a price increase, the corporation statement is an announcement that it does not recognize any obligation to engage in collective bargaining under the National Labor Relations Act.

By the above and other acts, the corporation by its officers and agents has refused and continues to refuse to bargain collectively with the union in violation of section 8, subsection 5, of the act.

By the above and other acts the corporation by its officers and agents has discouraged and sought to discourage membership in, and activity on behalf of, the union of its employees, thus interfering with, restraining and coercing its employees in violation of section 8, subsection 1, of the act.

The undersigned further charges that said unfair labor practices are unfair labor practices affecting commerce within the meaning of said act.

INTERNATIONAL UNION—UAW-CIO,
WALTER P. REUTHER,
Detroit, Mich.

Small Business the Key to Prosperity in the Seventh Congressional District of Wisconsin

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. MURRAY of Wisconsin. Mr. Speaker, the following table shows the county location of and the total number of manufacturing establishments, wholesaling and retailing establishments, and the total business establishments in the Seventh Congressional District of Wisconsin. There are a total of 635 manufacturing establishments, 4,742 wholesaling and retailing establishments, 5,377 total business establishments, a total of 4,944 owners and a total of 21,755 employees finding employment in the businesses in the Seventh Congressional District of Wisconsin.

Small business the key to prosperity in the Seventh Congressional District

County	Number of places over 2,500	Number of places 1,000 to 2,500	Under 1,000	Manufacturing, number of—			Wholesaling and retailing, number of—			Total business in Seventh District, number of—		
				Establishments	Owners	Employees	Establishments	Owners	Employees	Establishments	Owners	Employees
Langlade	1		1	39	39	1,128	403	367	809	442	406	1,937
Marathon	1	2	12	190	190	4,738	1,022	878	2,403	1,212	1,068	7,141
Shawano	1		10	110	110	752	604	578	757	714	688	1,509
Wood	2	1	3	85	85	3,613	624	551	1,463	709	636	5,076
Waupaca	3	2	7	84	84	949	680	629	1,130	764	725	2,079
Portage	1		7	57	57	1,260	553	477	1,152	610	535	2,412
Adams	0		1	8	8	19	111	108	99	119	116	118
Waushara	0	1	6	16	16	96	246	241	317	262	257	413
Marquette	0	1	3	14	14	58	182	176	164	196	190	222
Green Lake	1	1	3	32	32	390	317	291	458	349	323	848
Total	10	8	53	635	635	13,003	4,742	4,296	8,752	5,377	4,944	21,755

This Seventh Wisconsin Congressional District is typical of most congressional districts represented in Washington.

Only a few counties contain bigger cities. Most contain small cities and villages. Small business is the backbone of the business system in these counties.

Most of the families in these smaller places depend upon these smaller businesses for employment and economic security.

These small businesses need help and protection; they are not organized, nor do they have many ways to get their story to their Representatives in Congress.

As is evident in the table, the Seventh Congressional District of Wisconsin is very much the home of small businesses. A large percentage of these small businesses are closely tied in with the farming business. The near 30,000 farms are family sized units averaging approximately 120 acres each with about half the acreage under cultivation.

While dairy farming is the main type, we have the world's largest fox farms, other types of farming include potato, poultry, beef, and specialty farming units.

The prices of agricultural products are of interest not only to the farmers but also to the small business groups whether they be doctor, dentist, barber, lawyer, banker, hotel operator, filling station operator, grocer, dry goods merchant, canning factory operator, feed-mill operator, or feed-mill dealer. The agricultural prices have a direct bearing on the profits and take-home pay of the businessmen in nearly all of the business establishments in the Seventh District.

You will note that of the 5,377 business establishments 4,944 of them are owner operated.

The amount of wages paid the employees in nearly all these businesses is dependent upon the price of farm products. This not only includes the wages paid in the canning factories and dairy plants that process the farm products but also is reflected in the wages and salaries of the employees in the many small businesses of the district. In fact agricultural prices most assuredly influence and often determine the take-home pay of a large percentage of the 21,755 employees in the small businesses of the district, and when prices are low it is reflected in the whole economy of the district.

Without question, small businesses are to expand. First, they will increase in number to offset their share of the 500,000 in the United States that were closed during the war period. There will be the normal increase due to increased population and there will be other increases due to the fact that many people will want to be their own boss.

We all realize that many business ventures fail under normal times, but there are so many straws in the wind and so many factors that will be conducive to new small business expansion that this expansion is most assuredly in the picture of tomorrow.

These small businesses, like all other groups, must continue to be vigilant and see to it that they have fair consideration in legislation comparable to all the other groups of our society.

I am indebted to Mr. H. L. Post for the table. Mr. Post has always been in close contact with the development of small business of the district and has been very active in the civic development of the district.

Army Versus Navy

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks and include an editorial, I wish to submit herein a copy of an editorial from the Washington Post, of date December 21, 1945, entitled "Army Versus Navy," as follows:

ARMY VERSUS NAVY

When the President disclaimed any intention of muzzling the armed services on the subject of his unification message to Congress, he showed a Christmas charity, but the fact remains that the unseemly battle between Army and Navy over the issue of his message has been conducted in violation of the law. That battle has not been waged

without funds. Brochures have been printed, speeches delivered throughout the country, and other expenditures entailed. The cost must have been pretty sizable. According to the Criminal Code, this is a misuse of public funds. Section 201 says:

"No part of the money appropriated by any act shall, in the absence of express authorization by Congress, be used directly or indirectly to pay for any personal service, advertisement, telegram, telephone, letter, printed or written matter, or other device intended or designed to influence in any manner a Member of Congress, to favor or oppose, by vote or otherwise, any legislation or appropriation by Congress, whether before or after the introduction of any bill or resolution proposing such legislation or appropriation."

This section of our Criminal Code, which was passed on July 11, 1919, appears to us to implicate a good many of the higher-ups, both military and civilian, in the War and Navy Departments. A single department is the object of several bills before Congress. Since their introduction both of the armed services have laid down a barrage of propaganda for or against, yet, without the express authorization of Congress. It has been a spectacle which should give the American people pause. But for the immense powers vested in the military in wartime, it could not have been possible. The fighting is over, but the military appears not to realize that the civilian again is king. What we have witnessed of late underlines the grave reminder in the Presidential message that civilian supremacy is next to equality before the law among the pillars of our American institutions. The propagandizing with which the people have been assailed constitutes a misdemeanor punishable by fine or imprisonment and removal from office.

Compulsory Military Training

EXTENSION OF REMARKS
OF
HON. J. W. ROBINSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. ROBINSON of Utah. Mr. Speaker, under leave to extend my remarks, I am including a letter on the subject of compulsory military training, which was sent to me by the First Presidency of the Church of Jesus Christ of Latter Day Saints. This letter, in my opinion, gives a very complete analysis of this subject:

CHURCH OF JESUS CHRIST
OF LATTER-DAY SAINTS,
OFFICE OF THE FIRST PRESIDENCY,
Salt Lake City, Utah, December 14, 1945.

The Honorable J. W. ROBINSON,
The House of Representatives,
Washington, D. C.

DEAR MR. ROBINSON: Press reports have for some months indicated that a determined effort is in making to establish in this country a compulsory universal military training designed to draw into military training and service the entire youth of the Nation. We had hoped that mature reflection might lead the proponents of such a policy to abandon it. We have felt and still feel that such a policy would carry with it the gravest dangers to our Republic.

It now appears that the proponents of the policy have persuaded the administration to adopt it in what on its face is a modified form. We deeply regret this, because we dislike to find ourselves under the necessity of opposing any policy so sponsored. However, we are so persuaded of the rightfulness of our position, and we regard the policy so threatening to the true purposes for which this Government was set up, as set forth in the great preamble to the Constitution, that we are constrained respectfully to invite your attention to the following considerations:

1. By taking our sons at the most impressionable age of their adolescence and putting them into Army camps under rigorous military discipline we shall seriously endanger their initiative, thereby impairing one of the essential elements of American citizenship. While on its face the suggested plan might not seem to visualize the army-camp training, yet there seems little doubt that our military leaders contemplate such a period, with similar recurring periods after the boys are placed in the Reserves.

2. By taking our boys from their homes we shall deprive them of parental guidance and control at this important period of their youth, and there is no substitute for the care and love of a mother for a young son.

3. We shall take them out of school and suffer their minds to be directed in other channels, so that very many of them, after leaving the Army, will never return to finish their schooling, thus over a few years materially reducing the literacy of the whole Nation.

4. We shall give opportunity to teach our sons, not only the way to kill but also, in too many cases, the desire to kill, thereby increasing lawlessness and disorder, to the consequent upsetting of the stability of our national society. God said at Sinai, "Thou shalt not kill."

5. We shall take them from the refining, enobling character-building atmosphere of the home and place them under a drastic discipline in an environment that is hostile to most of the finer and nobler things of home and of life.

6. We shall make our sons the victims of systematized allurements to gamble, to drink, to smoke, to swear, to associate with lewd women, to be selfish, idle, irresponsible save under restraint of force, to be common, coarse, and vulgar—all contrary to and destructive of the American home.

7. We shall deprive our sons of any adequate religious training and activity during their training years, for the religious element of Army life is both inadequate and ineffective.

8. We shall put them where they may be indoctrinated with a wholly un-American view of the aims and purposes of their individual lives, and of the life of the whole people and Nation, which are founded on the ways of peace, whereas they will be taught to believe in the ways of war.

9. We shall take them away from all participation in the means and measures of production to the economic loss of the whole Nation.

10. We shall lay them open to wholly erroneous ideas of their duties to themselves, to their family, and to society in the matter of independence, self-sufficiency, individual initiative, and what we have come to call American manhood.

11. We shall subject them to encouragement in a belief that they can always live off the labors of others through the Government or otherwise.

12. We shall make possible their building into a military caste which from all human experience bodes ill for that equality and unity which must always characterize the citizenry of a republic.

13. By creating an immense standing army, we shall create to our liberties and free institutions a threat foreseen and condemned by the founders of the Republic, and by the people of this country from that time till now. Great standing armies have always been the tools of ambitious dictators to the destruction of freedom.

14. By the creation of a great war machine, we shall invite and tempt the waging of war against foreign countries, upon little or no provocation; for the possession of great military power always breeds thirst for domination, for empire, and for a rule by might, not right.

15. By building a huge armed establishment, we shall belie our protestations of peace and peaceful intent and force other nations to a like course of militarism, so placing upon the peoples of the earth crushing burdens of taxation that with their present tax load will hardly be bearable, and that will gravely threaten our social, economic, and governmental systems.

16. We shall make of the whole earth one great military camp whose separate armies, headed by war-minded officers, will never rest till they are at one another's throats in what will be the most terrible contest the world has ever seen.

17. All the advantages for the protection of the country offered by a standing army may be obtained by the National Guard system, which has proved so effective in the past and which is unattended by the evils of entire mobilization.

Responsive to the ancient wisdom, "Train up a child in the way he should go, and when he is old he will not depart from it," obedient to the divine message that heralded the birth of Jesus the Christ, the Saviour and Redeemer of the world, "Peace on earth, good will toward men," and knowing that our Constitution and the Government set up under it were inspired of God and should be preserved to the blessing not only of our own citizenry but as an example to the blessing of all the world, we have the honor respectfully to urge that you do your utmost to defeat any plan designed to bring about the compulsory military service of our citizenry. Should it be urged that our complete armament is necessary for our safety, it may be confidently replied that a proper foreign policy, implemented by an effective diplomacy, can avert the dangers that are feared. What this country needs and what the world needs is a will for peace, not war. God will help our efforts to bring this about.

Respectfully submitted.

GEO. ALBERT SMITH,
J. REUBEN CLARK, JR.,
DAVID O. MCKAY,
The First Presidency.

Ceiling Prices on Cotton

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose herewith a concurrent resolution adopted by the Senate of South Carolina under date of January 8, 1946:

Concurrent resolution requesting the President and the Congress of the United States of America to prohibit ceiling prices being placed upon cotton

Be it resolved by the senate (the house of representatives concurring), That the President and the Congress of the United States of America are hereby earnestly requested that they do all in their power to prohibit a ceiling price being placed upon the sale and purchase of cotton.

Surplus Property Disposal

EXTENSION OF REMARKS
OF
HON. ROGER C. SLAUGHTER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. SLAUGHTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letters:

SURPLUS PROPERTY ADMINISTRATION,
Washington, D. C., December 26, 1945.
Hon. ROGER C. SLAUGHTER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SLAUGHTER: In an extension of your remarks which appears on page A5500 of the Appendix of the CONGRESSIONAL RECORD, volume 91, part 13, there is included a letter of November 27, 1945, from Mayor John B. Gage, of Kansas City, Mo., concerning the administration of the Surplus Property Act of 1944.

Mayor Gage addressed an identical letter of the same date to Senator FRANK P. BRIGGS which was forwarded to this Administration for consideration and comment. A copy of our reply to Senator BRIGGS is enclosed. We thought you might wish to know of our correspondence on this subject and to have an expression of our views on the points mentioned by Mayor Gage.

We would welcome an opportunity to furnish additional information in the event our reply to Senator BRIGGS leaves any questions unanswered.

Sincerely yours,
W. STUART SYMINGTON,
Administrator.

SURPLUS PROPERTY ADMINISTRATION,
Washington, D. C., December 19, 1945.
Hon. FRANK P. BRIGGS,
United States Senate,
Washington, D. C.

DEAR SENATOR BRIGGS: This is in reply to your letter of November 30, 1945, enclosing a letter from Mayor John B. Gage, of Kansas City, Mo., which is returned herewith. We apologize for the delay in making reply.

SPA Regulation No. 2, issued November 16, 1945 (copies enclosed), is designed to give Government agencies and State and local governments full opportunity to purchase personal property under the priorities granted in the Surplus Property Act. This regulation was prepared with the cooperation, suggestions, and assistance of the Council of State Governments, the United States Conference of Mayors, the National Association of County Officials, and the National Institute of Governmental Purchasing.

The sales to Federal, State, and local governments have greatly increased in the last 4 months. For example, in the case of consumer goods, the sales to these priority claimants in November 1945 were 25 percent of the total sales of consumers goods as compared to less than 10 percent in July 1945.

Apparently, there is some misunderstanding concerning the application of 40 percent discount granted under SPA Regulation No. 14 (copies enclosed). This discount is not applied against the original cost of the property to the owning agency. Paragraph (b) of section 8314.9 of the regulation provides that the disposal agencies shall allow from the fair value of the property a discount of 40 percent. Such fair value shall not be greater than the lowest price which is offered to any trade level at the time the surplus property is purchased by the priority claimant. This formula—fair value minus 40 percent—enables the local governments, as well as the other eligible claimants, to acquire surplus property at a low cost.

Mayor Gage apparently does not agree with respect to the policy of selling surplus property on an "as is—where is" basis. We hold that this method of sale is consistent with the objectives of the Surplus Property Act. The primary purpose of making offerings on an "as is" basis is to achieve a prompt utilization of surplus property. This could not be accomplished if all goods were not made available for purchase until after the disposal agency had determined the exact condition of each item. Such determination would require unpacking, examination, sorting, testing, classification, and other processing. There are many hundreds of thousands of different items, and if this were done in every case the interval between declaration by an owning agency and acquisition by the purchaser would be much longer than is the case at the present time. Of course, this processing would also result in higher costs to the buyers. It is our opinion, therefore, that the advantages of selling surplus property on an "as is" basis—prompt disposals at minimum costs—are shared equally by the buyer and the seller.

The policy of requiring the purchaser to pay for handling and transportation charges conforms to established commercial practices.

The complaint of Mayor Gage has been brought to the attention of the Kansas City office of the Reconstruction Finance Corporation, and if, in the future, he feels that priority claimants are not receiving treatment in accordance with the Surplus Property Act we would welcome specific information so that we can investigate and take remedial action.

Sincerely yours,
W. STUART SYMINGTON,
Administrator.

Are the People Out of Step With the President in Regard to USES? The Apparent Answer Is "Yes"

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. MURRAY of Wisconsin. Mr. Speaker, I have had many letters in support of legislation to return the employment services to the State. These letters have come from both the employees and the employers. There must be merit to their position or there could not be such unanimity of agreement.

The following letter of January 10, 1946, voices the opinion of the Wisconsin State Federation of Labor in regard to the USES:

WISCONSIN STATE FEDERATION OF LABOR,
Milwaukee, Wis., January 10, 1946.
Hon. REID F. MURRAY,
United States Congressman,
Washington, D. C.

DEAR CONGRESSMAN: At the semiannual meeting of the General Executive Board of the Wisconsin State Federation of Labor action was taken instructing the officers of this federation to prevail upon the Members of Congress to use their influence to return the employment services to State control.

The board, in making its decision, felt that employment service under War Manpower control during the war, the period for which it was loaned by the State to the Federal Government, has now outlived its usefulness and that it is now a question of local concern which can best be administered by State agencies.

We therefore urge you to use your good offices to the end that the service of the USES be immediately returned to State control.

Very truly yours,
GEORGE A. HASERMAN,
President.
WM. NAGORSNE,
Secretary-Treasurer.

What United States Has Given in Wealth

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Louis Bromfield:

WHAT UNITED STATES HAS GIVEN IN WEALTH
(By Louis Bromfield)

I have just been reading a file of clippings from British papers commenting upon the American loan. None of it is very nice reading and little of it is reasonable reading. What impressed me most were three things: First, the complete misunderstanding by people trained in the Lord Keynes school of economy of the vast differences in the bases of the two national economies; second, the lack of understanding or the deliberate refusal to admit the true causes of England's position; third, the shortness of memory with regard to the causes of the Second and, indeed, the First World War.

In most of the editorials we, as a nation, as simply abused for not making gifts of valuable dollars without interest and without limit to Great Britain. In nearly every case there was no mention whatever of the cancellation of the gigantic debt owed us in the First World War, nor the fact that we canceled twenty-seven billions of lend-lease in this war. The cancellation of the First World War was of much less importance than that of lend-lease, although in the end they come to the same thing.

In both cases what we furnished them was infinitely more important than money. You can replenish money. You can even print it on presses when you get a little short of it. But what we gave England in both wars was real wealth cut out of the very heart of the Nation. We gave them iron, oil, food, timber, clothing, copper, nickel—indeed, all the precious commodities which are the true foundation of our wealth and our prosperity.

CANNOT BE REPLACED

Most of these things we can never replace save by buying them from other nations when our own stocks are exhausted, and some of them are far nearer exhaustion than most citizens understand. To Lord Keynes and to the British bankers and industrialists these precious commodities do not have the same vital importance, because England's economy is not founded upon such things but upon lending money, processing raw materials

from colonies and other nations, then selling them again to other nations and colonies.

In both wars we lent and eventually gave them much more than money. What we gave them they could not have gotten anywhere else in the world.

In none of the clippings is there any recognition of the fact that in a changed world any loan to Great Britain is a bad loan and that no matter what happens it will turn out, both loan and interest, to be a gift.

As I have written before, in this changing, complex world the day of the banking, processing nations without real wealth, attempting to control vast, scattered markets and sources of raw materials is on the way out. No matter what happens, no matter how much money we should pour into England, there will never be any return to the power and prosperity of the days before 1914.

LOAN IS APPRAISED

It is a good thing to make certain that the British people have more to eat and more to wear, that they have better housing, that we help them to renovate and make efficient the industries which should have been renovated and made efficient even before the First World War. But it is hypocrisy on both sides to pretend that even a loan of nearly $5,000,000,000 is, in any form, a real business deal between two equally powerful nations with equally bright futures or that the United States is making a loan backed by the securities that would be demanded even by a country bank. It is simply not so and to pretend it is pure, unadulterated Anglo-Saxon hypocrisy and self-deceit on both sides of the Atlantic.

As to shortness of memory, the British have forgotten, perhaps conveniently, where lie many of the roots of this war—in Lord John Simon's deceit which condoned the Japanese invasion of Manchuria, in Lord Halifax's nonintervention policy in Spain, in Samuel Hoare's connivance with Laval and Mussolini, in Great Britain's refusal to back up the French when Hitler marched into the Rhine. Hitler himself admitted such action would have ruined him. In Chamberlain's pathetic attempts at appeasement and peace in our time, and most of all the tory British desire and the desire of most of her bankers and industrialists to sabotage the German Republic as a Socialist state and to build up the Nazis as a barrier against bolshevism.

MATTER OF RECORD

These facts are all matters of record together with countless others. Great Britain got the war which all these actions asked for. In all that, we were guiltless or nearly guiltless. The balance of power was no affair of ours. Today Great Britain has the socialism that its bankers and industrialists and tory statesmen hated and feared. In view of all these things, it seems a little fantastic that we are once again called Uncle Shylock.

The British deserve all the praise in the world for their heroism and we had to help them in order in the long run to save ourselves. The question is—How long does such a pattern continue? Zukhov has already complained of the great number of German troops still not demobilized in the British zone of occupied Germany. He has asked why?

Is it the old pattern beginning over again with Germany on England's side, this time against Russia? That is a pattern which is already a couple of centuries old and has given birth to war after war. The Atlantic Charter is already thrown out of the window in Java, in Malaya, in Hong Kong, in Greece.

I am not and never have been an isolationist. I am just growing a little tired of a pattern that is a little old and worn out. Sentiment is all right, but it seems to me that even to sentiment there is a limit when it involves ourselves and our children and grandchildren.

History will probably look upon lend-lease as the costliest gift ever made by one nation to another in history for it wasn't a gift of money which is so important to Lord Keynes. It was real wealth, torn out of our vitals and belonging in reality to generations of Americans as yet unborn.

Spartanburg, S. C.

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. BRYSON. Mr. Speaker, from the Birmingham Age-Herald, published at Birmingham, Ala., on Saturday morning, January 12, 1946, I have clipped the attached complimentary and truthful article regarding the city and county of Spartanburg, S. C., as described by John Temple Graves. I include the same as a part of my remarks in the RECORD, as follows:

THIS MORNING

(By John Temple Graves)

TIME MARCHES ON

SPARTANBURG, S. C.—Time is marching at quickstep here. Yet it carries baggage. The baggage is precious and is needed at each arrival. This community has come to be the most important textile one in the world and at the same time one of the most important agricultural ones. Spartanburg produces more than $166,000,000 worth of textiles each year, giving the county first rank in America in cotton-textile manufacture. At the same time its rolling red hills produce annually nearly 50,000 bales of cotton and 4,500 carloads of peaches. The peaches are something new, but already they rank in value with cotton. A swiftly growing livestock industry will rank with both one day.

And oh, how they know here that the South's greatest new market is the South. And oh, how they appreciate the importance of being science-minded, civic-minded, character-minded, hope-minded. The newspapers breathe it in print. The Kiwanis Club was electric with it as Duncan Sullivan Burnside turned the presidential gavel over to Lowell Talmadge Lister the other evening. A great factor determining the future of this county, vows the chamber of commerce in a teeming bulletin, "is the local demand for industrial products—demand from industry itself as well as demand from individual citizens."

"Piedmont" means foothills. This city of the Piedmont believes in foothills, especially Appalachian ones. The hills for ambition, the feet for marching and for modest appreciation of distance to go. Young William A. Townes, editor and publisher of the Spartanburg Herald, who belongs to one of the oldest families in this State and who has been learning in such distances as Oklahoma and Ohio to appreciate what a future his State has with its past, is preparing here with modern methods and ancient loves to push the Piedmont in all the directions of great living. There is something called the Piedmont Club. Outside it is Queen Victoria's—was once the stately nineteenth century home of the Montgomery family. But when you go inside you have skipped 50 years. All is smooth, beautiful, postmodernity, even to the extent of a manager trained in the elite vicinities of Bar Harbor, Maine.

Out at the old home of Judge and Mrs. T. S. Sease (she was Eunice Calhoun, grandniece of John C.) you stand at a hearthside where the great Calhoun himself once sipped toddy (my own father, too, later)—and hear talk of Petrillo, Truman, Stalin, atomic power, and the future of cotton. Yes; they carry baggage here. In Morgan Square, heart of the city, only the monument to Gen. Daniel Morgan, hero of the Revolutionary Battle of Cowpens, orients you to a picture of that same square in 1884. Every building has been torn down and replaced with a new one in that interval. But Morgan goes on being there, looking it all over, sometimes exercising a wise veto.

And do you know what their great baggage is as they travel, dear friends and fellow citizens of the atomic age? It is a sense of human excellence, through education and the Lord. They will tell you that they are a city brought into being by educational institutions founded in love of God, depending quite literally upon these for growth and present substance. The first impetus to the little village this once was came from Wofford College, founded in 1854 by a Methodist minister and owned today by the church. Then came the now famous Converse College, founded in 1889 by Presbyterians. And Spartanburg Junior College, established in 1911 as a textile school, owned today by the Methodist Church of America, is one of the first institutions in America to inaugurate a work study plan enabling young people to earn their way as they get their education. If this school had a less localized name, it would rank with Berea in national attention.

And what do they do with their money, these people of Spartanburg? One thing they do is invest it in Spartanburg, in South Carolina, in the South. Another is to put it into a newly created civic humanitarian fund whose directors appropriate the income of nearly half a million dollars to what will most serve the health, educational, or spiritual needs of the people, individually or as a whole. Only in Winston-Salem is here another such institution.

A city of balanced and balancing economy. A city where economy itself is balanced with those best things money can buy or has bought and with even better ones that can't be bought. That is Spartanburg, S. C. I am glad to be living in the same South with it.

Taking Stock of President Truman

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Chicago Daily News of January 4, 1946:

TAKING STOCK OF PRESIDENT TRUMAN

President Truman last night called on the Nation to take stock of itself. His speech affords the opportunity for taking stock of President Truman.

There was the familiar earnestness, sincerity, and humility. There was no pretense that all is well in this troubled land. There was a final appreciation of the fact

that our domestic confusion is beginning to threaten our position in world affairs.

He attempted to rally the people of the country to support of a program that Congress has in large part neglected. But the program is not clear and the call did not ring.

One need go no further than his own words for proof that the administration does not know which of two opposite evils threatens the country first, which it is fighting.

It fears both inflation and deflation, not merely as one might follow the other, but simultaneously, and it is fighting both at once. It has tramped down with both feet on the accelerator and the brake. When you and I do that, we kill the engine, and that is not very different from what is happening to industry.

Notwithstanding the enormous inflationary forces put into play by war expenditure and Government borrowing, President Truman was sold by the labor elements in his administration and counsels that the main threat was deflation.

President Roosevelt tried much more consistently throughout the war to hold wages and prices in line together, but since the end of hostilities President Truman has thrown the full force of the administration behind the inflation of wages and labor costs, while declaring (as he did again last night in his most emphatic tones) that we must hold the line on prices.

Secretary Schwellenbach told the oil industry that wages must rise more than 15 percent by the hour. President Truman proposed a 22-percent increase for Government employees. Even before this inflationary ground swell has taken effect, while much of industry is strike bound or strike threatened over the limits of the increase, prices are rising on uncontrolled items and production is jammed in many of the controlled lines.

It is foolish to suppose or dishonest to pretend that wage rates throughout the Nation can rise as far as even the administration proposes (by example and precept) without a substantial rise in prices, too.

The assumption is probably pretense. Washington is full of people who really believe that a measure of inflation, including prices, is not only desirable but necessary to reduce the burden of the national debt. While it might accomplish this, it would have the evil consequences that President Truman outlined.

Considering the forces making for it, inflation is the real threat, but the major part of President Truman's program ever since VJ-day has assumed the contrary. He decries inflation and says we must hold the line on prices, but he helps to build up the pressures that threaten to break the line.

So we have his insistence on higher wages throughout Government and industry, higher unemployment insurance, higher minimum wages, and kindred measures each of which will twist the spiral higher if it becomes effective.

We have no sympathy with the tactics by which any committee prevents or delays action on any measure pending in Congress. We hope President Truman's appeal does blast loose every item of his program that is log-jammed, so that there can be a decision on all, and affirmative action on many.

But as a remedy for what ails us, some of the program is a fraud. He says it is important that Congress pass a full employment bill such as he favors. For the present emergency, it is utterly unimportant whether it passes either the Senate bill, the House bill, or no bill at all.

Public works are the principal means by which this kind of legislation means to guarantee full employment. But today's unemployment is the result of bottlenecks of materials and manpower—including the bottleneck of voluntary, purposeful unemployment threatening to engulf much of major industry.

What sense would there be in a big program of public works at a time when a man cannot buy a few sticks of lumber to build a bookcase—or a garage to shelter an auto (if he could buy an auto)—to say nothing of the materials for a house?

With President Truman we deplore the withdrawal of General Motors from the fact-finding procedure intended to settle the automobile strike. With him we believe a legal basis must be found to facilitate the settlement of such disputes. But he did not answer the questions that General Motors raised in withdrawing.

It was no disagreement about facts that produced the General Motors deadlock, it is now apparent; it is a disagreement, or confusion, about theories.

The union, and the President's commission, have proclaimed a new theory of wage fixing, without precedent in American labor negotiations. This is the theory that a future estimate of a single corporation's ability should determine the wages it shall pay; but it is not clear whether it should also determine the wages of other units in the industry, regardless of their ability to pay.

Perhaps the Board, which may report today, will say what scope should be given to the theory, and what limitations. If so, perhaps President Truman will adopt the Board's theory as his own. But it is the theory, and not the facts, that has been the sticking point.

Congress may have to legislate concerning the theory as well as the facts. If Congress is confused, the President has not shown that he sees the issue clearly.

Navy Announces Details of New GI Uniform—Movement Started by Leib

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. GILLIE. Mr. Speaker, on January 1, 1946, the Navy Department officially announced that it had finally given in to the zipper age and that the bellbottom trousers, jumpers, and so forth, representing a moth-eaten tradition honoring dead heroes of another nation, were to be discarded.

This statement culminated a long and extended fight to scrap the present uniform. Some years ago Joseph Leib, now legislative director of the American Veterans of World War II—Amvets—launched a private campaign to have the outmoded uniform replaced by one of a more modern design. It all started in this way: One day a Navy man, embittered because he had to wear the so-called Little Lord Fauntleroy suit, called upon Leib, pointing out to him the many disadvantages of the tight-drawn trousers around the hips and the big flaring bottoms at the ankles, also the lack of pockets.

Leib undertook an investigation and found that the black neckerchief, which sailors drape about their necks, represented a continuous mourning for Lord Nelson, hero of the British Navy. The 13 trouser buttons commemorates the Thirteen Original Colonies, while the three white collar stripes were for the three sea victories of Lord Nelson. In addition the big flowing square collar was designed in the early days of the British Navy to catch the tar that sailors used on their heavily greased pigtails and the white hat was designed to use as a bucket to bail out a boat.

Leib thought that it was about time for a change and went out to do something about it. He prepared articles for newspapers. When the going was hard he called upon the assistance of Members of Congress. He wrote Senate bill 1082 to provide for changing the design of the uniform of enlisted personnel of the Navy and the Coast Guard and have it conform in basic design to the uniform worn by commissioned and warrant officers of the Navy and Coast Guard. Then he prepared the speech that Senator LANGER delivered on the Senate floor on June 15, 1945—pages 6194–6201—which threw the Chamber in stitches. In the midst of this address Senator BARKLEY, majority leader of the Senate, walked over to Senator LANGER and assured him that if he would "call off the dogs" that he—BARKLEY—would make it his own personal business to see to it that the uniform would be changed.

Senator BARKLEY kept his word and now the outmoded uniform is about to be discarded. Here is the announcement as made by the Navy:

[From the Washington Evening Star, of January 1, 1946]

NAVY TESTS CONVENTIONAL STYLES FOR SAILORS' NEW UNIFORMS

The Navy has revealed details of its proposed new design for enlisted men's uniforms, replacing the jumper and bellbottom trousers which have been the trade-mark of seafaring men for six centuries.

It cautiously explained yesterday, however, that the new design is still the subject of tests and, if adopted, must await depletion of present stocks of old-style uniforms.

Some 2,500 sample uniforms have been distributed to the Atlantic and Pacific Fleets and to shore stations for wearing and stowage tests under all conditions, on the basis of which commanding officers will make criticisms and recommendations. The tests are expected to require about 3 months.

In the new design, conventional trousers replace the laced bellbottoms, and the black neckerchief, which tradition says was designed by the British as a sign of mourning for Lord Nelson, will be replaced by a black four-in-hand tie.

The body-tight jumper will give way to a jumper-type shirt similar to a sport shirt, which can be worn open at the neck for undress or buttoned for dress.

A tailored, waist-length battle jacket is provided for dress or winter wear.

There are three separate uniforms in the new outfit—blue, gray, and white—with shirts to match. The blue and white are dress uniforms and the gray the working uniform. White trousers may be worn with the blue battle jacket in warm weather.

The white uniform may be worn in both dress and undress fashion—with a black tie for dress and open at the neck for undress. The gray uniform is composed of gray shirt and trousers similar to those now worn by chief petty officers.

Headgear includes a blue garrison cap for the blue uniforms and the present white hat and a gray baseball-type cap to be worn with the white and gray uniforms, respectively.

Currently authorized badges, hash marks, and other insignia will be worn with the new uniforms. The present overcoat, known to Navy men as a pea coat, has been retained.

The Truman Loan to Britain

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include the following statement made about the Truman loan to Britain:

The Truman loan to Britain does not merit support. The United States, through its Congress, has provided or is providing $2,700,000,000 for UNRRA. Additional millions and billions of dollars have been appropriated to carry out the principles of the Atlantic Charter. The UNRRA appropriation was made in the name of humanity. These funds were provided to feed, clothe, and shelter human beings. We should not nullify these Christian objectives by now providing Britain or any other country the funds with which to carry on an imperialistic war to destroy human beings. While UNRRA will save human lives, the British loan will destroy more human lives.

The time has come to tell Britain and all countries that the American people are not going to give further from their depleted resources any money to any country that does not subscribe and support the principles of the Atlantic Charter. There is small difference, indeed, between carrying on an imperialistic war ourselves and the providing of funds for other countries to carry one on.

No one need be deceived. Everyone knows that these funds will be used for bombs and bullets to take the lives of innocent people in Java, Indochina, and other countries. No thoughtful person would provide a loan for some individual to buy a gun and the ammunition to take even one human life. Why, then, I ask, should these enormous funds be provided a country to destroy thousands upon thousands of human lives?

The world should be advised once and for all that Christian America is not so materialistic that it can be influenced by those who would place more coins in the pockets of a few "money changers in the temple" regardless of the country the temple happens to be located in. I hesitate to believe that the American people are so materialistic and so mercenary that this loan can be sold to them on the basis of the "good times" it will bring in our country.

There is a moral issue involved in this proposed loan, and no whitewash is white enough to hide the sins incident to it. The Truman administration and the previous administration professed great interests in humanitarianism. Even on the floor of this House it is frequently evident that the majority wishes to convey the impression that minority membership is lacking in appreciation of human rights and human values. This has been a most false approach. The Truman administration has evidently now repudiated all humanitarianism—yes; it has openly flouted all humanitarianism by even proposing this loan.

Enough sugar cannot be used to coat this legislative pill so that it should be swallowed by any person who does not want human blood on his hands and a permanent blight on his conscience.

The American people applauded the President's action when he told the Chinese to quit killing each other and to unite for the benefit of their country. I believe the American people would applaud the President if he would tell Britain and the other loan-seeking countries to sweep off their own doorsteps, follow the Atlantic Charter, and cease activities that violate the rights of men—yes, men, whoever they may be, wherever they may be, and whatever the color of their skin may be.

Attlee's description to the Congress of the conditions in Limey and the reasons why he is for the general welfare of all the people of England was only a sham, if he now advocates or condones what his own country is doing in Java and in Indochina at this very moment.

The right and the desire for life and freedom is just as valuable and sweet to the lowly as it is to the snobs of any country.

Ability to Pay Wages

EXTENSION OF REMARKS
OF
HON GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Daily Tribune of Royal Oak, Mich., of January 8, 1946. This editorial presents a reasoned and sound analysis on the question of ability to pay. If ability to pay is to become the yardstick on which wages are based and the tested principle of fairness known as value received is to be abandoned, then indeed a new philosophy has appeared in the United States. It would be as detrimental to labor as it would to management and the laboring man would suffer most.

The editorial follows:

PERSONALLY SPEAKING
(By Floyd J. Miller)

ABILITY TO PAY WAGES

Somehow, in all I have read or heard about the General Motors-UAW wage dispute, I have never encountered the statement:

"If wages are to be based on the ability of the employer to pay, they should also be based on his ability not to pay.

"That is, if good profits for the company mean a raise in pay, regardless of what the employee is now getting, a decrease in profits, or operation at a loss, should mean a decrease in pay."

I don't see how you can fairly have one without the other.

And if we are to adopt such a plan, we must realize that we are approving a very drastic change in our present system of wages and salaries.

Perhaps that is what we want. Or maybe we don't. But we should at least understand what we are headed for when we talk about wages being based on "the ability to pay." That is one of those fancy phrases that sounds wonderful—until we follow it through.

If we do this, we may come out with some answers that we never dreamed of.

The system on which we have always operated in this country has been based on agreements entered into at the time a man—or woman—takes a job. Under this plan, an employer promises to pay a certain wage for certain work. More often than not it has also been understood that a raise would be given after a certain time. Often this scale of increases was definitely set.

But under no circumstances was the worker to receive less than the agreed amount.

The employer does not say, "Of course you realize that this business may not be a success. In that case I shall expect you to share the loss; to take less pay, or even to get none."

No; the employer is held for the agreed-on amount. He may lose all he has invested in the business, plus his own pay, plus everything he can scrape up to try to save the enterprise. But he still has to pay the workers the amount due them.

That is the way it should be. The laws are right which provide that if a business goes broke, the workers' claims for wages due shall come ahead of almost any other claim in dividing up what assets are left.

How else could most of us plan our lives? How could a man marry, have children, buy a house, or take on other obligations if he were expected to share the risks of the business in which his employer is engaged?

PAY IS GUARANTEED

Guaranteed pay is such an accepted part of our system that it never occurs to us that the custom had to be built up by centuries of performance. It has become our never-worried-about rule because employers have made good on it. Once a wage is promised a man for certain work, it is paid, regardless of any other demands on the employer's cash.

Now, if we are to change the plan; to make wages depend on whether the employer makes a big or little profit, or none at all, that will be quite a shift in our way of doing things.

Just now the automobile union is asking that its members be given a 30-percent increase in hourly pay rate on the basis of alleged high company earnings over a very short period of years. With a great show of righteous indignation, Walter Reuther shouts, "Don't tell us you can't afford to pay that amount. Don't duck the issue. Just show us your books, and prove it."

It seems to me that the General Motors is not trying to duck the issue. Instead, it is trying to bring it out into the open.

It isn't doing too good a job in this because its head men are not as good argufiers as Walter Reuther. What we call "public relations" is only part of the job they have to know in order to run automobile companies in a highly competitive market. They are not nearly as quick on the trigger as the capable young labor leader.

DEPEND ON PROFITS?

They would make the situation much more understandable to the average person if they inquired whether the employees wanted their pay to depend on the employer's profit or loss. For if employees do want this, they must be prepared to go without any pay at all, sometimes.

The employees of automobile companies that do not make any profit would be forced to work for one rate, while those working for more successful concerns would get a lot more. Do you think the first group would stand this? Of course not. They wouldn't work. Nobody could make them.

In other words, if looking at the books showed that the company was making a profit, temporarily at least, raises would be granted. But the plan wouldn't work the other way around. For no union could force its men to take a pay cut because the company was in the red.

What rot, then, to talk about the ability to pay more, and demand to see the books to prove it, without also considering the ability to pay less, and expecting the men to take that, also.

General Motors Versus the Rest of Us

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Walter P. Reuther from the New Republic of January 14, 1946:

GM VERSUS THE REST OF US

(By Walter P. Reuther)

More than 325,000 General Motors workers and members of their families are on strike and walking picket lines in a hundred American towns and cities. They are determined to win the first major home-front battle for a peace of full production, full consumption, and full employment, year in and year out.

The strike is solid. It has the full support of the entire CIO. Members and officials of other labor organizations support it. Church leaders, businessmen, and others who have studied the record of our attempts at negotiation, at conciliation, and voluntary arbitration have endorsed our basic contention, that purchasing power must match production and that the first step in making sure that it does is to maintain take-home pay.

We are convinced, as the result of our arithmetic based on published facts about the auto industry, about General Motors' past performance, about costs, prices, profits, and the certainty of a market for capacity production for the next 3 years, that General Motors should and can pay 30-percent higher wage rates without increasing prices and at the same time make profits higher than the prewar level. We are convinced that the real reason why the GM management will not discuss the arithmetic, will not discuss its ability or inability to pay, will not even try to prove it can't pay, is simply that the facts and figures locked up in GM vaults would bear out the union's case and prove beyond any question that GM can pay.

Actually, the corporation in its letter of October 2, 1945, and in page ads appearing about that time throughout the Nation, originally pleaded inability to pay. The letter rejected our August 18 wage demand as "unreasonable." The ads tried to frighten the public—and GM workers—into believing that higher wages would mean higher costs and, hence, higher prices. And that, said GM, would bring on inflation. The inference was that GM would have to pass any wage increase along to the consumer in higher prices. The fact that a postwar volume at least 50 percent above prewar would cut unit costs and permit higher wages, higher profits, and lower prices to the consumer was omitted.

When we challenged GM representatives to produce the facts and figures to support their plea of poverty, GM shifted gears. Overnight GM became the defender of "the prerogatives of management." We were told, day after day, that discussion of costs, prices, profits, production schedules, and volume of production was wholly out of place in a discussion of wages. Wages, we were told, must be discussed "on their merits." We were given no hint of what this meant until on December 28 GM trotted out the caveman of American labor relations, Walter Gordon Merritt, and presented him to the President's fact-finding board as the corporation's mouthpiece.

Costs, prices, and profits were "none of the union's damn business." GM books were closed, even to GM stockholders.

Our proposal of arbitration was turned down as an "abdication of management."

GM representatives told us and the public that past experience meant nothing in relation to present and future operations, that prices were set on hopes of what the traffic would bear, and that management was entitled to whatever profits resulted from the whole hit-or-miss operation.

As against this crystal-ball approach, let me quote from the findings of the national citizen's committee:

"Considerable data from the General Motors Corp. and United States Government reports were submitted by the union in support of its contention that the corporation can afford a substantial wage increase without raising prices. Outside of a flat denial based upon sources not open to the union, to this committee, or to the public, no convincing evidence has been submitted by the corporation to show that the union's wage proposal cannot be met.

"While future profits cannot be computed with absolute certainty, it is common practice to base the prospects of them upon experience and estimated volume and costs. The union is asking that wages be projected in such a forecast as other cost factors and profits are projected. It is the consensus of the committee that the union is making a legitimate claim in asking that wages be negotiated in terms of future expectations."

In the light of these words, consider GM's defiance of the President's fact-finding board and the President's own wage-price policy, set forth in his statements of August 18, October 30, and December 20. President Truman has declared that purchasing power must be maintained during reconversion by increasing wage rates while holding down prices. But when union negotiators take the same stand GM cries "revolution," "socialization," "regimentation," and the death of "free enterprise."

Twisting and turning in attempts to avoid negotiations based on the arithmetic, GM has made several offers to the union. As long ago as October 19, we were offered a deal whereby, if we would join the corporation in pressuring Congress to lengthen the normal workweek from 40 to 45 hours, by amendment of the Wages and Hours Act, wage rates would be boosted enough to maintain take-home pay on a 45–48-hour week. GM President C. E. Wilson said this was necessary because other nations (whose plants have been wrecked and manpower decimated by war) were going to work long hours at "subsistence wages."

This offer has been advanced again and again.

Then we were offered a 13½-cent-an-hour increase, the corporation reserving the right to use it to get higher prices from the OPA and the car-hungry public. This offer was used as the basis for a newspaper advertising campaign which sought to leave the impression that GM workers had been offered, and had rejected, weekly take-home pay 10 percent higher than in wartime. According to our best calculation, the $63.44 weekly wage (for a 45.6-hour workweek) used in the ad is $2.75 too high, based on GM's own wage figures. But the most important fact about this ad, and about GM's whole attitude in this dispute, is the stubborn determination to turn the clock back, to put into effect a workweek of 45–48 hours, to defy and defeat the national policy of maintaining purchasing power by increasing wages while holding down prices.

The union is charged by the corporation with making a broad attack on American industry and free enterprise. We feel that our demands, and our support of them by this strike, constitute an attempt to save American industry and free enterprise from committing suicide by liquidating some of its customers and underpaying the rest. There is nothing novel or revolutionary in our proposal that, in bargaining collectively with the corporation, we consider costs, prices, profits, volume, market, and other factors in the production picture. As the recently published Twentieth Century Fund study of collective-bargaining practices has pointed out, this has been done for years by employers.

The grim fact is that if free enterprise in America is to survive, it has got to work; it must demonstrate more than an ability to create earnings for investors; it must master the techniques for providing full employment at a high standard of living, rising year by year to keep pace with the annual increase in technological efficiency. Incidentally, this increment, estimated at more than 2.5 percent a year normally, may amount to more than 30 percent in the first three postwar years, according to the Bureau of Labor Statistics.

Free enterprise has got to demonstrate a willingness to adjust itself to national policies such as the present wage-price policy, now being appealed by GM from President Truman to Congress. Good will must be substituted for the obstructionism, arrogance, and refusal to cooperate—the latter Mr. Truman's phrase—that have marked GM's conduct in this dispute.

GM's sudden concern lest ability to pay be used to push small employers to the wall must cause the one-time small competitors of the General Motors Corp. to turn over in their economic graves. The union, in using ability to pay as one—not the only—factor in wage negotiations, can be relied on to be more considerate of small employers than the two-billion-dollar General Motors Corp. has ever been.

The UAW-CIO in this case has repeatedly said: "We are not going to operate as an economic pressure group. We refuse to act according to the principle of 'let's get ours and the public be damned.' That is why we have not conspired with GM to bring about a longer work week—with millions of unemployed in prospect. That is why we have refused to pocket a wage increase and look the other way while the corporation used it to extort a higher price.

"We are part of the community. We intend to make progress with the community and not at the expense of the community.

The fight of the General Motors workers is a fight to save truly-free enterprise from death at the hands of its self-appointed champions. In the face of a threatened loss of $35,000,000,000 from the annual wage bill, it is a struggle to maintain purchasing power. It is a holding action, designed to forestall a disastrous deflation and to prepare the ground for an advance toward a $200,000,000,000 postwar economy. As such, this strike, now nearing the end of its second month, is the fight of every American worker, farmer, small businessman and professional worker. It is also the fight of every veteran coming home in search of a job and a tangible stake in the future of the country he saved from international fascism.

Labor is not fighting for a larger slice of the national pie. Labor is fighting for a larger pie. That is a national, not a sectarian, goal. Its achievement must be the task of every American who appreciates the wisdom of the statement made by Secretary of the Treasury Vinson last July: "The American people are in the pleasant predicament of having to learn to live 50 percent better than they have ever lived before."

This fight is being fought for keeps. Vinson, Truman, Snyder—all our political leaders—have uttered the words of faith and good intentions. They have declared, along with progressive industrialists and economists, that purchasing power is the key to prosperity. General Motors workers are on winter picket lines to make those words stick. They will go back to making automobiles when General Motors policy-makers stop sulking in their tents—when Mr. Wilson and Mr. Sloan realize that General Motors is not a sovereign power but an integral part of the total economy.

In Search of a Solution

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mrs. LUCE. Mr. Speaker, the following editorial which appeared in the Stamford Advocate of Monday, January 7, 1946, on the strike at Yale & Towne reflects my views in the matter of that controversy, which has now become notorious throughout the Nation:

IN SEARCH OF A SOLUTION

Today the strike at Yale & Towne is just 2 months old. This is a long time for men and women to be out of work, and an equitable settlement at the earliest possible moment is the fervent wish of the whole community. The management has invited the representatives of the union to meet with them in closed session for the purpose of resuming collective bargaining. This invitation must be accepted without delay. Every possibility of finding a solution should be promptly and thoroughly explored.

So much time has passed since this controversy started that it seems desirable to sketch its course briefly. The contract between labor and management was due to expire on March 21, 1945. In order to initiate discussions looking toward its renewal, the unions presented their demands to management on February 20 of last year. Thereafter there ensued interminable negotiations which by the month of September had led to an agreement in respect to many of the points at issue, with the notable exception of the basic question of union security.

In regard to this, no progress whatsoever had been made, nor was any progress subsequently made in regard to wage rates, which became an active issue with the ending of the war. On September 23, 1945, a walk-out took place which was not only unauthorized, but was actually opposed by the top union leadership. Although this walk-out lasted less than 2 days, it afforded the company legal justification for terminating the existing contract, and this the company did. When the men went back to work they were thus no longer covered by the old contract, and negotations were started with a view to agreeing upon a new one.

The unions took the stand that these negotiations should proceed on the basis that all conditions previously agreed upon be considered as accepted by both parties, and that the discussions should be limited to the major unresolved questions of union security and wages. The position of the company, however, was that every element in the contract had to be negotiated anew. When the unions found that they were making little progress, and none at all in respect to fundamental matters, a strike was called on November 7.

Thereafter discussions between management and labor, which had been difficult enough before the strike, became, as is so often the case, infinitely more complicated. Mass picketing diverted attention from the matters originally in dispute to the necessity of preserving law and order; and only after the intervention of Governor Baldwin was it possible to return to a consideration of the real points of difference. Thereafter two attempts to proceed with collective bargaining were made in open meetings at the Town Hall, of which the second took place last Thursday. Neither of these developed any basis for compromise.

This summary must be considered in the light of a certain number of related facts. Historically labor relations at Yale & Towne have not been satisfactory. They were, of course, greatly improved during the period of the war boom. With some increase in wages and a considerable amount of overtime, the take-home pay of the worker was larger than it had ever been before. The maintenance-of-membership clause, inserted in the labor-management contract under a directive of the War Labor Board, established a degree of union security. In spite of minor grievances, which normally arise, conditions on the whole were tranquil.

But with the end of the war, it became apparent that Yale & Towne was reluctant to make any material increase in wage rates to compensate in measure for the loss the workers were bound to suffer through a reduction in the amount of overtime, and that they were unwilling to grant any form of union security. This aroused the fear that a return to conditions prevailing before the war was threatened. The rigid and unyielding position of management during recent months has done nothing to alay this fear.

The workers felt that all the gains they had made through the years were placed in danger. Whether rightly or wrongly, they formed the belief that the president of Yale & Towne, W. Gibson Carey, Jr., was out to break the union; and that, in fact, Yale & Towne was being made the spearhead of a Nation-wide attack by reactionary business leaders on the trade-union movement.

The past history of the company furnished some ground for apprehension. The workers have long memories; and, whether management likes it or not, Mr. Carey's record is not apt to be entirely absent from the thoughts of labor when engaged in collective bargaining.

Until now management has been adamant in insistence upon an open shop. Labor has asked for a closed shop, but there is ground for the belief that they would be satisfied with the maintenance-of-membership clause. After negotiations broke down last Thursday, a United States Department of Labor conciliator proposed to management, as an alternative, a voluntary irrevocable check-off. This was rejected by management out of hand. It is entitled to more serious consideration.

The maintenance-of-membership clause requires an affirmative act by the worker if he does not wish to remain in the union on the basis of a contract that has been agreed upon. He has 15 days after the signing of the contract within which he can withdraw from the union. The voluntary irrevocable check-off, on the other hand, requires an affirmative act by the worker if he wishes to remain in the union under the terms of a negotiated contract. Clearly this removes a certain degree of union pressure from the worker, and it should be satisfactory to management—and to labor as well if the unions really deserve the loyal support of their members.

There is one other important point of difference. Under the maintenance-of-membership clause, the company is obliged to dismiss any worker who is not in good standing with the union. The worker can forfeit his good standing for many other reasons than merely failure to pay union dues. This provision may easily be abused by union leaders and become a disturbing factor in the operations of the plant.

Mr. Carey has argued for the open shop on what he likes to describe as grounds of high principle. It is hard to see how this argument can be fairly made against the voluntary irrevocable check-off.

The question of wages is in no sense a matter of principle, but purely one of bargaining, in which various factors must be given weight. In the present discussions, not the least important consideration would seem to be that it has become almost a matter of recognized national policy that the whole burden of transition from war to peace is not to be borne by the workers alone. Postwar wage rates have been increased to varying degrees by a large number of companies on the theory that it is neither just, nor economically sound, to expect the workers to accept the reduction in take-home pay that would otherwise be involved. In the State of Connecticut, and even in the lock industry itself, such increases have already been made. The demands of the workers at Yale & Towne have not been so exaggerated that there should be difficulty in reaching a satisfactory agreement on this point.

This, it appears, is the way matters stand as negotiations are about to be resumed. If Mr. Carey wants to win this strike, regardless of the cost to his company, his employees, or the community of Stamford, he may be able to do so. Two months of idleness have already made a material dent in the war savings of the worker. Men have families to feed, rent to meet, and doctors' bills to pay. They cannot in the nature of things hold out idefinitely.

But in the eyes of the citizens of our town, this is a human problem far more than a problem in corporate arithmetic. We do not consider that it would be good for the country, for the community, or in the long run for Mr. Carey, himself, or his company, if the strike were to be settled solely on the basis of economic strength. We like to think that in our great Nation we have passed beyond this point. We recognize that some labor leaders have taken, and continue to take, positions no less extreme than those taken by the most reactionary spokesmen of management. We do not find that in the existing controversy this charge can fairly be leveled at the leadership of the International Association of Machinists.

We want to see the workers of Yale & Towne return to their jobs with morale high, eager to play their appropriate part in attaining that high level of full production so essential to the Nation's prosperity. This they can only be expected to do if an agreement is reached on fair terms. It would be a tragic outcome if they were forced by economic pressure to go back to work as a body of dispirited men. We cannot urge upon Mr. Carey too strongly the wisdom of this view. There is still time for him to modify his position. He has much to gain by instructing his representatives to bring to the coming negotiations a sincere willingness to meet the unions half way.

Things the Public Should Know

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mankato Free Press, Mankato, Minn., entitled "Things the Public Should Know":

THINGS THE PUBLIC SHOULD KNOW

The Big Three parley in session in Moscow is following the same pattern as other similar gatherings during and since the end of the war—all sessions are cloaked in complete secrecy; newsmen and radio commentators are denied access to any of the participants or their aides.

It is argued that such secrecy is necessary. There was some justification for that contention during the war; there seems little now. The London Conference last spring failed completely—to this day no one knows just why, just where the major powers were unable to agree, just what issues could not be compromised and adjusted.

Still it is public sentiment, within other nations as well as within our own, that must be satisfied and served in all of these agreements. How do we know that public sentiment in Russia or in Britain would not support the American position, in these unsuccessful negotiations, if that position were known?

If our cause is right and just, why should we permit it to be cloaked in the secrecy of Russian totalitarianism or British imperialism?

For an administration that professes to be following the ideals of Woodrow Wilson in international affairs the Truman administration has assuredly forgotten his cardinal pronouncement for "open covenants, openly arrived at."

Just where is that first of the "four freedoms"—freedom of speech and of press—in secret negotiations of this kind?

The Office of the Inspector General of the Army Should Be Controlled by Congress

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. PITTENGER. Mr. Speaker, recent developments point very clearly to the conclusion that the Office of the Inspector General of the Army should be under the jurisdiction of Congress. Right now the need for congressional control of such an office stands out prominently, and Congress ought to give immediate attention to that question. I say this because we are faced with a tremendous amount of protests by men in our armed forces against the delays and the slow procedure in connection with our demobilization program. Members of Congress have had complaints from fathers, mothers, wives, and other people interested in our boys who are now scattered in some branch of service in the Army and Navy all over the world. We have also had letters of protest from the men themselves. Without exception, so far as I know, Members of Congress have sought advice and information from the War and Navy Departments. There has been one excuse after another in connection with the methods employed in getting our soldiers and sailors back to civilian life. A few days ago out of a clear sky the solemn announcement was made that the demobilization program would be slowed up 3 months or more because replacements for men discharged from service were not available, and for some unnamed reason we had to keep a large Army and Navy force. I do not here repeat the story of the different incidents that have taken place. You know what they are. Congress is still in the dark, so far as any intelligent picture of the Army and Navy program and plans are concerned. A timely suggestion was made by a United States Senator to the effect that Congress could, and should, cut off appropriations until we found out just what was going on, and why.

CONGRESS SHOULD CONTROL THE OFFICE OF THE INSPECTOR GENERAL

In my opinion, Mr. Speaker, the sound answer to the whole problem is the enactment of legislation which will put Congress in control of the office of the Inspector General of the Army, and create a like office in other branches of our armed forces. The purpose of an Inspector General is to check up on the different departments of the Army, find out what commanding officers are running matters efficiently and just what officers are inefficient and unfit. The Inspector General is supposed to find out the mistakes and then see that these mistakes are rectified in connection with all matters of Army policy. Of course, we are to assume that this is done, but under existing law the Inspector General reports to his superiors, and perhaps it is not unkind to say that they like to protect each other from any public knowledge of their mistakes and shortcomings. It is doubtful if the office of the Inspector General can function as it should under present conditions. If it were responsible to Congress rather than to superior authority in its own group, results would be different.

HISTORY OF THE INSPECTOR GENERAL OF THE ARMY

Historically, this office at one time was under the jurisdiction of Congress. In a report that has been furnished me I note that Baron Frederick William Augustus von Steuben was appointed Inspector General in 1778. His office was independent of every authority, except that of Congress itself. Later this was changed and as time went on the office came within the jurisdiction of the Secretary of War. Running through the history of this department, however, is the thought that the officers in the Inspector General's office were to be independent of the different department commanders, and one of the important functions was to detect and make possible prompt correction of irregularities and deficiencies and to eliminate unfit officers, and to see that merit governed the promotion of other officers.

MY CONFERENCE WITH AN OFFICER OF WORLD WAR II

During 1945 and probably prior thereto, on more than one occasion, I had visits from an Army officer who talked very frankly about the Army and its problems, its fine elements of strength, and also its shortcomings. On every occasion he would point out some matters that had come to his personal knowledge. He mentioned one commander in a certain theater of war who was thought to be unfit and inefficient by every Army officer, who was permitted to exercise his independent opinion when he could visit with friends and talk out of turn. It was pointed out that as a result of inexperience and inefficiency, large numbers of soldiers were ill-clad and poorly shod and that many of them would probably lose their feet because of such a situation. I was also told that if Congress had control of the Inspector General's office, this sad situation could be investigated and that Congress could be properly informed; that incompetent Army officials would then have to be discharged or relieved of their command and competent men placed in charge. Suggestion was made that nothing would be done under existing conditions because the mistakes would be covered up, and since no one talked out of turn, no one in the Army would ever do anything drastic toward the men who were responsible for its shortcomings. Instead, the remark was made that the Army officer would probably get a promotion and might, by accident, even be decorated by the Commander in Chief.

These discussions made quite an impression on me and convinced me that it would be a good thing for the Army and a good thing for the the American people if Congress had its own inspectors to investigate conditions in the Army and make true reports to Congress. There would not be the constant fear that some superior officer would resent having a fellow officer check up on his mistakes, and would then do everything he could to prevent the fellow officer from giving him poor marks.

I do not continue this line of thought further because I believe it is evident to everyone that a mistake was made when Congress lost control of the office of the Inspector General of the Army. I am introducing legislation that will correct this defect and enable Congress to again take control of this important office and administer it in the interests of the American people, and not in the interest of any clique or group of any branch of our Government. If we had such contacts today between Congress and the Army, the demand for an investigation into the program of demobilization would not be necessary, and Congress—and through Congress—the American people would be fully informed of the plans and procedure of the men in charge of our armed forces.

The bill reads as follows:

A bill to place the Inspector General of the Army under the jurisdiction of Congress

Be it enacted, etc., That the Inspector General of the Army shall be appointed by the President, by and with the advice and consent of the Senate and the House of Representatives, and shall be responsible solely to Congress. The Inspector General shall hold office for 4 years. An Inspector General appointed under this act may be removed only by concurrent resolution of Congress after notice and hearing, when, in the judgment of Congress, he has become permanently incapacitated or has been inefficient, or guilty of neglect of duty, or malfeasance in office, or of any felony or conduct involving moral turpitude, and for no other cause and in no other manner.

SEC. 2. The Inspector General shall make to Congress at the beginning of each regular session a report in writing of the work of the Inspector General's Department, and shall make such additional reports as may be requested from time to time by Congress or by either House thereof.

SEC. 3. The President is requested to submit to Congress not later than 60 days after the date of enactment of this act the name of the person nominated by him to serve as the first Inspector General under this act.

The Demobilization Crisis

EXTENSION OF REMARKS
OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, the recent demonstrations by GI's all over the world should cause the American people and the American Congress to consider the seriousness of the lack of a definite clear-cut demobilization policy. The January 5 announcement by the War Department that there would be a slowdown in demobilization and that men with two or more years service would not be released by late winter is a breach of faith with those who served us so well. The men and women in service have a right to know what our actual demobilization program is and will be, what our foreign policy is as far as they are concerned, and what our military needs in foreign countries will be in the foreseeable future.

We realize, of course, that we have definite commitments to occupy Japan and Germany and this must be done for as long as necessary. I can see no reason for the continued maintenance of large forces in the Philippines, India, Italy, the Caribbean and elsewhere. These are not enemy areas and therefore we should not continue large-scale occupation policies there.

The answer to the present disagreeable incidents lies, I believe, in the creation of a large volunteer army. We have been told that the Army is planning on maintaining 797,000 American troops overseas after July 1, 1946. In Europe there will be 335,000; in the Pacific, 375,000; elsewhere, 87,000. We have already had in excess of 400,000 volunteers enlisted for our postwar Army and undoubtedly that number will increase. This Army, however, must be a democratic body and the inducements must be sufficient to make a career worth while. The matter of salaries and promotions must be investigated and considered if we are to have the "esprit de corps" so necessary for a good functioning organization. The differential which exists between officers and enlisted men must be done away with or, where necessary, reduced to the lowest minimum essential for discipline. The following suggestions would, in my opinion, be helpful:

First. Make all appointments to the Military and Naval Academies from the enlisted ranks of the services.

Second. Install a promotion system based on merit and performance only.

Third. Introduce real orientation policies for all services so that our men will understand the peoples and countries in which they will serve and the reasons for their being there.

Fourth. Continue allotments to families of servicemen so they can have some degree of security.

Fifth. Allow furlough time for enlisted men to accumulate on the same basis as for officers' terminal leave.

Sixth. Set up a sound legal system for the offenses committed in service and do away with the present system of haphazard military justice.

Seventh. Do away with such rank discrimination as "off limits to EM."

These suggestions, if considered and followed out, would make a service career more attractive, would give us the volunteer army we need, and would offer security and advancement to all personnel. Our Army today is a citizen and democratic-minded army composed of men who are serving because of the emergency and who, on the whole, do not wish to make the service a career. The demonstrations in which they participated in are significant and the symptoms displayed calls for action now. They must not be repeated, and the solution is for the Congress and the services to keep promises made and to correct inequalities which now exist.

Mr. Speaker, I have received scores of letters and cablegrams this past week. Under unanimous consent, I am inserting at this point in the RECORD some of the cablegrams I have had sent to me from the Philippines, Japan, and Germany, and also copies of letters I have addressed to the War Department and the House Military Affairs Committee:

JANUARY 7, 1946.

Hon. ROBERT P. PATTERSON,
Secretary of War, War Department.

DEAR MR. SECRETARY: I wish to protest the Army's new policy announced by Lt. Gen. J. Lawton Collins on January 5, 1946, whereby the rate of demobilization of Army personnel is to be slowed down "because of lack of replacements for troops on overseas duty." I feel, in view of the fact that we still have in excess of 4,000,000 men in the Army, this statement will not bear scrutiny. Therefore, I am requesting a detailed explanation of the reasons for this new policy.

General MacArthur has estimated that 200,000 men will be necessary for the occupation of Japan, and General Eisenhower has estimated around 400,000 will be needed for occupied Germany. It would appear to me that, on the basis of these expressed needs by the commanding officers in those two occupied countries at the time these statements were made, the Army is still far too large, and that the greatest good could be accomplished by keeping up the rapid rate of discharges now in operation and, wherever possible, accelerate that rate.

The statement has been made that there is now no lack of shipping facilities, and, in view of that, I see no reason why the men overseas cannot be sent home and discharged as rapidly as possible. I should like to know also why so many of our armed forces are scattered throughout all the continents of the world. I see no justification for the continued need of our armed forces, in large numbers, in the Caribbean, Australia, New Zealand, India, China, Yugoslavia, north Africa, South Africa, Canada, Ireland, and elsewhere. These men in the service have done their job and now that the actual hostilities are over, I feel they should be brought home.

Also, I feel quite strongly that the statement on the Army's policy just issued, whereby it was stated that men with 2 years' or more service, would not be discharged by late winter as General Marshall informed the Congress they would on last September, is a mistake.

I feel any man with 2 years' service should be sent home and discharged not later than late winter in accordance with the promise made to Congress when General Marshall addressed us last September in the auditorium of the Library of Congress.

I feel furthermore that the fathers in the service should be discharged at the earliest possible opportunity. It will be recalled, because they were fathers, that they were inducted later than others but this in nowise has lessened their responsibilities, and certainly the allotments their families are receiving, are only a stop-gap between them and privation. The bread-earners, the fathers, are needed at home and while, at the present time, fathers with three children are declared eligible for discharge, there is no reason it should stop there, because the support of one child or two children, while a little bit easier, is just as much a responsibility. It is my feeling that the fathers should be declared eligible for discharge immediately so they can return home and take over their responsibilities as private citizens.

Will you please do what you can to see that the discharge system is kept rolling as rapidly and efficiently as possible, and that the "lack of replacements for troops on overseas duty" be investigated thoroughly in view of the previous statements made by General MacArthur and General Eisenhower concerning the needs in occupied territories.

Must close now, but with best personal wishes, I am,

Most sincerely,

MIKE MANSFIELD.

JANUARY 7, 1946.

Hon. ANDREW J. MAY,
Chairman, Military Affairs Committee,
House of Representatives.

DEAR ANDY: I am enclosing a copy of letter I am today sending to the Secretary of War concerning my views on the new Army demobilization policy.

May I urgently request that your committee undertake an investigation of this so that the Army's demobilization program can be continued at the present rate and wherever possible accelerated. I feel this is a vital question at this time and I should appreciate you and your committee giving it your most earnest consideration.

Must close now, but with best personal wishes, I am,

Sincerely yours,

MIKE MANSFIELD.

MANILA, *January 10, 1946.*

Congressman MIKE MANSFIELD,
Washington, D. C.:

Give 'em hell Mike, we're behind you.

WYOMING VETS.

MANILA, *January 10, 1946.*

Representative MIKE MANSFIELD,
House of Representatives,
Washington, D. C.:

Orchids to you for your actions on demobilization. We shall remember and we shall return. Every American soldier in the Pacific has a warm spot in his heart for your help in hastening our return to our loved ones.

TWO HUNDRED AND NINETY-FIVE MEMBERS OF THE SEVEN HUNDRED AND FORTY-NINTH RAILWAY OPERATING BATTALION.

MUNICH, *January 12, 1946.*

Representative MIKE MANSFIELD,
Washington, D. C.:

Demobilization slow-down policy undermining morale of troops. Danger to occupation duties imminent. Confusion in redeployment demonstrates incompetence of officials in charge. Program of constant broken promises and excuses clarifies fact combat soldier has been forgotten. Imperative that action be taken to correct dis-

graceful situation. Return us home immediately.

SIXTY GI's, C COMPANY, TWO HUNDRED AND EIGHTY-EIGHTH ENGINEER BATTALION

MANILA, *January 9, 1946.*

Representative MICHAEL MANSFIELD,
House of Representatives,
Washington, D. C.:

Deeply appreciate your efforts our behalf. Request Congress probe demobilization facts.

Sgt. HAROLD SCHIFFRIN,
Spokesman, Twenty-five
Thousand Pacific Veterans.

MANILA, *January 10, 1946.*

Representative MANSFIELD,
Washington, D. C.:

One million two hundred thousand troops now in Pacific. War Department reveals less than 400,000 needed. Ask immediate investigation of these facts. Why are replacements needed before we can return home?

WYOMING VETS.

MUNICH, *January 11, 1946.*

Representative MIKE MANSFIELD,
Washington, D. C.:

Redeployment been as total flop. Get combat men home now. It's over.

JOHN WALSH.

MUNICH, *January 11, 1946.*

Representative MIKE MANSFIELD,
Washington, D. C.:

Fifteen months overseas, in three major campaigns. Feel new redeployment policy will keep me here holding the bag, when I am entitled to be home. Please keep punching to get me home.

J. P. GORMAN.

SAN FRANCISCO, CALIF., *January 11, 1946.*

Hon. MIKE MANSFIELD,
United States Representative,
House of Representatives,
Washington, D. C.:

We of the Coast Guard Reserve are scattered widely. Opportunity not available for mass protest against the injustice of present Coast Guard demobilization program. Some of us will be sent out to sea again unless points are lowered to level of Navy points. Trust convening Congress will see justice done.

Respectfully yours,
HAROLD D. WALLERT,
Spokesman.

NAGOYA.

Representative MANSFIELD,
Montana Representative,
Office Building, Washington, D. C.:

We, the undersigned husbands, fathers, and sons of those dear to us in the States, voice our protest against the broken promises of the War Department. We overseas GI's feel that the slow-down in the demobilization program is subterfuge used by the War Department to force passage of a bill to extend the draft. We ask that the discharge program be speeded up and all troop ships be utilized now. We have won the victory, and instead of being sent home we are being penalized by being forced to stay here unnecessarily. We want to go home now.

Information About President of National Maritime Union

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. PITTENGER. Mr. Speaker, last fall I commented on the activities of one Joseph Curran who was accused of promoting a strike in New York City among the seamen, or rather dock workers, and thereby delaying return of men in our armed forces from Europe. This charge was made by Joseph P. Ryan, president of the A. F. of L. International Longshoremen's Association. See Appendix of the CONGRESSIONAL RECORD, volume 91, part 13, page A4331.

Just recently one of my constituents wrote me and indicated that I had been misinformed about Joe Curran, and his communistic activities. Proof, however, that I was correct is contained in the following news item in the newspaper published by district 50 of the United Mine Workers of America for the January 1, 1946, issue which statement reads as follows:

COMMIES ROUTED BY DISTRICT 50—PHILLY WORKERS SLAP CURRAN'S PHONY PROGRAM

PHILADELPHIA, PA.—Organized labor won one of its greatest victories in years when district 50, U. M. W. A, soundly trounced Joe Curran, the draft-dodging president of the National Maritime Union in an election conducted here for the unlicensed personnel of the port of Philadelphia

Angelo Cefalo, regional director for district 50 in the Quaker City, reported that Commy Curran and his maritime union never came close in the poll as district 50 won by a majority of more than 15 to 1.

The election held on December 18 covers employees of the following firms: Curtis Bay Towing Co., Sheridan Transportation Co., Independent Towing Co., Banks Towing Co., P. F. Martin Towing Co., Taylor & Anderson Towing Co., and Bernard Tucker Sons Towing Co.

Four years ago the employees of the seven companies were members of the maritime union, but left that organization when it decided to adhere to the Commy line. The employees voted themselves into an independent union, the United Harbor Workers of America, but in June of this year they asked to become affiliated with district 50.

Shortly after they voluntarily affiliated with district 50 the United Mine Workers of America won more than $300,000 in back pay for the workers. District 50 later asked to be certified as the bargaining agency for the workers, and Curran, who was busy visiting his comrades in Russia, injected himself into the case without one signed card. Comrade Curran used the excuse before an examiner for the NLRB that the maritime union filed its cards with the New York office of the NLRB.

There is additional comment in this news item, but it relates to the results of the particular election and indicates that district 50 won easily. The write-up concludes, however, with this interesting statement:

When Curran was called to enter the service of his country by selective-service officials, he appealed, and it was only through CIO pressure at the White House during the Roosevelt administration that he managed to acquire the title as the draft-dodging president of the NMU.

I have no concern, Mr. Speaker, in these disputes among various organizations, but, like other American citizens who are interested in getting our men in the armed forces back from Europe and the Far East and other places, the reasons for the delay and the men who have to do with these delays furnish legitimate need for checking up and calling attention to the real facts. Evidently my remarks of October 15, 1945, on this matter are still 100-percent correct.

Hatch-Ball-Burton Bill

EXTENSION OF REMARKS
OF
HON. ANTONIO M. FERNANDEZ
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. FERNANDEZ. Mr. Speaker, pursuant to previous unanimous consent from the House, I wish to insert in the RECORD an editorial from the Washington News of last Saturday, January 12, 1946, giving some very cogent reasons why legislation such as that contained in the Hatch-Ball-Burton bill should be given prompt and serious consideration:

AN INTOLERABLE STRIKE

A telephone strike is, in the word's exact sense, intolerable. The Nation and its communities have become too dependent on telephone service to let it be cut off by any controversy between workers and employers.

The strike beginning yesterday in most parts of the country affected chiefly long-distance service and local service over manual switchboards. But dial service also depends on maintenance by union members. Without this maintenance, the machines that make connections on dialed calls would cease to function in a week or so at most.

A continued strike, then, would soon stop all or practically all telephone service. The effect on business activity would be severe. The effect on public health and safety would be calamitous. Government simply cannot permit the telephone strike to go on. If the strikers ignore appeals to return to work and let the controversy be settled by other methods, President Truman will—indeed, he must—order the strike ended.

He still has wartime powers to enforce such an order.

But if ours is to remain a Government by laws and not by men, the President's war powers cannot be continued long in peacetime. And after those powers have been withdrawn a telephone strike, or any strike subjecting the public to severe hardship or depriving it of services essential to life and safety, would still be intolerable.

So, we think, an obvious lesson of the telephone strike is that the country must provide itself with a method of preventing such

strikes by law. One proposal to that end is before Congress in the Hatch-Ball-Burton bill.

This bill, in our opinion, would create better machinery than now exists for voluntary settlement of labor-management disputes. As a last resort, in a limited class of disputes, of which the telephone case is typical, it would forbid strikes and require submission of the issues to compulsory arbitration. Arbitration awards would be subject to Federal court reviews and enforceable by Federal court orders.

The thought of compulsory arbitration is repugnant to us, as to millions of other Americans. But the evidence now so plain that strikes of a certain type are intolerable, and that Government must by some means prevent them, convinces us that some such legal means, as the Hatch-Ball-Burton bill proposes, should be provided.

Politics, Propaganda, OPA, and the 1946 Election

EXTENSION OF REMARKS
OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. PITTENGER. Mr. Speaker, on more than one occasion the statement has been made to me that one of the major political issues in the 1946 election would be the question of inflation, price control, and the achievements of the Office of Price Administration and the men in charge of its policies, program, and work. In other words, the man who has been against the mistakes and other atrocities committed by the ignorant and inexperienced Government bureau known as OPA is going to be purged. To put it in another way, if you have supported OPA then you will be entitled to administration support. On the other hand, if you have opposed OPA you are going to be held forth as a bad man who ought to be defeated for office.

I welcome this sort of an issue, namely, OPA, in the coming campaign. I have consistently said that we needed price controls where commodities were scarce or where there were other factors which would permit speculation and exorbitant charges against the consuming public. I have been equally emphatic in saying that the Office of Price Administration had made so many mistakes that it was evidently doing more harm than good and ought to be abolished and another price control agency set up. This suggestion has not met with approval of administration leaders because they do not want to repudiate their own agency. That evidently would be poor policy, politically speaking. We might just as well have a lot of discussion about all of these matters at this time. Even before Congress adjourned on December 21, 1945, people were talking about OPA and its relation to the 1946 election. One of the most interesting newspaper items that I ran across at that time was written by Walter H. Waggoner in the New York Times for December 23, 1945, and is as follows:

BATTLES LINES ARE DRAWN ON EXTENDING PRICE CURBS—ACT HAS 6 MONTHS TO GO, BUT CRITICS AND DEFENDERS MAP CAMPAIGN

(By Walter H. Waggoner)

WASHINGTON, December 22.—The possible end of price control was more than 6 months away, but lively skirmishes between the forces for and against continued restrictions had already begun this week and the lines of battle could be clearly seen.

The Emergency Price Control Act, which empowers the Office of Price Administration to impose, adjust or remove price ceilings almost at will, comes to an end on June 30, 1946. Its extension for another year, as a precaution against a sudden postwar wave of inflation, is being sought by a strong line-up of the members of the administration. As solidly against it are the spokesmen for commerce and industry who have chafed and complained under price limitations since they were first applied.

Chester Bowles, Price Administrator and vigorous leader of the Government's anti-inflation effort, showed signs of digging in for a hard fight a fortnight ago when he warned that even his time table for suspension or removal of maximum prices had proved too optimistic.

"We are far behind in our decontrol program," he told a press conference.

STRONG INFLATION TREND

He went on to say that the inflationary pressures he had hoped would have begun to subside with the advances made in industrial reconversion were still blowing strong, and it appeared that many more ceilings would have to be retained than had once been expected.

The pressure feared by Mr. Bowles was readily seen in a recent action relating to citrus fruits. The OPA, anticipating a depressing force on prices as a result of a big crop, eliminated ceilings last month. Prices abruptly went up, more than doubling in some sections of the country. Prices remained high for a short time but eventually dropped back to levels close to those they had left. But wholesale and retail prices declined less than growers' prices and the consumer still has to pay more for his grapefruit than the OPA believes he should.

The already complex issue of price control was further complicated, and yet somehow illuminated, by the opposition Congressman who charged the OPA with perpetrating a hoax. The agency removed price ceilings on citrus fruit, he argued, because it knew what the result would be and because it hoped to use the rising prices as a demonstration of further need for control.

The OPA has not bothered, so far, to answer the charge. Yet a good many other charges will have to be answered and considerable dialectics parried if Chester Bowles and his several cohorts sustain a case for extension of the Price Control Act.

A LITTLE INFLATION

Still in the Government—chiefly in its legislative branch—are a few spokesmen for the school of thought contending that a little inflation would be good for us. Senator ROBERT A. TAFT, a shrewd student of conservative economics, is of that opinion, as undoubtedly are several of his colleagues who prefer, however, a greater degree of anonymity.

A similar view, with variations, was put before the Senate Small Business Committee this week. A dress manufacturer expressed the view that Mr. Bowles and his coworkers have fallen for a lot of humbug. With disarming frankness, he said he was willing to gamble that within 4 months after price controls were lifted prices would be no higher than the previous ceilings. Fearing postwar inflation gave credence to an economic bogy, no more and no less, he suggested.

It was before this committee on the same day, however, that a businessman broke with the majority view and pleaded for the extension of the Price Control Act for at least a year beyond its present expiration date. The witness, a Jersey City tobacco dealer, also assured a startled committee member that the OPA had not solicited his testimony.

TAFT VERSUS BOWLES

Senator TAFT's strategy appears to be based on the hope of eliminating price ceilings by undermining the public's confidence in them. But Mr. Bowles, with his charts and his history, does a far more effective job of showing what he thinks is likely to happen when ceilings are removed. Assuming the validity of his historical parallels, it is a frightening prospect.

The more familiar arguments of his opponents, consequently, do not attempt to question the essential value of price ceilings. They begin by asserting that the pull of industrial production, which means assembly lines pouring out millions of automobiles, refrigerators and radios, prevents inflation naturally by supplying the volume of goods which keeps prices down.

From here, this logic tries to show that price ceilings, by discouraging production, are doing more to contribute to inflation than to combat it.

CABINET SUPPORT FOR OPA

With few exceptions, the OPA has been able to show that, price ceilings notwithstanding, most industries fighting price control are amassing profits at an unprecedented rate. Where they cannot, the agency tries to make the necessary adjustments.

Support of Mr. Bowles' position in the crucial months ahead will come from several Cabinet members and the heads of most executive agencies concerned with the domestic economy. Secretaries Anderson, Vinson, and Schwellenbach are already on record for continuation of price control measures. So are Mr. Collet, John W. Snyder, Director of War Mobilization and Reconversion, and John D. Small, Civilian Production Administrator.

President Truman also is held likely to appeal for the life of the Price Control Act. Such support cannot help but be influential among the legislators who will act upon it.

It is very evident, Mr. Speaker, that the foregoing news item points clearly to one of the major political issues during the coming months. The politicians are going to be clever and they are going to manipulate things so that we will have no chance to vote on establishing some new and independent agency to control prices. Action on any legislative proposal will be delayed until the last minute and then, as in the past, we will be faced with the choice of taking OPA again, castor oil, epsom salts, and all of the rest of the stuff, or else—the "or else" conclusion that the politicians will suggest is that if you do not take OPA, you will get increased prices and inflation and a lot of other evil developments which nobody wants. My answer to that suggestion is that now is the time to give consideration to legislation which will protect the people against increased prices in the cost of commodities, in rentals, and in other matters. If we do that, we do not have to condone the mistakes of inexperienced Government employees. We do not have to adopt the OPA program that it is a crime to permit any-

one—farmer, laboring man, or a businessman—to make a profit. As I have outlined before, it means the destruction of our system of free enterprise if we are to take the position that in order to avoid an increase in prices we must see to it that no one makes a profit. That sort of a development just leads to a communistic condition where the Government has to take over all kinds of business. We do not want it.

PROPAGANDA AGENCIES BUSY

I am prompted to make these observations, Mr. Speaker, because the propaganda agencies are already busy. I am getting letters from different localities and from different individuals. Most of the letters read alike. It is evident that the people who wrote many of them have done so because they have been told certain things and they are, therefore, endorsing OPA. I am glad to get correspondence and to have the people write me and give me their views on public questions. That is not propaganda, that is not politics, but when you get a mass of circular letters signed in a great many instances by someone at somebody else's request, then you do have propaganda and you do have politics. Of course, this technique is ancient and has been used by politicians since time immemorial. Already Government officials are talking before groups of people throughout the country, pointing out the danger of inflation and then assuring these groups that OPA is the David which can slay the giant Goliath. What a twisting of the truth. What a perversion of facts. Yet, Mr. Speaker, it is clever propaganda that is being carried on by people in the employ of the Government of the United States at the expense of the taxpayers and it is being engineered and planned by officials in the office of OPA.

The truth does not need any such method to justify it. A Government agency that is worth while does not have to go about over the country and misrepresent the facts. As long as we are having congressional investigations, I think it would not be a bad idea to check up a little and see how much money the politicians are spending to cover up the mistakes of OPA and to try and convince the American people that this Government agency is a beautiful dream which will solve all troubles, real and imaginary, with which the American people might be afflicted. I still have, Mr. Speaker, some very clear-cut recollections of days when OPA adopted policies which caused food and meat shortages. I remember the protests that came to me from the housewives when they could not get meat for their husbands who were doing hard manual labor. That stuff took place under OPA. It was all unnecessary. The quicker we get rid of OPA and its desire to control the cost of production, the price of products, the habits of the American people, and the economic system of the country, just that much quicker will we get back on a basis where people can agair live their own lives in their own way. Then we will again have a free America.

Flight From Free Bargaining

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. CRAWFORD. Mr. Speaker, the organized minority monopoly now operating in the United States has acquired such proportions that most of the thinking people of this country are greatly concerned about our immediate future. I refer to the violent seizure of buildings, machinery, machine tools, communication lines, steel plants, packing houses, and other facilities now in operation and being proposed by certain organized labor leaders.

It would appear that this organized violence is under present Federal laws receiving a protection to a far greater degree than any other monopoly ever before enjoyed in the more than 165 years of the history of this Government.

When, under the direction of a labor leader, the buildings, machinery, and machine tools of a great industry are seized, and through this operation the production flow sheet ceases to operate and the flow of social income no longer runs, it all constitutes a violent attack against American ideals, institutions, and guaranteed freedom and liberty. For instance, when Reuther seizes the property of General Motors and holds it as a hostage until his demands are met, he in fact serves notice on the people in the vicinity where General Motors plants are located, that first, they cannot produce the goods, and secondly, that the people residing in other parts of the country cannot purchase and receive those goods that might otherwise be produced. Reuther in this manner violates all the rules of economic decency which have been generally accepted by our people as their protection under the provisions of the Federal and State Constitutions and the precedence of the courts of this land. If Reuther and those who operate concurrently with him can say to the man in North Dakota, "Thou shalt not produce and ship beef critters to Chicago for butchering and to be sold to the people of the country until you first meet the demands of my organized minority," then that constitutes a new philosophy which is of great interest to the people of this country If Reuther and his assocates seize the telephone lines and equipment of this country and precipitate a walk-out which deprives the people of the United States of the use of their telephones for which they pay in advance a monthly service charge, and if during the strike the cost of this service which is not being rendered must continue to be paid, that also is a great concern of the people of this country. If Reuther and his associates can deny the people of the United States the use of these utilities whether there be an incident of happiness or joy or death or birth or flood or tornado, or of some other character, that certainly is a situation of which the people of the United States must take cognizance.

The only protection there is for the people as a whole is in the free play of competitive forces. Goods of higher quality at a lower price can be obtained under competition, and in no other way. One of the great difficulties about this whole proposition rests in the fact that labor leaders and agitators have succeeded in so engineering our thought channels that little consideration is now given to the problems of all the people as consumers. In most every instance where any thought is given to the subject at all, that thought is directed toward the welfare of an organized minority of producers, instead of being directed toward the interests of all consumers, including those representing organized producers as well as unorganized consumers. The thought is given in behalf of a small group of occupational operators engaged in a certain factory or certain industry and as related to the particular practices of that particular unit of industry or the whole industry. The prayer is prayed in the name of a small organized minority as against an industrial unit or a whole industry. The prayer is not prayed in the name of all consumers as a class. In this way, legislation is proposed and enacted in the interest of some specific organized minority and against the interests of the general welfare of all consumers of the United States. This has all developed to a point where the organized minority-monopoly now goes along under the protection of Federal laws, and to a great extent enjoys the minority-monopoly benefit of violence of the first order.

December 17, 1945, Allen W. Rucker, president of the Eddy-Rucker-Nickels Co., business management counselors, of Cambridge, Mass., discussed certain phases of this subject over the radio, and for the benefit of those who care to know Mr. Rucker's sentiments, I submit his statement for the RECORD. In my opinion, Mr. Rucker has made a contribution at this particular moment which is so constructive that the people of this country cannot afford to ignore what he said. His statement, entitled "Today's Forgotten Man in Labor Disputes," follows:

The labor-management conference, from which so many had been led to expect so much by a fanfare of publicity, has failed. Its operation was very much like the Tennessee mountaineer's sawmill. Said a neighbor, "Bill's got a 50-horsepower whistle hooked up with a 5-horsepower saw. When the whistle is blowing, the saw is not cutting."

The conference was equipped with a 50-horsepower publicity whistle and a 5-horsepower saw. It cut no wood and the reasons are plainly these.

A handful of men from business and labor unions were asked to substitute their judgment on wages and hours for the democratic process of bargaining. Consider what that meant. In America there are over 2,000,000 nonfarm businesses with 40,000,000 employees. Those businesses are worth upward of $175,000,000,000. They are owned by some 50,000,000 thrifty people, many of them labor union members. How can a handful of men, any men, be expected to substitute their arbitrary judgment for the essential bargaining between these millions of people who own business and its tools, and the other millions who use those tools to

make a living? It is no wonder that the conference failed.

Exactly the same thing applies to the President's proposed "fact-finding" commission and to Governor Stassen's proposed economic conference. Both of these schemes are birds of the same identical feather—they are attempts to compromise the wage-rate issue by replacing free bargaining with the arbitrary decisions of a handful of men responsible to no one. If either succeeds, free bargaining among Americans is gone forever.

What, in plain words, are these labor conferences and commissions supposed to do?

They are supposed to appease the leaders of minority pressure groups by finding some sugar-coated way to compromise with the primary right of 50,000,000 thrifty Americans to own and manage their business property and to enjoy the legitimate competitive earnings therefrom. And the truth is there is no way to take arbitrarily from these thrifty people and give to others without substituting confiscation for cooperation and abandoning democracy for totalitarianism.

The life's savings of these 50,000,000 thrifty Americans, directly through ownership of corporate securities and unincorporated firms and indirectly through ownership of life insurance, savings accounts, trust funds, and annuities, are invested in the means of production—the land, buildings, and machinery used by business. These things are the tools of production. And the real owners of those tools are these 50,000,000 Americans who, through labor and self-denial, have accumulated the savings that have made the tools possible.

Now, every workman knows that the tools he uses are the source of his livelihood. Without a taxicab, the taxi driver would be no more than a ricksha boy; without the boring machine, the hydraulic press or the turret lathe, the machinist would be no more than a day laborer at a day laborer's scale of wages. Without tools of production, the users of tools could produce barely enough to exist.

Moreover, every workingman knows that tools are always wearing out, or becoming obsolete. In either case, the tools must be replaced with new ones. Throughout industry are thousands of tools that need to be replaced. These tools range all the way from battered old typewriters and adding machines to ancient trucks with broken connecting rods and sticky valves, and patched-up planing mills, boring heads and presses. If they are not replaced now, no power under the sun can maintain production enough to prevent a drop in the real earnings of working people, regardless of wage rates.

From where is the money coming to replace these tools?

There is just one source—the savings of some 50,000,000 thrifty Americans. These thrifty people, these tool owners, accumulate savings from what are erroneously called business profits. The right name for profits is "payments for the use and renewal of tools."

Unless these people are safeguarded in their right to receive legitimate, competitive earnings from their tools, they are just not going to put their life savings into replacing old tools and installing new ones. The situation is so serious now as to jeopardize the job security and pay, and the hope of future advancement of millions of working Americans. Note these figures:

Our own United States Department of Labor reports that in 23 out of 25 peacetime industries unit labor costs have risen all the way from 17 to 70 percent. Their tools are too old. That is not all. A recent study of the metal-working industries shows that 57 percent of machine tools owned by private business in New England and 54 percent of private business tools in the entire United States are over 10 years old.

By 1950, unless billions of dollars of savings are accumulated and invested by tool owners in new tools, as much as 75 percent of our tools will be over 10 years old. It needs no prophet to see what the end must be. If that happens, it will be impossible to maintain the annual production and the annual real earnings of American workingmen regardless of wage rates.

And to obtain those new tools so urgently needed, 50,000,000 thrifty Americans must be safeguarded in their right to receive payments for the use of their tools.

The incentive to save and invest in private enterprise rests solely upon that right. To deny or to seriously infringe that right is to destroy the incentive to thrift, and with it the source of funds necessary to renew and increase the tools of production.

Here lies the fundamental reason why business management, the responsible agent of 50,000,000 tool owners of America, resists every effort of any handful of men to dictate merchandise prices and payments for the use of tools. Business management is held morally, legally, and financially responsible by both its employees, who are the tool users, and by its own bosses, the 50,000,000 tool owners, to see that payments for the use and renewal of tools are continuously adequate. If management fails in that responsibility, there will be neither production nor pay nor job security and hope of advancement for millions of tool users and tool owners alike.

The President of these United States is therefore entitled to the earnest, vigilant, and vigorous support of every tool-user and tool-owner in a new policy that will safeguard the essential right of free bargaining. Any contrary policy which substitutes the judgment of a handful of men, any men, any time, for the bargaining of free Americans would deny this primary right to 50,000,000 tool-owners. Let me emphasize this:

The right of bargaining belongs quite as much to tool-owners who provide the mechanical energy of production as it belongs to the labor unions whose members provide the muscular energy of production.

Nonetheless, it has for many years been the persistent practice of the Federal Government to violate this right and to discriminate against our 50,000,000 unorganized tool-owners. And what has been the result?

According to official United States Treasury Department reports, it has been over 15 years since as many as one-half of corporations earned a taxable profit. With the exception of two or three war years, there hasn't been a year in the past 15 when more than one-half of corporations earned enough to make any payments to tool-owners for the use of their tools. Is it any wonder that thrifty people don't want to put their savings into new tools for production? Is it any wonder that in the absence of new tools, unit costs in 23 out of 25 industries have risen up to 70 percent above 1939; that 54 percent of the machine tools in private business are over 10 years old? It is no wonder at all.

When the Federal Government adopts any policy that undermines the fundamental human right to receive payments for the use and renewal of tools, it discourages investment to replace old tools with new tools, it hinders additions to the stock of tools and thereby obstructs the growth of production upon which the well-being and prosperity of everyone depends.

Unless, therefore, we encourage and vigorously support a square deal governmental policy that will safeguard thrifty citizens in their right to bargain for legitimate, competitive earnings from their tools, our future is dreary indeed. But, given such a policy the natural genius of Americans for thrift and risk taking will respond; new tools will replace old tools, and the American way of brains, sweat, and teamwork will carry us to the very heights of prosperity.

In our country's urgent need of such a square deal, it would be no surprise if 50,000,000 American tool owners should organize themselves into a union of their own for the purpose of regaining equality before the law; a union formed to reassert their fundamental human right to enjoy the fruits of their labor and self-denial; a union formed to reestablish their position as the primary source of the tools upon which depend the workingman's productivity, pay, and prosperity.

Certainly some such movement will develop to assure the continuous supply of tools. For without tools, without new tools, and more tools, there is no lasting job security, no strong prospect of a rise in annual real earnings, and no bright hope for the future advancement of our workers.

This basic national need cannot be compromised. It must be fulfilled. Its fulfillment now depends upon urging the President and the Congress a policy of encouraging thrift and risk taking by safeguarding the human right of 50,000,000 tool owners to be secure in their property and in the legitimate competitive earnings therefrom.

That kind of Government policy is in the primary interest not only of tool owners, but of our people in general and of our workers in particular; yes, in the very preservation of free bargaining itself. Our national genius for thrift and risk taking has provided the tools that have made this Nation the strongest and freest in all history; the blood and sacrifice of our sons and daughters have cemented that strength and freedom in democracy; it is our duty to keep it that way.

We must also press on and forward in the American way, with freedom of bargaining for all of us, and with brains, sweat, and teamwork by all of us.

An Example of Reason and Sound Sense

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. LUDLOW. Mr. Speaker, to the misguided world reformers who imagine that it is our duty to reach out and reform all of the peoples of the world so that they will conform to our concept of living, I commend an article by Lowell Mellett, the columnist, as a shining example of reason and sound sense. Salient extracts from Mr. Mellett's article follow:

Our homesick soldiers in Manila and Yokohama and Paris who are holding demonstrations against being kept longer in the Army seem disposed to make Robert Patterson, Secretary of War, the object of their wrath. But he is not to blame; nor is President Truman, from whom he takes his orders and who supports the War Department's demobilization plans; nor is anybody in particular, except the American people.

The American people are incurable reformers—of other people. Not satisfied with helping to give the Germans and the Japs the worst licking they ever got, we are now bent on reforming them—determined to make them over into fine, free, upstanding democrats like ourselves. At least we've embarked on a program with that end in view, and nothing seems likely to stop us unless our sympathy for the boys that want to come home gets the best of us.

This isn't a Truman program nor an administration program. It comes nearer being a truly national program that anything the Government has engaged in save the war itself. About the only dissenter I've happened to observe is myself, although Walter Lippmann has recently shown signs of losing any missionary zeal he may have had. Speaking of the difficulty experienced in carrying out our occupation policy in Germany, he remarked one day this week, "There was an alternative. That was to let the Germans reeducate themselves and to fix our attention upon making it impossible for them to rearm. It was a relatively simple thing to do."

A relatively simple thing to do and one not requiring so many hundrds of thousands of American soldiers to carry out. One that would permit a much more rapid demobilization of our wartime Army.

But that, up to the moment, hasn't been the American way. Our way has been to debate and argue over what we should teach the Germans and the Japanese and the ways and means of doing same.

* * * * *

What a field day the Republican-southern Democrat coalition in Congress would have if President Truman should ask for "must" legislation comparable to that which we are trying to make "must" in Japan. And yet if any member of the political alliance that has been blocking the President's domestic program has raised his voice against our much more radical program for Germany and Japan, nobody seems to have heard him.

It is just possible that the steadily increasing chorus of discontent coming from the troops overseas may serve to make the administration and Congress take a new look at this part of our foreign policy. We've been accustomed to say that our best ambassadors abroad are the troops themselves. It is from them, we have thought, that other peoples would learn the advantages of our way of life. It's a sound idea, but what are these peoples going to learn from troops that have only one firm conviction—namely, that they haven't any business being where they are, that they ought to be allowed to come home?

This is not to say that the troops have thought the matter through to any better purpose han the rest of us; most of them doubtless would consider the program perfectly satisfactory, if given to some other troops to execute. But the howl they are raising may accomplish something. It may cause the administration, the Congress, and leaders of American thought generally to reexamine a policy toward Germany and Japan that contains no possibility whatever of being successful in the long run.

Labor-Management Relationships and Responsibilities

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. COLE of New York. Mr. Speaker, for the last several months, and especially since the cessation of hostilities with Japan, it has been my desire to discuss in this Chamber certain aspects of labor-management relationships and responsibilities which I felt to be pressing and in need of thorough consideration by the Congress. However, my comment has been withheld for the reason that it seemed best and more advisable if the readjustments which seem to be necessary were to be accomplished through cooperative efforts by the leaders of industry and of labor and, if not by them, then through the influence and authority of the President and Government officials.

Ample opportunity has been afforded both of these forces to establish industrial harmony, but both of them have failed—failed miserably and completely. Several weeks ago the labor-management conference, called by the President, adjourned without the accomplishment of a single effective or constructive step in the effort to bring an end to labor strife. It was inevitable that the conference would not succeed for two quite definite reasons: First, that our Government has had no positive, clear, and impartial policy toward labor-management relationships; and, second, that the attitudes of the leaders of both groups were so completely hostile, irreconcilable, and unyielding as to make unlikely any agreement which would be fair to both groups. Until the leaders of industry and of labor come to a full realization and understanding of the responsibilities and obligations of each other and the community of interest which both groups have in the peaceful settlement of their controversies without the interruption of production and employment, there can never be reached a satisfactory solution through voluntary efforts and agreements.

After the labor-management conference failed, the President then took a hand and endeavored to effect a settlement by an appeal to the employer group that they yield to the demands of labor with the rather vague promise that if it were found that the concessions were too great some subsequent steps would be taken by the Government which would give to them a measure of relief—the effect of such a program upon the public was not discussed, if considered. As was to have been expected, the employer groups did not acquiesce to the President's plea. The promise of governmental aid in the event it should develop that they had yielded too much was so vague and indefinite as to make it unwise for them, in the light of their responsibility to their stockholders and investors, to take a chance.

Then, when it appeared that his appeal was ineffectual, the President, shortly before the advent of Christmas, urged to Congress that it take immediate action on his recommended legislation giving him authority to settle industrial disputes by means of fact-finding boards appointed by him which would have authority to inquire into the issues involved and the capacities of the employers to meet the demands of the workers. His recommendation was met by a storm of protest by both groups; it satisfied neither of them. So, the President has likewise failed.

It has now become completely apparent that no solution can be found either by the warring groups themselves or by the authority or influence of the President. The public, which inevitably is a silent third party to labor-management disputes and whose interests are paramount though most often ignored and forgotten, now demands action and the only way by which this action can be taken by the public is through its elected representatives in the various State legislatures and the Congress.

Hundred of thousands of workers in basic industries and services are killing time at home or in picket lines; more thousands threaten to walk away from their jobs every day. Work stoppages have prevented the production of goods which have been denied the public during the war years and for which there is an urgent and crying need. Only by a full, increasing, expanding, and uninterrupted production of goods can the physical and material needs of the American public be met and the acute danger of inflation and unbridled prices be averted. Some alternative to the strike must be found so that kind of production can be given full sway.

How much longer are we going to temporize with this situation? When will we have the courage to grapple with the roots of this problem? Others, who have the primary responsibility of finding the right solution have tried and failed. Now the responsibility rests squarely upon us and we must not delay in our efforts to find a satisfactory solution.

This problem is not one which has come upon us overnight; it is not one which has developed in recent months. Only recently have we felt, bitterly and acutely, the full consequences of our failure to grapple with the problem. At no time in the past, certainly not in recent years, have we faced squarely the issues of a sound labor policy, and then acted in the public interest. Until that is done, we shall continue to have labor strife of such character and volume as to bring permanent and costly injury to the economy of this country in the future.

Examine the statutes now on the books affecting labor relations with management and you will find a hodgepodge of laws, none of which is descriptive of a consistent and impartial national policy. Study the administration and judicial interpretation of some of these laws and you will find incontestible proof of the need for reform.

The present widespread industrial strife is the direct result of an attitude of preferment which the national administration has shown, during the past decade, toward organized labor. Ostensibly interested in the economic and social advancement of working men and women, they have granted them privileges and immunities not afforded other classes of citizens and deliberately exploited the political strength of labor for their own partisan purposes. Labor unions, growing with unprecedented speed, nurtured and protected by the Government, have gained unfettered financial and economic strength beyond that of any organized groups in this country. It is now within the power of one man to tell us how much coal shall be mined, how many automobiles shall be produced, how much steel shall be fabricated and what kind of music our ears shall hear and when.

It should be noted that in sponsoring such a development, the national administration caused the Government to abandon its historic role of arbiter or

umpire in disputes between groups and classes of citizens. Handling of the oil strike by the Secretary of Labor is clearly a case in point. Here, as in other disputes, the unions demanded a 30-percent increase in wages. The oil companies offered 15-percent increase. The Secretary recommended that the parties arbitrate—not the whole issue, but the difference between what the companies had offered and what the unions had demanded.

A generation ago the employer class, because of an abject attitude by the Government, was allowed to run roughshod over the rights and interests of the working class. Public indignation was eventually aroused to the point where national legislation was enacted to prevent such abuses and exploitation. Today, because of an active and positive attitude by the Government, the pendulum has swung to the other extreme and labor groups are in unbridled control of our economy. Once again the public demands action which will bring more nearly into balance these two dominant forces in our economic system.

An objective study of the disputes now in progress shows the complexity of the problem before us. Some unions are struggling to enforce rights which have already been satisfactorily established by others. There is a pronounced reaction among employers to continuation of practices, imposed during the war by governmental direction, such as the check-off and maintenance of union membership. Labor is trying to force into its ranks supervisory employees, and groups of agricultural workers which heretofore have not been organized as labor units. The basis of certain other disputes is solely a test of economic strength irrespective of the rights of the parties or the public interest which should be paramount. Obviously, in most instances, labor is demanding wage increases to offset losses in take-home pay due to shortened hours of work and down-grading.

Here we begin to see the national administration's two-faced policy on wages and prices. Unions were determined to maintain wartime wages regardless of the course of reconversion. The administration gave them full encouragement, first, by discontinuing all attempts at wage stabilization and, second, by giving public sanction to wage increases of 15 or 24 percent—take your choice—and the unions took 30 percent. These decisions meant facing one way with a vengeance—toward increased production costs, greater amounts of money in circulation, greater consumer buying power—in short, toward inflation.

But the administration had to have a price policy. Accordingly, it continued ceiling prices on nearly all commodities. The OPA immediately engaged in a deadly struggle with industries that demanded reconversion prices which would permit payment of wage increases for shorter hours of work and less production. These decisions meant facing the other way with a vengeance—toward lessened production, fewer capital investments, and smaller profits.

If I understand it at all, Mr. Speaker, this is the way I understand the administration's two-faced policy on wages and prices. It will not work, and it is only a question of time before we shall see which is the irresistible force and which is the immovable object.

Judging events of the future by the record of the past, I greatly fear that the forces of inflation and of labor bias will prove the stronger. The cost of labor is 90 percent or more of the cost of the things we buy and use. Add substantially to that cost by arbitrary means and we shall add inevitably to the price of goods and services. It would make Government regulation far more efficient than that imposed or displayed by the OPA to change that eventuality.

The one sure way out of this dilemma requires prompt resumption of production, particularly of the goods which are in great demand. In satisfying market needs, competition will be restored, prices will be kept in proper relation to purchasing power, and still permit the absorption of labor costs. But such a course cannot be followed with sufficient speed when strikes shut down our major industries and the mere threat of strikes halts most attempts to carry out the postwar plans which employers everywhere developed during the war years. Thus, we must admit a duty which most of us would probably prefer to ignore; we must develop a sound labor policy enforceable at law which will restore industrial peace.

Mr. Speaker, I confess my incapacity, and doubt the capacity of any one person, to introduce in this House today a bill which would fully carry out such an objective to the satisfaction of a majority of the Congress. Our collective judgment is essential. The broad principles of such legislation are sufficiently clear to permit discussion of them at this time.

I am convinced that one of the evils which lies at the root of this problem is the trend which has taken place in the last decade, through statutory expression and judicial interpretation, toward concentrating all authority and all responsibility in labor-management relationships in the Federal Government. There was a time when the States shared this duty with the Federal Government, each in its respective sphere depending upon the relationship of the particular industry with interstate commerce. Because of this dual responsibility, an opportunity was afforded for the testing of various methods of dealing with complex problems and through the process of trial and error, the best and most satisfactory solution eventually was adopted by the several States and the Federal Government and became uniform throughout the country. The gradual encroachment of the Federal Government upon the constitutional responsibilities of the States in this field has resulted in denying to the Nation this source of what might be termed "proving grounds" for acceptable labor legislation. This condition has reached the extreme when, through judicial interpretation, it is held that the manufacturer of electric power which is supplied to a lighthouse whose rays shone across State boundaries, is engaged in interstate commerce. There must be a reassessment of the respective responsibilities of the States and the National Government in the field of labor relations and a corresponding revival of State activity within those limitations.

A primary principle requires a definition, a new definition, of the rights of labor and management. They must carry commensurate responsibilities that will give complete protection to the public interest. If such a principle necessitates the chartering or incorporation of labor unions, I am prepared to vote for it. Only responsible parties should have the right to make a contract and they should have an appropriate character in the eyes of the law.

The principle of free collective bargaining should be upheld. By the same token, the fruits of collective bargaining must be preserved. This may require a new definition of contracts covering the collective services of a union. Such contracts to have value for either party must be as good an instrument as a contract covering the services of an individual.

It follows that there must be adequate provision for remedies for a breach of contract, available to either party, and to any other person who can show injury as a result of a broken contract.

The making of a new contract is a fruitful source of labor controversy. The Congress cannot legislate good faith which is an indispensable element in any negotiation but it can lay down simple rules of conduct which the parties must observe in order to preserve an orderly procedure and cause a minimum of public inconvenience.

When disputes arise under existing contracts, there are numerous methods which may be pursued in order to bring about a speedy settlement. Labor's only weapon today is not the strike; management's only weapon is not the lockout. I bespeak a more clear and prompt recognition of the mutual interests of both sides, and a more definite understanding of the effects of their claims and counterclaims upon the public. Such an attitude is simply good business and good human relations. When it prevails, voluntary methods of settling disputes can be successfully employed, and there is ample experience to show which methods are preferable.

It is only in these wild and senseless struggles for domination entered upon by irreconcilable elements in management and labor that the needs for stronger methods exist. I seriously question several which have been proposed.

In the Railway Labor Act provision is made, for example, for the formation of fact-finding commissions. Such a commission performs the function of an impartial investigator whose findings are expected to provide a basis for settlement. Enforcement is made a matter of public opinion. Fact-finding commissions have worked in railway labor disputes remarkably well. It is true, however, that railway labor is on the whole well disciplined and well led; moreover, wage demands which are always the most difficult can usually be passed on to the public in the form of publicly regulated increases in rail tariffs.

It does not follow that fact-finding commissions would work in labor controversies affecting diverse industries, even if such industries were restricted to those

deemed essential to interstate commerce. Similar conditions do not always apply and other factors must be taken into account.

Public opinion is a powerful force in any cause; but the same means that a fact-finding commission might use to arouse opinion in support of its position can be employed, perhaps more skillfully and effectively, by a dissatisfied party to upset the finding.

For many years, voluntary arbitration has been used successfully. Arbitration is essentially a peaceful means of settling differences; the notion that it should be made compulsory, although thoroughly repugnant even in extreme cases, might become necessary if no other acceptable method is found.

An argument against the compulsory system is the common practice of selecting arbitrators. Both sides usually choose their man and let them select a third. Thus, two advocates and one umpire are named, instead of three impartial and disinterested arbitrators. Arbitration, either voluntary or compulsory, would be better favored if labor and management could draw upon a national reserve of qualified experts on labor relations. A trustworthy authority, for example, the Supreme Court, could name a panel of experts and arbitrators for each dispute, could be selected by mutual agreement of the parties, or each select a given number of arbitrators from the panel. This method could be provided for by law, together with suitable safeguards against procedural delays. Awards of arbitrators would, of course, be made enforceable as a judgment of a court.

Compulsory arbitration has been denounced by spokesmen for labor and management alike. However, conspicuous cases have been settled by that method recently under pressure of State or Federal officials; where the public interest is vitally affected, any method which will bring industrial peace is apt to be employed.

But a sound labor policy cannot be developed, nor will it receive public support, if the methods used do violence to the objectives to be accomplished. A better means must be found then for settling fairly and promptly the major disputes which now appear inevitable.

I urge upon your consideration a system of labor courts in which such disputes could be handled or an extension of the jurisdiction of our Federal courts to permit a review of the findings by the Labor Board. Experience abroad justifies a belief in the efficacy of labor courts. Under a carefully drawn statute, these courts might be made to work in this country. At least, such an idea is well worth careful consideration and study.

The exercise of force and violence and intimidation is so thoroughly repugnant to the American sense of honesty and fair dealing as to make it illegal in the settlement or enforcement of labor controversies. A bill for this purpose, though passed by the House on two occasions, has been held in a committee of the other body of the Congress, assertedly upon the plea of the President.

Not only should labor organizations be held responsible for the contracts and commitments which they make, but the labor leaders and union officials should be likewise responsible to their union members for their acts. To accomplish this, it might be advisable to require union elections to be held at definite intervals, an independent audit of the union books provided periodically to each member, and such other regulatory requirements as might be necessary to protect the union member from the dishonest or unscrupulous labor official.

The principle of the closed shop by which an individual must belong to a certain union in order to take employment is not consistent with our way of life, especially when the union is permitted to charge exorbitant membership fees or allowed to arbitrarily reject an application for membership. No person should be required to pay tribute to any organization for the opportunity to work.

Many years ago the public recognized the evils and corruption which followed the practice of corporations making financial contributionss to the election of public officials and the Congress enacted a statute making this practice illegal, with severe fines for punishment. Fairness and impartiality requires that no greater latitude be permitted to labor organizations or associations in this regard.

There are many problems of a detailed nature which would have to be considered along with any comprehensive labor legislation. Most of them have been represented in separate bills to this House but, with few exceptions, they should not in my opinion be acted upon separately.

I reject the idea of a piece-meal approach to this, our most serious domestic problem. I seek to have written into Federal law a new, national labor policy. It must embrace the problem, fairly and temperately. It must be predicated upon a realistic understanding of present-day labor and industrial conditions, and a sound appraisal of the public's interest.

Such a law cannot be enacted in haste, neither shall noisy minorities delay or dissuade us from our manifest duty. Now, at once, we must settle to this task with all the wisdom all of us can muster for we shall need it if this job is to be done well.

Navy Department and United States Foreign Policy

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. ANDERSON of California. Mr. Speaker, on December 11, the gentleman from California [Mr. PATTERSON] addressed the House in connection with the policy of our Government toward the Netherland East Indies. Mr. PATTERSON made certain charges against the Navy Department and requested a prompt investigation by the House Naval Affairs Committee. As a member of this committee, I considered it my duty to ascertain, insofar as possible, the facts which my colleague desires. Accordingly I addressed a communication to the Secretary of the Navy requesting a full statement in reply to the charges made by Mr. PATTERSON. For the information of the House, I wish to include herewith, without comment, the reply which I have just received:

THE SECRETARY OF THE NAVY,
Washington, D. C., January 4, 1946.
The Honorable JACK Z. ANDERSON,
House of Representatives,
Washington, D. C.

MY DEAR SIR: This is in response to your letter of December 18, 1945, receipt of which I have previously acknowledged, in which you refer to the speech of the Honorable ELLIS E. PATTERSON in the House of Representatives on December 11, 1945 (Appendix of the CONGRESSIONAL RECORD, page A5426), and suggest the desirability of correcting the RECORD if the facts are not as recited by Mr. PATTERSON. I have looked into the entire question of the Navy Department's relationship to the Royal Netherlands Marine Corps. I believe the following paragraphs fairly summarize the Navy Department's actions with respect to the Netherlands Marines and am satisfied that examination of such actions will show that, although they originated from purely military considerations, they have at all times been thoroughly consistent with the foreign and military policies of the United States Government.

During 1943 the Netherlands Government approached the Combined Chiefs of Staff (British and United States) with a proposal for Netherlands participation in the war against Japan after the liberation of Holland. As a result, the combined Chiefs of Staff, having particularly in mind operations which might have to be undertaken against the Dutch East Indies to free them from the Japanese, determined in 1943 that plans should be made for such participation, and agreed that the United States should be responsible for the training and equipping of a brigade of Royal Netherlands Marines (about 5,000 men), while the British would assume responsibility for a substantially larger army contingent and for Dutch naval and air forces. Quite logically, the responsibility for the training and equipping of the Netherlands Marines was delegated by the United States Chiefs of Staff to the Navy Department so that their training and equipment might be closely similar to that of our own Marine Corps.

The Netherlands Marine Corps program was actually begun in 1943, and was accelerated shortly after VE-day when Dutch manpower became available but, even so, proceeded slowly since all available shipping was being utilized for transportation and redeployment of United States troops and because operations against the Netherlands Indies had not been assigned a high priority by the Combined Chiefs of Staff. However, by August 1945, about 5,000 men of the Royal Netherlands Marine Corps were undergoing training in the United States under the auspices of our own Marine Corps, the bulk of such training taking place at Camp Davis, N. C. Due to the shortage of shipping and the short time from VE-day to VJ-day, none of the United States trained Netherlands Marines had been shipped to the Far East by the time of Japanese capitulation on August 14, 1945.

In connection with the surrender of Japan, the responsibility for accepting the surrender of the Japanese in the Netherlands East Indies and contiguous areas was assigned to the South East Asia command, headed by Admiral Lord Mountbatten. This responsibility

included the tasks of disarming and removing the Japanese forces, of securing the surrender of Japanese equipment, of repatriating and liberating Allied prisoners of war, and of assuring the safety of civilians interned by the Japanese. It was entirely logical for the Kingdom of the Netherlands to desire to participate in accepting the surrender in this area of which it is the territorial sovereign. Furthermore, it was militarily desirable that it do so in order to lighten the load on United States and British manpower which would otherwise have been required to undertake the entire mission and, also, in order to make it unnecessary for United States forces to become involved in the liberation of these territories from the Japanese. Accordingly, the United States Chiefs of Staff supported the completion of the training of the Netherlands marines already in this country, but refused to accept in the United States the additional troops which the Dutch desired to be trained as replacements for the brigade of 5,000 men. The cost of this training was properly charged to lend-lease as a war measure and continued to be so charged until completion, as was permitted under the President's directive terminating lend-lease except for certain special categories. There is a possibility that the entire cost thereof may be recovered in the final settlement of lend-lease.

The equipment for the Netherlands marine forces presented a different problem from their training. Plans for procuring this equipment and delivering it to the Dutch under lend-lease had been perfected before VJ-day but it had not been delivered when lend-lease terminated. It is my understanding that the Netherlands Government sought to acquire the necessary equipment by negotiating a so-called 3-C agreement under the Lend-Lease Act, but that the Foreign Economic Administration refused to sanction their obtaining the necessary credit through such an arrangement. The Netherlands Government then arranged to pay cash for their equipment and supplies, many items of which otherwise would have become surplus and could have been disposed of at only a small fraction of their cost. The Netherlands Government was charged cost plus 10 percent for all equipment and supplies purchased; the additional 10 percent was to cover the cost of transportation within the United States to dockside. The estimated charges for equipment and supplies totaled $13,670,831.34 and the Netherlands Government has deposited checks for that amount in full. The equipment and supplies for the Netherlands marines have, therefore, been paid for in cash.

It is of further interest that the personnel of the Netherlands marines with their equipment and supplies, have left the United States in ships of Dutch registry.

That the Navy Department's part in the training and equipping of the Royal Netherlands marine forces has been entirely in keeping with the foreign and military policies of the Government is apparent from an analysis of the recent statement of the State Department on the Netherlands East Indies which was published in the morning papers on Thursday, December 20, 1945. The responsibilities of the troops under the Southeast Asia Command in connection with the Japanese surrender are there clearly set forth and it was to assist in these responsibilities that the training and equipping of the Netherlands marines, planned more than 2 years before VJ-day, was completed. To do otherwise than to assist in the completion of their readiness which had been undertaken by our Chiefs of Staff, would have been contrary to the military interests of the United States, and might well have been considered as an affront by our ally, the Kingdom of the Netherlands.

I believe the foregoing résumé of the Navy Department's part in the training and equipping of the Netherlands marines places the picture in the proper light and do not feel that anything would be gained by discussing the details of Mr. Patterson's speech. You may feel free to use this letter in such manner as you deem appropriate in order to clear the record. I am sending a copy of it to the chairman of the House Naval Affairs Committee for his information.

Sincerely yours,

H. STRUVE HENSEL,
Acting Secretary of the Navy.

Radio Address of Hon. Fred Bradley, of Michigan

EXTENSION OF REMARKS
OF
HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my radio broadcast which was put on the air over Station WSOO, Sault Ste. Marie, Mich., on January 8, 1946; Station WMAM, Marinette, Wis., January 6, 1946; and Station WDBC, Escanaba, Mich., January 9, 1946:

Probably because of its importance, one of the most urgent problems the Congress is going to have to face when the second session of the Seventy-ninth Congress goes into action on January 14 is the so-called British loan. Technically, just how this matter will be handled is still in doubt on Capitol Hill. Of course, it is common knowledge that the State Department has gone right ahead, presumably with the approval of the White House, and negotiated a so-called loan with Britain which has been overwhelming accepted by the British Parliament but without, however, the support of Mr. Winston Churchill and many of his cohorts. In other words, what has been done down here in Washington by our State Department is a "rule of thumb" method adopted by Mr. Roosevelt and his New Dealers many years ago of committing the United States Government and the people who make up that Government to a definite foreign commitment and then expect Congress to rubber stamp it. I repeat, just how this rubber stamp is to be applied is another matter but, personally, I feel at the moment I shall not be a party to that rubber stamp and I will tell you why in a few minutes.

This proposed loan to Britain is not a treaty—therefore, is not subject to ratification by two-thirds of the Senate alone. More probably there will be a bill introduced in the House—which under the Constitution has the sole authority to spend your money and reach into your pocketbook and take the money away from you in the form of taxes to meet those payments. When such a bill is introduced in the House it may be referred to any one of several different committees for study and debate; namely, naturally the internationally minded Foreign Affairs Committee, or the Banking and Currency Committee—which handled the Bretton-Woods proposition—or the Ways and Means Committee—which takes the money out of your pockets in the form of taxes—or the Appropriations Committee which spends your money for you. Once it passes the House—which is likely in view of the overwhelming New Deal—internationalist membership—it would then have to be concurred in by the Senate.

Presumably, the old argument will be used that the White House, acting through the State Department, has already committed this country and there is nothing we can do about it but vote for the bill. I said a few minutes ago that I intended to speak and vote against it—and now I am going to tell you why.

Let us look at the deal which the British have more or less quietly agreed to accept with some misgivings for their own future. This deal—as I choose to call it—or as you have heard of it as a loan to Britain—has been agreed to by our State Department. It's a huge international poker game in which we put up the chips and Britain deals the cards. It was promoted and put through by Lord John Maynard Keynes, whom you will recall came over to this country in the early days of the New Deal filled with grandiose monetary ideas which brought forth a warm welcome from the White House. It was Lord Keynes who advised the early Roosevelt administration that the best way to get out of the depression was to spend our way into prosperity. He was the first advocate of the "priming the pump" policy. He was the man who told us that no matter how high our internal debt ran it was not actually a debt because we were simply owing it to ourselves; that we never need pay it, and that the interest on it was not a burden because we merely took it out of the right-hand pockets of the people in the form of taxes and put it in their left-hand pockets in the form of interest. And that reminds me that I have always admired, and do admire, British statesmen. They are always honest with themselves and their people and with all those with whom they deal. Above all, they are the foremost realistic nationalists in the world—they are for Britain first, last, and always. As Mr. Winston Churchill so admirably stated one time, "I was not made Prime Minister to preside at the liquidation of the British Empire"—therefore, I say that in the present instance I do not blame Lord Keynes, Winston Churchill, Mr. Attlee, Lord Halifax, or anyone else, or the British Empire itself, for pulling the wool over our eyes. I do say, however, the wool is being pulled over our eyes and you people back home better know it because the wool is being pulled over our eyes by the State Department of the United States Government and you might as well know it—or if you have known it before you had better come to a better realization of it. Now, let us look at this so-called British loan for a minute and see what it exactly provides.

It provides, first of all, that we shall liquidate approximately $25,000,000,000 worth of lend-lease material and equipment that we sent over to Britain to prosecute the late war for roughly $650,000,000. That is a pretty sharp trade. When the lend-lease program was on the floor of Congress we were told it was lend-lease. In other words, when I lend my neighbor my lawn mower to cut the grass I expect him to either return it in as good shape as I lent it to him, or I expect him to give me something in exchange for it in a comparable value, or I expect him to pay for it. To me that is what lend-lease means, and we have carried on lend-lease all over the world. As you will recall, the provisions of the initial program provided that the President would send our sum and substance anywhere in the world where they would help to defeat our mutual enemy—but I still insist that we were repeatedly told that this was solely on a lending basis and that we would be repaid in money, or in kind, or in services. I want to get that clear in your minds because I will return to it in the line of present evidence.

Now, here is Britain who has gotten $25,000,000,000 of lend-lease—which is over 50 percent of everything we lend-leased to the entire world and our statesmen in the State Department propose a settlement of 2½ cents on the dollar which is a pretty fair settlement for Britain but even the settlement itself contains plenty of jokers. For instance, we

are told that we can—at any time—demand payment from Britain of $50,000,000 a year on this total amount of $650,000,000—but does that come back to the United States in cash—oh, no—not one penny of it. It specifically provides that the "Government of the United States will use this money exclusively to acquire land or to acquire or construct buildings in the United Kingdom and the colonial dependencies (that is the entire British Empire) for the use of the Government of the United States and for carrying out educational programs in accordance with agreements to be concluded between the two Governments." Now, just what does that quotation from the agreement mean. It means two things. We will either use that money to build grandiose new American embassies or other installations in the British Empire for the use of our own Government, or we will use it for a tremendously expanded Rhodes scholarship program. What do I mean by the latter? Well, simply the cleverest scheme ever invented by the thoughtful mind of one man to insure the perpetuation of the British Empire. When Sir Cecil Rhodes died many years ago he left a large endowment fund providing for the annual education of 96 American students in the famous Oxford University of England. Naturally, these British-educated young men return to the United States thrilled with the greatness of the British Empire—with its tremendous international scope—because you will recall that the sun never sets on the British Empire—and most of them have devoted their time ever since preaching the doctrine that America must forever be the guardian of, rather than the step-child, of her parent country of Britain from whom we thought we gained our independence back in 1776. They are in the driver's seat in the State Department today and I will give you just one illustration. When I was at the Food Conference in Hot Springs, Va.—at which time UNRRA was born back in May of 1943—our principal State Department spokesman, and who is now the Under Secretary of State, was Dean Acheson, who was a Rhodes scholar. He ate every meal with the British at that conference—not with the Americans. He played tennis with the British, he lived, dressed, and talked like the British, and that reminds me of another thing. Personally, I am getting sick and tired listening to the "cheerio's," "right-ho's", etc., down here in Washington—and the British accents and mannerisms which we are constantly met with. It's a new, but costly, fad

And so there is where your $650,000,000 are going, folks, to promote that stuff—to be sure, not that America shall continue to live but that the British Empire shall survive. Oh, yes, many of you fathers and mothers right now are sending letters to me wanting to know why your boys do not get home sooner from those far-flung places all over the world. Many of the boys themselves—and the girls—want to know why they cannot be demobilized sooner. Let me answer that in this fashion. There is no demobilization going on at the British Purchasing Commission right today. It is running bigger than it ever ran—every window in that tremendous building at Eighteenth and K Streets in Washington still has its lend-lease purchased air-conditioning unit sticking out to gawk at American citizens who pay the bill for it, and now we are going to liquidate all of that and pay for it at 2½ cents on the dollar. So that is the first phase of the situation that makes me boil. The sun shall never set on the British Empire—your boys are tending to that today.

The second phase of this so-called British loan is the fact that our State Department has committed us to give them $3,750,000,000 of your money in the form of credit to be used to put them back on their feet financially, and presumably to increase prosperity in America through the improvement of world trade. Well, let us look at that for a minute. I hope there is a butcher, or baker, or candlestick maker listening in to this program. Supposing I came into your store and I said, "Look, Buddy, you and I were out last week fighting a forest fire that threatened our entire town, and I lost some of my money in that fire, and I know you did—but you have a store here with a lot of groceries in it, and I am hungry—so I want to buy $5 worth of groceries and I want you to loan me the money. I am never going to pay it back, you understand"—and let us not kid ourselves on that point either because that is history—and so I have the storekeeper give me $5 worth of credit and I receive $5 worth of groceries. The point I want to make is this—how is he ever going to put those groceries back on the shelf—he must pay someone for them, and you Americans will have to pay with your cold dollars for that $3,750,000,000 worth of credits that we are pledged to give Britain presumably to purchase commodities in this country.

Now, how do they justify that? Let me quote from Mr. Sydney Campbell, financial editor of Reuter's, a British news agency. Last July he stated: "Britain would almost certainly refuse any such loan, however big it might be or however low the interest * * * they are rather mystified as to why Americans trouble to discuss the matter. A grant-in-aid would, of course, be accepted." Now, mind you, I am quoting Mr. Sydney Campbell, of London, who went on to say, "Britishers would regard that in terms of the United States and possibly others of the United Nations taking over their fair share of the common war debt, which is at present piled on Britain's back alone." And that is a very fair attitude for the British in their view, but let me remind you of two things, Britain's debt today is about double what it was before this war started. Our debt in the 7 years I have been in Washington has increased from less than $40,000,000,000 to its present $280,000,000,000, and of course the major portion of that went into this war, so I think we have paid our part, not only in dollars, but in blood.

The statement has been frequently made that we owe a debt of gratitude to Britain and the rest of our allies for holding the line until we got ready. My friends what do you think we would have been doing if our own Nation was invaded as was Russia—or threatened with imminent invasion as was Britain. Fight, of course; we would have fought and we would not have cared who was getting ready. The fact of the matter is when it came time to lick the Germans on the soil of France we furnished 75 percent of the manpower and we did 100 percent of the job in the Pacific. And yet today your boys that you want home are standing guard in the Pacific and are standing guard in Germany to protect the interests of the British, of the Dutch, of the French—of everybody else in this world—that is why they are not coming home any sooner.

And remember this: This $3,750,000,000 of British credit is to be loaned them at 1.62 percent, without any guaranty whatsoever to insure its eventual repayment, and that 1.62 percent of interest that they presumably will pay us comes out of your pockets, friends, in the form of taxes which cost you about 17 percent on every dollar you earn. And how are you going to float it? There is only one way and that is to take it out of your own pocket in the form of a new loan—"dollars for Britain" and that is not all—soon it will be dollars for Russia, France, China—and dollars for every other nation on the earth if this loan goes through and Congress rubber stamps it.

Ladies and gentlemen, when you sent me to Congress I took an oath to uphold and defend the Constitution of the United States and to protect it against all enemies, domestic or foreign, internal or external. There was nothing in my oath that commits me to preserve and protect the British Empire.

Is This Their Reward?

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. ROONEY. Mr. Speaker, the situation that confronts the presently returning war veteran is nothing short of desperate. When he seeks employment, after being tossed from pillar to post, the best the average dischargee can find is a job which will return him little more than the amount of his weekly unemployment insurance. When he attempts to find any sort of home for his wife and child or children the best he can get is talk of the State taking over some empty barracks. And when he tries to start a small business and looks to purchase surplus Government property which this Congress decreed he is entitled to buy, all he gets is, to use the vernacular, the run-around.

It is now practically 5 months since cessation of hostilities, and the situation is not getting any better. I trust that we shall all bear this in mind by immediately passing legislation designed to remedy these vital matters.

I suggest that we read and heed a newspaper article entitled "Is This Their Reward?" by Sidney Fields, which appeared in yesterday's New York Sunday Mirror. The article follows:

ONLY HUMAN

(By Sidney Fields)

Remember us? We went out to sweat and suffer, to fear and die, and the air was full of fine promises.

Remember us? We sweated and suffered. We feared and died. Then we got the big "Welcome home" signs.

Remember us? We're the young, the cream of the Nation. Nine years of depression. Four years of war. We left you all the lush opportunities of the boom war years.

Remember us? We're Americans. No damned charity. We want a job, a chance to earn our way. Our wives and kids want to breathe, too. And we want a place to live in just a little bigger than our old fox hole.

Remember us?

MONOLOG IN MISERY

Every door is slammed in my face. I'm Lewis C. Lingle, 26, a vet with 4 years in the Navy. Radio communications man. Convoy duty, air raids, sub attacks, three invasions—north Africa, Italy, Normandy. A wife, one 9-months-old kid, another one coming. And I can't get a job.

My wife doesn't say much. That's her way of cheering me up. She used to work in a war plant. Lived with her folks. Now we live in a one-room apartment and kitchenette. Just an alleyway. Couldn't have gotten that if her father wasn't superintendent of the building.

Our little bank account just isn't anymore. We're living on the $20 unemployment insurance and the mustering out checks. After we get the second one this month—God knows. It isn't pleasant thinking of moving in with the folks. I've just got to keep pounding at those locked doors.

No sense answering newspaper ads. Sixty cents an hour. We could all starve comfortably on that. I have to take the $20 and look for a better job. I've hit every

civil-service application I could fit into. Now I wait. Every job-hunting vet goes to the United States Employment Service. I've been going there since my discharge, last November. You're supposed to come back once a month. I get back more often.

It's a run-around. They place 1 out of every 4 vets, and 60,000 of us in the city are getting unemployment compensation. You sit around all day waiting to talk to someone. When you do, nothing happens. Meanwhile, you're supposed to live on $20 a week.

Why do we rate this? Where are the promises? I'm sore. Sore at the casual way they treat us at the Employment Service. Sore at the Government and the guy who offers us a job we can starve at. They sure sent us away fast enough. But they're in no hurry to take us back.

DON'T FENCE ME IN

You'd tear your hair, too, if you had to crowd your wife and baby and yourself into the same three-room apartment with your father-in-law, mother-in-law, and sister-in-law.

We all have colds. The baby is constantly sick. My father-in-law is a night worker and has to get up at 1 a. m. Cozy.

My name is David Saunders. War record? Private to second lieutenant. Three and a half years' service; 1 year overseas. Two bronze stars. I should have taken my CPA exam when I graduated NYU in 1941. But the Army had other ideas. I'm an internal revenue agent now.

Since my discharge last May we've been hunting for a place to live. Four visits to the housing commission. One offer—a cold-water flat. Swell, with an infant. They told my wife not to be so particular. We wrote Mayor LaGuardia and got a form-letter answer referring us to the housing commission. My Congressman says it's a local problem. Want ads. Real-estate agents. Fantastic rents we can't afford, even if we could pay the inevitable bribe to the superintendent.

Why wasn't all this foreseen by the big brains who run the show and made all the vote-catching promises? The OPA blames the builders. The builders blame the OPA. And the Housing Commission is always holding big conferences.

Listen. Vets and their families will need 3,000,000 homes by the end of 1946. Since last October 1,200,000 vets live doubled up. Lots of them have in-law trouble. There's going to be a lot of broken homes.

We built roads and bridges and buildings and anything they wanted overnight in the war. What's happened? Say, I'd even live in one of those converted barracks—if I could get one. But I don't see anyone who stayed behind rushing to rent one.

A SCARCITY OF SURPLUS

For 1 year I've tried three times to get some surplus property and start my own business. Don't know who gets all the surplus stuff. But the veterans aren't getting it.

I'm George Abo. No glamorous war record. In the Army 13 months. Discharged a year ago with a leg injury I got in service. Don't draw a pension. Never traded on my injury. Nor did I ever trade on the fact I'm president of the New York chapter of the American Veterans Committee. We're a young, vigorous group, and do it all the honest way.

My business is men's wear. Had 8 years of it before the war. With my bad leg and a business that keeps you outside I needed a car. Applied for one over 6 months ago. No word from them since. All vets who needed them have had the same experience. Who's getting them?

Last October the War Production Board said over 4,000,000 yards of parachute nylon were surplus. I wanted some desperately. Fifty letters and papers and applications and waiting endless hours to see some big shot. No luck.

I heard of one vet who took off his discharge button, applied through ordinary channels and got 67,000 yards of it. Must be a curse to be a vet.

Two months ago I filed for 5,000 yards of woolens, pleaded, badgered, traced my application to Washington, phoned there. Nothing. It's all crazy. They dump jeeps into the Pacific, and burn clothes while half-naked Filipinos beg for the stuff. Here we get lots of promises and no performance. They remembered us when they needed us, and forgot us when they didn't.

GI bill of rights? My foot. So far it's a GI bill of wrongs.

Criticism of H. R. 3462 by Commerce and Industry Association of New York Offers Strong Arguments in Favor of Passage of the Bill

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I include first of all a report of the Commerce and Industry Association of New York, Inc., concerning my bill, H. R. 3462:

The Commerce and Industry Association of New York submits the following report regarding the Voorhis bill, H. R. 3462, to amend the Clayton Act, now pending in Congress before the Committee on the Judiciary of the House of Representatives.

The Voorhis bill would amend the Clayton Act, entitled "An act to supplement existing laws against unlawful restraints and monopolies and for other purposes," approved October 15, 1914, by adding thereto sections 27, 28, 29, and 30.

Section 27 authorizes the United States to intervene as a party in any action in which the validity, scope, or infringement of any United States patent is involved, provided that, in the court's discretion, such intervention will promote the public interest.

Section 28 requires that various enumerated patent transactions, past, present, and future, be reduced to writing and be filed with the Attorney General within certain prescribed time limits. It also provides for a heavy penalty for failure to file.

Section 29 is the heart of the Voorhis bill. This section declares illegal any use of a patent or patent application or of any interest therein which extends the monopoly granted by a patent beyond the invention covered by such a grant. The section specifies as illegal any use which limits or restricts the licensor or any licensee, or the assigner or any assignee, with respect to the following:

1. The amount of any article he may produce;

2. The price at which he may sell any article;

3. The terms and conditions on which he may sell any article;

4. The purpose for which or the manner in which he may use the invention or any article produced thereunder; or

5. The geographical area in which he may use the invention or produce or sell any article.

The penalties provided by this section are quite drastic, viz:

1 Such illegal use shall render such patent or patent application null and void, and shall be so adjudged by any court having jurisdiction under the antitrust laws, civil or criminal; and

2. Every person who violates this section or who engages in any combination or conspiracy to violate this section shall be punished by a fine not exceeding $5,000 or by imprisonment not exceeding 1 year, or by both.

Section 30 creates the right for a party in any proceeding involving a violation of the antitrust laws or involving a patent or any interest therein, to show the invalidity or the limited scope of any patent or patent rights involved.

From the above résumé it is clear that the Voorhis bill is very broad in scope, carrying severe and significant implications for all businessmen who are in any way concerned with patents. Presumably the bill is leveled at certain practices current in patent-license practices, which the administration, primarily through its Department of Justice, believes to be antisocial and illegal as an unlawful restraint and monopoly. To some extent the bill is a codification of existing law as developed by recent court decisions.

The Voorhis bill is designed to be a "cure-all" of all the evils alleged by the administration to be existent in patent-license agreements and practices, both domestic as well as international. For an exposition of the administration's indictment, see the monograph written by Mr. Corwin D. Edwards, Chairman of the Policy Board, Antitrust Division, Department of Justice, entitled "Economic and Political Aspects of International Cartels." This study was made for the Subcommittee on War Mobilization of the Committee on Military Affairs, United States Senate, pursuant to Senate Resolution 107, a resolution authorizing a study of the possibilities of better mobilizing the national resources of the United States.

An immediate effect of the bill, were it to be enacted into law, would be to condemn all present patent-license agreements which allocate, justly or unjustly, markets, industrial fields, or production, or regulate prices and sales terms or restrict either party in any way. This would, of necessity, cause the revision and rewriting of most existing patent-license agreements.

The policy of our laws has been and still is to encourage and to stimulate new inventions. History has shown that this policy has proved beneficial to the industrial progress of our Nation. The monopoly granted to an inventor by our patent laws is, in nature, a reward and an incentive. This monopoly is a valuable property right which is intangible and exists for a limited period (17 years). Of course the right of ownership of a patent is subject to the requirement that the property be so used as not to infringe the rights of others. The patent owner has the right to license others to produce under his patent. However, a patent-license merely providing for the payment of royalty but containing no other protection to the patent owner, would limit the patent owner's reward solely to his royalty and would, in the nature of things, reduce the amount of the royalty. To forbid a patent owner to allocate geographical areas in which his licensee may produce or sell any article would stifle most patent-license agreements since a patent owner would, by his own act, be thereby setting up his own competition. Moreover, to a certain extent the rewards of the inventor would thereby be limited and diminished. The reasonable effect of all this would be to discourage new inventions and thus retard our industrial progress. The patent owner should not be restricted solely to his royalty; he should not be stripped of various rights which he may employ to increase and enhance his royalty.

Corporations spend countless hours of time as well as fortunes of money in research, i. e., the development of new inventions, methods, and processes. A mere royalty, as restricted by the bill, is insufficient to recompense, let alone reward, such enterprises. The foreseeable effect of the Voorhis bill would be to cause many corporations now carrying on expensive and vast research activities to cease such endeavors. This, again, would hamper our country's industrial progress and position in world affairs.

The very broadness of the language of the bill renders the meaning of the provisions of the bill unclear and uncertain. Were the bill to be enacted into law it would be the subject of much litigation. As an example, what is the precise meaning of "any use which extends the monopoly granted by a patent beyond the invention covered by such a grant"?

The Commerce and Industry Association of New York opposes the Voorhis bill, H. R. 3462, to amend the Clayton Act, now pending in Congress before the Committee on the Judiciary of the House of Representatives.

I have quoted in full the report of the Commerce and Industry Association. Now let us consider a few facts about the patent system and the bill.

The patent system of the United States was established by article I, section 8, of the Constitution. It provides: "The Congress shall have power to promote the progress of science and useful arts by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries." Despite this unequivocal statement of purposes, patents frequently have been used to retard the progress of science and useful arts; to prevent the development of technology and the introduction of new processes and new products.

It is the purpose of H. R. 3462 to provide a method for correcting certain patent abuses and by so doing to strengthen the operation of the patent system as a whole. The bill provides that patents which have been intentionally abused shall be rendered unenforceable. The bill does not seek any radical changes in the patent system, such as compulsory licensing. Evidence which has been accumulated over the years, in hearings before the Congress and in scores of cases brought by the Department of Justice, offers abundant testimony of patent abuses in many industries. Since a patent is a privilege granted by the United States Government, if this privilege is shown to have been used contrary to the constitutional purpose for which it was granted, then the Government which bestowed the privilege has the duty to withdraw it for the good of all the people.

In coping with the problems of the postwar period, this country must lead the world by demonstrating that a democratic economy can provide full employment, full production, and freedom of opportunity. American business will find its role rendered difficult if it is confronted with markets and fields of technology closed to new enterprise by arbitrary restrictions. It is imperative, now that victory has been won, to lift all possible restraints upon initiative if we are to achieve the peacetime levels of production and employment which are necessary to the successful operation of our economy. Where patents expedite the attainment of these ends, as they were originally intended to do, they will definitely aid in the expansion of new industries. Where patent practices are employed to destroy or impede opportunity, these practices must be eliminated. It is essential, if the public interest is to be safeguarded, that protection be provided against improper uses of patents. Where improper uses occur, the privileges bestowed by the patent grant become subject to cancellation, and that is what H. R. 3462 proposes to do.

It is inconceivable that anyone should contend that in addition to the monopoly for 17 years, the patentee is entitled to the further privileges of price fixing and production-quota arrangements which by law are denied to manufacturers and sellers of unpatented products.

In all other important respects, as the Commerce and Industry Association of New York points out in its report, the bill is merely "a codification of existing law as developed by recent court decisions."

The association criticizes the bill on the ground that the language, "any use which extends the monopoly granted by a patent beyond the invention covered by such a grant," is too broad and might be subject to various interpretations. This criticism certainly is difficult to understand since the very words quoted above are the same ones used repeatedly by the Supreme Court in rendering opinions in cases involving patents.

For example, in *Morton Salt Co.* v. *The G. S. Suppiger Co.* (314 U. S. 488 (1942)) the Supreme Court stated:

> A patent affords no immunity for a monopoly not within the grant. * * * The public policy which includes inventions within the granted monopoly excludes from it all that is not embraced in the invention.

In *Mercoid Corp.* v. *Mid-Continent Investment Co.* (320 U. S. 661 (1944)) the Supreme Court held that—

> It is the protection of the public in a system of free enterprise which * * * denies to the patentee * * * the power to use it in such a way as to acquire a monopoly which is not plainly within the terms of the grant. The necessities or convenience of the patentee do not justify any use of the monopoly of the patent to create another monopoly. The fact that the patentee has the power to refuse a license does not enable him to enlarge the monopoly of the patent by the expedient of attaching conditions to its use.

In other words the language of the bill is nothing more nor less than what the Supreme Court has already declared repeatedly to be the present law. This brings us to the very heart of the controversy which has been raging with regard to this bill.

The whole purpose of the bill is to provide certain protection for the American public against practices already repeatedly declared to be illegal by the highest Court in the land. Arguments against the bill, therefore, constitute primarily a contention that while these practices are illegal, nonetheless no penalty should be imposed against them. This is, indeed a strange doctrine and one entirely foreign to American principles of good government. An illustration of this point of view, however, is found in another portion of the report of the Commerce and Industry Association, for they state that—

> An immediate effect of the bill, were it to be enacted into law, would be to condemn all present patent-license agreements which allocate, justly or unjustly, markets, industrial fields, or production, or regulate prices and sales terms or restrict either party in any way. This would, of necessity, cause the revision and rewriting of most existing patent-license agreements.

I should like to underline the words "justly" or "unjustly." In other words, the association appears to contend that the bill is wrong because it would condemn patent-license agreements which unjustly restrict production, regulate prices and sales terms, or allocate markets. This is equivalent to saying that if a corporation owns a patent the law should not interfere, no matter what kind of monopolistic practices they engage in. Such a doctrine is obviously untenable in a civilized society, particularly one which professes to believe in economic freedom.

From a broader point of view, however, it is important to observe once again that the right to engage in monopolistic price fixing or production restrictions is denied to American business generally under the antitrust laws of the Nation. It is true that the granting of a patent gives to the holder of that patent a 17-year monopoly on the process or article involved, but it is not true, as contended in the report of the Commerce and Industry Association, that the granting of a patent entitles the holder thereof to use his patent monopoly as a means of stifling the trade and commerce of America by taking to himself powers far beyond the scope of the patent grant as such.

The passage of H. R. 3462 would strengthen, not weaken, the patent system of America, for it would deprive monopoly power in this country of the means most frequently used today for stifling competition and shutting the door of opportunity in the face of small business.

Radio Address of Hon. Fred Bradley of Michigan

EXTENSION OF REMARKS
OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD I include my latest radio broadcast, put on the air over Station WSOO, Sault Ste. Marie, Mich.; Station WMAM, Marinette, Wis.; and Station WDBC, Escanaba, Mich.:

This last week I spent two very interesting days in Cleveland where I attended the second annual conference of licensed officers who operate our Great Lakes steamers. The principal speaker at the banquet was the famous Vice Adm. Marc A. Mitscher who made such a wonderful reputation in the Pacific. His first Pacific assignment was in command of the aircraft carrier *Hornet* which on that particular mission was charged with the responsibility of sending Gen. Jimmy Doolittle and his intrepid

fliers on their way to bomb Tokyo. Later, of course, he commanded the famous Task Force No. 58—one principally composed of our largest and fastest aircraft carriers whose pilots literally blasted the Japs out of the skies of the Pacific. He said that when the first atom bomb was dropped, Japan had been thoroughly whipped in the air, on the sea, and on land and the dropping of that first bomb merely gave the Japanese military commanders the perfect excuse to sue for peace and yet—as they thought—save face with their own people. Admiral Mitscher is an extremely personable man and having met him and chatted with him intimately it is very easy to see why all of those who served under him claim that he is not only a great fighter but one of the finest and most tolerant, and most fearless leaders of men that our Navy has ever known. Marc Mitscher is going down in history; he is going down in history alongside of the names of men like Dewey, Decatur, and all of those great Navy heroes of the past. He is a great man and a fine man to have met with and have talked with intimately and personally. I will give you an example of him—one of his young pilots happened to be present during the banquet, and also one of the boys who served under him. After the banquet Admiral Mitscher insisted that both of these boys come up, sit down and have a chat with him. Marc Mitscher is really a seaman's man and an airman's man as well.

The principal object of these annual meetings of the licensed officers is to get together to exchange mutual ideas on how to improve their unparalleled record for moving gigantic tonnages of raw materials and also to exchange mutual ideas with the Coast Guard to improve the regulations governing their operations and, above all, to promote safety at sea.

With the latter thought in mind, therefore, it was but natural that much of the conference should center around one of the greatest of wartime secret inventions and its future application to Great Lakes steamers to promote that safety at sea by visual means. Therefore, radar—and I will spell that for you r-a-d-a-r—was the all important subject matter of this conference. The famous radar—some secrets of which are being made public for the first time—is simply a radio device that sends out radio waves from the ship and when those radio waves strike an object a small proportion of them rebound and are then picked up by a sensitive radio receiver on the same ship—in the same equipment and over the same antenna—and are transmitted, in turn, to a visual indicator known as the scope. This scope is about 8 to 12 inches in diameter and on it the navigator of the ship sees a constantly changing silhouette of everything around him. Now, there is a time element that enters into this picture also. The time element permits the radar to accurately put right on that scope the exact distance the object is from the ship which originally sends out the radio waves which, in turn, receives it—and so the navigator has before him this accurate silhouette. In effect it is just exactly the same as one would see if he were out on a moonlight night in a rowboat on a small lake and if he were familiar with the outline of the shore line could then very easily distinguish where he was and, naturally, he would know how to proceed to his destination. An experienced operator can tell from these silhouettes on the scope not only the location of the shore line but also the location of buoys and other aids to navigation, and also can distinguish from the size of these silhouette markings the size of other objects like ships that may be in the vicinity. He does not get a picture of the ship but he knows from the silhouette on the scope exactly what type craft it may be or whatever obstacle may lie in his path or around him. Seven different radar manufacturers had exhibits at this meeting which were very interesting indeed. Radar experts from the Coast Guard and from the Lake Carriers' Association discussed the various types of radar instruments in considerable detail and explained the possibilities of its use to improve the safety of navigation on the Great Lakes and also stressed the present limitations in the use of radar. It has some limitations, too. In its present state of perfection it is not an absolute panacea to insure safety of operation at all times. It will pierce darkness, it will pierce fog, it will pierce storms—but it requires expert judgment in its use, just exactly the same as it requires experience and good judgment to operate any kind of craft on sea, land, or air at all times and especially by silhouette at night.

On Thursday morning a most interesting conference was held between representatives of the vessel operators and some of their captains and radio technicians and their engineers—the Coast Guard experts were there, too, and about 30 representatives of the 7 different companies who were represented. The purpose of that conference was to set before the electrical technicians—those wizards of electronics for these manufacturers—just what navigation problems are before a Great Lakes captain; just what he would like to have the radar perform for him; and, lastly, and perhaps more important than anything else—just how the radar could be installed on the various types of Great Lakes vessels. The sending and receiving antenna, for instance, of the average radar weighs at least 200 pounds. In order to increase its effective range it should be located as high as possible above the water because the radar can "see"—and I quote that word "see" because, in effect, that is what it does—only to the horizon. Therefore, the higher one puts it the greater the horizontal range. On huge ocean ships radar might be able to see 100 miles or more, but we do not need any such extreme range on the Great Lakes. We would like to see perhaps 30 miles at a maximum, but of much greater importance to a Great Lakes captain is to be able to see very accurately—such as during stormy weather—just where he is in some of our channels which are so extremely narrow that if a 600-foot vessel were to veer off of its course even as much as 10 degrees, it could very easily find its bow and stern aground at the same time thereby effectively plugging that channel to the passage of all other steamers, and if one were following too closely behind, it could very easily cause a most serious collision. Then there is another very important situation that the skipper runs up against and that is when he is going into some relatively narrow breakwater opening. If he could see clearly ahead, just what those openings are and exactly where they are, he could enter the harbor with extreme safety.

The Great Lakes vessel owners expect to install a number of various types of experimental radar in the near future and, naturally, will watch its performance with a tremendous amount of interest. From these experimental installations the manufacturers, themselves, will undoubtedly learn how to improve them, how to perfect their accuracy and to build them more closely to the operating requirements of our Great Lakes vessels. The interesting part of this conference over at Cleveland was the fact that for the first time those who used the equipment were telling the manufacturers what they needed to satisfy them rather than the manufacturers handing them a "cold deal," saying, "Here it is—you use it to best advantage." In this instance the manufacturers wanted to know what the problems were and they will set out now to solve those problems.

The Coast Guard, in turn, will undoubtedly set up certain shore installations designed to send out radio beams over the Lakes. They have coined a name for this proposed installation which they call Ray Mark. Now, here is exactly what the Ray Mark will do. It will simply be a radio lighthouse. When you are out sailing there are certain lighthouses that have what is called a fixed light. Some have a fluctuating light—or one that goes off and on occasionally. This can be done with radio just as well as with a fixed light. In the lighthouse this light may be white, red, or green but it is visible all around the horizon at all times and when a skipper is coming up on course night or day it is his practice to take a 45 degree bearing on that light; in other words, taking a line on it 45 degrees off his bow and then carefully calculating his time while holding the same speed and compass direction. When he gets abreast of the light he knows from his previously calculated speed he can then accurately determine exactly how far off the light he is. With the Ray Mark installation and a radar aboard his ship, therefore, in the stormiest of weather or in the blackest of night—or the heaviest of fog—he will be able to determine his position in exactly the same manner.

The Coast Guard cutter *Mackinaw* has been conducting practical experiments in the application of radar on the Great Lakes ever since she went into service a little over a year ago. Being a military ship she could put on the latest type of equipment and secretly experiment with it. The skipper of the *Mackinaw*, Commander Edwin Roland, told me that he finds no difficulty whatsoever in navigating our very narrowest channels in the Detroit River, in the St. Marys River, and elsewhere in any kind of weather without aids to navigation through the proper application of radar. I predict a great future for the use of radar on the Great Lakes and I assure you that this conference in Cleveland was most informative to everyone who participated in it, and I think we have made a great stride toward the ultimate goal of attaining perfection of safety of life and property at sea.

With the thought in mind that this very important, as well as very interesting, subject should be more widely understood by the public at large, I propose to ask for an immediate congressional investigation by our own Committee on the Merchant Marine and Fisheries of the possibilities of using radar for the purpose of protecting life and property at sea.

Sometime ago President Truman made a radio broadcast to the people of this Nation. Among other things he protested the activities of some pressure groups who seek to influence legislation in the Congress and then in the next breath he did recognize the existence of these pressure groups who had been in support of him and said that some of them had let him down in his program which explains the present mess that we are in. Then, he turned right around and outlined his proposed legislative program and condemned the Congress as a whole—more particularly, certain committees of the Congress, for their failure to act more promptly on his legislation and he requested the people of this country to talk to their Congressmen when they were home during the recent recess—and if they did not locate us there—to write us letters demanding prompt action on his program. In other words, he personally sought to create the greatest pressure lobby that Congress has ever known. Well, what is the answer? As for myself, I have received exactly six letters so far and by and large they are entirely opposed to the program. I have talked with many of my colleagues and I think they would tell you the same thing—most people are opposed to it.

The Increase of Real Wealth Is Not Automatically Accomplished by Corresponding Increase in Money or Credits So as To Enable the New Wealth To Be Consumed by the Community Which Has Received It

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. VOORHIS of California. Mr. Speaker. I am very pleased to include with my remarks herewith a editorial published in the Pomona (Calif.) Progress Bulletin for December 29. 1945, entitled "Peace, the Burning Issue," and written by Mr. Dewitt Mackenzie, an Associated Press world correspondent.

I should like in this connection to point out that the argument which Mr. Mackenzie advances to the effect that the central problem of modern industrial society is the failure of nations to provide for an automatic increase in purchasing power in the form of money whenever the production of wealth is increased, is precisely the same point that I have been stressing since I first came to Congress in 1937. It is gratifying indeed to be able to include this editorial for this reason:

PEACE, THE BURNING ISSUE

(By Dewitt Mackenzie)

LONDON, December 29.—Preservation of world peace is a burning issue in this England which so recently was at bloody grips with the Nazi monster, and the debate has been given fresh impetus by the auspicious Big Three parley in Moscow and the impending meeting of the United Nations Organization assembly here.

One of the most unusual approaches to this subject I've encountered comes from Sir Richard Paget, distinguished British scientist, with whom I discussed the matter. He holds that peace depends primarily on the solution of two problems, one economic and the other judicial, and on the economic side his ideas are a sizzling challenge to economists.

"The economic problem," he told me, "is that of discovering the best machinery for enabling every nation to use and distribute the wealth-producing powers; that is, their power to produce goods and render services to the utmost and to exchange their surplus wealth with other communities which need them, without artificial restrictions of any kind.

"This will need many changes in the present economic system and can, I believe, only be arrived at by an intensive scientific research to be carried on by teams of the most intelligent economists, statisticians, psychologists, historians, legal experts, etc., working with the same freedom, team spirit, and intensity as that which produced the atomic bomb.

"At present it is not an exaggeration to say that nobody in the world knows how the problem of the production and distribution of real wealth could be handled. Man's powers of production have completely outstripped his orthodox methods of handling the problems of exchange and distribution of real wealth by means of monetary tokens, etc. A better and more scientific method is urgently required.

"Thus it is obviously crazy that the world's best metal for fine craftsmanship—gold—should be laboriously extracted from the earth at great expense of manpower and then be reburied in the vaults of the national banks. Gold should, of course, be used for the development of a real golden age by the world's finest craftsmen.

"It is equally crazy that the great manufacturing nations should be constantly striving to export more goods and services than they import, and that any sudden accretion of real wealth should be looked upon as a national danger, to be guarded against by tariffs.

"In this particular case the reason is clear. The increase of real wealth is not automatically accompanied by a corresponding increase in the tokens of real wealth, that is, money or credits, so as to enable the new wealth to be consumed by the community which has received it. Hence such tragic anomalies as the burning of surplus wheat, the ploughing in of cotton, the throwing of miraculous draughts of fishes back into the sea.

"So long as tariffs, currencies, and monetary questions are dealt with as matters of international politics and rivalries, there is little hope that a rational and scientific solution will be found, and the risk of future wars will continue to increase.

"Intensive scientific research might find the proper solution in 2 or 3 years—instead of 20 or 30, if ever."

Sir Richard believes that the judicial problem is that of discovering a method, "that of selecting from among all the nations a panel of men and/or women of the greatest wisdom, courage, clarity, and impartiality, to form a world supreme court to which all nations would be willing to submit their gravest differences and accept without question the decision of the court."

This world panel, he said, should be made strictly on the merits and without any question of national representation.

"With the discovery of rational economic system and a truly impartial world supreme court," he declared, "the prospects of world peace would be very good."

There Is a Call for Clarification of the 1939 Reclamation Law

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. MURDOCK. Mr. Speaker, on November 29 last year when the first deficiency bill was being read for amendments under the 5-minute rule in the House, our colleague, Congressman ROBINSON of Utah, made a point of order against the language in that bill commencing on page 30, line 15 and continuing on page 31 down to the end of line 6, on the ground that it was legislation on an appropriation bill. The point of order was sustained and the language was stricken out. As chairman of the Committee on Irrigation and Reclamation I agreed with Congressman ROBINSON that the language in the appropriation bill was subject to a point of order, and I was pleased to have it taken out of the bill that day.

However, in the subsequent debate, the reasons for the presence of that language which had been written in by the Appropriations Committee, were explained by various members of the Appropriations Subcommittee on the Interior Department bill. The chief reason mentioned was that a solicitor in the Department of Interior had recently made a ruling, thought to be erroneous, on the provisions in the Reclamation Act of 1939 covering hydroelectric power rates for reclamation projects to make repayments. Members of the Appropriations Committee who voiced their sentiments that day felt that the solicitor's ruling on the act of 1939 violated the intent and purpose of that act. While admitting that the language stricken from the appropriation bill was properly subject to a point of order, they had taken this means of calling attention to a lack of clarity in the 1939 law as it pertains to power rates and the repayment of power costs on such suitable parts of reclamation projects given over to power production.

When questioned about my attitude in this matter I was free to admit that commercial power costs on reclamation projects should be repayed to the Government with interest and expressed my belief that such was the intent of Congress—at least of the House Committee on Irrigation and Reclamation—when the act of 1939 was being considered by our committee. Naturally I also expressed my view that policy should be determined by Congress rather than by solicitors in a department, and that if the act of 1939 was not clear, Congress should take steps to make it clear. I felt then, and feel now, that any needed modification of the act of 1939 in this or any other respect should be carefully considered by the legislative committee having jurisdiction over such matters, that is, the Committee on Irrigation and Reclamation. To that end I have called a meeting of that committee for January 24 at 10 o'clock, and scheduled hearings on Congressman ROBINSON's bill introduced today amending the Reclamation Act of 1939.

Because this is a controversial matter, and so vitally affecting the whole cause of reclamation, I am anxious that we shall hear at length from the Bureau of Reclamation, from any department of Government interested in power, and also from those Members of Congress or other persons interested in reclamation or in power connected therewith who feel the need of clarifying the law.

Without expressing an opinion whether the Solicitor's ruling properly interprets the law of 1939, or modifies it contrary to the intent of the lawmakers, I must say that this is an interesting matter to me personally and one vital to the cause of reclamation. While I have reread the law of 1939 and I have studied the Solicitor's ruling on the law, I am trying to determine whether the Solicitor's ruling on the language in section 9 (c) of the law is correct. It seems to me that the Reclamation Committee, made up of some eminent lawyers, of which I am not one, ought first to decide whether the Solicitor has correctly

read and interpreted the act of 1939 on repayment of power costs. What does the law of 1939 in section 9 (c) really provide with regard to the fixing of commercial power rates on reclamation projects?

What is my personal attitude in this matter? I am tremendously interested in promoting reclamation throughout the 17 Western States. I am more interested in the use of water to vivify or revivify the land and thus produce life, both animal and vegetable, throughout the semiarid West, than I am in any other use of that precious water. Second to that, I know full well that we cannot have full utilization of our scarce supply of water without a multiple use of it, and that means we must produce hydroelectric power in great quantities and at the cheapest possible cost at which it is economically feasible to be produced. Throughout the 43 years during which reclamation has been transforming the West, hydroelectric power production has gone hand in hand with the other phases of irrigation. As we develop bigger irrigation projects it is becoming increasingly necessary that irrigation and power production go along together. If we cannot have power production as a part of irrigation, certain otherwise feasible projects become unfeasible and we simply could not have them. Any move made to hamper production or distribution of hydroelectric power in connection with irrigation would be a terrific blow, and possibly a fatal blow, at some projects of reclamation. This close relationship must grow closer in the future as the projects become greater, and incidentally more expensive.

The contention has been made that if the law of 1939 is to be as the Solicitor ruled it, such will be sanctioning a deception so that reclamation will be subsidized through power rates that are too low and that such subsidy comes out of the pockets of the American taxpayers. Now, I want to say right off that I am not in favor of any conniving or scheming to subsidize irrigation through power at the expense of the taxpayer. I do not want to deceive anyone, or attempt to do so. I do know that reclamation must be carried on by the Government, or it will not be carried on. I dislike to call the Government expenditures for reclamation a subsidy, for such expenditures are really investments in wealth-producing developments and every cent which the Government expends on irrigation is reimbursable and comes back to the Federal Treasury.

My effort shall be to try to prevail upon the Congress to invest wisely and generously in these western developments of reclamation which build up communities and create such rich taxpaying units and wealth-producing areas, representing a hundred-fold the Government's initial investment. How to do this with equal fairness so as to aid reclamation and power production while duly safeguarding the established interests in power and the long-run interests of the American taxpayer is the purpose of the committee hearings on this bill, H. R. 5124, introduced today by Congressman ROBINSON of Utah.

Resolution on Profit Sharing

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mrs. LUCE. Mr. Speaker, the way to make a man conservative is to give him something to conserve. Profit-sharing plans tend to do precisely this.

The way to save the capitalistic system is to increase to a clear majority the number of Americans who can honestly call themselves capitalists. Profit-sharing plans tend to do precisely this.

The way to induce a sense of personal responsibility in the workingman toward the tools of production which he handles, and his own role in the productive system of the industry in which he is employed, is to give him some ownership in the tools, and a monetary stake over and above his fair and adequate daily wage, in that industry. Profit-sharing plans tend to do precisely this.

Today there is a disastrous economic and moral error common both to capitalistic states, like the United States of America and Great Britain, and collectivist states, like Soviet Russia, that labor, that is, the sweat, skills, efforts, intelligence of the working man are a commodity to be bought and sold, depending, in capitalistic states, on the so-called laws of supply and demand of the labor market, and in totalitarian states on the utterly arbitrary will of the state bureaucracy. The way to destroy or rectify this error is to establish clearly and finally the principle that the workingman is at all times and in all circumstances entitled to participate at two levels in the wealth of the community which his labor creates through production: First, at a wage level and a wage rate which must be adequate to his human needs, and not posited on the inhuman fluctuations of labor supply and demand; and, second, at a profit level and a profit rate which should be a fixed percentage of the profits of the industry or business for which he works.

Profit-sharing plans tend to destroy or rectify this most evil of modern economic errors, which has it that by and large no man who works with his hands or for daily wages is entitled, over and above his daily wages, to share in the wealth which his hands, or skills, or brains have helped to create.

Mr. Speaker, because of the failure of leaders of industry, government, and labor to rectify this basic error in our so-called free-enterprise system, they have condemned millions of our working people to the status of economic wage slaves, and today all of industrial America has become a vast arena, in which two hostile armies are engaged in bitter conflict, concerning the price of the commodity called labor. Both armies fight with the lowest of weapons, force, violence, espionage, smear, and propaganda.

Today, labor, having through many, many long years been on the defensive, is now in the deserved ascendancy, and capital properly, after so many abuses, is on the defensive. But labor's effort to key up the price of labor to a shortage of supply is merely repeating the basic error that labor is a commodity which was made by capital in the days when capital tried to key the price down because there was a surplus.

However successful organized labor may seem to be in the next few years in achieving its so-called wage demands, the repetition of this error will in the end lead to the same disaster as threatened us when capital was in the ascendancy; the break-down of the American free-enterprise system into collectivism. And with the state as employer, the workingman will have stepped from the frying pan of unregenerate capitalism into the fire of degenerate capitalism—which is communism or fascism. For the workingman is not free when:

First. The state can arbitrarily command his bodily services at wages which the state fixes, or force him to a dole, starvation, a firing squad, or a concentration camp.

Second. Private employers can arbitrarily command his bodily services at a wage which they fix—or leave him to starve or seek government aid.

Third. Labor leaders can arbitrarily command his bodily services at wages or on terms which they fix; or exclude him from the possibility of finding work of a character for which he is fitted.

He is free only when his relation and his labor leader's relation to their employer or employers is that of true partners—that is to say, profit sharers.

For the above reasons, I have introduced the following resolution today on profit sharing:

Resolution introduced by CLARE BOOTHE LUCE, of Connecticut, on January 14, 1946, to authorize and conduct a survey of experiences in profit sharing

Whereas the prevalence, persistence, and intensity of strikes and labor disputes are symptoms indicating that the establishment of a new principle of relationship between labor and capital which will win public support is urgent if industrial peace is to be restored and maintained; and

Whereas a fair and equitable distribution of the fruits of industry is a basic condition of a just and healthy capitalism; and

Whereas the profit-sharing principle provides a rational method for dividing the fruits of industry at the source where wealth is created; and

Whereas Senate Resolution 215, introduced in the Seventy-fifth Congress to conduct a survey of experiences in profit-sharing, resulted in extensive hearings on this subject; and the committee findings are of continuous importance in view of the present strike-ridden industrial scene, as witness the following paragraph from the Senate Committee report;

"The committee finds that profit sharing, in one form or another, has been and can be eminently successful, when properly established, in creating employer-employee relations that make for peace, equity, efficiency and contentment. We believe it to be essential to the ultimate maintenance of the capitalistic system. We have found veritable industrial islands of 'peace, equity, efficiency, and contentment,' and likewise prosperity, dotting an otherwise and relatively turbulent industrial map, all the way across the continent. This fact is too significant of profit sharing's possibilities to be ignored or depreciated in our national quest for greater stability and greater democracy in industry.

"The profit-sharing ideal, as an ideal, is invincible. The subjoined hearings and analysis present indisputable evidence to sustain this contention."

And whereas the outbreak of World War II, with the freezing of our economy for war production, halted the work of this committee and made its completion in wartime inexpedient; and

Whereas the report clearly indicated that it was the work of future Congresses to determine proper legislative means by which there could be created a wider diffusion of ownership through contracts of partnership in industry between employer and employee, in times of peace: Therefore be it

Resolved, That the House Ways and Means Committee, or any subcommittee thereof, is authorized and directed to complete the studies made under Senate Resolution 215, introduced in the Seventy-fifth Congress, and report to the House upon all existing profit-sharing systems, between employers and employees now operative in the United States with a special view (a) to the completion of an authentic record of experience which may be consulted by employers in the postwar period who are interested in voluntarily establishing profit-sharing plans; (b) to the consideration of what advisable contribution, if any, may be made to the encouragement of profit-sharing by the Federal Government, including the grant of compensatory tax exemptions and tax rewards when profit-sharing is voluntarily established; (c) to the consideration of any other recommendations which may prove desirable in pursuit of these objectives, including the enactment by the Congress of profit-sharing legislation; and be it further.

Resolved, That for the purpose of this resolution the committee, or any duly authorized subcommittee thereof, is authorized to hold hearings; to sit and act at such times and places during the sessions, recesses, and adjourned periods of the House during the Seventy-ninth and succeeding Congresses; to employ such experts and clerical, stenographic, and other assistants; to require by subpena or otherwise the attendance of such witnesses and the production of such books, papers, and documents; to administer such oaths; and to take such testimony and to make such expenditures as it deems advisable. The cost of stenographic services to report such hearings shall not be in excess of 25 cents per 100 words. The expense of the committee, or any duly authorized subcommittee, which shall not exceed $25,000, shall be paid from the contingent fund of the House upon vouchers approved by the chairman of the committee, or the chairman of any duly authorized subcommittee thereof, and approved by the Committee on Accounts.

Educational Benefits Provided for Veterans of World War II

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, I have this day introduced before this House of Representatives a bill to extend the educational benefits provided for veterans of World War II by part VIII of Veterans Regulation No. 1 (a) to widows of such veterans.

The principle of the bill is simply this—that by this legislation I propose that the widow of any person who served in the active military or naval forces of the United States on or after September 16, 1940, and prior to the date of the termination of the present war, as proclaimed by the President or specified in a concurrent resolution of the Congress, and, second, either died in service or was discharged or released from active service under conditions other than dishonorable after having served 90 days or more, exclusive of any period he was assigned for a course of education or training under the Army specialized training program or the Navy college training program, which course was a continuation of his civilian course and was pursued to completion, or as a cadet or midshipman at one of the service academies, or was discharged or released from active service by reason of an actual service-connected injury or disability—his wife shall be eligible for and entitled to receive education or training under the provisions of part VIII of Veterans Regulation No. 1 (a) as amended.

The bill further provides other conditions. The purpose is, however, to give to the widows of diseased veterans an opportunity for an education or the completion of an education under the revised GI bill in order that they may carry on in the support of themselves as well as in the support of their children.

Demobilization of the Army, Navy, and Marine Corps

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. SPRINGER. Mr. Speaker, I take this time to advise the House that I have introduced a resolution, today, asking and requesting that the War Shipping Administration give to the Congress the full and complete information regarding the demobilization of the Army, Navy, and Marine Corps, and the vessels now employed in transport duty carrying our troops from foreign shores to our own country. This question of demobilization is a most important question, and there are vast numbers of our boys, in all branches of the service, with ample points for their discharge, but it appears that many ships have been taken out of transport duty, some of our ships have been turned over to foreign countries for transport duty for those countries, and many of our ships are standing idle in the many and various ports throughout the world while our boys await the opportunity to secure transportation back home so they may secure their discharges. This situation has created great dissatisfaction among our boys who are still in the service, and it is highly essential that this situation be immediately rectified.

Mr. Speaker, the boys who are still in the service write to their Congressman or to their Senator, urging that something be done to correct this bottleneck in bringing our boys back home who are entitled to discharge. These boys are homesick, they are despondent, and they are angry because of this unusual delay in returning them home to their families, and so they may again resume their work either in school or in civil life. The fact is, these boys with some 3 or 4 years' service in the late war, with citations and decorations denoting the major part they played in this war, want something done about this delay and they want to know who is responsible for it; they want to come home. There have been a number of demonstrations staged at various places by soldiers, sailors, and marines—and it is hoped that these will not in any manner jeopardize our country's position in enemy territory. Congress wants to do something about this situation, but there is certain information which has not been ascertained, and that is the specific information I seek to secure by the resolution I have offered. This information is essential before the Congress can tell, with certainty, just what should be done in this highly important mattter.

Mr. Speaker, three newspaper articles have appeared in the Washington Daily News upon this same subject. Under unanimous consent, I insert each one of these three articles as a part of my remarks, which are as follows:

[From the Washington Daily News of January 1, 1946]

"FORGOTTEN" UNITED STATES VESSELS GATHER BARNACLES IN FAR PACIFIC PORTS

American harbors on the far side of the Pacific are jammed with scores if not hundreds of "forgotten" merchant ships loaded with enough unneeded war cargo to supply a revolution in every Central American country, it was learned today. At Saipan alone, one day earlier this month, 41 loaded vessels were awaiting reassignment.

Of these 41, a letter by a mercnant seaman to a Washington newsman reveals, some had been there since June. Others had arrived in August. Later, arrivals had straggled in from closed-down island bases, adding to the dismay of servicemen waiting for empty ships to take them home.

The Navy currently knows of 1,239 cargo ships in the Pacific, but has no break-down on those traveling homewards, those still carrying necessary occupation cargo, and those acting as floating warehouses for war goods now as useless as down featherbeds in Tahiti. By Navy figures, a cargo ship's upkeep is $2,000 to $2,500 per day, counting wages, supplies, and all. That would be nearly $3,000,000 per day for 1,239 ships.

TWO HUNDRED PROTESTS A DAY

Congressmen, newsmen, and the Maritime Union are sharing the protest mail from the Pacific. The Mead Committee has dug part way into the situation, and a House Naval Affairs Subcommittee will dig deeper after the recess. The mail's proportions may be judged from a union's report that its Saturday mail bag brought 200 complaints from seamen.

A War Shipping Administration official admitted today that "we've been after them (Army and Navy) for some time" to release ships for commercial use. He was aware, too, that merchant seamen were sick of sitting in the Pacific harbors and "I don't blame them." He understood, however, that the Army-Navy shipping program was "being coordinated," and that pretty prompt action in sending the ships back could be expected.

The letter to the Washington newsman was signed by a seaman, who wrote:

"My vessel has been a member of this forgotten fleet for almost 4 months. We were

at Ulithi for 2½ months, and have been anchored at Saipan for 42 days.

"No one can tell us when we can expect orders to take our cargo to a forward area or return to the States. There have been a few ships returned to the States, but the number is negligible. All of us are at a loss to understand this gross mishandling of these ships."

LOT OF VICTORY BONDS

In 4 months of limping around the Pacific or rusting in harbor, the seaman-writer's vessel has added at least $240,000 to the cost of World War II. That is a big chunk of Victory bonds.

Compared to his ship, the writer said the *Guatemala Victory* was lucky. It had been waiting around Ulithi and Saipan only 43 days; a deck officer said it was loaded and left the United States after the war was over, because "no one thought of canceling our shipment."

The same deck officer said he knew of at least 15 other ships that left at the same time or later. He blamed "brass hats and gold braid conflicting orders, red tape and Navy business as usual."

"THEY ALSO SERVE—"

War Shipping Administration's customary designation for ships in the *Guatemala's* status is "awaiting orders." The *Adolph Sutro, Chelsea Victory, Henry Durant,* and *Andreas Honcharenko*—all mentioned by the letter writer—were thus explained. The *Alma Victory,* after 116 days of waiting, recently was reported by the WSA as assigned to United States coastal shipping. However, WSA has no record it has left Saipan.

Some forgotten ships are more correctly forgotten and lost. WSA answers "not known," for instance, when asked whereabouts of the *Beatrice Victory,* the *Chief Charlot* or *Edward R. Ripley,* last reported at Guam or Saipan in November. The Pacific is a big place, and a ship is so small.

[From the Washington Daily News of January 8, 1946]

"FORGOTTEN FLEET" UNDER THREE-WAY FIRE

Developments were threefold today in the "forgotten fleet" situation which has kept hundreds of war cargo-laden merchant ships riding anchor for weeks and months at a time in Far East ports and even close at home ports awaiting rerouting orders.

1. The Maritime Commission said it was conducting a campaign to recruit seamen to replace those rendered hors de combat by the fact that several thousand crew members are tied up in harbors with their ships. The members, incidentally, are all on full wages in one of the country's best paid occupations.

2. It was disclosed that Admiral Emory S. Land, in one of his last gestures upon turning in his resignation as Commission Chairman and War Shipping Administrator, had written the War and Navy Secretaries demanding immediate action to unload the ships and free their crews for other pressing assignments.

TO ASK PROBE

3. Representative RAYMOND S. SPRINGER, Republican, Indiana, promised he would offer a resolution to investigate and get these ships on active duty immediately the House reconvenes.

With merchant seamen in the far Pacific area literally on the verge of nervous breakdowns because of enforced idleness, the Army-Navy Petroleum Board announced that the "current dearth of personnel available to man War Shipping Administration tankers" was causing "critical fuel and gasoline supply shortages affecting United States forces overseas." Admiral F. J. Horne, Board chairman, said that less than 1 month's supply is on hand for occupation forces in Germany and this will shrink to 15 days' supply unless sailings are expedited immediately.

Warming up to a reporter's offer to tell its side of the case, the Maritime Commission cited chapter and verse on typical tied-up ships which aroused Admiral Land's concern.

The steamship *Christopher Gadsen* left Italy October 30, anchored off Cape Henlopen at Lewes, Del., November 19, was still waiting to unload late in December. Nine other Liberty ships in a similar predicament were anchored beside her.

Among others aboard the *Gadsen* was an Army lieutenant who had been overseas for 2½ years and had 90 points discharge credit.

MAN WITHOUT COUNTRY

For 3 weeks, the Maritime Union's Washington headquarters was informed, he's been sitting aboard this ship staring at the shores of Delaware wondering if he will ever make it. We also have a United States Navy gunner aboard who is eligible for discharge but is in the same position.

The ship had not even been allowed to pass quarantine and no shore leave could be granted.

On board another ship in the group, the steamship *Oliver Hazard Perry,* an armed-guard unit of 11 enlisted Navy men—six eligible for discharge—and an Army sergeant with 60 points were "prisoners" just 5 miles from shore. With fuel and fresh water low and no clean linen since September, the situation, Chief Radio Officer Clyde M. Singleton reported, "is possibly dangerous." Most of the ships carried unwanted ammunition, and have about a "Z" unloading priority.

In addition to complaints about enforced idleness, which came to light in a seaman's letter to Joseph Leib, Washington veterans' leader, a House Naval Affairs subcommittee shortly get eyewitnesses accounts of destruction "throughout the Pacific" of valuable equipment. A crew member of the steamship *Edwin Markham* reports: "We sent a valve ashore to be rebuilt for our motorboat and when the captain went to get it he was told by the officer in charge that it had been thrown in a large hole and covered up with a bulldozer.

"He said his orders were to take what things he needed with him to Guam but to get rid of the excess. That is how they do it. Trucks are taken off ships, put on LCT's and taken out and shoved into the ocean. We have been sitting here for 4 months, waiting to unload. We have been told they don't need things we have aboard. No one wants to take the responsibility to divert us to some other base even though they say they are building a stock pile in Manila The food, trucks, and housing we have aboard can be used in China. The whisky and beer I leave to your judgment where they can be used."

The *Markham* is in the Far East.

[From the Washington Daily News]

GI RALLIES WIN SUPPORT, PROBE DEMAND IN CONGRESS

Angry congressional demands for a full investigation of the Army's demobilization program mounted today in the wake of mass GI demonstrations which extended from Manila to the very door of Congress.

The Manila demonstrations were the most spectacular. But gripes also were registered at Paris. And a large group of enlisted men at Andrews Field, just outside Washington, protested to their officers of "inequalities" in the discharge system.

Some Congressmen, members of both parties, charged bluntly the Army had broken faith with its men and demanded an investigation.

"PRESTIGE" INVOLVED

Bound up in the demobilization controversy was the problem of United States prestige in conquered countries and the home-front question of universal peacetime military training.

Also having a bearing on the outcome of investigation demands was congressional concern over the possible effect of GI discontent in the impending 1946 elections.

The Army, which touched off the demonstrations with an announcement that demobilization would slow down from now on, said it could not "rob" occupation forces because it did not have adequate replacements.

It said the situation stemmed from the lack of any comprehensive program for replacing veterans in Europe and Asia. It also blamed changed "world conditions."

WHAT CHANGES?

Representative BROWN, Republican, Ohio, demanded to know what the changed world conditions were. BROWN, a member of the GOP Policy Committee, said it was time for Congress to look into the entire picture.

"If world conditions haven't changed and there is no emergency," he said, "can it be that the War Department is simply pressuring Congress to enact compulsory military training or to extend the draft?

"It is the duty and responsibility of Congress to investigate as soon as Congress reconvenes."

Representative MANSFIELD, Democrat, Montana, joined the demand for an investigation, saying he saw "no need" for large United States occupation forces in a score of countries, including Greece, India, Burma, Java, and China.

MANSFIELD sent a letter to Chairman MAY, Democrat, Kentucky, of the House Military Affairs Committee. He urged the committee to see to it "that the Army's demobilization program can be continued at the present rate and, wherever possible, accelerated."

BREACH OF FAITH

Democatic Senators JOHNSON, Colorado, and MCCLELLAN, Arkansas, agreed an investigation was in order. MCCLELLAN charged the demobilization slowdown was "a breach of faith with the veterans."

White House Press Secretary Charles G. Ross said President Truman had no plans to intervene.

Senator MURRAY, Democrat, Montana, cautioned GI's to be careful "and not do anything that would jeopardize this country's position." He said the demonstrations were "unfortunate."

The War Department reiterated that the demobilization slowdown was not unexpected, and that Army planners ever since VJ-day have predicted that a point would be reached early this year where occupation requirements rather than available shipping would determine how fast men could be returned.

They pointed out Army demobilization plans, presented to the House Military Affairs Committee last August, called for an Army of 2,500,000 on July 1, including 900,000 men in the Pacific and 400,000 in Europe.

Since then, those figures have been scaled down to a total of 1,550,000 men, including 335,000 in Europe, 375,000 in the Pacific, and 87,000 in other overseas areas.

Mr. Speaker, I am confident the foregoing newspaper articles give a very vivid recital of the sad plight in which many of these boys, still in the service, find themselves. Many of these boys are stranded upon islands, and upon the mainland, of countries where there is no work of an occupational character to be done, and these boys are doing very little at this time. They are merely kept and held at great expense to the taxpayers of this Nation—without any service to render. The war is over, insofar as these boys are concerned. There are married men, with families, who are stranded there—they have enough points for discharge, but they cannot get a ship to bring them home; there are boys who

have not yet completed their high-school work, although they have been in combat service for 2 or 3 years, and they want to resume their education, but they cannot get a ship to bring them home. There are doctors, lawyers, farmers, businessmen, and those with skilled trades in the shop—they have been through the war, and now they want to return home—they want to try to rehabilitate themselves in some useful occupation—they have their future before them. All of these should have great consideration at the hands of the War and Navy Departments, and of the War Shipping Administration. It is a shame to hold the boys who are not now essential to our security in occupational work—and there are hundreds of thousands of these boys who are not stationed upon any island, or upon any mainland, which is enemy territory. Therefore, all those boys who are still in the service, and whose services can be dispensed with without impairing our security, should be released and returned to their homes so that they may start to again rehabilitate themselves in civil life.

Mr. Speaker, it is my hope that the resolution I have introduced, today, may have immediate consideration at the hand of the committee to which it has been referred, and it is my further hope that the War Shipping Administration will promptly, and immediately, make available to every Member of Congress all of the facts relative to this situation as requested in my resolution. These facts are essential in order that Congress may know how to approach this very urgent and serious situation, and I feel confident that Congress will promptly approach this situation when the facts are made available to the Members.

Lastly, the boys have done their job—they did it well. Let us not fail in doing our job—to aid them in every possible manner to get aboard a ship to come home.

Proposed Loan to Britain Is Inflationary and Threatens the Future of the GI Bill

---

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am inserting the text of a speech delivered by me over radio station WOW, Omaha, Nebr., January 4:

Fellow Nebraskans, the Christmas recess of Congress has permitted me to get home, and to be back with my friends and neighbors.

But in a few days I cannot make the rounds of five counties to visit the hundreds of folks from whom I should like to again get counsel and advice. Accordingly, I am doing the next best thing. Through the public service facilities of WOW, I am able to make a general report to you.

My conviction is that the American people are entitled to the full truth about the affairs of their Government. That belief has not been changed but instead strengthened by my experiences in Washington. Accordingly, as long as you entrust me with public responsibility, I propose to continue with what my eastern acquaintances call "my midwestern habit of forthrightness and plain speaking."

On VJ-day the task in Washington became that of restoring to America its traditional blessings of opportunity, righteousness, and justice.

BRING THE BOYS HOME

When Congress reconvened the military authorities were apparently planning a slow and leisurely demobilization. In early September, their plan was to have only 26 discharge centers—a method which would have dragged out demobilization over a period of years. However, the people of America rose up in their wrath and protests poured into Washington.

Faced by this rising tide of public indignation, the military became alarmed and increased the number of discharge centers from 26 to a total of 200 separation centers. As a result, hundreds of thousands of veterans are now home that would not have been home today except for the decisive effect of an aroused public opinion.

While the military leaders still dominate the Washington scene, there is a vital lesson in this episode. It is this: When the American people become aroused, they can still exert a vital influence on the actions of the Government.

With the humble people elsewhere almost hopelessly in socialism and slavery, this demobilization speed-up demonstrates that the people here can retain the direction of their Government, if they will.

However, the present situation is by no means satisfactory. Congress should have promptly passed legislation that would give every boy who wants to return home a prompt opportunity to do so. Various bills were introduced for that purpose. They have been referred to the powerful Military Affairs Committee. Thus far the chairman of that committee, obviously carrying out administration orders, has refused to hold a single hearing on these measures—and this procedure is the normal way to get bills before the House.

The only other method for Congress to consider legislation to bring the boys home is the petition route. If a Member can get 218 Congressmen to sign a petition for his bill it will be brought up promptly. When the first such petition was introduced, I was the second signer. That petition now has 160 of the required 218 signatures.

BARE CUPBOARD FOR VETERAN

As the boys get home, they are experiencing various problems, of which housing is the most serious. This significant fact is often overlooked. The veteran is at the end of the line on housing. Those who stayed at home have secured permanent quarters, so that when the veteran seeks a place to live, he is at the end of the line—with the cupboard bare of housing. This deficiency, however, can and must be remedied promptly.

There is another situation, however, where, if the veteran finds himself at the end of the line, the results will be even more critical than the housing shortage. I refer, of course, to the gigantic outpouring from the Treasury of the United States of the assets of this Nation into foreign lands.

On top of the reckless war spending of hundreds of billions, the administration is now engaged in pipelining abroad much of our remaining wealth. Before these officials run hog wild in their egotistical attempt to be a "good-time Charlie" to the whole world with your money, let us at least take a quick look at our problems and obligations at home.

HONEST DOLLARS A "MUST"

On September 30, 900,000 World War II veterans or their families were drawing pension or compensation payments from the Treasury. Moreover, additional claims are coming into the Veterans' Administration at the rate of 200,000 per month. Now, I ask you, does the Government have any business starting a series of gigantic foreign loans, of which the proposed $4,400,000,000 loan to Britain is only the beginning, unless it has made sure provision to pay our veterans' claims in honest dollars?

What do I mean by honest dollars? Simply this, what kind of dollars are these claims and your life insurance and war bonds going to be paid in—honest dollars, of their present purchasing power, or will they be paid in a diluted money that has declined in value like most European currencies?

The future value of the dollar depends on whether or not the Truman administration has the integrity and ability to fulfill its duty to balance the budget—a budget that has gone in the red over eighteen billions during the last 6 months. For a national balanced budget is the only genuine defense against inflation, just as in your home a balanced budget is your only sure defense against family bankruptcy.

OPA DOES NOT STOP INFLATION

Despite this truth, tremendous propaganda efforts are being made to sell you the counterfeit idea that OPA can stop inflation. Why this ballyhoo for OPA now? Here's the reason. If foreign reckless spending is to continue, the inflation it creates must be concealed. Remember this fact. Despite what OPA does or can do, every hand-out abroad today is a concealed cut in your pay check. Every foreign loan must slyly be deducted from your take-home pay. In confused anger against these tactics by government, workers become easy victims of the Communists in our midst who are stirring up much of our labor troubles. Likewise, chiseling, black-market thievery, and dishonesty of all kinds are spreading like an epidemic all over America—and the cause is the 40 or more Government bureaus still recklessly spending your money abroad. If you are a laborer or white-collar worker who has been fighting the uphill battle against the rising cost of living, you are entitled to the truth.

FOREIGN LOANS INFLATIONARY

Let's take a look behind the scenes, at how speculative interests profit by this spending. A financial expert advised his clients on December 24, as follows:

"New and inflationary calls on the Federal Budget follow one another in rapid succession. Congress last week voted final approval of a $750,000,000 appropriation for the UNRRA, as the first installment of the second year contribution. This comes shortly after a similar $550,000,000 appropriation. The Bretton Woods monetary funds and bank agreements will go into effect on December 27. Most authorities regard the new international financial entities, in particular the pending British loan, as powerful and inflationary trade stimulants."

Your Government has not told you that the billions now going abroad are pure inflation, and are the true cause of your family problems today, of rising prices, shoddy merchandise, and shrinking dollars. But the stock-market speculators, the profiteers in real estate, and the cunning people who are getting rich while inflation gnaws away at your pay check know this. You, too, should know that inflation goes on in America as long as your Government sends billions of our goods, even including housing materials, to foreign lands—taking the cost out of your pay check in one way or another.

BRITISH LOAN FANTASTIC

The proposed British loan, coming on top of billions for lend-lease, Import-Export Bank, Bretton Woods, and other hand-outs abroad, seems fantastic. While British agents were in Washington using their usual seductive social snobbery to set up this deal, another Britisher went to New York. He was that new leader, Harold Laski, telling east coast radicals that the American system of free enterprise must go on the scrap heap. Even though this technique is a British habit, this particular act of arrogance and insult seems like too much for the American people to swallow.

However, one fact about the British loan should be understood. I do not blame the British for seeking this huge fund from the United States. The British people bore many privations in the war, and the reckless spending of our Government naturally leads them to believe our resources are unlimited. Nevertheless, a loan either to prop up temporarily the brutal colonial imperialism of England or funds to finance an English venture into socialism, will do them no good in the long run—and it will pour gasoline on the fires of inflation in America.

If the administration is determined on a loan to England, let them meet these two conditions: first, that Mr. Truman should present a genuine plan to balance the Budget. That would indicate the effort to maintain an honest dollar. Secondly, this loan should be offered to the public as long-term bonds to individual investors for this specific purpose. Only then would this deal be noninflationary and only those who wanted to send their savings to England would do so. Most all of my mail on this subject has been vigorously against further loans. And if you favor this loan, I hope you will write me and give your reasons. I want to hear all sides. Likewise, I hope that the various veterans' organizations are aware of the long-term dangers of this scheme to the GI bill and other veterans' benefits. We should have learned when the Atlantic Charter was betrayed that even solemn government promises are often repudiated.

There is a limit to the failures the American people can absorb. The first was the great depression. The second was supplying Japan and Germany the materials for a gigantic war. Now our officials will fail us again if they saddle us and our children with the colossal and impossible burdens of the world.

To the claim the proposed loan to Britain will promote peace and trade, this answer should be made—America will not advance good will among nations, if we further endanger the American system that produced the goods that brought victory to every Allied Nation.

AMERICA'S DUTY IS TO VETERANS

On Christmas Day with my wife and youngsters, I visited the neighbors across the street in Washington. A happy crowd of folks were there, enjoying the fellowship of the holiday. But over in one corner, off by himself, sat the shadow of a man, too sick and too weak to ever participate in the conversation. He was a veteran who, while serving his country in the jungles of the South Pacific, contracted a strange oriental disease. From a position before the war of good income and a happy home, his service to his country has left him sick and broken.

For my part, our duty to this veteran, and thousands like him, must come first in America today. To care for the widow and the orphan, and to bind up this Nation's wounds are our first responsibility.

The time has come for us to put into practice the advice of St. Paul, who addressed Timothy in these words:

"But if any provide not for his own, and specially not for those of his own house, he hath denied the faith, and is worse than an infidel."

Fellow Nebraskans, nowhere in history is there a record of Christian charity to other lands that will compare with the generosity of the American people. For that aid we have asked no thanks, and generally speaking, we have received none.

In conclusion let me leave this thought: When a balanced budget indicates that we will carry out our responsibilities to those of our own house, then and only then can we, by the intelligent use of the simple virtues of example and persuasion, truly promote good will and prosperity everywhere.

Conditions in the Yokosuka Area in Japan

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. O'HARA. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following anonymous letter regarding conditions of prostitution and sex laxity among naval personnel in the Yokosuka area in Japan and the Navy's action in respect thereto:

TOKYO BAY, *December 10, 1945.*

Representative JOSEPH O'HARA,
House Office Building,
Washington, D. C.

DEAR SIR: In the Monday, December 10, edition of Stars and Stripes there appears an article entitled "Congress Gets Low-Down About Jap Cathouses." I quote in part: "Forrestal explained many sections of Yokosuka had originally been placed out of bounds, but, unfortunately, some houses were in the in-bounds area."

"In order to protect the health of the men," he continued, "prophylaxis stations were established where they would be most effective and in one instance this was at entrance to a house of prostitution."

This is not the truth. Either Mr. Forrestal is not telling the truth or else the true facts have been misrepresented to him (which is more than just probable). The houses that were attacked by all of the chaplains combined and some of the doctors used to be in the out-of-bounds area until this present command took over—then it was decided to throw them wide open. And why? To prevent the spread of venereal disease. Since they were opened, the venereal-disease rate has taken a spectacular rise.

Now, the "one instance" that Mr. Forrestal refers to—this prophylaxis station was not at the entrance but right in the house of prostitution which was furnished with Navy corpsmen who were ordered there.

It is true that these houses are closed now—but only by command. But where is the investigation? Are military investigations dependent upon who is guilty? It might interest you to know that this situation was a gross and deliberate violation of the Navy Department's stated policy as given in the Restricted Bulletin NAV 147 RNC P3–1X85X regarding the repression of prostitution.

If you people really want the real hot dope on what went on out here and want also to know how boldly and nobly the chaplains and doctors spoke out against it, then you'd better call in some of those same doctors and chaplains who were stationed out here while this degrading situation prospered under the protection of the USN's.

By virtue of necessity I must sign this letter "anonymous" or else hang for it. And so, asking you to accept this as the whole truth I sign myself:

ANONYMOUS.

Let's Bring the Boys Home

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. LUDLOW. Mr. Speaker, I am one of those who believe that with the war successfully over our boys in the armed forces should be allowed to return as speedily as possible to their homes and families and I was shocked today when I learned that a vast amount of shipping that could be utilized in transporting troops back to the United States is standing idle. When information came to me that the troop-carrying service, instead of being augmented to meet the requirements of faster demobilization, is being depleted by the decommissioning of a large number of ships, I sent the following letter to the Secretary of the Navy:

Hon. JAMES V. FORRESTAL,
Secretary of the Navy,
Washington, D. C.

DEAR MR. SECRETARY: I am informed that notice has been given to the War Shipping Administration that 65 ships that have been manned by the Navy and used as troop-carrying ships are being taken out of the troop-carrying service and returned to the War Shipping Administration. I am also advised that the War Shipping Administration now has on hand, standing idle and inactive, 200 ships that are being held as surplus. With the addition of the 65 which the Navy is sending back to it, the War Shipping Administration will have on its hands, doing absolutely nothing, 265 ships which, if put to use in carrying troops back from foreign theaters of war, would be the means of soon reuniting many thousands of American servicemen with their homes and families. I would appreciate being advised why the Navy is sending 65 ships back to the War Shipping Administration to be decommissioned at a time when there is such a widespread interest in a speedy demobilization of the armed forces and I would like to have whatever information you can give me explaining why the 200 surplus ships of the War Shipping Administration are not being brought into use in carrying troops back to their homes. It seems evident that the explanation we so often hear that our boys cannot be brought home for lack of transportation is not well founded when all of this shipping is standing idle. I have the highest respect and esteem for you as an official, and this letter is not written in a spirit of criticism, but I would like to know, and I think the country would like to know, why this large amount of shipping space remains unused when it could be carrying our boys back to their homes and families. I would greatly appreciate a reply.

Very sincerely yours,

LOUIS LUDLOW.

Mr. Speaker, I do not know what the troop-carrying capacity of 265 ships is, but I would suppose that that many ships, without too much overcrowding, could

carry some hundreds of thousands of soldiers.

Five months after VJ-day there are more than 6,000,000 men in our armed forces. To get the hopes of the boys, particularly those in foreign service, built up with the prospect of returning them home and then dash them with cold water, as was done the other day, is to my mind very unfortunate. Let's get the boys back home and discharged at the earliest possible moment. They have done their part; now let us do ours. It is apparent that there is very little actual useful work for a great percentage of these boys, who are merely waiting for the discharge system to catch up with them.

I know boys who have fine prospects in life—many of them—who are suffering the agony of such menial duties as running errands or peeling potatoes or acting as chauffeurs for officers, while they yearn to return home to resume their education where it was cut off by the war. They deserve consideration, now that the war is over. They should not be kept in the service 1 day longer than is necessary. In a few years they will be running the country, and they are entitled to the training and education necessary to enable them to meet their responsibilities. I know fathers in the service with children they have never seen, and they deserve consideration, and perhaps most appealing of all are the cases of sick and overly burdened wives who are struggling—bitterly struggling—to keep their homes together pending the return of the husband and breadwinner. They, too, are entitled to our kindest sympathy and help.

No one doubts, of course, that armies of occupation will be necessary. My own belief is that if the President would call volunteers to the colors for that purpose there would be a larger offering of manpower than would be needed to meet the requirements. General MacArthur said that 200,000 men will suffice for the army of occupation in the Pacific theater. A liberal estimate has been made that twice that number will be sufficient in the European theater when the situation there gets shaken down, making 600,000 in all. And yet, with VJ-day 5 months in the past we are still holding more than 10 times that number in the service. The folly of this is evidenced by the statement that it is necessary to retain 70,000 of our men in the Philippines. With Japan beaten to her knees and beyond all possibility of making a military recovery, just why is it necessary to keep 70,000 of our American boys in the Philippines? We should bring our men back as soon as possible to resume their family and social ties and their business and educational connections and to reorient themselves, so that they may rebuild a happy and prosperous America on the foundation of the home.

When so much existing shipping space is not being utilized to transport our troops to America, we naturally wonder whether too much stress is not being placed on world regulation. There is a vast difference between cooperation and regulation. We should be a good neighbor and cooperate with all right-thinking nations; but it is not up to us to reach out and try to regulate everything around the earth. President Benjamin Harrison, a fine Christian statesman, once said to me: "We have no commission from God to police the world." We will make a mistake if we assume that it is our mission to reform the peoples of other countries so that they will conform to our concept of living. What we should be interested in is the maintenance of peace and order and friendly intercourse throughout the world and in justice in international relations and not in bending other nations to our particular ideology, superior though we believe it to be. We seem to be getting too much world interference virus in our national system. What we need is a rebirth of sturdy Americanism. If we will stick to the principles that made America great we will not go far astray.

United States Marines in China

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. ANDERSON of California. Mr. Speaker, in order to clarify, if possible, the reason for maintaining a force of United States marines in China, I wish to include with my remarks the following exchange of correspondence:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 3, 1946.

Gen. ALEXANDER VANDEGRIFT,
United States Marine Corps,
Washington, D. C.

DEAR GENERAL VANDEGRIFT: This will supplement our previous correspondence with respect to the presence of our marines in China.

In a previous letter you advised me that these troops were there for the sole purpose of disarming the Japanese and that they would be withdrawn when they had served their purpose. I have also received this same information from the War Department and from the State Department.

Recent published statements, however, to the effect that more of our troops are needed in China, and newspaper articles such as the enclosed, would seem to indicate that some of our marines are being used for other purposes.

I think you will agree with me that if the American people are to be expected to support the Government's foreign policy in China, a clear and definite statement of the use to which our troops are being put is absolutely essential. Any further light you can throw on the subject will be appreciated.

With every good wish, I am,
Sincerely yours,
JACK Z. ANDERSON,
Member of Congress.

HEADQUARTERS, UNITED STATES
MARINE CORPS,
Washington, January 9, 1946.

The Honorable JACK Z. ANDERSON,
The House of Representatives,
Washington, D. C.

MY DEAR MR. ANDERSON: Your letter dated January 3, 1946, regarding the presence of United States marines in China, is hereby acknowledged.

In accordance with the United States policy toward China, as stated by President Truman on December 15, 1945, United States marines are stationed in North China for the purpose of assisting the National Government of the Republic of China in effecting the disarming and evacuation of Japanese troops in the liberated areas. Undoubtedly, the existence of a difficult internal situation in China has had a retarding effect on the accomplishment of the mission outlined above and has resulted in some situations which, when not considered in the light of all available information, appear on the surface not to be consistent with the assigned mission.

The basic directives concerning the occupation of China were issued by the Joint Chiefs of Staff. The assignment of specific marine units employed was effected by the commander in chief, United States Pacific Fleet. Marines now on duty in China are under the immediate tactical command of the commanding general, China theater (U. S. Army). Although some of the recent newspaper publicity may indicate otherwise, from the official reports that I have seen, it appears that unit commanders are working conscientiously toward the accomplishment of their assigned missions and are handling a delicate situation in a commendable manner.

Sincerely yours,
A. H. TURNAGE,
Major General, USMC, Assistant Commandant of the Marine Corps.

Statement of Free Competitive Enterprise, Inc.

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1946

Mr. VOORHIS of California. Mr. Speaker, from time to time there have been sent to me statements by various organizations seeking to protect economic liberty in the United States and freedom of competitive enterprise, but I have never found so forceful, thoughtful or well-balanced a statement in this field as that recently issued by an organization known as the Association for Free Competitive Enterprise, of Columbus, Ohio.

Under unanimous consent, I therefore ask to include this statement with my remarks herewith:

WHAT WE MIGHT DO TO CHECK THE ABUSES THAT THREATEN OUR AMERICAN SYSTEM OF FREE COMPETITIVE ENTERPRISE

Freedom of competition is our objective. Freedom, not more controls. For we take it as axiomatic that freedom, not control, is the motivating force in a democratic system such as ours. Controls—whether by government or by private organizations—can only hamper and limit the free competition of private capitalism—and destroy it in the end. Our objective therefore must always be the encouragement of competitive enterprise, rather than its control.

The following are suggestions—not an adopted program, but merely suggestions that point out the possible areas which we may search for courses of action—when our organization is ready to function through properly constituted committees.

THESE ARE POSSIBLE AREAS FOR ACTION

Making research and new technologies available to all business—little as well as big

The control of research and new technology by a few big corporations is incompatible with a democratic free-enterprise system. But it has become an established fact today because only the big enterprises have had such profits as to enable them to finance research, or to buy up the results of independent individual research.

In the field of agriculture, Government has long sponsored research, and has spent great sums on this work. Farmers have benefited hugely from this research (which is made freely available to all) and the public generally has benefited a hundred-fold for each dollar spent in such research.

A similar program of research could be established by Government for the benefit of industry—with the results free to all comers. There is sound precedent for such a step, as well as great need.

As to the effectiveness of Government research, consider the atomic-bomb development. A practical way to release atomic energy was found in less than 4 years. Private research had not found the solution in the 20 years men had worked on it. Obviously Government can provide better resources for research, and quite as obviously Government research can get results.

It is conceivable, of course, that some huge private corporation like General Motors or duPont could have finally harnessed atomic energy. But it probably would have taken much longer. And in the course of the development there would (judging from past experiences with similar corporations) have been cross-licensing agreements with the Germans, and probably with the Japs.

In any case, how long would free enterprise last with atomic power the private property of one or two great corporations?

Revision of the patent laws to prevent abuse of the patent privilege

Our Government grants patent holders certain privileges and advantages in the use of a patent with the object of encouraging technical development. When a patent holder withholds from the public the benefit of his patent—to protect his investment in other patents, for instance—he clearly is abusing the privilege of patent protection granted by the Government. Deliberate withholding of patented developments from the market, or any other abuse of patent protection should void the right to protection. A revision of our patent laws in this respect is long overdue.

More active enforcement of the antitrust laws

The Antitrust Division of the Department of Justice should have more funds to work with. This would not cost us money in reality; it would make money. For example: In 1939 the Antitrust Division was given only $1,300,000. In the first 6 months of that year their enforcement proceedings resulted in over $2,400,000 in fines paid into the Federal Treasury. Of course, the Antitrust Division is not run to collect fines; this point is brought up only to illustrate that the Federal Government would not be out of pocket if liberal allowance were made for antitrust enforcement.

The really great benefits of enforcement accrue to the public. In one single case the milk consumers of Chicago were saved about $10,000,000 a year. And there is, of course, no way of measuring in dollars and cents the value to our democratic system, of maintaining freedom of competition.

Vigilant resistance to the ever-recurring attempts to obtain immunity of the antitrust laws

Every industry has members who think that the antitrust laws should not be applied to them. Frequently conditions within an industry become such that an association purporting to speak for the entire industry demands exemption from the operation of the antitrust laws. In recent years tremendous pressure has been brought upon Congress to secure such exemption by one industry after another. It is not in the public interest to whittle away the effectiveness of the antitrust laws simply because an interested group fears prosecution under them. The general public should be made aware of these attempts to secure special concessions and the legislation which would confer them should be opposed with determination. We refer specifically to present efforts to obtain immunity on the part of railroads and certain large insurance companies.

Government, financial and legal assistance to inventors or businessmen who are financially unable to defend their patents

Many a business has been throttled, and many an inventor has been kept from enjoying the benefits of his patent because of a suit for infringement brought against him by a powerful corporation. In such cases, it is almost inevitable that the small patent holder must yield to the rich corporation—because patent litigation is long and costly. It is suggested that Government be required by law to subsidize patent litigation—thus giving both parties to the suit an even break. Here again we have good precedent for such a law—even a common criminal is furnished legal counsel for his defense if he is unable to secure such counsel with his own means.

Government aid to those whose livelihood is taken away by technological improvements

The refusal of labor to use labor-saving equipment is a restraint of trade—and must be so considered. But along with this firmer attitude toward such restraints, we should adopt measures to compensate (pending reemployment) labor displaced by labor-saving equipment. It is largely the fear of unemployment and insecurity that prompts painters to refuse to use fast spray-painting equipment, or cement finishers to work on concrete mixed in transit. We cannot in fairness take a firmer attitude against all such forms of "feather-bedding" by labor unless we first remove labor's dread of displacement by adopting measures for compensation, retraining, and reemployment.

Cooperative equipment pools for small farmers, and the encouragement of cooperative marketing of farm products

Much of the difficulty of a large class of farmers arises from the operation of farms too small to be efficiently mechanized. Cooperative pools from which the farmer can secure the use of the more expensive machines would immensely benefit the smaller farmers.

Another aid to all classes of farmers would be the establishment of more marketing cooperatives. It is a curious fact that there are so many cooperatives trying to sell something to the farmer, and so few trying to sell his produce to better advantage. Surely the farmer's disadvantage lies as much in the disorganized market for farm products, as in the too profitable pricing of the things he must buy.

A notable example of the effectiveness of marketing co-ops is the egg auctions at Wooster and Versailles, Ohio. These auctions not only increased greatly the participating farmer's income from his eggs, but also raised the quality of the eggs marketed.

The establishment of similar marketing co-ops for all possible classes of farm produce should be encouraged by more active Government effort.

Provision for making new capital available to the small business

When General Motors needs new capital for expansion, investment bankers find no trouble in supplying the funds quickly. In fact, large corporations like General Motors have sufficient reserves to finance new construction. For example, large corporations are financing reconversion without the aid of bankers. But a small factory in need of money has the greatest difficulty in finding it. There is no Reconstruction Finance Corporation for the little fellow. Something must be done for the small business in this respect. And the Reconstruction Finance Corporation furnishes ample precedent. Why not permit banks to buy the stock of small companies and resell it to investors in the form of participating shares, thus averaging the investor's risk so that, with a percentage of any loss guaranteed by government, the investor's risk would be indeed small. Good precedent for this device also has been established—in the Federal guaranty of bank deposits. Some such arrangement as this would not only enable many small businesses to expand, but would also furnish profitable new business to the thousands of smaller commercial banks.

Taxation program

As a further means of encouraging free competitive enterprise, tax methods must be developed to encourage the development of free competitive enterprise and penalize the accumulation of monopoly profits.

The technical details for such a tax program require further study but are possible of achievement.

1945 a Record for Merchant Marine Fleet

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank J. Taylor, president of the American Merchant Marine Institute:

1945 A RECORD FOR MERCHANT FLEET—BROOKLYN NERVE CENTER FOR GREATEST OCEANIC MOVEMENT IN HISTORY

(By Frank J. Taylor, president, American Merchant Marine Institute)

The year 1945 will go down in history as the peak year for the American merchant marine, surpassing all others in number of vessels operated, volume of cargo carried and number of troops transported on United States ships. Some 130 private steamship companies, serving as general agents for the War Shipping Administration, made these records possible with efficient management and operation of the world's largest merchant fleet.

It is only natural that Brooklyn should have had a prominent part in these efforts of the shipping industry as its warterfront, which stretches from Greenpoint to Bay Ridge, has been extremely active not only during 1945 but also in the entire war period.

BRILLIANT WAR RECORD

As headquarters for the New York Port of Embarkation, the borough served as the nerve center of the greatest oceanic movement of humanity in all history. The return of American troops from the war zones has been the merchant marine's No. 1 task since VE- and VJ-days. With the homeward flow of men increasing with each month, a record was set in November when more than half a million GI's landed at New York, Boston, and Hampton Roads. During that 30-day period 12 soldiers each minute went down the gangplank to American soil. Despite the use of some foreign-flag liners in this service, 90

percent of the troops came home on American-flag vessels.

While American shipping can look back on a brilliant war record which has earned it the acclaim of all military leaders, the industry realizes that its war job is far from completed In 1946 it will continue to bring home our soldiers from overseas and maintain supply lines to those making up our armies of occupation. Other highly essential services of world-wide nature will employ a great amount of shipping.

ACTIVITIES CONTINUE

The ending of the war has witnessed but little respite for the merchant marine. For instance, more ships sailed from New York and other east coast ports in November 1945 than during the peak wartime month. American ships not employed in transport service are providing desperately needed raw materials, food, and rehabilitation supplies to war-torn Europe. Services of this nature will require a large share of our merchant marine for many months to come.

Merchant shipping, which was the first industry in America to become totally mobilized for war, will, therefore, undoubtedly be the last to be returned to a peacetime basis. No American dry cargo or passenger vessels have been returned to private ownership. The dissolution of the Allied shipping pools under the control of the United Maritime Authority is expected to take place on March 2, 1946. The speed with which shipping is returned to private ownership and operation by our Government after that date will have considerable effect on the American competitive position with foreign nations.

MANY PROBLEMS AHEAD

The American merchant marine now, for the first time since the clipper-ship era, equipped with sufficient new, fast, and economical tonnage, can be of immeasurable service to an expanded foreign commerce. Our merchant fleet will transport the products of our factories abroad and return loaded with raw materials for further production and processing. New fleets of passenger liners to provide the best in oceanic comfort, luxury, and safety are being built or are on the drawing boards. Their construction was impossible during wartime.

The gradual transition from war cargoes to commercial cargoes has been responsible during the latter part of 1945 for the easing of rationing. However, this is not private operation, as all freight revenues earned are for the account of the United States Government.

Many difficult and complex problems lie ahead for American shipping during its return to private ownership and operation. However, the best minds and experience within the industry which coped successfully with the problems of war will also surmount the problems of peace.

Lateral Canal Project on Red River

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement made by Mr. Homer H. Harris, of Alexandria, La., at the hearing conducted by the Board of Engineers for Rivers and Harbors. His statement is as follows:

The case for the Red River lateral canal, prepared for presentation to the Corps of Engineers, United States Army, by the State of Louisiana Department of Public Works in August 1945, is a very conservative document, wherein the engineers who prepared that brief were careful to include only data and statistics dealing with the subject that were substantiated and backed up by the facts and reports from only a partial list of shippers and receivers of freight in the trade areas that will be served by this canal. In fact, these gentlemen "leaned over backward" in order that there could be no reasonable contradictions made by anyone as to the figures and data submitted to support its case for the economic necessity to construct this canal.

My residence address is Alexandria, which is located in the very heart of Louisiana. In addition to having been a member of the State board of public works for the past 5 years, I have been engaged in business in Rapides Parish where Alexandria is located, for the past 34 years, operating during that time a large plantation and at present am owner and general manager of the largest wholesale and retail lumber and building-material business in central Louisiana. These operations, together with serving as a member of the Rapides Parish School Board and the Rapides Parish police jury, which is the governing body of the parish, as well as numerous other civic enterprises, has enabled me to be thoroughly familiar with the business and political economy of the area which this canal is proposed to serve.

Along he route of the lateral canal, which includes Red River Valley in Louisiana, is one of the highest developed areas of the State of Louisiana, but Red River Valley will never attain its full economic potentiality until it has water transportation.

Alexandria's trade territory extends 50 miles in every direction and can be easily visualized as a circle 100 miles in diameter, which is served by Alexandria's many wholesale and distributing houses, handling such heavy goods as lumber, building materials and supplies, hardware, mill supplies, farm implements, and machinery, food supplies, fertilizers, and other commodities too numerous to mention.

Alexandria and suburbs with a population of 60,000 is one of the important wholesale distribution and agricultural centers of Louisiana. It has a very large tonnage of freight both in-bound and out-bound, at the present time, and with water transportation serving this area, its possibilities for growth and development are stupendous.

Despite the fact that Alexandria is at present served by five railroads and many paved highways, it has suffered for many years and is still suffering from inadequate transportation facilities to handle its freight tonnage in a prompt and economically satisfactory manner.

The lack of water transportation is holding the area back from an otherwise rapid development of its natural resources, and unlike many other sections of the country, this area already has a large freight tonnage movement, and its shippers and receivers of freight are ready and anxious to make use of water transportation as soon as it becomes available.

It is a recognized fact by the highest military authorities here in Washington that central Louisiana provided the Army the finest military maneuver area in the whole United States during the past war.

This was attested by the numerous Army camp and air base installations within this area adjacent to Alexandria, and the large portion of our Army that received training in central Louisiana. It was in this ideal maneuver area that most of our outstanding and highest ranking Army generals for the first time experienced the opportunity to command very large units of men, under similar conditions that they were later to encounter in Africa, Europe, and in the Pacific. The benefits for over-all command training afforded our Army commanders by this ideal maneuver area contributed in a large manner to the ultimate victory for our troops.

Had the Red River lateral canal been in operation during the war and Army training period, its ccs would have been to a great extent saved by the Government in transportation costs of the enormous tonnage shipped in and out of this Alexandria area, where hundreds of trainloads of heavy Army ordnance, tanks, trucks, ammunition, supplies, and equipment were of necessity transported by costly rail shipments.

Gentlemen, there is no question as to the economic justification for the Red River lateral canal project. Its necessity is so very apparent to even a casual observer, and the more the matter is investigated and the facts and figures checked and verified, the stronger the case for the canal is found to be.

The canal is justified by tonnage already available, and there is a very great potential tonnage that will only be available when water transportation becomes a reality. Much of this additional tonnage and the development to the area that it will bring will never be obtained with our present inadequate transportation facilities.

To sum up, I wish to assure your board that the facts and figures already presented in the case for the Red River lateral canal are sound, true, and very conservative. There is no need to discount any part of it; on the other hand, there is much more tonnage that could be found and added if time were taken to gather up the data.

My long residence in this valley, close experience and observation, and broad information as to the economy of the State of Louisiana warrants the statement that there is no place in the United States where water transportation is more necessary than through Red River Valley in Louisiana.

I thank you kindly for your attention, and will appreciate your favorable consideration of this important project.

Free Enterprise or Socialism?

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. WOODRUFF. Mr. Speaker, under permission to extend my remarks in the RECORD, I offer the following editorial from the New York Journal-American in its issue of January 4. Much misinformation has been given the public relative to the full employment bill which passed the Senate recently. The editorial which follows points out clearly the obnoxious features of the Senate bill. The Manasco bill which the House committee has substituted for the Senate bill is the type of legislation which anyone interested in preserving our free enterprise system, under which we have become the richest, most prosperous country the world has ever known, can enthusiastically support. The editorial is a valuable contribution to a better understanding of what the so-called full employment bill would do to this country:

FREE ENTERPRISE OR SOCIALISM?

On January 16 a Conference Committee of the two Houses of Congress will meet in one

of the most important sessions in the history of the Republic.

Its sole assignment will be to consider two bills which have been passed by the respective Houses.

Ordinarily a congressional conference has the relatively simple task of reconciling minor differences in the House and Senate versions of proposed legislation and the task is performed without much acrimony or delay.

In this instance, however, the differences are of such a nature that compromise is impossible.

One bill or the other must be accepted in toto; and the choice made, if accepted by the Congress, will have a profound effect upon the welfare and future progress of the Nation.

The Senate bill is the so-called full-employment bill which the upper House passed in a slightly diluted form.

Together with the general welfare bill, this measure would inflict the British Beveridge plan of state socialism upon this country.

It would establish deficit financing and huge public expenditures as the permanent Federal policy and would subject agriculture, industry, commerce, and employment to rigid Federal control.

All this was so evident that the House of Representatives refused to pass the full-employment bill in any guise.

Instead, the House substituted an entirely new measure, called the employment-production bill, which was drafted in its Committee on Expenditures in the Executive Departments under the chairmanship of Representative CARTER MANASCO, of Alabama.

The fundamental difference between the two bills is this:

The employment-production bill would protect the American system of competitive free enterprise, which the full-employment bill would destroy.

Under the terms of the Manasco bill, "the continuing policy of the United States" will for the first time be declared by law to be—

"(1) Preserving and encouraging the American economic system of free competitive enterprise and fostering the investment of private capital in trade, agriculture, commerce, and in the development of the natural resources of the United States;

"(2) Aiding in the development and maintenance of conditions favorable to stimulating new business, and especially small business; and to promoting continuous growth in the quality and quantity of facilities of production;

"(3) Encouraging individual initiative;

"(4) Avoiding competition of government with private business enterprise; and

"(5) Adopting sound fiscal policies and maintaining the credit of the United States."

The Manasco bill would therefore not only reject the collectivist theories of the full employment bill itself, but would also put Congress on record against other proposals which the full employment bill contemplates, including the various bills that would supersede the States by dividing the Nation up into eight regions under the totalitarian control of Federal authorities.

To meet actual problems, the Manasco bill further provides for a permanent Council of Economic Advisers, to be composed of three qualified members who would receive salaries of $15,000 a year each and who would make continuous studies of economic and employment problems to guide the Congress and the President.

But it authorizes no appropriations of indefinite amounts for undefined purposes, and it delegates no bureaucratic administrative powers.

Congress itself must act upon any recommendation made.

The House bill thus not only fortifies the free-enterprise system in America—it also reaffirms in effect, the legislative functions of Congress under the Constitution.

Obviously, if Congress is going to pass an employment bill at all, it should be the employment production bill to encourage the American system of free competitive enterprise.

Overseas Men Seek Action in Providing Replacements

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 15, 1946

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks, I want to insert in the RECORD the following letters from various groups of servicemen now stationed overseas. These letters, published in the New York Times today, are profitable reading for any legislator or citizen interested in the present crisis of morale in our armed forces.

It is significant that these men show no sign of disloyalty, as has been charged by some observers. On the contrary, they call our attention to the fact that it is the Congress which has ignored the advice and the pleading of the generals under whom these men fought and won.

What they ask is that the Congress act to safeguard their victories by arranging properly trained replacements over the period of time which it will require to put in force the machinery of peace. Conquering forces have seldom asked for less at the hands of their civilian representatives.

The letters follow:

OVERSEAS MEN SEEK ACTION—CONGRESS IS BLAMED FOR DILATORINESS IN PROVIDING REPLACEMENTS

To the EDITOR OF THE NEW YORK TIMES:

From December 1941 to the close of the war Congress established a record of patriotism and statesmanship seldom equaled in the history of any democracy. The majority acted swiftly in every emergency and generally supported to the fullest extent the desires of the President and of the people. Such things are not forgotten swiftly.

Since the close of the war, however, a marked change has come over Congress. Now one hears the voices of isolationists, of arch-conservatives too old to change or see the new light of freedom which the war brought. Worst of all one now hears the voices of professional politicians who cannot believe in democratic principles because they have none themselves.

Congress was asked by the Chief Executive and by the wisest generals to pass appropriate legislation in order that a steady flow of replacements to Europe and the Pacific would be insured. Of course, Congress of the war years would have acted at once. Now the politicians, the so-called nationalists, recoil in horror at such a positive act. They cannot believe it is necessary, though it is true they declaim loudly that fascism must never rise again. They raise the old hackneyed bogy of militarism, they scream about injustices in the court-martial system, they beg the question, they ignore the question, they bury the question in the cluttered trivia of their minds.

In short they cannot support a controversial problem because they fear they would lose votes. They have not yet learned that if they lead the people boldly and resolutely then the people will inevitably follow.

The soldier overseas does not ask that he be pulled out overnight and leave chaos behind. He does not ask that the Army be disbanded, the officers shot, the equipment junked, the obligations ignored. All he asks, all he demands is that as an American citizen and as a soldier he be treated as such and not as an embarassing relative who having earned his right to live is now forgotten.

The discerning soldier does not blame the War Department for the virtual cessation of redeployment. He could not, because Congress alone is to blame. He sees with nausea the sorry spectacle of these elderly politicians mouthing their worn platitudes and hearing only the cry of frantic constituents whom the Congressmen incite by their irresolution.

The soldier realizes that as a legislative body the American Congress has far less courage than the English Parliament. It can be seen that the soldier asks very little really. He desires no one to give more than he has sacrificed. He simply wants a universal draft law passed in order that rotation of men will be a fact and not a fantasy. No intelligent man could call this unreasonable.

S/Sgt. JAMES R. JACKSON
(And 605 men, One Thousand Two Hundred and Fifty-eighth Combat Battalion).
NÜRNEERG, GERMANY, *January 11, 1946.*

ACTION, NOT STATEMENTS, WANTED

To the EDITOR OF THE NEW YORK TIMES:

Latest statements from high officials on the redeployment chaos are ambiguous and do not clarify this unjustifiable and deplorable situation. We are homesick, demoralized former Eighth Air Force personnel who are being penalized by the Army's indiscriminate redeployment policy. We are non-VD or court-martial cases, definitely nonessential. We average 26 months overseas and 3 years in the Army and are eligible for discharge. Low-pointers are being discharged home while we remain because of lack of replacements, as stated by "brass." We ask for definite action and not more statements.

EIGHT HUNDRED MEN, TWO HUNDRED AND TWENTY-FOURTH QUARTERMASTER TRUCK COMPANY.
HONINGTON, ENGLAND, *January 12, 1946.*

IDLENESS PALLS

To the EDITOR OF THE NEW YORK TIMES:

Give your readers all the facts. If we are psychiatric cases, there are 300,000 of us. Why maintain an idle occupation army, sane or otherwise, in the peaceful Philippines?

ENLISTED MEN, ONE THOUSAND AND SECOND ENGINEER FORESTRY BATTALION.
MANILA, *January 11, 1946.*

DELAYS PROTESTED

To the EDITOR OF THE NEW YORK TIMES:

We, the undersigned, as a duly elected committee of three, represent the enlisted men of Headquarters Company, Vienna Area Command.

The great majority of this group were members of infantry and armored divisions and include men who wear the Purple Heart, Silver Star, and Bronze Star earned in combat. We intend to refute the opinions and statements expressed by leading military and civilian officials in their attempts to justify the slowdown in demobilization. We are furious with the statement of Lieutenant General Collins that "the number of men still overseas who heard a shot fired in this war is not very great." To abolish now a system by which men could almost count the days until they would be home is prima facie unfair and we do not feel that we should accept it without expressing our position. We know from what we see about us daily, not from month-old reports, that the staff of 14,000 American soldiers in Vienna with minor reorganization could be reduced to 7,000 im-

mediately without impairing the efficiency of the military task here. We are told that a similar condition exists throughout the entire American occupation zone.

The highly mobile police force that could handle the job is out of gas. Why? Draft boards cannot furnish men to replace soldiers who served when soldiering was dangerous. Why? The statements of our high military officials indicate that they have no facts or are afraid to use them. A smoke screen of words is being used to cover ulterior motives. We are angered with being misrepresented and lied about. We cannot accept more weak excuses. Won't the people of the United States help us in our struggle for release from these brass chains?

Sgt. ALEXANDER N. RUBIN.
Sgt. HARRY P. MCKEAN.
Corp. EZRA LAPIDES.

VIENNA, *January 10, 1946.*

TROUBLE FEARED IN AUSTRIA

To the EDITOR OF THE NEW YORK TIMES:

Your stand on redeployment demonstrations is in keeping with the best American ideal, but objectively speaking there will be no end to them until favorable action is taken by Congress. Because of the breach of faith and the subsequent demonstrations we have lost all prestige in Austria and are now a laughingstock. Within 7 days, I predict, 80 percent of the American strength here will be out of Austria or in mutiny.

STUART M. THOMPSON.

SALZBURG, *January 11, 1946.*

FAIR DEAL SOUGHT

To the EDITOR OF THE NEW YORK TIMES:

We want a fair democratic deal for all soldiers. We want (1) a set time limit for overseas service not subject to change, (2) a set time limit for all Army service not subject to change, (3) more similarity between the requirements for the present draft and the requirements for release from the Army. The ex-GI's are the men who know of our plight. Help us to get a fair deal.

EIGHTY MEMBERS OF SECOND MEDICAL GENERAL DISPENSARY.

FRANKFURT, GERMANY, *January 11, 1946.*

A Timely Suggestion to Mr. Truman

EXTENSION OF REMARKS
OF
HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 15, 1946

Mr. BRADLEY of Michigan. Mr. Speaker, the President is scheduled to either give us by his personal appearance or send to us on Thursday a message on the State of the Union. I am sure when he prepares such an important message—if he does his own writing—the President receives some very sound advice. In the event, however, that he may resort to "ghost" writers I submit herewith for the RECORD what I believe to be a very worth-while, carefully prepared speech on the State of the Union. I suggest Mr. Truman read it carefully before appearing on your rostrum in this House on Thursday:

AN OPEN LETTER TO PRESIDENT TRUMAN

DEAR MR. PRESIDENT: As stockholders in the great corporation of which you are President, we desire to help in whatever way we can to promote the successful operation of that great enterprise known as the United States of America. We understand that you will soon advise our board of directors, the Congress, on the condition of our enterprise.

For what it may be worth to you, we have drawn up a suggested draft of your forthcoming message to Congress on the State of the Union, which represents, we believe, the views of many of your stockholders.

"To the Congress of the United States:

"1. We have successfully concluded two great wars, which have been enormously costly in lives and treasure. I urge you to pass immediately a resolution declaring that the state of war has ended, and that we are now at peace with the world. In the conduct of war it is necessary to concentrate enormous powers in the Chief Executive. I now desire to be relieved of these great powers. I desire that the division of powers between the Congress and the President, as set forth in the United States Constitution, shall be restored without unnecessary delay.

"2. The production of goods and services is being restrained by strikes and industrial turmoil. It is my belief that the National Industrial Relations Act passed by Congress in 1935 is largely responsible for the present turmoil. Experience has shown that the objective of this act—the relief of commerce from the burdens due to strikes and industrial strife—has not been achieved. Instead, the Wagner Act has been used to bring about a great concentration of economic power, so that single individuals can determine whether we can have coal, steel, and automobiles. It has given certain individuals the power to shut off essential services, such as telephone and telegraph service, radio music, truck and bus transportation, the loading and unloading of ships. I ask for the immediate repeal of the National Labor Relations Act, because it is a proven failure, because it gives the protection of the Federal Government to economic dictators, and because the United States Constitution does not authorize Congress to legislate on matters pertaining to employer-employee relations. The labor laws passed by Congress are a usurpation of powers which our Constitution reserves to the States. Our States differ greatly in soil, industries, climate, racial stock, and urbanization. Let each State enact whatever labor laws are required to meet local conditions and the desires of the citizens.

"3. I ask for the repeal of the Fair Labor Standards Act, because the Constitution gives Congress no authority to determine the hours a citizen shall labor or the wages he shall receive. The number of hours that a citizen works is a personal matter which depends on his age, health, ambition, and circumstances. This law which tends to restrict the hours of labor necessarily restricts production and lowers the standard of living of our citizens. I suggest the repeal of the wages and hours law.

"4. I ask that you repeal all Federal laws for the control of prices, production, and the allocation of materials. These controls are unnecessary and are opposed to the principle of free competitive enterprise. A large proportion of the war expenditures were financed by the printing of Government bonds and other promises of the Government to pay dollars at some future time. This enormous supply of paper-promises to pay dollars, which now exceeds the nominal value of all the physical wealth of the people, has greatly depreciated the value of our paper dollars. The operations of the OPA are designed to maintain a fictitious value for our paper dollars and to deceive the people in regard to the true worth of our paper money. If the elimination of price controls results in a great rise in prices, then we will know the true value of our money and we can then base our actions on the facts. Little or nothing can be gained by substituting deception for truth. To continue price controls is to make the Federal Government a party to the dubious procedure of perpetuating a colossal deception. A rise in prices is the inevitable consequence whenever any government pays its bills by printing money rather than by levying taxes. It is impossible, by devious monetary manipulations, to escape the necessity of paying for governmental extravagance and the enormous costs of the war.

"5. It is only a corrupt and dishonest government that destroys the value of the peoples' money. It is the duty of Congress to maintain the integrity of the American dollar. To restore the value of the dollar and to prevent further inflation, Congress should increase taxes and drastically reduce Federal expenditures so that there may be no further increase in the Federal debt, and so that in the near future the debt may be progressively reduced. Such action is needed to convince our people that Congress is determined to preserve and not to destroy our monetary system.

"6. I do not look with favor on laws which tend to nationalize agriculture. I ask for the repeal of all laws designed to influence the prices or the production of farm products. Our farmers are not incompetent. They shoud be free to operate their farms without help or hindrance from the Federal Government. Serfdom is outmoded, and we should not replace the lords of the manor, who enslaved those who toiled on the land in feudal times, with modern lords of the manor operating from the Nation's Capital.

"7. As a result of war, there is much misery, hunger, and suffering in other lands. The American people are generous and relatively prosperous. I suggest that nations which need capital to restore their productive machinery be encouraged to sell bonds to those Americans who desire to help them in the tasks of rehabilitation. I hope that private organizations like the Red Cross will disclose to us the needs of those who suffer and will collect funds for the relief of the suffering which is the aftermath of war. I have been unable to find in our Constitution any article which authorizes Congress to levy taxes on American citizens in order to make loans or gifts to other nations or to aliens residing in other lands.

"8. I ask for the repeal of the Social Security Act as of June 30, 1947. Legislation should be enacted to distribute to the States on that date any funds which have been accumulated as the result of this act, on an equitable basis. The relief of poverty and destitution should be handled by State and local governmental agencies as was our practice for 150 years. I fail to find in the United States Constitution any article which authorizes Congress to care for destitute citizens, or to establish compulsory and discriminatory systems of insurance, or to pay money to citizens because they are not working.

"9. I suggest that no appropriations be passed for Federal housing. It is not the function of the Federal Government to build houses for the people to live in any more than it is the function of the Government to make shoes for them to wear or to bake bread for them to eat. It is pure hypocrisy for Congress to give lip service to free competitive enterprise and at the same time engage in all kinds of business undertakings.

"10. There may be certain cases in which Federal aid to the States is necessary and desirable. But in most cases Federal aid to the States should not be granted. There should not be divided responsibility and authority. The plea that the States are too poor to engage in certain activities and that they must receive help from the Federal Government is specious. The total wealth and resources of the citizens of the States are exactly the same as their wealth and resources as citizens of the United States.

"11. This great Nation is at the crossroads of destiny. All over the world nations are floundering in the quicksands of socialism and communism. We ourselves have gotten off the main highway of economic

of the most important sessions in the history of the Republic.

Its sole assignment will be to consider two bills which have been passed by the respective Houses.

Ordinarily a congressional conference has the relatively simple task of reconciling minor differences in the House and Senate versions of proposed legislation and the task is performed without much acrimony or delay.

In this instance, however, the differences are of such a nature that compromise is impossible.

One bill or the other must be accepted in toto; and the choice made, if accepted by the Congress, will have a profound effect upon the welfare and future progress of the Nation.

The Senate bill is the so-called full-employment bill which the upper House passed in a slightly diluted form.

Together with the general welfare bill, this measure would inflict the British Beveridge plan of state socialism upon this country.

It would establish deficit financing and huge public expenditures as the permanent Federal policy and would subject agriculture, industry, commerce, and employment to rigid Federal control.

All this was so evident that the House of Representatives refused to pass the full-employment bill in any guise.

Instead, the House substituted an entirely new measure, called the employment-production bill, which was drafted in its Committee on Expenditures in the Executive Departments under the chairmanship of Representative CARTER MANASCO, of Alabama.

The fundamental difference between the two bills is this:

The employment-production bill would protect the American system of competitive free enterprise, which the full-employment bill would destroy.

Under the terms of the Manasco bill, "the continuing policy of the United States" will for the first time be declared by law to be—

"(1) Preserving and encouraging the American economic system of free competitive enterprise and fostering the investment of private capital in trade, agriculture, commerce, and in the development of the natural resources of the United States;

"(2) Aiding in the development and maintenance of conditions favorable to stimulating new business, and especially small business; and to promoting continuous growth in the quality and quantity of facilities of production;

"(3) Encouraging individual initiative;

"(4) Avoiding competition of government with private business enterprise; and

"(5) Adopting sound fiscal policies and maintaining the credit of the United States."

The Manasco bill would therefore not only reject the collectivist theories of the full employment bill itself, but would also put Congress on record against other proposals which the full employment bill contemplates, including the various bills that would supersede the States by dividing the Nation up into eight regions under the totalitarian control of Federal authorities.

To meet actual problems, the Manasco bill further provides for a permanent Council of Economic Advisers, to be composed of three qualified members who would receive salaries of $15,000 a year each and who would make continuous studies of economic and employment problems to guide the Congress and the President.

But it authorizes no appropriations of indefinite amounts for undefined purposes, and it delegates no bureaucratic administrative powers.

Congress itself must act upon any recommendation made.

The House bill thus not only fortifies the free-enterprise system in America—it also reaffirms in effect, the legislative functions of Congress under the Constitution.

Obviously, if Congress is going to pass an employment bill at all, it should be the employment production bill to encourage the American system of free competitive enterprise.

A Timely Suggestion to Mr. Truman

EXTENSION OF REMARKS
OF
HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. BRADLEY of Michigan. Mr. Speaker, the President is scheduled to either give us by his personal appearance or send to us on Thursday a message on the State of the Union. I am sure when he prepares such an important message—if he does his own writing—the President receives some very sound advice. In the event, however, that he may resort to "ghost" writers I submit herewith for the RECORD what I believe to be a very worth-while, carefully prepared speech on the State of the Union. I suggest Mr. Truman read it carefully before appearing on your rostrum in this House on Thursday:

AN OPEN LETTER TO PRESIDENT TRUMAN

DEAR MR. PRESIDENT: As stockholders in the great corporation of which you are President, we desire to help in whatever way we can to promote the successful operation of that great enterprise known as the United States of America. We understand that you will soon advise our board of directors, the Congress, on the condition of our enterprise.

For what it may be worth to you, we have drawn up a suggested draft of your forthcoming message to Congress on the State of the Union, which represents, we believe, the views of many of your stockholders.

"To the Congress of the United States:

"1. We have successfully concluded two great wars, which have been enormously costly in lives and treasure. I urge you to pass immediately a resolution declaring that the state of war has ended, and that we are now at peace with the world. In the conduct of war it is necessary to concentrate enormous powers in the Chief Executive. I now desire to be relieved of these great powers. I desire that the division of powers between the Congress and the President, as set forth in the United States Constitution, shall be restored without unnecessary delay.

"2. The production of goods and services is being restrained by strikes and industrial turmoil. It is my belief that the National Industrial Relations Act passed by Congress in 1935 is largely responsible for the present turmoil. Experience has shown that the objective of this act—the relief of commerce from the burdens due to strikes and industrial strife—has not been achieved. Instead, the Wagner Act has been used to bring about a great concentration of economic power, so that single individuals can determine whether we can have coal, steel, and automobiles. It has given certain individuals the power to shut off essential services, such as telephone and telegraph service, radio music, truck and bus transportation, the loading and unloading of ships. I ask for the immediate repeal of the National Labor Relations Act, because it is a proven failure, because it gives the protection of the Federal Government to economic dictators, and because the United States Constitution does not authorize Congress to legislate on matters pertaining to employer-employee relations. The labor laws passed by Congress are a usurpation of powers which our Constitution reserves to the States. Our States differ greatly in soil, industries, climate, racial stock, and urbanization. Let each State enact whatever labor laws are required to meet local conditions and the desires of the citizens.

"3. I ask for the repeal of the Fair Labor Standards Act, because the Constitution gives Congress no authority to determine the hours a citizen shall labor or the wages he shall receive. The number of hours that a citizen works is a personal matter which depends on his age, health, ambition, and circumstances. This law which tends to restrict the hours of labor necessarily restricts production and lowers the standard of living of our citizens. I suggest the repeal of the wages and hours law.

"4. I ask that you repeal all Federal laws for the control of prices, production, and the allocation of materials. These controls are unnecessary and are opposed to the principle of free competitive enterprise. A large proportion of the war expenditures were financed by the printing of Government bonds and other promises of the Government to pay dollars at some future time. This enormous supply of paper-promises to pay dollars, which now exceeds the nominal value of all the physical wealth of the people, has greatly depreciated the value of our paper dollars. The operations of the OPA are designed to maintain a fictitious value for our paper dollars and to deceive the people in regard to the true worth of our paper money. If the elimination of price controls results in a great rise in prices, then we will know the true value of our money and we can then base our actions on the facts. Little or nothing can be gained by substituting deception for truth. To continue price controls is to make the Federal Government a party to the dubious procedure of perpetuating a colossal deception. A rise in prices is the inevitable consequence whenever any government pays its bills by printing money rather than by levying taxes. It is impossible, by devious monetary manipulations, to escape the necessity of paying for governmental extravagance and the enormous costs of the war.

"5. It is only a corrupt and dishonest government that destroys the value of the peoples' money. It is the duty of Congress to maintain the integrity of the American dollar. To restore the value of the dollar and to prevent further inflation, Congress should increase taxes and drastically reduce Federal expenditures so that there may be no further increase in the Federal debt, and so that in the near future the debt may be progressively reduced. Such action is needed to convince our people that Congress is determined to preserve and not to destroy our monetary system.

"6. I do not look with favor on laws which tend to nationalize agriculture. I ask for the repeal of all laws designed to influence the prices or the production of farm products. Our farmers are not incompetent. They shoud be free to operate their farms without help or hindrance from the Federal Government. Serfdom is outmoded, and we should not replace the lords of the manor, who enslaved those who toiled on the land in feudal times, with modern lords of the manor operating from the Nation's Capital.

"7. As a result of war, there is much misery, hunger, and suffering in other lands. The American people are generous and relatively prosperous. I suggest that nations which need capital to restore their productive machinery be encouraged to sell bonds to those Americans who desire to help them in the tasks of rehabilitation. I hope that private organizations like the Red Cross will disclose to us the needs of those who suffer and will collect funds for the relief of the suffering which is the aftermath of war. I have been unable to find in our Constitution any article which authorizes Congress to levy taxes on American citizens in order to make loans or gifts to other nations or to aliens residing in other lands.

"8. I ask for the repeal of the Social Security Act as of June 30, 1947. Legislation should be enacted to distribute to the States on that date any funds which have been accumulated as the result of this act, on an equitable basis. The relief of poverty and destitution should be handled by State and local governmental agencies as was our practice for 150 years. I fail to find in the United States Constitution any article which authorizes Congress to care for destitute citizens, or to establish compulsory and discriminatory systems of insurance, or to pay money to citizens because they are not working.

"9. I suggest that no appropriations be passed for Federal housing. It is not the function of the Federal Government to build houses for the people to live in any more than it is the function of the Government to make shoes for them to wear or to bake bread for them to eat. It is pure hypocrisy for Congress to give lip service to free competitive enterprise and at the same time engage in all kinds of business undertakings.

"10. There may be certain cases in which Federal aid to the States is necessary and desirable. But in most cases Federal aid to the States should not be granted. There should not be divided responsibility and authority. The plea that the States are too poor to engage in certain activities and that they must receive help from the Federal Government is specious. The total wealth and resources of the citizens of the States are exactly the same as their wealth and resources as citizens of the United States.

"11. This great Nation is at the crossroads of destiny. All over the world nations are floundering in the quicksands of socialism and communism. We ourselves have gotten off the main highway of economic

freedom and constitutional government. I ask that Congress repeal all existing laws which do not have unequivocal constitutional authority, thus undoing some of the mischief done in the past. Respect for law cannot be inculcated in our citizens unless the lawmakers themselves obey the law. For you that law is the Constitution of the United States, which you have taken an oath to preserve, protect, and defend. I also took that oath. I ask you to restore the United States Constitution, under which we became prosperous, great, and strong, so that our children's children may have the great privilege of living in a free America. Whatever others may do, let us preserve this Nation as an island of freedom, so that liberty may not everywhere perish from this earth."

SOCIETY OF SENTINELS.

DETROIT.

Canal Project, Red River

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. ALLEN of Louisiana. Mr. Speaker, I wish to include in the RECORD the following statement made by Mr. Fred C. Barksdale, of Alexandria, La., in which he supports the construction of a lateral canal on Red River:

STATEMENT IN SUPPORT OF RED RIVER LATERAL CANAL, LOUISIANA, PRESENTED TO THE BOARD OF ENGINEERS FOR RIVERS AND HARBORS, AT WASHINGTON, D. C., JANUARY 14, 1946, BY FRED C. BARKSDALE, VICE PRESIDENT OF BROWN-ROBERTS HARDWARE & SUPPLY CO., LTD., ALEXANDRIA, LA.

Technical data in support of the Red River lateral canal project has already been given this board. Advantages anticipated in different sections of inland Louisiana are outlined today. Other localities being represented, I shall deal largely with benefits to be gained by my home community, Alexandria and central Louisiana.

But first let me pay tribute to the railroads for their magnificent contribution to our hard-earned victory in World Wars I and II. I recognize also their indispensable part in any future fight against enemies of our national welfare. If I thought the proposed canal would drive one railroad out of business or work to the lasting detriment of that industry, certainly I would oppose its construction. But as the automobile, long fought by railroads, has brought vastly increased revenues to them, so am I convinced that additional business from the economic and industrial expansion following completion of this project even justifies support from the railroads themselves. This canal means natural progress. Natural progress may be retarded or even diverted, but never permanently blocked.

Recognized as a natural distribution point, the site of Alexandria was chosen by French and Spanish settlers long before the Louisiana Purchase. Located almost in the exact geographical center of the State, a circle with a radius reaching a hundred miles distant would pass through or at the very door of Shreveport, Monroe, Baton Rouge, Lafayette, and Lake Charles. Surely, Alexandria is the hub city of Louisiana.

In spite of many disappointments through years of tireless fight against freight-rate discrimination Alexandria has, so far, successfully defended its commercial birthright. But it has been deprived of the full development which nature intended, and today it pleads for the privilege of climbing to the pinnacle of its economic possibilities.

Convinced that cheap and adequate transportation is one of the basic factors in economic progress, Alexandria has long sought the benefits of inland waterways. The proposed canal, leaving Red River about 30 miles north of its mouth and extending to the city of Shreveport, would fulfill that dream. It would connect central and northwest Louisiana with the Nation's navigable waterways. It would greatly aid a large and prolific agricultural area now held in check by transportation costs which clog the wheels of progress. It would reclaim vast additional acres, by proper drainage, for greater production of cotton, sugar, rice, and other farm products to help satisfy the wants of a growing nation. Such development would enable our farmers to retain and enjoy a greater share of the fruits of their own labors. Finally, it would bring higher living standards to our people.

It is notable, too, that unnatural barriers deprive our section of natural industrial development. With low freight rates only on outbound raw materials, we see our great natural resources being shipped to distant points for processing.

The devastating atomic bomb warns America that industrial congestion in comparatively few cities is a hazard to our national safety. Decentralization of industry must, of course, follow if we may hope to survive another war.

It has been said that nature was in an extravagant mood when she endowed Louisiana. Even natural waterways, no longer adaptable to modern every-day needs, once served our people. But today, with great stores of precious raw materials, including oil, gas, salt, sulfur, limestone timber, sand and gravel, with abundant fuel, with spacious sites for industrial expansion, with ample native labor, and with year-'round mild climate, inland Louisiana's only basic need is for low-cost water transportation.

We do not make this appeal as individuals seeking to advance our own selfish interests. We echo the call of our people and seek for them the stable and lasting prosperity which beckons. We have organized the Alexandria Port Development Association, of which I have the honor to be president, whose membership covers practically every phase of our economic life—manufacturers, processors, wholesalers, retailers, bankers, professional men. Our purpose is the full development of our community. Among our plans, when Red River Lateral Canal becomes a reality, is the promotion of adequate docks and other facilities to serve our city and adjacent territory.

Then will come the economic development and expansion which is our heritage. Then will come full fruition of our efforts and our dreams. Then will our people share and enjoy the benefits of the magnificent treasures which nature bestowed upon us. Then will our national safety be more secure. Then, too, will the whole Nation profit through a better balanced economy.

They Want Disaster

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. WOODRUFF. Mr. Speaker, I present for printing in the Appendix the following editorial taken from the Detroit (Mich.) News. This editorial is timely and calls attention to the developing situation. In view of the rapidly growing strikes throughout the country the reader will find the editorial very interesting indeed:

THEY WANT DISASTER

The Communist faction of the UAW-CIO is urging a general strike of automobile workers as an improvement on Vice President Walter Reuther's one-at-a-time strategy.

A general strike certainly would contribute more to the general economic paralysis of the country, if that is regarded as an improvement.

The Communist move evidently is in part, if not wholly, a maneuver in the never-ending game of union politics. That faction is laying the ground work for exploiting probable membership dissatisfaction with the wage settlement, whatever it may be, achieved in the General Motors strike. The Commies will say they could have done better.

They also may be counting on a steel wage settlement more favorable to union claims than will be won in the auto industry. At any rate, their spokesmen lay heavy emphasis on the strategy of Philip Murray, president of the steel workers as well as of the CIO, who has called an industry-wide strike for next Monday.

If the steel industry goes down, however, the Commies can stop worrying about a general auto strike. A steel strike automatically would shut down the auto industry, as well as a lot of others.

Demobilization

REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. MILLER of Nebraska. Mr. Speaker, this morning the Members of Congress had an opportunity to listen to Gen. Dwight D. Eisenhower and Admiral Chester W. Nimitz. These men offered explanations and explained the big job of demobilizing the Army and Navy. In my humble opinion, they failed to answer many of the questions which are now bothering the American people.

What are the facts as to the size of the armed forces as of January 1, 1946? The Army has a total of 4,300,000 men in service; the Navy has 2,117,000; the Marine Corps 292,000. The Navy has an added total enlistment of about 372,000 since VJ-day. It can be readily seen that the armed forces now compose nearly 7,000,000 men. It should also be remembered that there are nearly 1,000,000 civilian employees, most of them outside of the United States, under the control of some branch of the armed forces.

The Army is complaining that they are unable to handle all the present details of policing, watching surplus property, prisoners of war, and other duties imposed upon them. If they are unable to do this with 4,300,000 men they now have, how, may I ask, would they expect to look after all of these details when they reduce their forces to a million and a half as of July 1, 1946?

The facts are, Mr. Speaker, that there has been very poor management and the

use of the men by the armed forces. In my humble opinion, the country did not expect to have an Army of nearly 7,000,000 men 8 months after VE-day and more than 4 months after VJ-day.

I am also of the opinion, Mr. Speaker, that this Congress should declare hostilities at an end. We drafted men to fight this war. We lowered the age limit to get more men. Our Government made a solemn agreement with these drafted men that they would be in service for the duration, plus 6 months. Is it the intent of this Congress now, by a legal trick, to continue them in the Army by failing to declare hostilities at an end? In my opinion, Mr. Speaker, this one thing is helping to break down the morale of our Army more than any other one condition. This Congress should not only declare hostilities at an end but should definitely set the size of the Army and the Navy and take from the brass hats some of the authority that they had during wartime and which they would like to continue during peacetime.

"And Peace on Earth"

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 15, 1946

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial written by me and appearing in the December issue of the Villa Marian, and published by the students of the Villa Maria High School, Villa Maria, Pa.:

"AND PEACE ON EARTH"

(By MICHAEL A. FEIGHAN, Member of Congress)

At Christmas, the feast of the Prince of Peace, our thoughts turn naturally to that peace on earth which He came to bring. After the bloodiest war in human history all the world is hungering for peace. The great war is over; we have won the victory; we have not yet won the peace. When the Bishops of the United States met in Washington this November and surveyed the world situation, they issued a statement appropriately called Between War and Peace.

That, indeed, is our predicament today. We are in what Walter Lippmann calls "the period of pacification," when the passions aroused during the war have not yet been abated and when periodical flare-ups like the flash fires following a major conflagration still occur. There is major trouble in China, trouble in Iran, trouble in Palestine, trouble in Java, trouble in Indochina, trouble it seems everywhere. We might exclaim, as Pope Pius XI, with the Prophets Jeremias and Isaias, exclaimed after the last war in his encyclical, Ubi Arcano: "We looked for peace and no good came: for a time of healing, and behold fear, for the time of healing, and behold trouble. We looked for light, and behold darkness * * * we have looked for judgment, and there is none: for salvation, and it is far from us."

The world is hungering for peace and the world must have peace. The development of atomic energy and its use as a weapon of hideous destruction puts upon all the peoples of the world the solemn responsibility to assure a lasting peace. Gradually we are coming to understand the warnings of the atomic scientists that this planet cannot stand another war. Because that war would be an atomic war in which the belligerents would destroy not only themselves but the rest of the world as well

And so we are witnessing this Christmas time a frenzied effort to work out the means of making any future war impossible. In a few weeks the most ambitious attempt ever made on an international scale to assure lasting peace will begin at the London UNO Conference. Our best prayers must be offered for its success. All the while we realize that even the most perfectly conceived machinery for peace will avail little unless it is powered by the will to peace.

The angels who heralded the coming of the Prince of Peace expressed in their angel song the most profound political truth the nations could ponder today. "And peace on earth," they sang "to men of good will." The selfishness, suspicion, and distrust which wrecked the London Foreign Ministers Council will wreck the new organization for peace unless men and nations learn the lesson of the angels' song. There will be no peace while the wills of the great nations are motivated by greed and pride and the determination to dominate the affairs of the whole world. There will be no peace until the men who control the international organization for peace are good men with good wills.

It is at this point that catholicism can make an invaluable contribution to the cause of peace. Catholics still teach the principles of objective goodness. They still believe in the existence of free will and still attempt to develop a strong determined will. If peace is a matter of giving the world more and more men and women of good will then the Catholic educational system of which your school is such an important part can do its important share in bringing peace into the world. Catholics are working mightily to influence the peace settlements as well as the organization to maintain the peace, but they need the backing of millions of men and women of good will who know and love goodness and have wills trained to virtue and the full acceptance of the law of Christ. If all of us work to bring into the world just a little more of the good will which is the condition upon which God gives His peace, then we can be satisfied that we have done our share to establish what the world most desperately needs, "peace on earth."

Starving German Women and Children

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 15, 1946

Mrs. LUCE. Mr. Speaker, many, many people in the United States who are not of German ancestry and who were and are ardently anti-Fascist and anti-Nazi, are nevertheless horrified by our policy in Germany, which seems designed to condemn millions of women and children to the horrible death of slow starvation.

In this connection, I wish to insert a letter from the Reverend Robbins W. Barstow, D. D., director of the Commission for World Council Service of the American Committee for the World Council of Churches:

MY DEAR CONGRESSWOMAN LUCE: I have sent the enclosed telegram to President Truman.

Cannot you and other leaders exert sufficient pressure to force quick action by the War Department or the Treasury Department or whatever other office is blocking this ministry of mercy?

I will be most grateful for your help.

Most sincerely yours,

ROBBINS W. BARSTOW.

A copy of his communication to the President, follows:

Referring to our letter and petition to you and heads of State, War, Treasury, dated December 17 only response is irrelevant and evasive answer from General Hildring dated January 4. He states that "special relief in Germany and other occupied areas must of necessity be limited to welfare agencies of the nationals concerned." This is precisely what we are requesting. Namely, the shipment of clothing and other necessities to be distributed by Deutsche Evangelische Hileswerke as cooperating arm of World Council of Churches. Despite agreements of American church leaders with military authorities in Germany that such assistance is politically and morally desirable we receive scant cooperation from Washington offices. British authorities are allowing shipments of relief goods from American church agencies into their zone, but we are still barred from extending aid in American zone. Unable even to secure clearance $100,000 church funds for purchase in Switzerland of medicines, fats, and oils specifically requested. Our representatives advise us "assurance of transportation for these materials into Germany." Would be distributed by indigenous church organization. Millions of American Christians deplore present-harsh policies and needless delays making a mockery of professed democratic and humanitarian aims. We endorse position stated by Dr. Swanstrom, of National Catholic Welfare Conference in New York Times today. We urge immediate executive action to expedite aid. Otherwise this Nation will stand condemned before conscience of world for missing decisive opportunity to build good will for future world peace.

I also wish to include at this point in the RECORD a copy of a letter from Howard A. Smith, of Bridgeport, Conn., written to President Truman on January 10 on the same subject:

JANUARY 10, 1946.

President HARRY S. TRUMAN,
White House, Washington, D. C.

DEAR PRESIDENT TRUMAN: At the conclusion of the First World War, we promised, as a condition of the armistice, that we would feed the German people. It was 8 months after that promise before a food ship entered Germany. Three million Germans died of starvation—not the Kaiser or Hindenburg or other top-ranking Germans, but 3,000,000 women and children.

Again we have promised to the German people as a condition of the peace that we would feed them and again millions of Germans are dying of starvation. You know the horrible conditions reported in the Christian Century and you probably know of even more horrible conditions not reported and again it is the women and children who are dying. True, we are going to shoot this time the top-ranking Nazis after we put them through the more or less farcical trial for their crimes against humanity, but at least in the interim we are feeding them. It would be far more humane and kind to hoot these millions of women and children that we have, by the Morgenthau plan, literally sentenced to a slow and horrible death.

We have made the promise—we are primarily responsible and you as the leader of the American people must shoulder that responsibility. Relief organizations are permitted to send food to every other single

country in Europe but you do not permit any organization to send food to Germany. How can you distinguish between a German child and any other child unless you have been converted to the principles of the Morgenthau Mosaic law plan of an eye for an eye and 100 babies for every Buchenwald victim.

I heard a very prominent minister, Dr. William Ward Ayer of the Calvary Baptist Church of New York City say over the air a few Sunday's ago that every crime that we have attributed to our enemies we have committed ourselves. I think I am quoting him correctly, but I believe there is a bigger crime that our enemies have not committed, at least on the scale we have, and that is the crime of hypocrisy. We are trying a few old men for their crimes against humanity but God help us if America is ever put on trial for its crime against humanity today.

Do not tell me you cannot do anything about it because of lack of ships. There are 121 ships tied up, the papers tell us, for lack of crews but we got crews during the war. We got crews by paying them a bonus for crossing the ocean, more bonuses for calling at certain ports and more bonuses for going through mine areas. Well, there are no mine areas today and there are no submarines and there are no bombers to contend with, but there are reliable reports made by your representatives and officials that 10,000,000 women and children will die in Germany this winter. Already it is reported that few children are alive in Germany today who were born in 1945. The infant mortality rate is close to 100 percent.

If we can pay bonuses to ship munitions to kill people, we can pay bonuses to ship food to save starving children. I am not a Nazi. I fought the Germans in 1917 and 1918 and my two boys fought them this time, but babies and women are not our enemies. For Jesus Christ's sake give them at least an equal chance with the other women and children in Europe. Please—before it is too late.

Respectfully,

HOWARD A. SMITH.

Admiral Land Did His Bit

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the New York Times of January 9. Admiral Land recently retired as Chairman of the Maritime Commission and the War Shipping Administration after a long and brilliant career devoted to the service of his country. Our great fleet of merchant ships is a fitting tribute to his knowledge and skill.

The editorial follows:

ADMIRAL LAND DID HIS BIT

After serving his country for almost 46 years, 39 of them in the Navy and 9 as Chairman of the Maritime Commission and the War Shipping Administration, Vice Admiral Emory S. Land has received President Truman's permission to retire. He has served the Nation well. His monument will be the greatest fleet of merchant ships that ever sailed the oceans of the world.

Admiral Land gives as his chief reason for retirement the belief that he has "done his bit." It was quite a bit. The only word to describe it is the one used by the President himself—"colossal." Under Admiral Land's direction this country built and sent to sea 50,000,000 deadweight tons of shipping, a feat unmatched in maritime history. This represents five times the tonnage we possessed before the war, and most of that was more than 20 years old. Today we have a splendid fleet of new fast vessels led by the Victory ships.

But long before we were attacked the Maritime Commission recognized that our future frontiers lay on the oceans and planned for it. The first Liberty ship, appropriately named the Patrick Henry, sped down the ways on September 27, 1941, more than 2 months before Pearl Harbor. In the worst months of submarine warfare our merchant vessels were being sent to the bottom at the terrifying rate of 50 a month. But activity in our shipyards to replace them was prodigious. Within 2 years we were turning them out at the rate of 180 a month, or more than 5 a day. No such mass construction had ever before been dreamed of. But the job was not alone to build the ships. It was to keep them moving, to keep their cargoes pouring not only into our far-flung bases all over the world but into the ports of friendly Allied Powers. That job, too, Admiral Land handled with equal skill, devotion, and fortitude.

He wants a rest now. He says he is "war-weary." But it is not likely that he will remain long at ease. Men with his knowledge and executive talents are seldom allowed to retire.

Supports Lateral Canal on Red River

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by Mr. Sylvan W. Nelken, of Natchitoches, La., at a hearing conducted by the Board of Engineers for Rivers and Harbors, concerning the Red River lateral canal:

General Crawford and members of the Board of Engineers for Rivers and Harbors, the Red River Valley, stretching through a considerable part of Louisiana, as well as other States, contains thousands of acres of the Nation's most productive farm and grazing lands. The basic industry of this territory is agriculture—chiefly cotton, livestock, and hay crops. Continued production of cotton, because of inevitable lower prices, due to foreign competition, manufacture of synthetics, large carry-over, and loss of export market—must be based upon speedy mechanization of its production. This mechanization must and will cover all phases of production, planting, cultivating, and picking. Such change will most certainly create a problem in labor utilization. (One mechanical cotton picker is now doing the work of 100 cotton pickers.) A great reservoir of semiskilled and unskilled labor will result. Give us water transportation and industry will gladly make use of this labor and solve the great problem of what will happen to the Negro in the valley when cotton is harvested by machine. Such industry that would move to the valley to utilize the relatively cheap available labor would create tonnage. To mechanize cotton will require the movement of much heavy machinery—thus a great tonnage on the proposed canal.

It is a fact that the Red River Valley lands produce more grass per acre than any other land in the Nation. A small amount of this grass is being dried and ground and shipped to feed manufacturers. With water transportation this business will multiply many times, creating tonnage and jobs.

The late President Roosevelt called the South the Nation's No. 1 economic problem, and many of us from the South feel that he was correct. A great part of the South, lacking water transportation, has not been able to attract industry to any great extent, thus making a continuance of too many small farmers unable to earn a satisfactory standard of living. If industry could be combined with small farm operation, much of the South's economic problem would vanish. Buying power of the individual would be greatly increased, thus bringing about a great movement of goods along the proposed waterway

In conclusion, may I point out again:

1. Cotton will be mechanized, thus creating a vast amount of surplus labor.

2. That industry will most certainly use this labor.

3. That a tremendous amount of farm machinery must move to the Valley.

4. New industries will develop because of cheap transportation.

5. The canal will improve the income of our citizens and thus increase the movement of goods.

Housing Is Essential for Such a Program

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. John W. Bricker over the Columbia network on Saturday, January 12, 1946:

This morning as I came to the office I noticed five new houses under construction. Some were frame, some stone. A hundred more might well be built in that same community. This same situation prevails in the thousands of communities of our land.

Millions of veterans are returning, hundreds of thousands of them married. A great majority of the newly available housing facilities will be needed by returning veterans. Some will be needed for the shifting families resulting from readjustment of our industrial production to peacetime needs.

We cannot completely segregate political problems from each other. Housing is inseparably linked up with reconversion and industrial development. A strike in steel affects housing.

Public policy is determined by the attitude in which we approach the integrated whole of the problems confronting the governmental bodies of our country. Certainly housing demands political attention today. This is well attested by the number of bills before the Congress, the attention that has been given and will necessarily be given to the problem by the Congress. State legislatures have been working with it and many may be called back especially to consider the problem of providing homes for people. Councils of our cities are constantly dealing with the various aspects of building and housing. Building codes and standards need attention and revision in many instances.

Possibly the most acute aspect of housing is in connection with the returning veterans

who want to go back into the universities and colleges of the country. The educational programs of hundreds of thousands of young men and women who were in the armed service were interrupted. As a matter of right, they are entitled to the opportunity to make up that which they have lost. The welfare of our country is in no small degree dependent upon the proper training of those who are to assume leadership in the days hence. Our universities, their administrations, and boards of trustees can never be forgiven and should not, unless they do everything within their power to provide the facilities to make possible the best educational program for the returning veterans. Housing is essential to such a program.

We should also be mindful of the fact that when an individual builds his own home, either directly or through private contractor, he builds something more than a place to live. Something of his personality, his individuality, his aims, and ambitions in life enter into the structure. It ties him more closely to his home, to the community, and to the nation of which he is a part. That factor must not be forgotten in determining public policy.

American life has been built around the individual, his family, his home. His individual rights are paramount. The individual citizen of America is not one of a mass of Americans. For him, his rights, his opportunities, his enjoyment, the American Government was organized and must continue to be his servant, subject to his guiding will. The lure of a good family life and of a home—and yet a better home—is one of the noblest motives of our American community life. That ambition to own one's home America dare not injure, for government cannot regenerate it. It is something inherent in the American heart and soul and conscience and upon it we must build public policy.

The local problems of housing require different approaches. There are some fundamental principles that must guide the public housing program at this time if it is to ultimately effectuate the good that we desire.

I am excluding in this consideration today the problem of housing for the needy and those who are dependent upon their Government for the necessaries of life. Let us consider a few of the fundamentals that must be regarded in the immediate housing program for the American family.

1. THE BUILDING PROGRAM IN EVERY POSSIBLE WAY SHOULD BE CARRIED OUT BY PRIVATE BUSINESS

There are over 37,000,000 homes in America. Approximately 30,000,000 of these meet high standards of living conditions. Electricity, gas, refrigeration, adequate water facilities are the rule rather than the exception in the American home. Practically all of these homes have been built by private enterprise. Government standards locally fixed have protected the public interest. Approximately 19,000,000 of these units are occupied by the owners. It is most encouraging that the percentage of homes occupied by the owners has increased in a marked way during the war years.

A million housing units have been erected during war years. A great part of this construction has been under private ownership and private construction. We have an example here in Columbus that private ownership has proven speedier, more efficient, and able to produce in greater quantities than any Government agency. In 1940, in a city of 300,000 people, private builders built 1,700 building units; in 1941, 1,400; and since 1940, 4,254 home units have been built and sold for a figure of $6,000 each or under. In the spring of 1943, Defense Housing Incorporated, a Government agency, undertook to build 200 units in the $7,500 class. These were completed nearly 2 years later. I think that those figures generally mark the relative efficiency of political operation as contrasted with private operation. This contrast is more marked when there is a scarcity of materials as there is today.

2. THERE MUST BE LESS GOVERNMENT REGULATION AND MORE GOVERNMENT ENCOURAGEMENT IF THE HOUSING PROBLEM IS TO BE SOLVED

There are already too many czars, directors, regulators in Washington for the good of the housing program. There is adequate legislative authority for Government encouragement to building houses. Each house that is built means a home for someone, and in most cases a veteran. There is not enough ability in all the bureaucratic organizations of the Federal Government to mesh the various detailed needs of the communities of America into a uniform policy that will be in the public interest. Control and regulation should be brought to the local communities. The banks and building and loans are bulging with money—ready to be used. Owners and builders are ready to proceed, and will proceed as soon as released from the red tape of Washington. OPA recently, in a bulletin, boasted of increased production in certain fields of building materials because of price increases permitted.

A housing czar has now been appointed. The very name is repulsive to the American public and yet it is typical of the bureaucratic attitude toward the people of America—that they must be pushed around, directed, restricted, and regulated. We have just fought a horrible war and gloriously won it to do away with that kind of thing and permit our people to live their lives rather than grope about from day to day trying to find out what their government will permit them to do or furnish them.

Through the power-mad bungling of OPA, we now have a shortage of butter and a surplus of milk and butterfat. This is just the most recent mistake of this political institution of government, which has so greatly handicapped America's effort to move forward and is now interfering with the housing program.

It has been so inept in its work, so politically vicious in its administration, that the American people have completely lost confidence in not only the law, but in the political manipulation and administration of the law.

I note in the Washington Daily News of Friday, December 14, that enough lumber has been shipped to foreign countries during 1945 to build some seventy-five thousand to one hundred thousand homes in America. The article further says that higher prices could be secured in the foreign market than OPA would permit here at home. With the crying need for more and more material in America, no one can justify a program that permits a situation like that to come about. I am advised that the export of lumber is increasing the first quarter of this year over that which went out of the country last year. A public building administrator, such as has been appointed, can have but one function to perform, and that is to break the bottleneck in supplies. It will take the fearless courage, the ability and driving energy of a man like William Jeffers in the rubber program, because that which is needed today to solve the housing problem in America is first—material, and second—labor.

A step has been made in releasing the Army and Navy supplies for the building program. Temporary housing facilities have been made available for immediate needs. This is commendable, but it is only a temporary expedient. The material for building homes must flow from the mills and factories of America and until the wheels of industry start to turn that supply will not be available.

The greatest handicap that production has today are the restrictions and Government regulation which prevents the free flow of materials and rapid reconversion and promotion in production. Those are the bottlenecks first to be opened. There is, of course, a shortage of labor which will be taken care of, in my judgment, with the release of materials and with the returning of the veterans. Here is a field in which the virtues of the Republic ought to reassert themselves. Housing calls for private initiative and private enterprise. Opportunity with Government encouragement must be established. There is sufficient Government power today to direct the flow of the available materials into the proper channels. There are enough homebuilders in America to do the job. There is sufficient local authority to protect the public interest. There is a desire here among all those needing homes to establish their families, to own their homes. Home owning has continued and will continue to be the very hearthstone of the Republic. We must drive from government all those in every bureau and commission at once who look upon the American people as a mass—who would regiment them, shift them about, use them according to political whims or personal desires.

We must again encourage pride of production and release the full force of competition. In no other way can we secure full employment, retain individual freedom, and foster the home owning and home loving instincts, the undergirders of the Republic.

Why Our Soldiers Protest at Manila

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. WEICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to say that while the War Department and the Navy make detailed explanations with reference to bringing our boys home, the fact remains that they are still in foreign lands.

More than 2 months ago I introduced bills into this House with reference to the number of ships with foreign countries and the use of our own ships to return the boys back to this country. The bills were referred to the Committee on Merchant Marine and Fisheries and up to this time the administration has been successful in smothering hearings on this legislation. There have been no hearings or investigations with reference to the matter of our ships with foreign lands and the use of our own ships.

Forestalling every means of keeping the facts from the public as to failure to use our ships, it is no wonder that the men overseas are becoming dissatisfied.

The fake story of "no ships" put forth by the administration concerning the use of our ships to bring our boys home, was a fraud on our men overseas as well as upon the parents in this country.

It is no surprise that they are now openly asserting themselves and demanding that they be brought home, when they find the administration has lied to them and smothers hearings on bills covering the use of our ships.

And I want to include the printed matter that I have just received from Manila which evidences the temper and feeling of those who have been mistreated by our Government:

MR. TRUMAN, BRIEF US NOW

The late Al Smith campaigned, "Let's look at the record."

Let's look at the demobilization record as portrayed in the news dispatches from Washington to the Daily Pacifician:

September 22. Point scores announced: October, 70; November, 60; and after that all 2-year men.

September 25. No 36-point enlisted men or 48-point officers will be sent overseas.

October 20. Army must reduce point score to keep pace with demobilization.

October 21. War Department reaffirms release target dates.

October 24. Homeward sailings lag behind goal.

November 20. Pacific-based returnees promised relief as transport surplus looms for January.

December 5, 9, 12, 15. Bright prospects on shipping as backlog breaks.

December 21. Fifty points good December 31.

December 28. All troops not needed to go home by March 1, says Patterson.

January 3. Sixty-three thousand more berths assigned to AFWESPAC.

January 5. Empty berths sail to United States for lack of eligible men.

January 5. Army announces demobilization will be slowed down and the return of some troops delayed.

The facts read like a war-of-nerves drive. Yet throughout all the confusion one fact stood out: Policy makers were promising that men above occupation needs would be sent home immediately.

But what about the two new situations?

(1) The Secretary of War didn't know the way the point system is being operated. Does this show lack of liaison and understanding of our Washington leaders on the problem? This, with all the public clamor.

(2) Rate of demobilization is slowed down because of the difficulty of getting overseas replacements. What has happened to the thousands of red applers and selective-service inductees? Have no replacements been trained since VJ-day?

We ask our Commander in Chief, Harry S. Truman, to give us the facts. We were briefed on our mission during days of combat. Let us be briefed now.

POTENTIAL VETERAN

Do you want to go home?

We were told that—

1. There will be no empty berths returning to United States (War Department).

2. We need only 200,000 men for occupation (MacArthur).

3. No men will be held after they become eligible (War Department).

4. Men not needed for occupation or surplus-property disposal will be home by March 1, 1946 (Secretary Patterson).

5. By March 1946 all men with 2 years' service will be eligible for discharge (War Department).

6. When shipping is available men will go home (Secretary Patterson).

7. Sixty-eight thousand berths will be assigned to AFWESPAC for January (War Department).

The truth is—

1. Navy takes 130 ships off Pacific run (authorized source).

2. Ships leave Manila partly empty (A. S.).

3. I didn't know men overseas had stopped accumulating points (Secretary Patterson).

4. Secretary Patterson said on Guam that he didn't know 2-year men were to become eligible in March 1946.

5. Discharges cut in half; a man may be kept in the Pacific 3 months after becoming eligible (Lieutenant General Collins).

This is the story: The Army is up to its old tricks. Believing that public opinion is sufficiently placated by discharges to date, the Army hopes to fall back to such double talk as "But men are not yet eligible." Discharges have been intentionally slowed down first by the cry, "There are no ships," and now that they can no longer contend this, the cry is that there are no men eligible. In this last one nothing is said about refusing to lower the points except that it will disrupt the divisional organization of the Army, but again it is skillfully left out that the Army is trying to hold wartime installations with what is to be a peactime Army.

It seems we are to be used as a pressure group to force Congress to pass compulsory military training.

It seems also that if we wish to get home that we will have to do something about it. Write your family and Congressman, and above all, insist that the GI be given an open hearing with the Senate investigating committee that is to be in Manila Monday, January 7.

Every soldier in Manila is requested to be at city hall, Manila, today, Monday, January 7, at 6 p. m. to form a welcoming committee for the Senate investigating committee.

Manchester's Housing Problem

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a letter which I have received from Ernest G. Swanburg, chairman of the special housing committee of the Manchester (N. H.) Chamber of Commerce:

CHAMBER OF COMMERCE,
Manchester, N. H., January 8, 1946.

The Honorable CHESTER E. MERROW,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MERROW: Manchester's housing problem, like that of many other communities throughout the country, is so critical that we have been forced to try and find a solution to it outside of the new-building field. Our reason for doing this was because of the fact that materials are not adequate for any new-building program and it looks as though they will not be available in quantity for quite some time. As a result of considerable study, we have arrived at a plan which we think has great merit. We can see its possible benefits here in our own community and it could undoubtedly be put into effect throughout the entire country.

Our plan is to overlook the new-building field for the time being and devote all of our efforts to the rehabilitating of substandard houses and to the remodeling of existing one- and two-family houses so as to accommodate more families. We find that in some cases the biggest part of the work can be done with the materials already in the building. In other cases it is necessary to use only a small amount of lumber and to install plumbing and fixtures. In no case would we use anywhere near the amount of lumber that would be required in the building of the average new small home. In other words, our available supply of materials can be stretched to cover some 5 to 10 times as much ground if we restrict our operations to remodeling and rehabilitating work.

In order to do such work efficiently, cooperation on the part of all Federal agencies is needed. This means the lifting of restrictions on the usage of lumber now available so that we might proceed with such a program and possibly the adding of new restrictions which would prohibit the use of lumber for any purposes except remodeling and rehabilitating until such time as the materials are coming through in volume sufficient to warrant the beginning of a new building program. In Manchester, we have started out on such a program. We have had splendid cooperation from the local newspapers explaining our plan and we have received numerous requests from property owners to discuss the matter further with them. It appears that they never thought a great deal about converting single- and two-family homes into multiple units until it was called to their attention.

In several instances, we have found that a good deal of lumber is being used for strictly nonessential projects—skating rinks, dance halls, etc., make up this category.

We believe that this is one opportunity you have to serve not only the people of your own State but the country as a whole in pointing out to them the advantages of following the suggested program of rehabilitating and remodeling possible for the next 6 or 8 months. We trust that you will see your way clear to have lifted any restrictions which interfere with this program and to place in effect such new restrictions as are needed to proceed efficiently with such a program.

Yours very truly,
ERNEST G. SWANBURG,
Chairman, Special Housing Committee,
Manchester Chamber of Commerce.

P. S.—A further suggestion might be offered to the effect that this program might well be sponsored by chambers of commerce in all parts of the country and thus eliminate the need for additional Federal agencies.

The Laboring People of Our Nation

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. ROONEY. Mr. Speaker, an intense and well-financed campaign is now being conducted by many of the huge corporations of this country to drive the laboring people of our Nation into the throes of reaction. They refuse to bargain collectively. They will not recognize the fact that the laboring class has suffered drastic reductions in take-home pay while the cost of living has steadily increased. Under permission granted by this House I include in my remarks a telegram received yesterday from the president of the Brotherhood of Railroad Trainmen, Washington, D. C.:

WASHINGTON, D. C., *January 14, 1946.*

Hon. JOHN J. ROONEY.,
Member of Congress,
Washington, D. C.:

The laboring people of the United States today are the target of a most vicious campaign of propaganda, which is also misleading some Members of Congress. Instead of rewarding labor for its decisive contribution to victory in the recent war, there are those in Congress who would pillory the men and women who won the battle of production. These spokesmen for reaction are bent not only on destroying organized labor, but are

deliberately preventing the adoption of legislation on full employment, housing, health, social security, including amendments to the Railroad Retirement Act. It is time that thinking Members of Congress got on their feet and read into the RECORD the facts about the sacrifices the American worker has made and the fine job he has done for the war effort. Since VJ-day labor has suffered serious reductions in take-home pay while the cost of living has continued to mount. As president of the Brotherhood of Railroad Trainmen I call upon you to take an active part in offsetting the antidemocratic drive now being conducted against the working men and women of our Nation.

A. F. WHITNEY.

Red River Lateral Canal

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement made by Mr. George F. Chicola, of Alexandria, La., in support of the project to construct a lateral canal on Red River in Louisiana:

It has been my good fortune to have lived in the city of Alexandria, La., for the past 30 years. During the last 15 years I have been actively engaged in the wholesale-jobbing business in the city of Alexandria, La., and with pardonable pride, I believe that I can say that I am thoroughly familiar with the economic conditions of the whole of central Louisiana. While my business connections consume a great deal of time I have been active in civic work and am at present president of the Alexandria Rotary Club. I mention this fact in order to show my range of observation of conditions and business.

Alexandria, La., is located on Red River in the geographical center of the State and is the parish (or county) seat of the parish of Rapides. It is the heart of the hard-surface highway system, leading into every direction of the United States.

Alexandria is surrounded by the richest and most fertile lands in the world and agriculture is a principal industry or occupation. Cattle-grazing lands are equal to any in the United States and the cattle industry is growing by leaps and bounds. The lumber industry is again finding itself, assisted by planned reforestation. Oil fields are in every direction of Alexandria and the development is only in its beginning.

Because of Alexandria's strategic location and the natural advantages, aforementioned, Alexandria is on its way to become a great industrial and jobbing center.

The development of water transportation will naturally afford cheaper and more transportation and so hasten and materially assist Alexandria in becoming an outstanding industrial and jobbing center. The range for service to jobbers into trade areas will be extended and the business of Alexandria jobbers, because of this increased territory opportunities, should triple in volume.

The development of water transportation will enable the railway systems to render a greater and better service, moving perishables and fast moving freight more expeditiously. By moving heavy and slow moving freight via water transportation, a bottleneck in existing car shortages will be eliminated.

In conclusion, insofar as Alexandria is concerned, water transportation will assist other means of transportation and will work in conjunction with other means of transportation in the development of a greater Alexandria. The opportunity of water transportation will bring new factories and business to Alexandria and this will mean additional tonnage for all types of transportation. In the future greatness of Alexandria, water transportation can well and truly move on with other means of transportation.

The Program of the American Legion Auxiliary

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Dr. Ruth Miller Steese, State president of the American Legion Auxiliary, of Pennsylvania, over Station WHJB, Greensburg, Pa., on January 8, 1946:

A Happy New Year to every one and may that happiness be crowned with the realization of those national and international plans which shall culminate in an enduring peace.

To consider the program of the American Legion Auxiliary at the beginning of this New Year of 1946, the first year which has witnessed the dawn of peace for a long period of time, it is necessary to think just what constitutes membership in this greatest patriotic organization of women. We, as an organization, are most unique for we were organized by the American Legion in 1919, just 8 months after their own organization in Paris, France. They planned our program for us and they defined what should constitute our membership.

Because of the action of the American Legion, our parent organization, the American Legion Auxiliary, opens its ranks to the wives, mothers, sisters, and daughters of Legionnaires and of those men and women who paid the supreme sacrifice in World Wars I and II. We are also proud to claim within our membership those women who served our country in these two wars and who carry an honorable discharge from the armed services. With such a type of membership, we in the State of Pennsylvania are proud to announce our membership for this new year of 1946—a paid-up membership to date of over 56,000 women. But to these 56,000 we would add another 56,000 because in our organization we offer an opportunity for unusual service to humanity.

May I outline for you just a few of our interests—interests which command the attention of women of every religion bound together with that one common tie—service to humanity, service to others, service whose only recompense is to be found in unselfish devotion to those objectives which alone make life worth the living.

During the recent holiday season, when so many were interested in a new fur coat, a diamond ring, or a trip to the sunny Southland, the women of the American Legion Auxiliary visited every Government, State, and county hospital and institution in this great Commonwealth, distributing gifts to every serviceman and veteran, making contacts for them with their families back home and arranging that those families back home were also having a pleasant Christmas. In our mental hospitals, where so much thought must be given as to the correct type of gift, boxes were given containing those articles which could not injure the patients, but gifts which would remind them that there are still those in the outside world who know and care. In our medical hospitals and institutions we gave lovely boxes with a great variety of articles to please every taste, we distributed dollar bills and we gave parties to help and encourage, to help many to forget where they were, even if only for a few short hours.

The children of those hospitalized and disabled were not forgotten in any community. The slogan—"A square deal for every child"—is a reminder every month of the year, as well as in December, of our obligation to the youth of America. At Scotland—Pennsylvania's only school for the orphans of her sailors and soldiers—Christmas week was, indeed, a merry one with the continuous arrival of those packages which were the answer to the letters written to a faithful Santa Claus—that Santa Claus being the American Legion Auxiliary.

But our program in the American Legion Auxiliary is not just the distribution of gifts at Christmas. Throughout the year nine Government hospitals and veterans' facilities in Pennsylvania, one in Maryland, and three in New York are cared for by our Pennsylvania women, who distribute cigarettes, help with ward parties and dances, and add those personal touches which make permanent residence in a hospital a little more earphones.

These personal needs are supplemented by larger gifts to the hospitals themselves—permanent installations which are of value over a long period of years. These gifts include printing presses, mimeograph machines, band, orchestra, and athletic equipment—even the installation of bowling alleys and of metal collapsible stadiums and of master radio-control sets with hundreds of earphones.

Our first great project for 1946 is the erection of a greenhouse at Valley Forge General Hospital. As a living memorial to those men who by the sacrifice of their arms and legs on the Normandy beachhead, by the loss of their sight in the seething waters of the South Seas, and by the contribution of their very lives, made this year of peace possible, we would erect this greenhouse—erect it on the soil of Valley Forge—soil made sacred by Washington and his men in 1776, soil whose sacredness was preserved by the men and women of 1941–45.

This greenhouse at Valley Forge will be the answer to many needs. The blind, whose sense of touch is now the keener, can derive many hours of pleasure and comfort from the simple task of working in the ground. The war-weary can fill many lonely moments while the pleasure of blooming flowers gradually takes their thoughts from the crash of guns and the zoom of planes to the beauties and the quietness of enduring peace. The permanently bedridden can find happiness in the enjoyment which comes from colorful flowers scattered in the wards of the hospital—flowers which come from the hospital greenhouse.

This greenhouse project will be financed by the collection of coupons from various articles of merchandise and by large and small financial contributions from individuals and organizations whose great interest is the loving care of our hospitalized veteran. Already we have received checks for $1 and for $100 from those who felt most keenly the meaning of war, from those who gave their all in that war, and from those who prefer to give to the living.

In addition to our vast program on rehabilitation and child welfare, the American Legion Auxiliary offers a national defense program which would maintain the peace which nations fought for. This program demands for America an army and navy which would be of sufficient size to keep America

secure—an army and navy second to none. This program also seeks the enactment of the American Legion plan of universal training for national security. If you wish permanent national security, study this plan of the American Legion and then join with us in working for its passage into permanent legislation in our congressional halls in Washington.

National defense and Americanism are inseparable. Our Americanism program is a practical one, teaching in our schools what citizenship means through the medium of essay contests, emphasizing the good traits of citizenship by the awarding of medals to outstanding students, stressing the value of good sportsmanship by our support of the American Legion's junior baseball program, and sponsoring girl and boy scout troops to aid in the development of future leadership.

The poppy program of the American Legion and its auxiliary commands public interest. We are the only organizations—may I repeat—we are the only organizations which go into our Government and veterans' hospitals in Pennsylvania and present a poppy-making program. The hospitalized men make the poppies, are paid for the making of them by our organizations, and then we, the members, sell those same poppies that the proceeds may further promote the welfare of the disabled and hospitalized veterans and their families. If we would all realize that the purchase of an American Legion poppy means employment to the hospitalized and compensation for him and his family we would buy more and more poppies and make a reality our slogan for 1946—2,000,000 poppies worn over 2,000,000 hearts—another living tribute to those who gave and gave and gave.

These are but a few of the many phases of our American Legion Auxiliary program—a program which has a personal appeal to every woman interested in the enduring things of life. Will you by your membership add to the great womanpower of the auxiliary, so that, working together we, as women, may add our strength to preserve the peace for which Washington and his men fought at Valley Forge, for which Lincoln dedicated the National Cemetery at Gettysburg, for which the men of '17 and '18 went over there, and for which the men and women of '41 and '45 encircled the globe.

To be an auxiliary member means an opportunity to be a finer citizen, a more devoted comrade, a finer member of the United Nations. We would welcome you and you and you to membership, a membership which embraces every race, class, and creed which fought for the security of these United States—a membership which serves but two masters—God and country.

And so as we stand at the beginning of the New Year of 1946, as you, a member, and you, a prospective member, consider our program, may I ask for each of you the realization of this wish—

"May the Giver of Gifts give unto you
That which is good and that which is true;
The will to help and the courage to do;
A heart that can sing the whole day through:
Whether the sky be gray or blue,
May the Giver of Gifts give these to you.
That which is good and that which is true:
The will to help and the courage to do."

Silly "Sentinels"

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 15, 1946

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial which appeared in the Washington News of January 14, 1946:

SILLY "SENTINELS"

The Detroit group which has organized itself as the Society of Sentinels deserves some sort of award for the worst idea of 1946.

The year is young. But it is not likely to produce any more asinine proposals than the ones advertised by these "sentinels" in Detroit, New York, and Washington newspapers.

Generally, they want to abolish the New Deal. Specifically, they urge President Truman to advocate repeal of the Wagner Labor Relations Act, the wage-hour law, the social-security law, and practically every other Federal law adopted since 1933 in efforts to improve the condition of workers and farmers.

Chairman of this society is Les Allman, advertising director for the Freuhauf Trailers Corp. One of the vice chairmen is Stephen Du Brul, a General Motors economist. Its secretary is Wayne Stettbacher of the Detroit Employers Association. Its treasurer is Noble Travis, a banker.

Shades of the Liberty League!

The Sentinels appear to believe—at least, they say—that they are defending free enterprise against regimentation. In our opinion, they do not represent the viewpoint of any large number of industrialists or businessmen. If they did, then free enterprise would indeed be in deadly peril of destruction by blind, black reaction.

The American people, we think, hope to see many New Deal laws made fairer, more workable and more effective instruments for the purposes they are intended to serve. But they do not want, and they do not propose to let, these laws be wiped from the books.

It's a free country. The Sentinels have a right to be stupid, and to advertise their stupidity. But American business and industry as a whole—and especially the companies with which officers of this society are identified—should lose no time in repudiating the group and its absurd program.

New York Amvets Hold First State Convention

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 15, 1946

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks, I wish to include three brief newspaper clippings that appeared in Buffalo, N. Y., newspapers concerning the recently held State convention of the American Veterans of World War II—Amvets—as follows:

[From the Buffalo Courier-Express of December 16, 1945]

STORM DELAYS AMVETS' FIRST STATE SESSION—IMPORTANT BUSINESS SCHEDULED FOR TODAY

American Veterans of World War II will attain the size and importance of the American Legion within a few years, Joseph H. Leib, of Washington, national legislative director of Amvets, predicted yesterday at the opening of the first annual State convention of the organization in Hotel Lafayette.

Amvets now has a membership of 25,000, which is greater than the American Legion strength after its first year of organization, Leib asserted. He said Buffalo, which has 17 posts, is a leader in Amvets growth.

STORM DELAYS DELEGATES

Because of the storm, many delegates arrived late, and most business was postponed until today. At the morning and afternoon sessions today, officers will be elected, a State charter adopted, and the resolution committees will report on revision of the GI bill of rights, the full employment bill, the Wagner-Ellender-Taft housing bill, waiving of premiums on retirement pensions for veterans returning to civil-service jobs, and the extension of price and rent control beyond 1946.

Amvets national headquarters is planning to buy the Government's McLean Gardens in Washington from the Defense Homes Corporation and operate it as a cooperative project, Leib announced. The cooperative will be financed by 700 veterans who will pool their $2,000 loans under the GI bill. If it is successful, similar projects will be organized throughout the country.

SEEK SURPLUS BENEFITS

The legislative director reported progress in Amvets efforts to have the Surplus Property Board "changed from a policy-making group to an organization staffed by veterans who will sell property direct to veterans and civilians."

"We don't find any fault with the American Legion and other veterans' organizations," Leib said. "But we feel the veterans of World War II can solve best our problems by having an organization of our own in which we have a community of interest, age, and experiences."

Raymond O'Brien, of Buffalo, acting State commander, presided.

[From the Buffalo Courier-Express of December 17, 1945]

AMVETS CLOSE FIRST ANNUAL SESSION HERE—BETTER-TRAINED STATE COUNSELORS DEMANDED

A resolution recommending that counselors group to an organization staffed by veterans Affairs be given more extensive training was passed at the closing session last night of the first annual State convention of Amvets, American veterans of World War II, at Hotel Lafayette.

Forty-three delegates, representing 32 Amvet posts throughout the State, charged that many counselors are insufficiently trained, especially in handling questions about on-the-job training.

Increased effort on the part of local and State authorities to arrange immediate housing facilities for veterans and their families was urged in a second resolution. A third resolution requested that the Government guarantee loans for homes, farms, and businesses up to 75 percent instead of the present 50 percent authorized in the GI bill of rights.

WANT CONTROLS KEPT

The Amvets further went on record as urging the State legislature to memorialize Congress to continue price and rent cantrol beyond 1946 and to waive back payment of premiums to the New York State retirement fund for returning civil-service employees. Many veterans returning to police and fire jobs must pay up to $400 in back premiums, the resolution pointed out.

A Buffalo attorney, William H. Hepp, 176 Lafayette Avenue, was chosen commander. Other Buffalonians elected to State department offices are Vincent M. Gaughan, 28 Downing Street, second vice commander; James T. Francis, 51 Lemon Street, provost marshal; State Senator-elect Edmund P. Radwan, 3 Norway Park, national executive committeeman; and William E. Blake, 73 Grey Street, alternate national executive committeeman.

Other officers elected are Michael A. di Fate, of Yonkers, first vice commander; Marcy Carlucci, of New York, third vice commander; Walter Brause, of New York, judge advocate; Joseph R. Barone, of Dunkirk, finance officer; and Joseph Grandwetter, of New York, adjutant.

[From the Buffalo Evening News of December 17, 1945]

BUFFALO ATTORNEY IS CHOSEN AMVETS' STATE COMMANDER

William H. Hepp attorney, of 176 Lafayette Avenue, was chosen commander of the Department of New York, American Veterans of World War II, by delegates at the first State convention Sunday afternoon in Hotel Lafayette.

Other State officers are: First vice commander, Michael A. Di Fate, Yonkers; second vice commander, Vincent M. Gaughan, 28 Downing Street, Buffalo; third vice commander, Marcy J. Carlucci, New York City; adjutant, Joseph Grandwetter, New York City; judge advocate, Walter I. Brause, New York City.

National executive committeeman, State Senator-elect Edmund P. Radwan, 3 Norway Park; alternate, William E. Blake, 73 Grey Street; provost marshal, James T. Francis, 51 Lemon Street; finance officer, Joseph R. Barone, Dunkirk; chaplain, the Reverend Stanley Wisniewski, assistant pastor, St. Adalbert's Church.

Raymond D. O'Brien, of 93 Meriden Street, who, with Mr. Blake, helped organize Amvets here, was designated as the department's first past commander.

A resolution was passed urging Congress to revise the GI bill of rights, especially to provide more liberal educational provisions and more liberal real property and loan features.

Other resolutions passed favored: Passage of the Wagner-Ellender-Taft housing bill; continuation of rent and price controls by OPA beyond 1946; passage of the bill to give enlisted veterans pay for accrued furlough time similar to terminal leave for officers; appointment by Governor Dewey of more qualified veterans to the veterans State commission and to give them more extensive training to make them more qualified; memorializing the legislature to waive payment of back premiums to the State retirement fund for returning civil-service employees.

Palmyra Legion Demands Fair Demobilization

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. KUNKEL. Mr. Speaker,. under permission to extend my remarks, I include some resolutions adopted by the Harrison B. Quigley Post, No. 72, of the American Legion, of Palmyra, Pa., on December 17, 1945. I thoroughly agree with the sentiments expressed and the purposes sought by these resolutions. They are further evidence of the desire by the American people for complete justice and equality in the demobilization program. They also show the careful thought and attention this important program. They also show the careful Americans:

Whereas the method of separation of men from the armed forces is being made on a point basis, giving credit for length of service, service overseas, dependents, citations, campaigns, and the like; and

Whereas men are being separated from the service because of age and years of service; and

Whereas the separation of certain individuals has been fostered regardless of agreement with existing regulations; and

Whereas favoritism has been exhibited to people of certain professional classes or to the sons of influential military and civil leaders, Be it

Resolved, That some action be taken by the legislative bodies representing the people of these United States to air these inconsistencies and restore equality of opportunity for separation to all those who meet the qualifications; and

Resolved, That favoritism be eliminated immediately from separation procedures because of the desire of certain peoples whose selfish interests are placed above established regulations; and

Resolved, That our representatives, through proper committees, exert the full measure of their high office to eradicate these existing evils.

Program of the Democratic Party

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Robert E. Hannegan delivered before the Boston Democratic State Committee on January 12, 1946:

A few days ago, from the President of the United States, you heard a candid and courageous discussion of the state of our Nation.

Harry Truman was talking to all Americans, to that all-important individual whom we in America describe as the Man in the Street. He was speaking not only of the tremendous opportunity that lies ahead for this country in the postwar era but also of the difficulties.

He was aware that we in America stand on the threshold of better times. He has several times mentioned this—new products, greater markets, and a higher standard of living—now all within our reach.

But he was aware, too, of present obstacles. And he was resolved that these difficulties should not be allowed to block our way. It was his purpose to let us know that for our future well-being and prosperity we must face these problems squarely now.

It is easy enough, you know, to talk about the prosperity that is just around the corner. Even a Republican can do that. But it takes courage and a deeper integrity to talk about the corner that we still have to get around.

The Republican Party was quick to criticize President Truman for talking over our Nation's problems openly and candidly with the man in the street.

To the Republican leaders, that idea has always been abhorrent. The members of the Old Guard clique have one rule which they hold inviolable, one principle to which they adhere through thick and thin with the greatest fidelity.

That principle is never to take the people into their confidence. And they stick to it even in their own party.

Naturally, then, when Harry Truman undertook to inform his fellow citizens of the true state of their Nation, these Republicans declared that he had made a political error. They disapproved of the program he was fighting for, but they went beyond that. They said it was poor political strategy, in an election year, to place any issue before the electorate—something they themselves would never do. And they were elated because they believed the President had made a mistake.

Now, political strategy is a deep, deep subject. I have been a student of it for years and I would think anyone ill-advised to try to learn it all in just one lifetime.

But I find that after a man has put in the deepest kind of study on this subject, and worked his way through its most difficult, complex problems, the net result is a certain humility. I find that after all is said and done, after all the clever techniques in the book are learned and digested, the best political strategy still lies in the answer to one simple question:

"What do the American people want?"

Now, the Republican strategists—those who have criticized the President's speech on political grounds—have not yet reached that point that understanding, in their studies. Apparently they cannot get beyond the chapter on Republican techniques.

Harry Truman would not make a very apt pupil in these particular techniques. His whole background and training point away from the Republican philosophy—and straight toward the man in the street. So these Republican Party experts probably would give him a grade of no better than C minus.

Harry Truman has pointed out that this year—1946—is a year of decision. And by that he meant decision vital to the American people. By what we decide now, we can make the most—or the least—of a great opportunity for economic security and better living. That is why he seeks enactment of his 21-point program for postwar America, a program of specific action to meet real problems.

The Republican political experts have given Harry Truman a low mark for this. They point out that 1946 is an election year. And it is "poor politics," as they see it, to be specific on anything in an election year.

One of these Republican specialists has already attacked the President publicly. That one—Senator ROBERT A. TAFT, of Ohio—was selected by the Republican Party leadership In a radio broadcast following the President's address to the Nation, TAFT authentically voiced the answer of the Republican Party.

In providing that answer, the Senator has performed a service. He has further clarified the issue between the two parties. He has sharpened the battle lines for both 1946 and 1948 He has made it finally and unmistakably clear to all Americans that the Republican Party has taken its stand against a progressive postwar program for America. The Republican stamp of approval is once more on a policy of outright reaction.

Answering for my party, I wish to announce that in this drawing of the battle lines for 1946 and 1948, we Democrats wholly concur. We accept this challenge, and we go along with Senator TAFT 100 percent in his clarification of the issue.

We are ready to lay the case before the voters of America. We shall do everything in our power to make Senator TAFT's meaning perfectly clear to them—to all Americans, Republican voters included.

The rank-and-file membership of the Republican Party should now realize that their last hope of a forward-looking, constructive policy is gone.

Even the "me too" days are over. Senator TAFT and his associates have dropped the pose of liberalism. They control the party, and so long as they continue to do so, there can be no more claims to liberalism under that party's banner. There can be no such thing as an accredited Republican liberal. Henceforth, by the party's own decree, Republican candidates for office cannot stand on liberal principles.

What, then, does the Republican Party now offer?

For a fair appraisal, we must go back to September of last year and start from there.

At that time—September 6, 1945—when President Truman addressed his message to Congress embracing the 21-point program, immediately the Republicans in Congress set up a chorus of opposition. This was communism, they said It was communism for the Government to interest itself in what might happen to unemployed war veterans. It was communism to ask that war workers be granted unemployment insurance during reconversion. It was communism to put a minimum limit on wages.

But the scarce did not "take." Not many Americans began looking under the bed at night to see if Harry Truman, the Communist, was hiding there. In fact, there was a general approval of the Truman program in the press and in public opinion.

But wait, the Republicans then said. We have something much better. We have—and these were the exact words that Republican Congressman CHARLES HALLECK, of Indiana, used in a statement to the press—we have "old-fashioned conservatism."

Now, Congressman HALLECK is chairman of the Republican congressional campaign committee. His work was not without weight. President Truman's message, he said, was the kick-off. "This begins the campaign of 1946. And in waging the Republican congressional campaign, we will go back to old-fashioned conservatism."

But many people—and many Republican voters among them—were still puzzled. Truman had a program. It meant maintenance of public purchasing power. It meant consumers could continue to buy and, therefore, producers could continue to put better products on the market. And that meant that we could enjoy the higher standards of living which our new scientific and technical knowledge held out to us in the postwar world.

But what about this old-fashioned conservatism? Could you pay for the new products of American industry with it? Could you put a couple of ounces of it in the pay envelopes of American workers in place of wages? And would the makers of refrigerators and automobiles and new houses and radio sets accept this old-fashioned conservatism in lieu of cash?

The rank-and-file voters in the Republican Party began to wonder about this. They began to ask embarrassing questions. Suppose public purchasing power should fail to remain high of its own accord. Suppose our factories and our mines and our farmers should one day find their markets shrinking.

Was old-fashioned conservatism a good kind of insurance policy against this? Was it any better now than it was in 1930 and '31 and '32? Had something new been added? After all, Harry Truman had a program.

All right, the Republican leaders replied. We'll have a program too. And 4 days after President Truman's message was delivered to Congress, Republican Representative JOE MARTIN, House minority leader, had an announcement to make to the world.

Now, many of you know JOE MARTIN. He is from your State. And those who know him cannot help admiring his boundless confidence in predicting things that never come to pass. Nobody ever put his money on the wrong horse with greater consistency, greater frequency, and greater faith, than JOE MARTIN, of Massachusetts.

The Republicans in Congress, JOE MARTIN bravely announced to the world, had appointed a seven-man committee to draw up a Republican Party program.

"We plan," he said, "to set before the country a definite and concise statement of the aims and objectives of the Republican Party as represented by Republican Members in Congress. We plan to do this in such manner as will leave no room for questioning as to where the Republican Members stand on the issues before the country."

Now, when I saw this promise in the newspaper I was impressed with the statesmanlike attitude that JOE MARTIN had taken—so deeply impressed that I marked the day on my calendar with a red pencil.

Then I waited. Again and again the seven-man committee of Republicans in Congress met to draw up the program that would leave no question as to where their party stood. But the days went by, and the program was not forthcoming. I began marking those days off on my calendar

I ran up a total of 87 crosses on that calendar. Then came another announcement. At the December 6 meeting of Republican leaders in Chicago the "definite and concise statement" that JOE MARTIN had promised was finally to be given out to the world.

That statement, or "interim platform," as it was called, bore out a prediction which I had made repeatedly in my talks with fellow Democrats. It said nothing. It turned out to be a collection of mottoes—very few of them suitable for framing—with not one specific action proposed to solve the problems that America faces today.

Nearly all the Republicans gathered in Chicago were disappointed with the statement. Those who had hoped to emerge as a "liberal wing" of the party were shocked and outraged. And even the reactionary leadership did not want this brain child of the seven Congressmen and refused to give it a name. On all sides the complaint was that the statement said nothing.

The group at Chicago therefore did what many another group does when the members realize they have run into a stone wall.

They appointed a committee.

The committee is to go on where the Congressmen left off. To minimize their embarrassment, the Chicago meeting approved the Congressmen's platform. But the new committee was assigned the task—all over again—of writing a platform. In other words, the Republican Party, in offering a program for America, spent months getting nowhere, and is now ready to continue nowhere from that point.

Meanwhile, I am obliged to continue marking off the days on my calendar while I wait for that Republican program. I now have 120 days crossed off. I have had to start on a new calendar.

Between now and the election there are 297 days still to be crossed off, unless the Republican Party can produce its program meanwhile. In other words, since Congressman JOE MARTIN made his promise of a definite program, a third of the time remaining before the election has already elapsed.

Prior to that December meeting of the Republican leaders in Chicago, I had made another prediction. I had stated that this so-called interim platform of the Republicans would be one of two things: It would be another "me too," operation—in which case those who had criticized President Truman's program would have to eat their words—or it would be no program at all.

I am now ready to offer a further prediction. And this time I am adding no "either-or" condition. I now predict that the Republican Party will produce no program at all.

It requires no gift of prophecy, of course, to make that prediction. I am not taking any chances of miscalling the turn. Senator TAFT and his colleagues have given us all the information we need. They have made it clear that the old guard controls the party. And the Republican old guard never has had a program to offer this country and never will have one.

To the returning soldier, to the factory worker, to the farmer, to the businessman, and to the housewife of America, the issue between the Democratic and Republican Parties in the next election boils down, then, to this:

Democratic Party initiative and leadership in realizing the possibility of a prosperous postwar America, or no leadership, no initiative at all.

A Democratic Party program for full employment or no program at all.

Democratic Party action to maintain public purchasing power through the period of postwar adjustment, or no action at all.

Democratic Party protection of American workers against subdecency wages, or no protection at all.

Democratic Party measures to prevent inflation, or no measures at all.

Democratic Party assurance of adequate peacetime military reserves for the defense of America, or no assurance at all.

Democratic Party initiative in bringing medical care within the reach of all Americans who need it, or no initiative at all.

These are the choices that Americans must make when they go to the polls next November. If these objectives are the will of the people, then the voters can give their mandate only by supporting our party.

It is true that the main body of legislation required by the Administration's program has not yet been enacted. But let us not be deceived by this, and particularly let us not jump of our own accord into the fallacy which our opposition has reached by the route of their own wishful thinking. It is significant that those who have been predicting failure of the Truman program are those who do not wish its success.

The fact that the program has not been enacted to date does not mean, as our opponents would have us believe, that it will not be enacted in due course.

The program embraces a large body of new legislation. This takes time. Ordinarily, a legislative program of this magnitude would require more time than has elapsed to date.

President Truman has asked the people to press Congress for action now, not because he doubts the eventual acceptance of these proposals, but because he realizes the importance of enacting them as quickly as possible. He knows that in order to insure the continued public purchasing power which means good business and steady jobs, these things have to be done soon.

Harry Truman has every reason to believe that the people of America—the great majority—approve of his objectives. They are part of a bigger program which the people have four times approved by direct expression at the ballot box. The postwar objectives Truman has outlined in his 21-point message are the fulfillment of the promise which our party made to the people in its platform of 1944.

I believe the people of America want to see Harry Truman make good on that promise. I believe they will back him up in his efforts to do so.

Senator TAFT, who does not approve of the Democratic program, has stated his opinion that—I quote—"a large majority of the American people disagree fundamentally with Mr. Truman's program and his political philosophy."

I would recommend to the Senator a rereading of the Democratic Party's platform of 1944 and of the election returns of November 7 of the same year.

On the other hand, a member of Senator TAFT's own party, Republican Senator WAYNE MORSE, of Oregon, differs vigorously with the distinguished Senator from Ohio.

Senator MORSE recently made a radio speech in which he endorsed the Truman program. Immediately, he said, his office was deluged with letters from all parts of the country. And the Senator added that his mail was running 9 to 1 in support of the position he took, favoring the policies of Harry Truman.

I would recommend to the distinguished Senator from Ohio that he get together and compare notes with the distinguished Senator from Oregon.

Senator Taft goes on to criticize Truman's proposal of fact-finding boards and cooling-

off periods as a means of settling labor disputes.

But it appears that the American people are siding with Harry Truman. For an indication of this, I would commend to the distinguished Senator from Ohio a reading of the January 6 report of a Gallup Poll taken on this question. The poll shows that four out of every five Americans questioned are in favor of Harry Truman's method.

Ever since the victory of the Democratic Party in the last national election, wherever I have had an opportunity to address my fellow Democrats I have reminded them of the pledge our party made in its 1944 platform.

I have cautioned them against complacency. I have pointed out that with the count of ballots, the real fight was not yet won. The real fight is for America's safety and well being, at home and in the world at large. The real fight is to go on building the peace, to keep our promise of a job for every returning soldier, to maintain the purchasing power and the living standards of the American people, to defeat the reaction that would bar us from reaching these goals.

The real fight, in short, is to carry on and finish the job that Franklin D. Roosevelt began.

Not long ago I read in a newspaper column that I was guilty of a political error. Now, to me, that is a serious charge. So I read on down the column with keen interest.

I discovered that the political error I had committed was to urge that the Truman administration carry on the policies of Roosevelt.

I am very proud of that column. I consider it one of the greatest compliments that was ever paid me. And I shall continue to commit that political error. I hope we Democrats will all go on committing it, until the great hope that was held out to our Nation by the greatest leader of his time is realized throughout the land.

Resolutions Presented at Annual Farm Bureau Meeting

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. LECOMPTE. Mr. Speaker, Jasper County, Iowa, is renowned, not only as the washing-machine center of the world but is a leader in agriculture as well, and the very progressive farmers in this county are responsible for the high yields of grain and the superior quality of the livestock produced. At a recent meeting of the Jasper County Farm Bureau forward-looking resolutions were adopted that deserve the attention of every Member of the House of Representatives. Under leave to extend my remarks in the RECORD, I include therein this set of resolutions:

We, of the Jasper County Farm Bureau, make the following resolutions:

NATIONAL UNITY

Our three major economic groups—labor, industry, and agriculture—are most interdependent on each other. No one of these groups can long prosper while the others are depressed. We therefore believe, that if we are to assure all labor a good annual income and thereby achieve a more unified and prosperous America, these three groups must reaffirm their pledge to forget individual selfish gains and work together towards that common end.

PERFECTING AND MAINTAINING WORLD ORDER

Realizing that farmers, individually and through their organizations, can and should play an active role in support of efforts to achieve world security, we recommend their fullest cooperation in the following measures to restore world worder:

1. We favor continued support to be given to international monetary policies originally proposed at Bretton Woods.

2. We favor the general plan for maintaining world order and promoting social and economic progress proposed and adopted by the delegates from 50 nations at the San Francisco Conference.

3. We favor continued support of the reciprocal trade agreement to promote fair economic and commodity exchange.

FARM PROGRAMS, THEIR IMPROVEMENT, COORDINATION, AND ADMINISTRATION

We believe that economic stability in agriculture should be maintained through the administration of governmental agencies.

1. We urge the unification and simplification of existing agencies in order to avoid overlapping of functions.

2. We recommend the continuation of production guidance as a means of insuring parity at the market place for agricultural products.

3. We favor the continuation of the Soil Conservation Service with the expansion of the soil conservation districts program in order to further promote the doctrine of land use according to its capabilities. We recognize this as a problem common to and of interest to both rural and urban populace.

4. We endorse the continued expansion of the activities of the Rural Electrification Administration as a means towards our ultimate goal: Electricity for every farm home.

We further believe that REA lines, since they are not operated for profit, should not bear the same tax rates as utility lines which are operated for profit. We also believe that cooperatives should be encouraged and that savings made by cooperatives belong to the patrons and should not be subject to cooperation income taxes.

5. We favor continued cooperation with the Extension Service in promoting an educational program for general agricultural improvement.

INFLATION CONTROL

We urge the continuation of price-control measures on basic commodities as a means of avoiding the disaster of inflation. We favor this control until such time as production of the commodity, in relation to the demand for it, will warrant its release from price control.

LEGISLATIVE ISSUES IN IOWA

Realizing that Jasper County farmers are vitally concerned in current legislative issues, we pledge continued support of these measures.

1. We favor 100-percent collection of the State income tax according to original rates.

2. We urge the further equalization of educational opportunities in Iowa by increasing the amount of State aid possible through complete income-tax collection.

3. We recommend the continuance of the county schools committee in order that they may cooperate with the county school board in making it possible for every child to have an equal opportunity to secure a good education.

4. We strongly urge additional legislation and appropriation of funds for use on all-weather farm-to-market roads. We believe that the Farm Bureau Federation should adopt an aggressive program in securing such funds and in the correct allocation of them.

5. We favor the establishing of a county library.

RURAL HEALTH

We recommend the continuation of the Jasper County Health Improvement Association as a means of providing a hospitalization program for rural people.

We advocate the continuance of the county health-nursing program as adopted by the county board of supervisors and approved by the County Medical Association.

Recognizing the sincerity and willing service that officers, directors, and leaders have given in planning and directing the program of the Jasper County Farm Bureau and realizing that no organization can remain static and continue to grow, without such leadership, we extend appreciation and urge the membership to give their fullest cooperation at all times.

RESOLUTIONS COMMITTEE,
LESLIE DOAK, *Chairman.*
MRS. HENRY JENSEN.
MRS. W. B. SHAW.
W. B. SHAW.
JACK WORMLEY.

Give the President a Hand

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, in these difficult days which confront all of us it is the duty of the American people and the Congress to give our President every possible bit of support we can. He has the toughest job in the world today and we should do our very best to encourage him in his endeavors in our behalf.

We know, from actual experience, that he has given every consideration to Congress and the people in letting us know what his program is and how he would recommend the course we should follow. He has disclaimed any pride of authorship in his suggestions and has shown a real willingness to consider any other point of view.

The times call for unity among ourselves, a combining of all our abilities and a high regard for the leadership shown by President Truman. He has been frank with us, we know where he stands, and he is entitled to our help on the rough roads ahead.

Mr. Speaker, I was so impressed by a column of Malvina Lindsay that I am inserting it at this point in my remarks. The article was carried in the Washington Post of January 8, 1946, and is entitled "Give the President a Hand":

THE GENTLER SEX

(By Malvina Lindsay)

"GIVE THE FRESIDENT A HAND"

(A housewife views the democratic system)

"They keep saying President Truman's voice sounded tired in his speech the other night. It has set me to thinking. Why shouldn't the President be tired, with 50,000,000 people or so constantly nagging at him about what he does or doesn't do?

"I don't see how any man stands up to being President. I don't mean only the strain of the work and worrying about making his salary meet his bills. What I do mean is that he has to take so much criticism and he gets so little praise. So many people's pet sport seems to be heckling him and his family.

"What brings it home to me is my own family. Could Junior or Sister ever do anything at school or be popular with their playmates if I kept telling them how stupid and awkward they were? Every mother I know works hard at giving her children faith in themselves. In the child-psychology courses they tell us how necessary encouragment and self-confidence are to creative achievement in anyone, young or old. Well, we certainly need that badly enough for our President, don't we?

"Then take my husband. Don't I have to build him all the time and keep him from getting discouraged? Doesn't every wife have to do that? What if men in private life were continually being badgered and picked to pieces over every little thing they did in running their businesses? Why, they'd go completely to pieces. Well, a President can't depend on his wife alone to build up when there are so many millions tearing him down.

"I'm not saying we shouldn't criticize the President or at times protest his actions. That's our democratic privilege. But most of us are entirely negative in our practice of democracy. We blame, denounce, assail, but never praise, encourage, and strengthen our public men, especially when they are in tough spots.

"It's this little, querulous, carping and backbiting that I'm objecting to. Like a wife nagging her husband. Some of it comes from people who have already made up their minds they are against the President and all his works and lie in wait to jump on him for everything he does. A lot of it comes from childish people who, whenever anything goes wrong, look around for someone to blame.

"But I think maybe the largest part of it comes from the boarding-house gang. You know the ones who can't resist the human urge to beef * * * the professional gripers in boarding houses, college dormitories, offices, homes. Oh, I admit we all do it to a degree. It's the path of least resistance. It's an easy way of letting off steam, and it appeases our consciences for what we are failing to do. It gives us a chance to be clever and sound smart without too much effort.

"Then I suppose there's still a lot of the jungle in all of us. Did you ever watch the expressions on people's faces when they begin to complain or snarl about a public figure? Or, on the other hand, did you ever notice how their whole bodies expand, their voices warm, and their faces light when they begin to praise someone?

"All Presidents go through this thing, of course. I used to wonder how President Hoover ever stood what he had to take when they tried to make him the national villain of the depression. And everyone remembers how the Roosevelt haters were on the job day and night. President Truman is in an extra hard spot because we all expect him to present us a bright, new, happy peacetime world overnight.

"All our public leaders now are behind the eight ball, it seems to me. And, instead of trying to share their burdens and back them up, we stand to one side and boo whenever they make a poor shot. And its precious little cheering we give them when they make a good one.

"It used to be when I was on a bus or streetcar and somebody started calling 'that man in the White House' names, I'd think, 'Well, after all, it's wonderful to live in a ccuntry where anybody can sound off.' But I'm beginning to wonder if free speech is really democratic speech. It seems to me, speech to be truly democratic should be responsible.

"This is the way I look at it: We're cutting off our own noses when we pull down our leaders with name calling, nagging, and with criticism that has no basis of fact. It's to our interest that they do the best they can. That's especially true of our President now, who must lead us through the most critical time in our history. When we think he does wrong, we should criticize him, of course—that is, if we can suggest a way to do better. And when we think he does right, I say, 'Give the President a hand.'"

Our Forgotten Children

EXTENSION OF REMARKS
OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Miss Grace Clyde, assistant district attorney, Kings County, N. Y.:

OUR FORGOTTEN CHILDREN

What condition does bill H. R. 4953 seek to remedy?

Many thousands of parents leave home each year and although their children who are left behind are neglected and unprovided for there is no law that can compel support to be sent for the children.

1. States have recognized the need for courts of domestic relations.

In New York State, article 1, section 91, of the Domestic Relations Court Act, provide

"The family court shall have—

"1. Jurisdiction within the city to hear and determine all proceedings to compel support of a wife, child, or poor relative.

"2. Jurisdiction within the city in all cases or proceedings against persons charged with failure to obey an order of the court made pursuant to authority conferred by law."

A visit to one of the family courts is sufficient to convince an observer of the necessity for such a tribunal in the many cases where parents fail to provide necessities for children.

The family court, after hearing testimony of both complainant and respondent, is empowered to determine and fix by order the amount that a parent must contribute for the needs of his family, and a respondent who fails to comply with such order is subject to arrest.

2. Unfortunately for such children, parents do not always remain under State jurisdiction. What is the result when a husband and father leaves the family and, securing a job in another State, settles there and neglects or refuses to send support for his children? Although there is the same need for support in the family, and regardless of the fact that the family court may have determined the amount to be paid, the parent has placed himself outside the jurisdiction of the family court, and its orders cannot be enforced, resulting in the family becoming destitute.

3. Is there any tribunal that can compel support for the children under such circumstances? Although the man may be employed at a substantial salary, there is no court either in the State of residence of the father or in the State of residence of the children where support can be enforced, the reason being lack of jurisdiction. Incredible as this condition may seem, it does exist throughout the United States and affects many thousands of children each year.

4. There are no official figures to show the number of children involved either in New York State or in the United States. However, in Brooklyn, N. Y., for the year 1944 the fathers of 640 children under 16 years of age abandoned them, left the State, and failed or refused to send support. These cases came to the attention of the authorities.

There are 3,050 counties in the United States. The lack of a remedy for support applies to all counties. Kings County, which recorded 640 children under 16 years of age so abandoned, is one of the largest counties. However, if computation is made upon the basis of 50 children to a county, the total would reach 152,500 children each year left unnecessarily in want.

5. This problem is known and appreciated by law-enforcement agencies of other States.

In answer to inquiry the following replies were received:

From the State's attorney of South Dakota:

"There is nothing we can do to help you" to obtain support officially. "It is certainly a real problem and it seems rather hard to believe that in a country enjoying the high civilization attributed to the United States and endowed with resources as it is, there should be such a large number of men of such low morale or morality, that apparently without any qualms of conscience, they bring children into the world and walk or run off and forget about them entirely."

From the county attorney of Iowa:

"We have had a great deal of this recently although I am sorry to say it is a common practice at other times."

From the county attorney of Minnesota:

"We have much the same problem in this office and I fully agree with you that the situation respecting abandonments is very unsatisfactory. It has always seemed to me that there should be Federal legislation on the subject to protect the families of such men."

From the district court of Nevada:

"We have the same difficulty in this State regarding fathers who abandon their children and move to other States."

The above illustrated conditions apply whether the States be Florida or Oregon, California, or Maine, or any other State.

6. It is stated above that 640 children under 16 years of age who were abandoned came to the attention of the authorities in Kings County in 1944. By authorities is meant the district attorney's office.

The complainants, usually the mothers of the children, worried to distraction by the lack of resources to provide food, clothing and medical supplies for the children, and not knowing where the money is coming from to pay the rent and other household bills, faced with eviction and hunger, apply to the family court or police department in an effort to secure support from the husband. Since neither the family court nor the police department has jurisdiction when the man is outside the State, the mother is referred to the office of the district attorney as a last resort. However, the function of the district attorney is to prosecute crime.

7. The crime of abandonment: Section 480 of the penal law, which was enacted in 1905, makes it a felony for a person having the care or custody of a child under 16 years of age to abandon that child in destitution and wilfully omit to provide for him.

Like all crimes the plaintiff is "The People of the State of New York." Crime is punished as an offense against society. Assuming that a man is indicted, extradicted and convicted for the crime of abandonment, and that he serves the maximum penalty of 2 years in Sing Sing prison, how does that help the family? Have the children been fed, clothed or housed thereby? Have the rent, gas, electric or doctor bills been met while the father is in prison? Has the morale of the children been benefited?

8. There is rarely an exception to the request for support in abandonment cases brought to the district attorney's office. Support is not only requested but absolutely necessary, and yet there is no law at the present time that can compel support. Is prosecution and sentence to jail an adequate or logical substitute? Experience has shown that endeavoring to obtain support through prosecution is impractical. The first result

of an arrest is loss of the employment upon which the man depends and which is the source of the desired support.

9. This problem calls for study and action on the part of governments and legislators. It is not difficult to solve. Does the remedy lie with the States or with the Federal Government? The latter would be more effective in that the necessary jurisdiction of the man could be obtained.

10. In June 1944 a bill was introduced in Congress, which bill was reintroduced on January 8, 1945, and amended on December 11, 1945, designated as bill H. R. 4953. This bill is pending in the Committee on the Judiciary.

Bill H. R. 4953 confers on the district courts of the United States power to issue support orders requiring parents who are possessed of sufficient means, or who are able to earn such means, to pay a fair and reasonable sum for support of their children under 17 years of age, or a contribution toward such support, according to the means of such parents. Such support orders would require the providing of necessary shelter, food, clothing, care, medical attention, and the payment of educational expenses, funeral expenses, and other proper and reasonable expenses.

Said courts would have power to commit to jail for a term not to exceed 1 year any person who fails to comply with the court orders.

The bill further provides that the proceeding may be brought in the district in which a child resides or is present, and process may be served on a parent at any place in the continental United States, in any Territory or possession of the United States, or in the Canal Zone.

It is hoped that our legislators will give this problem the study it deserves with the view toward effecting the much-needed remedy.

One of the Reasons Why Soldiers Do Not Have Homes

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. SMITH of Wisconsin. Mr. Speaker, everybody in this country realizes that an acute housing shortage exists throughout the land. Those who suffer most from this condition are the heroes of this war who have returned to find inadequate home facilities to take care of them and their loved ones. As part of my remarks, I am inserting herewith an editorial by Mr. Bob Bliss, editor of the Janesville Gazette, which goes to the heart of this problem. It is timely, interesting, and informative:

LUMBER GOES TO FOREIGN BUYERS

It is generally understood that the strike of 60,000 woodsmen and mill workers in the lumber industry have caused a serious shortage in lumber, but what is not so well known is that our lumber is being shipped to foreign buyers.

The C. W. Chapman Lumber Co., Waterloo, Iowa, ran this ad in five Iowa cities in which it operates lumber yards:

"To Our Customers:

"This is our third letter to you about what the bungling bureaucrats are doing to the building business, and why we ask you to demand action by your Representatives in Congress.

"Where is the plentiful supply of lumber that the WPB said you should have within 30 days after August 23, 1945?

"1. Last week the sawmills on the west coast sold 66,000,000 feet of American lumber to foreign countries. This is just 1 weeks' sales. This lumber would build 6,600 average-size homes here in the United States. There is no ceiling price enforced by the OPA on sales of American lumber to foreign buyers. The sawmills need higher prices to pay higher costs, so they are selling the lumber we needed so desperately here at home to foreigners. Where do these foreign countries get all this money with which to pay these over-ceiling prices? The answer—you taxpayers, through your Congress, either gave them this money or lent it to them. Now we and almost every other American citizen want to help every needy human being in the world—but our own returned veterans will be just as cold as any foreigner if they have to sleep in the gutter. We believe that these Santa Claus bureaucrats should give their own country a fair show first.

"2. The Federal bureaucrats have had, since the end of the war, tied up in red tape at one base (Port Hueneme) on the west coast, 80,000,000 feet of lumber which they will not release. This lumber would build 8,000 homes for you people that need a roof over your heads."

This, of course, is not the whole story, but it is an interesting sidelight on what happens when Government tries too much control.

Grown-up Labor Relations

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Cleveland (Ohio) Press December 18, 1945, which is well worthy of consideration:

GROWN-UP LABOR RELATIONS

If the Joseph & Feiss Co. hadn't had a party Saturday night, it's likely there wouldn't have been much public attention called to a sterling example of labor peace right in the midst of the greatest labor-management turmoil in recent times. A group of companies comprising an entire industry, and a union have amicably resolved a wage and working conditions issue without strike or public incident.

The agreement has been quietly completed between the Cleveland Joint Board of the Amalgamated Clothing Workers of America and 22 industries employing about 5,000 in the manufacture of men's clothing. The process is "industry" bargaining, as contrasted with company-by-company bargaining. It insures at least that no companies are squeezed, in relation to their competitors.

This industry bargaining has gone on here in Cleveland for more than a decade. The ACW has maintained high-grade executive talent in union management. The present manager, Beryl Peppercorn, commands the respect of both the companies and the union membership. The companies know that he will deal fairly and responsibly, the union members that he will not let them down.

This is what the experts call mature collective bargaining. It offers a healthier lesson for our economy than the superheated battle for headlines in the motor industry. To make it possible, good company managements have shared with good union management the responsibility for keeping the peace under agreements that are responsibly made and honorably kept. This situation provides a constructive example, to which we are happy to call attention.

On the President's Veto

EXTENSION OF REMARKS

OF

HON. EMILY TAFT DOUGLAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission granted me to extend my remarks, I include a column by Edwin R. Wright, former president of the Illinois State Federation of Labor, which appeared in the Galesburg Labor News, Thursday, January 3, 1946:

We're starting the new year in a cheerful frame of mind. Of course, we know that in the months to come there will be serious questions of jobs and even more serious questions of rates of pay for those same jobs. But, first, there must be jobs.

With the old-line craft unions we see little difficulty on either count—there will be plenty of work and union wages will be pretty good. But that isn't all. Organized labor must never permit itself to light its pipe and put up its collective feet and call it a day while other workers are jobless and without earning opportunity. That has been tried in the past and every time resulted in a drastic "hot foot"—or worse.

Labor confidently looks forward to more and better jobs. There's a reason.

We know—we're not guessing, we know that the question of jobs has been solved, at least in part, by the local branches of the United States Employment Service. Not every applicant to the branches has gone away fully satisfied with the work or the pay offered—that would be too much to claim or to hope for. But work has been distributed fairly and evenly and honestly.

For the first time in our recollection, and that covers a 55-year membership in a trades union, we feel not only impelled but justified in saying "Well done!" to a governmental agency of this nature—whether it be national, State, or local.

To our mind, and, probably, to all workers, trade unionists or otherwise, the private employment agency was a stinking affair. It has been charged, and we believe truthfully, that jobs were sold by the private agencies as a huckster peddles potatoes from the tail of his cart. Men and women were hired and then fired to make room for a new crop of fee-paying applicants. And it may well have been true also that a venal plant employment man helped engineer this turnover that he might build up the fees of his friend, the employment racket officer and for himself. We're writing about private employment agents.

State employment agencies may have been ably and efficiently managed. We're willing to give some of them the benefit of the doubt, but we never knew of one better than what was locally described as "pretty good." And, where men depend upon an agency to find them work and wages "pretty good" leaves a lot to be desired.

Now, here's a new angle and one worth thinking about.

President Truman's action, his most important veto to date, was made in rejecting the $52,000,000,000 war appropriation cutback bill. It contained a rider sending the USES back to the States where the political machines of 51 State and Territorial governments would operate an agency upon which

the Nation has depended for orderly and fair reemployment policies.

The veto message was sharply worded, which occasioned more surprise at the Capitol than the action itself. The President said the USES rider "would immeasurably retard our reemployment program" and he called the rider an "objectionable practice" that is contrary to good government.

By tacking the rider to the economy-directed cutback measure, Congress hoped Truman would let it go through rather than lose the savings it contained. In reply, Truman said that he would move "by Executive action" to preserve the savings carried in the bill "in the exact terms which the Congress itself has approved."

We suppose that it is now in order for the Congress to pass, if it can, the measure over the President's veto. And, from what has come out of the present Congress, that may be possible.

Many or most, as you wish, of the coming job hunters will be servicemen and to turn them over to a bunch of sharpshooters for exploitation is neither good business nor even good politics.

Answer this question: "Can the Government disband its employment service and keep the private employment racketeers out of business?"

A Congressman that would cast his vote for a return to the old system of private employment agencies—and that would follow the repeal of the present governmental setup—in my humble opinion, should be (at least theoretically and politically) gutted with a dull fish knife.

Here in Galesburg we have what we consider a very good facility with a competent and hard-working staff.

We think it should be held intact. It has done a good job. We hope our Congressman reads this.

We thank you.

E. R. W.

Trees for Tomorrow, Inc.

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 15, 1946

Mr. MURRAY of Wisconsin. Mr. Speaker, in a recent issue of the Antigo (Wis.) Daily Journal appeared the following editorial:

Trees for Tomorrow, Inc., a nonprofit organization of the Wisconsin valley papermaking industry seeking to promote Wisconsin forestry by planting two trees for each one cut, brought about the planting of 4,000,000 young forest trees last year, which is no slight achievement. In 10 days last spring the organization supplied 700,000 3- and 4-year-old Norway pine, jack pine, and white spruce to loggers, farmers, and timbertract owners. Also school forests were started in six northern communities. It is hoped that in a few years 100,000,000 seedlings will be available annually for planting. We hope some of our local forestry minded organizations will find it possible to achieve a working partnership with Trees for Tomorrow, Inc.

Large areas in Wisconsin are adaptable to the growing of trees.

This crop has received the attention and support of the State and the State agricultural college. There is every indication that there will be a constantly increasing interest in this great project.

Letter to the President

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 15, 1946

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a copy of a letter directed to President Truman from Mr. Donovan D. McCarty, attorney at law, Olney, Ill.

Mr. McCarty has been very successful in the legal business and his judgment, as a lawyer and a businessman, is respected in my district.

OLNEY, ILL., *January 5, 1946.*

Hon. HARRY TRUMAN,
The President of the United States,
White House, Washington, D. C.

DEAR MR. PRESIDENT: Recently you took your case to the people on the radio, and I take it that you invite their reaction. Here's mine:

Of all the things you propose, probably the 30-day cooling off period is the only one that really makes sense. The rest are eyewash.

The theory of unemployment compensation is fine, but you ought or should know that it is abused all the time. Try and hire a worker who is drawing it. Extending it as you propose, will only create additional unemployment.

I want no part of the United States Government in the field of medicine. What you propose will only create another hugh bureaucracy with an additional horde of pay rollers taking their daily sustenance at the public teats, and reaching out for more and more power, until in the end the Government would name my doctor and hospital. There are plenty of voluntary hospital associations such as the Blue Cross, that any worker may join, and the over-all cost is cheaper than what you propose.

You can't stop strikes, neither can the Congress. Joe Stalin has been referred to as the only man who can do that, and Uncle Joe doesn't tolerate unions. For one, I believe in labor unions properly operated. The workingman would be in a sorry plight if he hadn't them in the past. He needs them now and in the future, but unfortunately many of them are in the hands of men drunk with power, and some of whom entertain communistic ideas. They want to perpetuate themselves in office by making bigger and better demands daily. They are leading their unions down the road the corporations traveled many years ago, before a distinguished predecessor of yours took them in hand.

Recently you held a conference of labor leaders and industrialists in Washington. The consumer who pays the freight when wages are increased was conspicuous by his absence. In this time of national crisis the people are looking to you for guidance. But you appear to be looking at the 1948 Presidential nomination and listening to the voice of the CIO. We don't all belong to that organization Mr. President. In fact, you might be surprised to learn that a vast majority of us do not Pay attention to the business at hand and forget about 1948. If you do a good job, you won't have to worry about the nomination and election.

Legislation should be enacted that would guarantee the local unions a free election each year, with the right of a secret ballot, wherein each worker may vote for his local and national officers without fear or favor. Unions should be held responsible for the violation of their contracts the same as any other person. Featherbedding and other equally unfair labor practices should be forbidden.

Set up a labor court with exclusive jurisdiction of all labor matters, with power to enforce its orders, but with a right of appeal to the United States District Court, and don't place either labor leaders, industrialists, economists, or college professors on the court as members. The books of a labor union should be open to examination by the Government.

And speaking of opening books, I would suggest that you read the annual reports of corporations which are now being published and sent the stockholders. They tell the story of their profits, losses, amounts paid for taxes, operating expenses, and all other matters. I expect any member of the Internal Revenue Department is as familiar with the earnings of General Motors as is the president. I own no stock in that corporation, but I see no reason to examine their books and learn what is known from the annual reports to see whether they can stand a raise.

It is entirely possible that the hired hand who opens your mail and decides what you should or should not read, will file this letter in the wastebasket, however, just to be sure that someone besides him reads it, I am sending a copy to my Congressman.

Lastly, Mr. President, instead of trying to be Bob Hannegan Phil Murray Truman, try being plain Harry Truman for a while, and I believe your administration will meet with more success and public approval.

Very truly,

DONOVAN D. MCCARTY.

Copies to Hon. CHARLES VURSELL, Member of Congress, House Office Building, Washington, D. C.; Senator C. WAYLAND BROOKS, Senate Office Building, Washington, D. C.

A GI's Questionnaire to the Army and Navy

EXTENSION OF REMARKS
OF
HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 15, 1946

Mr. ROWAN. Mr. Speaker, a GI in the Pacific, who signs his name, has propounded a questionnaire for the high-ranking officers of the Army and Navy. His name is withheld but can be obtained by application at my office.

JANUARY 8, 1946.

Hon. WILLIAM A. ROWAN,
Second Illinois Congressional District,
House of Representatives,
Washington, D. C.

DEAR SIR: Listed below is an account of statements from various sources, compiled in the interest of presenting the facts of the War Department's highly confusing discharge system:

"Shipping limits discharges."—Patterson.

"Three months would suffice were all available shipping used to return 1,553,000 men. However, it will take 6 months."—Lieutenant General Collins.

"There is a surplus of shipping in the Pacific, and as a result, the Navy is retiring certain ships which had been used as transport vessels."—Navy officials.

"I know nothing of the Navy."—Patterson.

"No man will be held longer than absolutely necessary."—President Truman.

"Two-year men will be released by late winter."—General Marshall.

"I am unaware that this was the case."—Patterson.

"Voluntary enlistments and the draft have failed to supply enough replacements."—Lieutenant General Collins.

"Patterson was completely surprised to hear that discharge points have not been accumulated since VJ-day."—Stars and Stripes.

"It is not difficult to figure out the next point drop."—Patterson.

"Patterson said he could not divulge the amount of the next point drop because 'I don't want to steal the show from the men in Washington.'"—Stars and Stripes.

The above statements clearly point to one fact—that the War Department's discharge policy is to appease the civilian public while at the same time confounding and confusing the servicemen.

The confusion, bitterness, and disillusionment of the Janus-mouthed War Department cannot be tolerated any further. The time has arrived for an exposure of the Regular Army hierarchy who are engendering the greatest kidnap hoax ever foisted on the American public. They hold the remaining servicemen as pawns for their perpetuation: "Give us what we want and you will get your men."

The time has also arrived for action. It is now up to Congress to clear up this oligarchy. It is time for the American people and their elected representatives to bring the control of the Army back into their own hands instead of allowing a small clique of Regular Army men to control them. We have all seen and felt what such an Army clique can do and has done in European and South American countries and in Japan.

Your aid in this matter is wholeheartedly requested. It is time Congress decided military policy.

Yours sincerely.

Jose Rizal, Filipino Hero

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. STEFAN. Mr. Speaker, it is a miracle in this age of materialism that neither time, nor change, nor war can destroy the national unity of peoples whose individual destinies are inseparably joined by the sacrificial courage of martyred patriots. France struggled from slavery to freedom during the late war as much under the spiritual leadership of Joan of Arc as under the leadership of General de Gaulle. The United States has again successfully defended its tradition of liberty for which Abraham Lincoln lived and died. The people of the Philippines look forward to freedom today, not only because of the superb ability of General MacArthur to command in combat, but because—wherever the dauntless Filipino guerrillas struck a blow for liberty—the undying soul of Jose Rizal led each column of ragged liberators.

Jose Rizal—like Joan of Arc and Lincoln—was a child of the people. He shared their simple joys. Their suffering was his suffering. His fearless pen told their story to men and women of all nations. He died before the firing squad on the Luneta, as Lincoln fell before the assassin's bullet in Washington—and as Joan of Arc slumped against the stake in the market place of Rouen—serene in the knowledge that he had led his people to the threshold of liberty.

By their own trials, by their own monumental sores, the Filipino people have been drawn closer to Jose Rizal. They can understand his eternal message to them today—after the black years of enemy occupation—better than they could have understood his great gift to them before the war. This inheritance from Jose Rizal, this jewel beyond all price which belongs to every Filipino, is: "Live not for yourself but live for your people."

All Filipinos are as one in their love for Jose Rizal. It is at once their responsibility and their honor to see to it that he has not lived and died in vain. On the anniversary of his martyrdom, it is the sacred duty of the Filipino people to do all within their power to read the life of reality into the words of the man they love—"Together: For freedom."

Mr. Speaker, before meeting his untimely and tragic death, Rizal wrote his famous "My Last Farewell." By permission of the House of Representatives, I include it as part of my remarks:

MY LAST FAREWELL

Farewell, dear Fatherland, clime of the sun caressed.
Pearl of the Orient seas, our Eden lost
Gladly now I go to give thee this faded life's best,
And were it brighter, fresher, or more blest,
Still would I give it thee, nor count the cost.

On the field of battle, 'mid the frenzy of fight,
Others have given their lives, without doubt or heed;
The place matter not—cypress or laurel or lily white,
Scaffold or open plain, combat or martyrdom's plight,
'Tis ever the same, to serve our home and country's need.

I die just when I see the dawn break,
Through the gloom of night, to herald the day;
And if color is lacking my blood thou shalt take,
Pour'd out at need for thy dear sake,
To dye with its crimson the waking ray.

My dreams, when life first opened to me,
My dreams, when the hopes of youth beat high,
Were to see thy lov'd face, O gem of the Orient sea,
From gloom and grief, from care and sorrow free;
No blush on thy brow, no fear in thine eye.

Dream of my life, my living and burning desire,
All hail! cries the soul that is now to take flight;
All hail! And sweet it is for thee to expire;
To die for thy sake, that thou mayst aspire;
And sleep in thy bosom eternity's long night.

If over my grave some day thou seest grow,
In the grassy sod, a humble flower,
Draw it to thy lips and kiss my soul so,
While I may feel on my brow in the cold tomb below
The touch of thy tenderness, thy breath's warm power.

Let the moon beam over me soft and serene,
Let the dawn shed over me its radiant flashes,
Let the wind with the sad lament over me keen;
And if on my cross a bird should be seen,
Let it trill there its hymn of peace to my ashes.

Let the sun draw the vapors up to the sky,
And heavenward in purity bear my tardy protest;
Let some kind soul o'er my untimely fate sigh,
And in the still evening a prayer be lifted on high
From thee, O my country, that in God I may rest.

Pray for all those that hapless have died,
For all who have suffered the unmeasur'd pain;
For our mothers that bitterly their woes have cried,
For widows and orphans, for captives by torture tried;
And then for thyself that redemption thou mayst gain.

And when the dark night wraps the graveyard around,
With only the dead in their vigil to see;
Break not thy repose or the mystery profound,
And perchance thou mayst hear a sad hymn resound;
'Tis I, O my country, raising a song unto thee.

When even my grave is remembered no more,
Unmark'd by never a cross nor a stone;
Let the plow sweep through it, the spade turn it o'er,
That my ashes may carpet thy earthly floor,
Before into nothingness at last they are blown.

Then will oblivion bring to me no care,
As over thy vales and plains I sweep;
Throbbing and cleansed in thy space and air,
With color and light, with song and lament I fare,
Ever repeating the faith that I keep.

My Fatherland ador'd, that sadness to my sorrow lends,
Beloved Filipinas, hear now my last good-by!
I give thee all: parents and kindred and friends;
For I go where no slave before the oppressor bends,
Where faith can never kill, and God reigns e'er on high!

Farewell to you all, from my soul torn away,
Friends of my childhood in the home dispossessed!
Give thanks that I rest from the wearisome day!
Farewell to thee, too, sweet friend that lightened my way;
Beloved creatures all, farewell! In death there is rest!

Five Million Trees Planted by Farmers and Youths

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. MURRAY of Wisconsin. Mr. Speaker, Wisconsin has always evidenced an interest in forestry. The wood products are looked upon as a crop. County and State appropriations have been made to promote the growing of trees. The paper mills have had tree-growing projects in operation for many years. Five of the six leading tree growing counties of the State are in the district I have the honor to represent.

The following news release from the Manawa Advocate shows the magnitude of this project in Wisconsin:

FIVE MILLION TREES PLANTED BY FARMERS AND YOUTHS

More than 5,000,000 trees were planted in Wisconsin the past year by farmers and rural youths. All of the trees were obtained from the State conservation commission.

Fred Trenk, State extension forester, reports that of 3,910,517 trees purchased by farmers, 2,870,252 were for general reforestation, with about 1,040,165 for shelter belts in central Wisconsin.

Youths planted 1,031,720 trees. Of these, 741,795 were by 4-H Club members and Future Farmers and 289,925 were for school forest plantings. Trees planted in community forests totaled 198,125.

In each of six counties farmers purchased and planted more than a quarter of a million trees. Of those counties, Marathon led with 381,165 trees, followed in order by Waushara, Portage, Wood, Sauk, and Waupaca Counties. Every county in the State was represented in this adult planting project.

Marathon County also led the list in number planted in school forests with 93,000 trees. It also led in the number planted on farms by rural school pupils, 4-H Club members, and Future Farmers. The plantings by these groups in the county totaled 64,000 trees.

Oneida was the second county in school forest planting with 50,000 trees; Wood County was third with 39,500 trees.

There are many pulp and paper mills located in the Seventh Congressional District, upon which a large portion of the economic life in certain communities is dependent. Many of the pay rolls are based upon the trees grown there.

St. Lawrence Frontier

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from a recent issue of the Chicago Sun:

ST. LAWRENCE FRONTIER

Once more, early in the new year, Congress will have before it the proposal to build the St. Lawrence seaway and power project. The project would make an ocean port of Chicago. It would generate cheap power for New England and New York, thus increasing the productivity and purchasing power of markets for Chicago goods. Yet, strangely enough, the city's businessmen and political leaders have not distinguished themselves as sponsors of this great plan to develop unused natural resources.

The St. Lawrence is a bargain for the country. It is a special bargain for Chicago. It represents a major test of national attitudes toward economic development in general. Those who cling to the status quo, who fear that we have only a limited amount of prosperity to divide, who value established commercial patterns over fluidity and adventure, will oppose the project. But it will be strongly supported by all who understand the crime of letting natural resources go to waste; by all who see that more goods, more commerce, more productivity, will benefit all sections and all groups alike.

Chicago once had the pioneering spirit. It backed and bred the pathfinders who conquered half a continent. We need to recapture some of that spirit now for the conquest of new frontiers. The intensive development of resources, natural and human, presents as great a challenge as did the subjugation of the geographical frontier 100 years ago. The St. Lawrence seaway, like the Missouri Valley Authority, should have high priority on Chicago's list of civic goals.

Mistakes We Mustn't Repeat

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, granted by the House of Representatives, I include an article written by my able colleague from Michigan, the Honorable ALBERT J. ENGEL. It was printed in the American Legion magazine of January 1946.

Congressman ENGEL is an honest, hard working, and conscientious Member of the House of Representatives. He is diligent, thorough, and efficient. The Nation is indebted to him for his individual effort to prevent waste, and the saving of a quarter billion dollars of taxpayers' money.

His article entitled "Mistakes We Mustn't Repeat" is a forceful and direct statement worth reading by every thoughtful American.

FOREWORD

ONE-MAN INVESTIGATION

Representative ALBERT J. ENGEL is probably the best-qualified Member of Congress to speak up on the subject of mistakes we mustn't repeat. Legionnaire ENGEL (Merrit Lamb Post, Muskegon, Mich.) decided early in 1941 that our Government was spending entirely too much money in its camp-construction program—a feeling shared by many another American at the time. Unlike the rest of us, however, Congressman ENGEL was in a position to do something about it. He did. Long before Pearl Harbor he climbed into his aging automobile and began a one-man inspection tour of cantonment construction projects. His findings resulted in a complete revision of the War Department's contract and construction program. The entire investigation cost exactly $238.17; it saved the Government an estimated $250,000,000.

We're glad to have you with us, Congressman ENGEL.

MISTAKES WE MUSTN'T REPEAT

(By Representative ALBERT J. ENGEL, Ninth Michigan District)

The United States must never again permit a false sense of world idealism or an unwarranted trust in our fancied geographical isolation to lure us into the state of military unpreparedness which Gen. George C. Marshall described and deplored in all his post mortems of the recent global struggle. His findings warn that we must keep in mind the obvious and also the little known factors which allowed Germany and Japan to deliver an almost fatal blow at the democracies in the early years of the 1939-45 conflict. That tragedy demonstrates that everybody—the administration in power at Washington, the Congress, and the people—must unite to prevent another lowering of our guard like that which occurred between World War I and World War II.

It may seem idle to try to assess the blame for the slow, steady deterioration of our national defenses during that period. In a sense, it was everybody's fault and nobody's fault. But as a legislator whose specific duties charge him with keeping in constant touch with the men who frame and finance our national defense policy, I do question the suggestion that the American public alone was responsible for the deplorable condition of our military establishment at the time of Pearl Harbor. The basic reasons for our unawareness and unpreparedness lie deeper, although, fortunately for us, they can easily be remedied in the future by a few simple reforms.

I am confident that if the American people and the Congress had been kept informed by their leaders of 1919-39 concerning international developments which jeopardized our very existence, they would have responded so heroically that Hitler and Tojo would never have dared to molest us. Our people would have supported proposals for an army, navy, and air force so powerful that Uncle Sam would have been an invulnerable and dangerous customer. I am certain that the American people will not make the same mistake again, provided they are given the raw facts by responsible officials.

Let me make clear at the outset that I blame no particular administration for our defense delinquencies in the years before Pearl Harbor. Every regime of recent years must assume some responsibility for the gradual break-down in our willingness and ability to fight on behalf of our national honor and safety.

It is true, and also to our credit, that our weakness on the land, on the water, in the air, in the factories which manufacture weapons, and in the scientific laboratories which produce atomic bombs and jet planes, derived from the fact that we are a peace-loving nation. In 1922, in 1930, and again in 1933, Presidents Harding, Hoover, and Roosevelt paced the world in seeking a reduction of armaments. In retrospect, however, we placed too great a faith in promises and pacts which their makers never intended to keep. As late as September of 1937 the late President Roosevelt dedicated Bonneville Dam with these words:

"As I look at Bonneville Dam today I cannot help the thought that, instead of spending, as some nations do, half their national income in piling up armaments for purposes of war, we in America are wiser in using our wealth in projects like this which will give us more wealth, better living, and greater happiness for our children."

The American people approved this lofty sentiment as they endorsed all other attempts to lift the unbearable burden of armament costs from the backs of humanity. In looking back, however, especially in view of the concurrent rise of dictatorships to the east and west, it might have been good insurance to invest a few billions in battleships, planes, tanks, artillery, and a trained personnel. In those old-fashioned, preatomic days we permitted our idealism and our reliance on oceanic protection to lull us into an Alice-in-Wonderland spirit of security. We must not do it again.

Only a few simple steps are necessary to keep the United States so strong that no nation, even allowing for the atomic revolution of all concepts of warfare, will dare to engage us in battle, and if this country preserves and uses its might effectively and wisely it can be a force that will prevent, or, if not prevent, then localize, all future disputes. Indeed, it is not too much to suggest that Washington, depending upon the military and diplomatic program it adopts, holds the world's fate in its hands.

As a first step, the officials at Washington must take the public into their confidence with respect to changing or deteriorating international relationships, the prospects of conflict, and the state of our Military Establishment at all times. Utter frankness must replace hush-hush diplomacy and the secret assumption of responsibilities likely to involve us in war. No considerations of domestic or foreign politics must be invoked to withhold from the people any pertinent information affecting such grave questions as war and peace.

In short, we must know what areas and policies we propose to defend and uphold, and also what force we have on hand or need for these purposes. This is not a fantastic recommendation for the simple reason that members of our committee, who are charged with appropriating funds for the Army and the Army Air Force, have frequently been kept in the dark concerning these vital matters.

Secondly, the men actually charged with heading our Army, Navy, and Air Forces must be allowed to tell their real defense needs to congressional committees more frankly than they have been in the past.

Let me illustrate what I mean from personal experience on Capitol Hill:

All through the years of turmoil between World War I and World War II, when we succumbed to unwarranted waves of economy, idealism, and depression, successive Chiefs of Staff constantly deplored the unsatisfactory state of our fighting forces in their reports to the Secretary of War. In 1933 Gen. Douglas MacArthur said: "The Army strength in personnel and material and its readiness for war is below the danger line." Six years later, after Hitler's attack on Poland, General Marshall confessed: "The Army is probably less than 25 percent ready for immediate conflict."

Strange as it may seem, Generals MacArthur and Marshall were not permitted to voice these same fears before congressional committees as a basis for larger appropriations, and the same holds true for spokesmen of the Navy and the Air Forces. Once the Budget Bureau, an executive agency, has passed upon—and pared—their requests for funds, the military authorities cannot ask for more appropriations than the budgeteers have granted.

On February 21, 1939, General Marshall, while appearing before the Senate Military Affairs Committee, described the operation and effect of this sort of muzzling. When former Senator Logan, of West Virginia, pointed out that "Army officers had never made a fight before the committee for larger appropriations to do those things which should have been done," the Chief of Staff replied:

"May I answer that by saying that these representations have been made in the printed reports of the Secretary of War and the Chief of Staff. But when it comes to appearing before the committee, we are confined to the total amount authorized by the Bureau of the Budget. We have to make our fight there before we come here."

Because of this policy of censorship and secrecy, we legislated in darkness and ignorance in the very years when the dictators were arming for an attack on the democracies.

From 1934 to 1940, inclusive, the War Department submitted budget requests totaling $3,383,752,985 with the expectation that they would be forwarded to our committee. But the Budget Bureau reduced the military experts' total to $3,084,316,144, or a cut of approximately $300,000,000. If the figures for the 1941 fiscal year are included in this summary, the amount which the Budget Bureau took from the War Department's estimate of its need reached the amazing total of $833,927,456. Over this same period our committee and Congress restored the sum of $352,588,695. It is pertinent to mention that these reductions were made during the years when Hitler, Mussolini, and Japan began to run amuck.

It was not until June of 1944 that I was able to obtain data showing how the War Department's original requests for money had been reduced by the Budget Bureau. Then, of course, the question had only historical interest.

These reductions constituted a definite handicap to the expansion and modernization of our armed forces. The primary charges against the Army's budget consists of money for pay, food, clothing, supplies, transportation, etc., and those items ate up almost every dollar appropriated during those years. Thus, the extra amounts that were disallowed would have financed experimental construction of Garands, artillery, tanks, armored vehicles, planes, and other weapons. Instead, the Army had to live on a hand-to-mouth basis, as successive Chiefs of Staff reported.

Our committee and Congress, even though we did exceed the Budget Bureau's allocations, would have been far more generous save for the fact, as I have explained, that we were never allowed to know the amounts which the War Department had asked in the first instance. For the same reason the American people had no conception of the need for larger appropriations for defense, even though these might have necessitated higher taxes.

In view of the role which air superiority played in the defeat of the Axis, another example of the effect of withholding the facts from Congress and the people is pertinent. It involves the failure to recognize and act upon trustworthy reports of Nazi Germany's growing strength in the skies. The report came from Maj. (now Col.) Truman Smith, who was our military attaché at Berlin. On the basis of his surveys of Hermann Goering's accomplishments, he submitted a sensational memorandum to the War Department on November 1, 1937.

It consisted of 6 pages of written comment and 28 pages of maps and tabulations on German air strength and production capacity. He gave the names and sites of 23 factories, and estimated their potential annual output at 6,000 planes. He placed their November 1937 strength at 1,500 first-class planes, 600 in reserve and an unknown number in depots. Emphasizing that these were conservative estimates, he added:

"Germany is once more a world power in the air. Her air force and air industry have emerged from the kindergarten stage. Full manhood will be reached within 3 years. * * * In November 1937, it appears that the development of German air power is a European phenomenon of the first diplomatic importance."

Major Smith predicted that Germany would gain "air technical parity with the United States in 1941 or 1942," thus indicating the date when Hitler might be ready to make war. He added that if this country slowed down on development (industrial, not governmental), "German air superiority will be realized still sooner."

That truly alarming report was pigeonholed; it was not submitted to any congressional committee. It was not until the fall of 1942 that I was able to obtain a copy after persistent efforts. However, in the spring of 1939, Gen. Henry H. Arnold, Chief of the Army Air Forces, introduced Col. Charles A. Lindbergh to our committee. He testified for 2 hours on his inspection of Germany's air establishment and industry, confirming Major Smith's report in every detail. But only two pages of the Lindbergh testimony were allowed to be printed for public consumption.

Meanwhile, for lack of this data, Congress continued to base appropriations for the Army Air Force on the old Baker report, which provided for a total of 2,500 planes. Since the life of a plane was then estimated at 5 years, our annual quota of new machines was only 500. As a result, we had less than 1,000 first-line planes when France surrendered. It was not until after this catastrophe and the Dunkerque evacuation—3 years after the warning from our military attaché in Berlin—that the required expansion and modernization of our Air Force was authorized.

The third essential military reform which recent history should have impressed upon us, supplementing the need for a substitution of frankness instead of secrecy on these life-and-death subjects, is the permanent maintenance of a balanced and impregnable Army, Navy, and Air Force, together with constant research and experimentation on new weapons in our factories and laboratories. Whether we need universal military training or a comparable system is a question which the White House, the Congress and the military experts should decide on the basis of developing conditions throughout the world. However, if we take heed from the lessons we learned between World Wars I and II, there need never be another Pearl Harbor.

The Return to the Poultry Producers Is Not Causing Any High Consumer Cost of Fowl

---

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. MURRAY of Wisconsin. Mr. Speaker, the following advertisement is similar to the many which have been appearing in the newspapers of central Wisconsin. It plainly shows what the producer obtains for his chickens:

LIVE POULTRY WANTED

	Cents
Light fowl	17
Heavy fowl	20
Leghorn springers	18
Heavy springers	23

We don't buy No. 2 chickens.

Questions which are brought to mind by this advertisement are:

First. Do you realize that these prices are getting pretty close to, if they are not below, the floor price of 90 percent of parity guaranteed by the Steagall amendment?

Second. Do you believe the producer of this splendid food is obtaining too much per hour in producing the fowl at the above prices?

Third. Do you wish to take the position that the producer is responsible if you pay more than you wish for chicken at the market place?

Fourth. Can you think of any legitimate or legal reason why the Quartermaster General of the Army should be paying 38-plus cents per pound for plucked chickens at points South when they can be purchased in the Midwest as

cheaply as the above advertisement indicates?

Fifth. Do you know of any rational person who believes the sale of fowl by a producer to any one purchaser should be limited to five birds? The OPA say this should be done.

Sixth. Is there any reason to keep a price ceiling on these birds, when they are selling at below cost and practically at or below the 90-percent parity support floor?

Seventh. Do you know why these poultrymen have been and are subjected to such agency treatment when other farm products, even though there is a surplus of the commodity, are purchased at 130 percent of parity? Why?

That is where agricultural politics enters into the picture.

The ways of the New Deal are confusing and the longer they operate the more confused and frustrated they become.

Presentation of a Silver Plaque to the Battleship "Missouri"

EXTENSION OF REMARKS
OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 16, 1946

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an excerpt from the Lead Belt News, Flat River, Mo., for Friday, January 11, 1946, together with the text of the address of Gov. Phil M. Donnelly, of Missouri, and text of the address of Capt. R. H. Hillenkoetter, commanding officer of the battleship *Missouri*, given on the occasion of the presentation of a silver plaque to the battleship *Missouri* by the officers and men of the St. Joseph Lead Co., Sunday afternoon, January 6, 1946:

[From the Lead Belt News, Flat River, Mo., of January 11, 1946]

ABOUT 5,000 PEOPLE WITNESS PLAQUE PRESENTATION ON SUNDAY AFTERNOON

An estimated 5,000 people crowded onto the area of the old Young Men's Christian Association Building in Flat River, Sunday afternoon, as the $2,000 silver replica of the great seal of the State of Missouri was accepted by Captain Hillenkoetter, commanding officer of the U. S. S. *Missouri*, from Gov. Phil M. Donnelly.

The ceremony, widely publicized in metropolitan newspapers, was attended by several State officials and naval officers and their families, officers and enlisted men of the battleship, and officials of the St. Joseph Lead Co., whose employees conceived the idea and were donors of the 22-inch plaque made of native Missouri silver.

President Clinton H. Crane, of the lead company, presided and introduced Senator FORREST C. DONNELL, Representative A. S. J. CARNAHAN, of this district, Paul Manship, the designer of the plaque, and the officers and men of the *Missouri*.

Before a crowd that was anticipating the biggest day the Lead Belt has seen for some time and started lining Main Street before noon—2 hours before the presentation—President Crane introduced Governor Donnelly, who spoke in behalf of the State, this section, and the St. Joseph Lead Co. and its employees. The audience was representative of this entire area—people coming from Flat River, Esther, Elvins, Rivermines, Desloge, Leadwood, Frankclay, Farmington, Bonne Terre, Bismarck, Fredericktown, and several from St. Louis, in addition to many from rural areas here, to see the notables and witness the presentation.

Governor Donnelly, citing the record of the U. S. S. *Missouri* as paralleling that of America in its invincibility, said that even though the battleship upon which the Japanese surrendered in Tokyo Bay on September 2 was named after our State, the battleship and its record should not be accepted as a matter of fact, but treated as an honor bestowed upon the State by "the greatest Navy in the world."

Capt. R. H. Hillenkoetter, commanding officer of the battleship since November, accepted the plaque as the crowd cheered and five scout planes from the battleship itself roared overhead.

In response to the plaudits of the crowd as he and the governor posed with the plaque for pictures by St. Louis and local photographers and a Paramount Newsreel cameraman, Captain Hillenkoetter spoke briefly on the accomplishments of the *Missouri*.

He said that "although the youngest of our battleships, the war log of the *Missouri* shows participation in the operations against Iwo Jima and Okinawa and numerous bombardments of the main islands of Japan as well as accompanying carrier strikes against various portions of the Japanese empire."

The 45,000-ton dreadnought, which became the pride of the famous Third Fleet, is anchored at New York from where the personnel who attended the ceremony came Saturday, arriving in Bonne Terre in time for a dinner given by the company.

As President Crane introduced the beribboned officers and men who were members of the ship's crew since it was commissioned, the crowd roared its approval as Eugene C. Rudy, Flat River shipfitter on the vessel, stood on his chair so that he could be seen throughout the crowd, and saluted his fellow townsmen.

Also invited were President Harry S. Truman and Senator FRANK P. BRIGGS, who were unable to attend. Messages from the President and Navy Secretary James V. Forrestal were read by Crane.

The plaque was set beside the speaker's stand as the Flat River High School band and the crowd assembled. Accompanied by several members of the State Highway Patrol, Governor Donnelly and two other cars of his party drove up at 2 o'clock and was seated with State officials and their families on the left side of the speaker's stand. To its right the Navy men sat. Behind them the heads of the divisions and other representatives of the company stood.

The speeches, amplified by a public address system and recorded by a sound system for rebroadcast, were interrupted several times as the Navy planes "buzzed" the crowd and went over in formation, drowning out the speakers.

The plaque was displayed after the ceremony and for a half hour it was almost impossible to get near enough to see the beautiful casting mounted on teakwood. On Monday and Tuesday it was displayed at the city hall in St. Louis and then taken to the Metropolitan Museum of Art in New York.

It will adorn the ship's wardroom as a permanent emblem after a period of display.

[From the Lead Belt News, Flat River, Mo., of January 11, 1946]

TEXT OF GOVERNOR DONNELLY'S SPEECH

Mr. Crane, Captain Hillenkoetter, officers of the Missouri, distinguished guests, ladies and gentlemen, we meet here today on an historic occasion to take part in a ceremony of great interest to all the people of our State. We honor the Navy today and a great battleship of that Navy, and in doing this we pay tribute to those who wore the uniform of their country in the greatest of all wars; to those who fought heroically that we might live as a free people.

To the United States Navy the people of Missouri join with me in expressing the most profound admiration. In the Atlantic and in the Pacific, on all the seven seas, the Navy conquered. Without the Navy there would have been no victory in Europe or in Asia and no surrender ceremony in Tokyo Bay. In all the annals of sea warfare there is no more inspiring chapter than the story of the United States Navy in World War II. In all the pages of history there is no more fascinating account of the exploits of those who go down to the sea in ships.

In this great war, which came to an end in Tokyo Bay a few short months ago, thousands of the gallant youth of Missouri donned the Navy blue. From our homes there came forth a host of young men and women ready and eager to wear that proud uniform of their country. Throughout the world, wherever the Stars and Stripes were carried, the youth of Missouri were in the vanguard, battling shoulder to shoulder with their comrades. We honor them, in a very special way, in this ceremony. And to those who gave their all, to those who paid the supreme sacrifice, we express our eternal gratitude. To the loved ones of those who nobly lost their lives in the service of their country we extend our loving sympathy. We join our prayers wtih theirs. Missouri will never forget its war dead.

In that mightiest of navies, the greatest the world has ever seen, there was one great ship that stood out from all the rest. One of a group of giant craft, the largest of their kind, the greatest of an armada of great ships, that one was the latest and the best. That mighty craft was the magnificent *Missouri*, queen of all the navies of the world. The story of this superb, ultramodern streamlined battleship is the story of America, invincible in its power. And in the career of this great ship—this giant of the sea—can be found convincing evidence of the hand of destiny; a destiny which reached its climax in the drama that brought to a close the greatest of wars. The very construction of that vessel is representative of the stupendous power of this Union of States, this Nation of ours. The fact that this Nation could build such craft is indicative of the strength and virility of America. Completed in time for action in the Pacific, the *Missouri* played its full part in carrying the bold fight to the enemy. In every engagement, and in every encounter in which this craft was called upon for action, the result was successful and a harbinger of that greater victory that was to come. At Iwo Jima, off the Kyushus, at Okinawa, off the island of Hokkaido, and finally in the waters of the Japanese homeland itself, in the great industrial area of Hitachi, only 60 miles from Tokyo, the great guns of the *Missouri* helped to blast the road to victory. And finally, as a magnificent climax to the career of a magnificent fleet, the mighty *Missouri*, fighting flagship of Admiral Halsey, commander of the Third Fleet, rested at anchor in Tokyo Bay. And on her decks the once proud Japanese, now humble and beaten, signed the terms of surrender. Upon the deck of the battleship named for our own beloved State, on that second day of September 1945 was written a glorious ending to the greatest struggle for freedom mankind has ever waged. History reveals no more significant event in all the years of the past.

And so we are met here today in order that a fitting tribute may be paid by Missouri and Missourians to the Navy and to

the battleship *Missouri*. As you have been informed, a silver plaque, made in replica of the great seal of the State of Missouri, will be presented to the U. S. S. *Missouri*. Fittingly, indeed, this silver shield, which bears the seal of our proud State, was made from Missouri silver produced from ores that were taken from the mines of southeast Missouri. In this presentation, and in the casting of this shield, citizens of our State, the workers in the mines, in the mills, and in the smelters, and those who work with and guide the destinies of the great mining company which is sponsoring this event, pay a worthy tribute and one in which we can all join. In doing this, these citizens of ours, in a larger sense represent all the workers of Missouri, all those thousands on the production front who paved the way for the victory of our armed forces. The production front, as you are well aware, laid the foundation for the triumph of America in this war. In that superb production effort Missourians did their full part. Their untiring, patriotic efforts, carried on with unswerving devotion and zeal, helped to produce the materials and the weapons of war in prodigious quantities. Missouri is proud of them, as it is proud of our men and women who were on the fighting fronts all over the world and on the seven seas. It is most appropriate that they should now make this gesture, and speaking through you should make this permanent contribution, in the form of this historic silver shield, to the wartime records of our country.

It is also most appropriate that this token of our appreciation should be made of a Missouri mineral, one of an immense variety of Missouri products. The very fact that silver is mined in Missouri indicates most eloquently the richness and the diversified nature of this State of ours. Since 1879 more than $3,000,000 worth of silver has been mined in this State. It should be more widely known that for centuries men have sought for silver in this area and that more than 200 years ago lead was mined in this section, which was to become a part of the State of Missouri. In the years that have followed Missouri has become one of the great mineral-producing States of the Union. While the total amount of silver production has been relatively small, this district has long been the greatest producer of lead. During the recent war period this section of our State supplied more than 30 percent of all the lead mined in the Nation. The total value of lead produced by the mines of southeast Missouri exceeds the huge sum of $850,000,000. In addition to the new wealth created by these mines, some 3,800 persons have been employed by the mines, mills, and smelters of the St. Joseph Lead Co. and its subsidiary companies in southeast Missouri. And the mining industry centering in this area is the principal means of support for more than 25,000 people. The lead-meaning industry of Missouri has had a long and honorable record, and there should be many more years of useful production. You who are engaged in mining will be interested to know that at the present time steps are being taken to locate new ore reserves in order that the lead-mining industry of our State may continue in its role of a leading producer among the States of this Nation. A complete review of the records in the offices of the geological survey of the State of Missouri is now being made, in an attempt to obtain a description of every reported and known occurrence of lead in Missouri. It is hoped that this survey may reveal properties and prospects which will justify further drilling in Missouri.

And so, in this ceremony, the workers of a great industry in a great diversified State join with me in the presentation of this plaque. We appreciate the significance of today's events, and we feel an humble pride that we can take part in this ceremony. A distinguished writer, a former Missourian, in describing the storm of welcome that was accorded the *Missouri*, upon its arrival in New York Harbor after the war, said that it would have been the same had that mightiest of craft been named for any other State. We in Missouri realize this. We know that the *Missouri* is a symbol of the might of our entire beloved country, and yet we will never forget that it bears the name of our State. May we always be worthy of that great honor. Our people for generations to come will take note of it and will be proud, as we are today, that of all the States of the Union, Missouri should give its name to this great symbol of America.

But we should be derelict, indeed, to all our deeper feelings and emotions if we did not recognize an even greater significance in these events. With the final surrender of the Japanese, the greatest of all wars was brought to a victorious close. The free nations of the world have conquered. Those who feared for the liberties of mankind can put aside that dread, and can turn their thoughts to the ways and the problems of peace. Let us be equal to those days and those problems. Let us anticipate the future, and our hearts and minds resolve to act with the same high courage and the same noble ideals with which our fighting men and women gave their services to their country. Let us give of ourselves to that nobler future for which the world is waiting.

In that spirit, may this plaque, made from Missouri silver, reflect in its sterling character, its intrinsic quality, its purity and its beauty, the finer attributes of this great land of ours. Upon the great seal of the State of Missouri, appearing on this shield, are engraved the words "United We Stand, Divided We Fall." There is also engraved upon it the State motto, in Latin, which translated reads: "The Welfare of the People Shall Be the Supreme Law." We commend these thoughts to the people of our Nation, to the officers and men of the battleship *Missouri*, and to posterity. They represent our deepest feelings toward our country, toward the people of our own State, and toward the people of the United States of America. This plaque is a worthy symbol of the best that we have to offer to our country.

On behalf of the officials and employees of this great mining company, St. Joseph Lead Co., on behalf of the people of this productive mining district, on behalf of all the people of the State of Missouri, I have the honor and the privilege, Captain Hillenkoetter, of presenting this plaque to you as the commanding officer of the U. S. S. *Missouri*.

TEXT OF CAPT. R. H. HILLENKOETTER'S ADDRESS

In accepting this silver replica of the great seal of the State of Missouri, I do so not only for myself and these representatives of the U. S. S. *Missouri* here with me, nor for the remainder of the ship's personnel not here, but for all these, and in addition, in behalf of all those who have served aboard and for all those whose efforts and skills went into making the *Missouri* what she is. The men who provided the material for her, among them undoubtedly many of you, and those who built her are, though impossible to identify individually, just as much a part of the ship as those who man her.

When the *Missouri* started for the Pacific after her commissioning she carried literally the hearts and hopes of her builders. The yard workmen who built her contributed 10,000 pints of their blood to inaugurate a blood bank for the ship. Their keen and unflagging interest accompanied the ship throughout all of its service in the Pacific.

Although the youngest of our battleships, the war log of the *Missouri* shows participation in the operations against Iwo Jima and Okinawa, and numerous bombardments of the main islands of Japan as well as accompanying carrier strikes against various portions of the Japanese Empire. These actions culminated in the signing of the formal surrender document on September 2 in Tokyo Bay. Our access to the Japanese homeland gave opportunities for securing reliable information as to conditions there, both by our observation and by conversation with Japanese officials who no longer had the incentive to deceive either their enemies or their own people. It was at once apparent that while the damage to their cities and production centers by strategic bombing was fully as great as photographic reconnaissance had indicated, the strangulation from our less-obvious but relentlessly effective surface and submarine blockade and from our carrier-based air attacks had been a decisive factor in the enemy's collapse. Their food situation was critical and their remaining resources in fuel and in all strategic materials were not less so.

Never before in the history of war has there been a more convincing example of the effectiveness of seapower than when a well-armed, highly efficient, and undefeated army of over a million men surrendered their homeland unconditionally to the invader without even token resistance.

True, the devastation already wrought by past bombings, as well as the terrible demonstration of power of the atomic bombs, augured nothing less for the Japanese than total extinction; yet without sea power there would have been no Saipan, Iwo Jima, and Okinawa from which to launch these bombings. True, the Japanese homeland might have been taken by assault in one final amphibious operation of tremendous magnitude, yet without sea power such an assault could not have been attempted.

Sea power is not a limited term. It includes many weapons and techniques. Sea power means more than the combatant ships and aircraft, the amphibious forces, and the merchant marine. It includes also the port facilities of New York and California; the bases in Guam and Honolulu; the factories which are the capital plant of war; and the farms and the mines of Missouri and Illinois and all the other States which are the producers of supplies. All these are elements of sea power.

Dependent upon imported food and raw materials, and relying on sea transport to supply her armies at home and abroad, Japan lost the war because she lost command of the sea.

Now that the peace has been attained, we hope that the wish so eloquently expressed by President Truman at the launching of the *Missouri* will be fulfilled. Mr. Truman said, "May the battleship Missouri and the other ships of the Navy do their full share on behalf of the people of the United States to maintain the peace which will follow our total victory." We shall do our best to carry out this hope with the reservation that battleships do not make for either war or peace. War and peace come from the minds and hearts of men.

Governor Donnelly, it is with great pride that I receive from you this plaque, a replica of the great seal of the State of Missouri, and on behalf of the officers and men of the U. S. S. *Missouri* I express our sincere appreciation and gratitude to all those connected with the St. Joseph Lead Co., to all those who conceived the idea, to all those who mined and refined the silver, to all those who contributed to its cost, and last, but certainly not least, to Mr. Paul Manship who brought the idea to such perfect fruition.

The Governor of Ohio Speaks to the Governor of Louisiana

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 16, 1946

Mr. PITTENGER. Mr. Speaker, it has been a long time since the Governor of North Carolina said to the Governor of South Carolina certain pertinent things. You know what they were. From the standpoint of historical importance the letter which the Governor of Ohio, the Honorable Frank J. Lausche, wrote to His Honor the Honorable Jimmie H. Davis, the Governor of Louisiana, is of tremendous importance. While this letter was written November 28, 1945, the holiday pressure must have denied it the publicity to which it was justly entitled. Whenever we get a man in public life who dares to take a stand against the selfish interests that are blocking the development of the St. Lawrence seaway and power project, I feel that he is entitled to recognition and thanks on the part of the advocates of the seaway.

Back in December 1945 I discussed this project and suggested the names of some prominent Presidential possibilities who either had declared themselves for it or were being urged to do so. I was led to do that because of reports that President Truman had a new Presidential yacht and other prominent people were interested in it. This was back on December 17, 1945, and my extension of remarks will be found in the Appendix of the CONGRESSIONAL RECORD, page A5602. I want to assure the Governor of Ohio that my omission of him as deserving honorable mention in the Presidential Yacht Club was entirely unintentional and very unfortunate. His letter to the Governor of Louisiana had not been called to my attention when I prepared my speech for December 17, 1945. I hope there will be no hard feelings on his part by reason of this omission. It is never too late to correct an error, and for that reason I am submitting herewith copy of his letter to the Governor of Louisiana, which needs no eulogistic remarks on my part. This letter speaks for itself. It reads as follows:

GOVERNOR LAUSCHE OF OHIO WRITES GOVERNOR DAVIS OF LOUISIANA ABOUT THE SEAWAY

NOVEMBER 28, 1945.

Hon. JIMMIE H. DAVIS,
Governor of Louisiana,
Office of the Governor,
Baton Rouge, La.

DEAR GOVERNOR DAVIS: I received your letter written in respect to the St. Lawrence-Great Lakes seaway. I note your view that this project ought not to be built.

My own view is that in the end any course that will develop a greater productive power of the Nation at a reduced cost will inure to the benefit of all people living within the Nation.

There are many projects being contemplated for irrigation, power, navigation, and water-supply purposes. In the Northwest, where great progress has been made through the construction of the Grand Coulee and Bonneville Dams, additional water impoundments are contemplated. Other areas in the Nation are studying and contemplating similar projects. These projects on the surface would seem to prejudicially affect those communities that are not immediately benefited by them. But it is my belief that in the course of time, wealth-producing projects will be built wherever they are feasible and the people as a whole will profit because of their construction.

If the cost of producing goods that are manufactured on the Great Lakes can be reduced, our ability to sell to the world will be improved. The more we, or other areas of our Nation, sell, the greater will be the gains that are made by the Nation as a whole in improving the economy and living conditions of all its people.

I am firmly of the belief that the St. Lawrence-Great Lakes seaway ought to be built. Economically the country is wasting a rich resource by delaying the project.

From the foregoing it is obvious that my views make it impossible for me to join with you in the course that you feel is the advisable one to follow.

Sincerely yours,

FRANK J. LAUSCHE,
Governor.

The foregoing letter, Mr. Speaker, is short but to the point. As I have indicated before, it is a clear indication of the fact that the great State of Ohio, which is rich in tradition, patriotism, and citizenship, is still in the forefront and ready to fight for constructive and worthwhile things for the people of the Republic of the United States.

Representative Manasco Assists Amvets in McLean Housing Project

EXTENSION OF REMARKS
OF
HON. LUTHER PATRICK
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 16, 1946

Mr. PATRICK. Mr. Speaker. I obtained this time for the purpose of placing in the Appendix of the CONGRESSIONAL RECORD a statement by the national legislative director of the Amvets regarding House Joint Resolution 297 introduced by the Honorable CARTER MANASCO.

The statement is this:

REPRESENTATIVE MANASCO ASSISTS AMVETS IN M'LEAN HOUSING PROJECT

(By J. H. Leib, national legislative director, Amvets)

Representative MANASCO, of Alabama, on January 14, 1946, introduced House Joint Resolution 297, which asks for a clarification of the Surplus Property Act in regard to the sale of defense housing for veterans.

Everyone familiar with the administration of the Surplus Property Act knows that it has never functioned to the benefit of the veteran. Particularly, the act as it is now being interpreted by Government officials is working to the veteran's disadvantage. Amvets have founded a mutual housing corporation, and are endeavoring to purchase McLean Gardens, in Washington, D. C., and are running into all kinds of difficulty because the terms of the purchase are such that the highest dollar bids are only being considered.

Obviously, such an interpretation of the act definitely works to the disadvantage of the veterans, for once having occupied the housing project, they must go through with their bid, whereas the speculative purchaser may leave the Government holding the bag, after making an initial profit on the venture.

The Defense Homes Corporation recently stated that the Surplus Property Board has required the acceptance of the highest figure bid which ignores the greater security to the Government by ownership of the project by several hundred veterans as well as the veterans presumed preferential right to purchase surplus housing. Any contention that the Surplus Property Act requires acceptance of such figures utterly disregards the rights of the veteran.

That is why the Manasco resolution has been introduced.

Attached herewith are a number of newspaper clippings that appeared in Washington newspapers and a copy of the mentioned resolution:

[From the Washington Times-Herald of January 15, 1945]

MANASCO BILL WOULD PROTECT VET PRIORITY IN HOUSING SALES

The American veterans of World War II got an ally on Capitol Hill yesterday in their fight to purchase McLean Gardens when Representative MANASCO (Democrat), of Alabama, introduced legislation which would delay sale of the property.

The measure, written as a joint resolution, would prevent the conveyance of permanent surplus housing to any private individual pending congressional consideration of the "priorities which should be accorded veterans" and associations of veterans.

MANASCO, chairman of the Executive Expenditures Committee, which wrote the surplus Property Act, said the legislation would be considered by the group "as soon as we can get around to it." Meanwhile, he added, he doubted if the Federal Housing Agency would take any further disposal action.

The Amvets, cheered by news of the new legislation which they hoped would give them time for formulation of complete financing plans, will meet tonight at 8 in the Interior Department Auditorium to continue discussions.

[From the Washington Post of January 15, 1945]

VETERANS PLAN M'LEAN OFFER

The Amvet-sponsored Veterans Cooperative Housing Association will meet to draw up detailed terms of its bid for McLean Gardens at 8 p. m. today in the new Interior Department Auditorium.

A Defense Housing Corporation spokesman said the Amvet offer was too "general" for the board to consider. DHC action was withheld on the bids until Amvets could complete the information.

"I don't know how much more definite we can be in our offer," Ray Sawyer, Amvet commander, declared last night.

"We have offered to pay a price fixed by a Government and an Amvet appraiser, or by a mutual appraiser if the two do not agree, with 10 percent of the purchase price as a down payment."

Ninety-nine bids were received by DHC, of which 58 were rejected as being too low. Forty-nine are under consideration.

A joint resolution which would give individual veterans and cooperative associations of veterans priorities in purchasing surplus permanent housing was introduced in the House yesterday by Representative CARTER MANASCO (Democrat), of Alabama. Senate introduction is expected today.

House Joint Resolution 297

Joint resolution clarifying the Surplus Property Act in regard to sale of defense housing for veterans

Whereas the regulations of the Surplus Property Administrator governing the sale of defense housing are being construed to permit the sale of such property and its use

by others than returning veterans of this war; and

Whereas no loss of housing or of the funds of the United States of America will be incurred if such surplus defense housing is withheld from private sale pending clarification of the Surplus Property Act: Therefore be it

Resolved, etc., That no surplus housing of a permanent character shall be sold or conveyed to private interests pending consideration by Congress of the priorities which should be accorded individual returning veterans and cooperative associations of veterans for the purchase and use of such housing.

Text of Complaint Issued by National Labor Relations Board Against General Motors Corp.

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 16, 1946

Mr. HOOK. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the text of the complaint issued by the National Labor Relations Board against the General Motors Corp., alleging that the corporation has at all times since August 18, 1945, "failed and refused and now fails and refuses to bargain in good faith with the union"—the UAW-CIO.

The complaint charges that the corporation, "though meeting with the union on numerous occasions since August 18, 1945, in pretended or purported bargaining has engaged at all times since said date in a course of conduct calculated to and having the effect of frustrating and avoiding bona fide bargaining on the union's proposals."

This complaint, issued January 13, 1946, was made in response to, and after investigation of, the UAW-CIO's complaints of November 8 and November 27, the texts of which I inserted in the Appendix of the RECORD January 14, at page A6. The first hearing on the NLRB complaint has been set for Monday, January 28, in the city of Detroit.

The complete text of the complaint follows:

UNITED STATES OF AMERICA, BEFORE THE NATIONAL LABOR RELATIONS BOARD, SEVENTH REGION—IN THE MATTER OF GENERAL MOTORS CORP. AND INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT, AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, UAW-CIO, CASE NO. 7-C-1496

COMPLAINT

It having been charged by International Union, United Automobile, Aircraft, and Agricultural Implement Workers of America, (UAW-CIO), hereinafter called the Union, that General Motors Corp., hereinafter called respondent, has engaged in and is engaging in certain unfair labor practices affecting commerce as set forth and defined in the National Labor Relations Act, 49 Stat. 449, herein called the act; the National Labor Relations Board, herein called the Board, by its regional director for the seventh region, as agent of the Board, designated by National Labor Relations Board rules and regulations, series 3, as amended, hereby issues its complaint and alleges as follows:

1. Respondent is a Delaware corporation, having its principal offices in the city of New York and in Detroit, Mich. Respondent is the largest manufacturer of automobiles and trucks in the United States. In 1941 respondent manufactured more than 1,800,000 passenger-type automobiles. During the war respondent's manufacturing facilities were principally devoted to the manufacture of many and varied items of ordnance, munitions, and military vehicles for the armed forces of the United States. Respondent is now, and at all times mentioned herein was, engaged in the manufacture and assembly of automobiles, parts and accessories thereof, Diesel engines and aircraft motors, and in converting many of its plants from the manufacture of ordnance and military vehicles to the manufacture of the said automotive products. Respondent maintains and operates manufacturing and assembly plants in many States of the United States, including California, Connecticut, Georgia, Indiana, Maryland, Michigan, Missouri, New Jersey, New York, Ohio, Tennessee, and Wisconsin.

2. A substantial proportion of the raw materials, exceeding 25 percent in value at practically every manufacturing and assembly plant of respondent, is obtained from sources outside the State in which the respective plant is located. Most of the products of each plant are shipped to points outside the State in which such plant is located or are delivered to another plant of respondent within the same State for incorporation in an assembly or subassembly or in a completed automobil , truck, or engine, which completed products are directly shipped in substantial proportion to points outside the State or are sold and delivered to General Motors Sales Corp., a wholly owned subsidiary of respondent, at the place of completion and then shipped by the said sales corporation outside the State. Respondent's normal operations cause a vast and almost continuous movement of commodities in interstate and foreign commerce.

3. International Union, United Automobile, Aircraft, and Agricultural Implement Workers of America (UAW-CIO), is a labor organization as defined in subsection (5) of section 2 of the National Labor Relations Act.

4. Prior to August 18, 1945, the Board, in numerous separate proceedings, had under section 9 (c) of the act, certified to respondent in writing that the union had been designated and selected as their representative by a majority of certain employees of respondent in a unit (or in each of two or more units) appropriate for the purposes of collective bargaining (the said unit or units being each defined in each such certification) and that the union was, pursuant to section 9 (a) of the act, the exclusive representative of all the employees in each such unit for the purposes of collective bargaining in respect to rates of pay, wages, hours of employment, and other conditions of employment. Each of said certifications (issued prior to August 18, 1945) and the record of the proceedings before the Board in which it issued, are incorporated herein by reference as though fully set forth.

5. The employees in each such unit heretofore defined by the Board in its aforesaid certifications did, on August 18, 1945, and at all times thereafter and down to the date hereof, constitute a unit appropriate for the purposes of collective bargaining within the meaning of subsections (a) and (b) of section 9 of the act.

6. The union was on August 18, 1945, and at all times since has been, the exclusive representative of all the employees of respondent in each bargaining unit described in the said previous certification of the Board.

7. Respondent has at all times since each such certification recognized the union as the exclusive representative for purposes of collective bargaining of the employees in each such unit. Since the first such certification of the union by the Board on or about May 29, 1940, respondent and the union have consolidated all negotiations and bargaining on subjects common to or affecting similarly all employees in all the said units.

8. On or about August 18, 1945, while respondent was engaged at its various plants as described in paragraphs 1 and 2 above, the union requested respondent to bargain collectively in respect to certain proposals made by the union in behalf of all of respondent's employees represented by the union concerning rates of pay, wages, and other terms and conditions of employment of the said employees, including a proposed general wage increase for all said employees. Respondent has at all times since said date failed and refused and now fails and refuses to bargain collectively in good faith with the union. Though meeting with the union on numerous occasions since August 18, 1945, in pretended or purported bargaining, respondent has engaged at all times since said date in a course of conduct calculated to and having the effect of frustrating and avoiding bona fide bargaining on the union's proposals. Without limitation thereto the said course of conduct has included the following:

(a) Respondent unreasonably delayed the commencement of any negotiations by refusing until on or about September 18 to meet with the union or to appoint a future date for a meeting for collective bargaining on the union's proposals.

(b) Respondent unreasonably delayed a reply to the union's proposals by failing and refusing to make any specific response to the said proposals or to any of them until on or about October 3, 1945, on which date respondent rejected the union's proposals in toto and without making any counter proposal.

(c) On or about October 19, 1945, and before any reasonable opportunity had been afforded the union for explanation or argument in support of its proposals, respondent caused identical letters, together with copies of certain enclosures referred to in said letters, to be sent to all employees represented by the union, each said letter bearing a signature (or facsimile representation thereof) of the manager of the plant wherein such employee was employed. A copy of the said letter (lacking signature) is attached hereto, marked "Exhibit A" and made a part hereof by reference. The said letter and enclosures were calculated and designed to discredit the union in the eyes of the employees represented by it, to undermine the confidence of the said employees in the union as their selected representative and to coerce and intimidate the employees into abandonment and repudiation of the union as their representative for collective bargaining.

(d) On various occasions since on or about October 4, 1945, respondent has disseminated on a Nation-wide scale inaccurate, misleading, and untrue statements concerning the proposals of the union. Such statements have been distributed through the media of newspaper advertisements and radio broadcasting announcements. The said statements were calculated and designed to undermine confidence in the union by the employees represented by it and to inculcate doubts among the said employees as to the veracity and integrity of the union officials, their designated representatives, and were calculated and designed to create a public opinion hostile to the union and as a result of such loss of confidence by employees and of such hostile public opinion, to compel the union to abandon its proposals.

(e) At various times on and after October 3, 1945, and up to and including the date of this complaint, respondent has, in the course of its pretended bargaining with the union, changed and shifted its position as to whether it did or did not rely on financial inability to accede to the union's wage proposals as

a reason for rejecting them, thereby perplexing and confusing all discussion with reference thereto and precluding any continuous rational bargaining.

(f) Respondent has at all times refused and now refuses to bargain collectively with the union in respect to its financial ability to pay the wage increases proposed by the union and has at all times, though repeatedly requested by the union so to do, refused to produce or disclose to the union any of its books or records containing information relevant to the question of its financial ability to pay the proposed wage increases and has at all times refused to furnish any such information to the union by production and disclosure of books and records or otherwise in any manner or form susceptible of verification. Respondent maintained its refusal to bargain in respect to its financial ability to pay the proposed wage increase and its refusal to produce or disclose such books, records, or information without regard to whether it was or was not currently asserting inability to pay the proposed increases as the reason for rejecting the union's proposals.

(g) On or about November 23, 1945, the union, having previously thereto (on or about November 19, 1945) proposed specific terms for submission of its wage proposals to arbitration, respondent rejected the said proposal without counter-proposal of other terms for arbitration. Respondent's rejection of the union's proposals was a rejection of arbitration on any terms.

(h) On or about November 23, 1945, respondent withdrew an offer of a wage increase of approximately 10 percent which it had previously made during the course of its pretended bargaining. Respondent withdrew said offer for the reason that the employees represented by the union had, as hereinafter set forth, exercised the right guaranteed by the act to engage in a strike.

(i) From November 26, 1945, until on or about December 6, 1945, respondent refused, unless the union would modify its proposals in accordance with terms imposed by respondent, to meet, confer, or negotiate with the union because the employees represented by the union had exercised the right guaranteed by the act to engage in a strike as hereinafter set forth.

9. By the acts and conduct set forth in paragraph 8 above respondent did engage and is engaging in unfair labor practices within the meaning of subsection (5) of section 8 of the act.

10. The unfair labor practices of respondent as set forth in paragraphs 8 (a) through 8 (f) above caused a strike on November 21, 1945, by the employees represented by the union. The continuing acts and conduct of respondent, as set forth in paragraphs 8 (a) through 8 (i) above have caused the said strike to be prolonged and have prevented settlement or adjustment thereof, the said strike being current at the time of issuance of this complaint. The said employees and each of them have been entitled at all times since the commencement of said strike to be reinstated to their former positions in respondent's employ upon application therefor.

11. By the acts set forth in paragraph 8 above and by each of them respondent has interfered with, restrained, and coerced, and is interfering with, restraining, and coercing its employees in the exercise of the rights guaranteed to them in section 7 of the act and has thereby engaged in and is thereby engaging in unfair labor practices within the meaning of subsection (1) of section 8 of the act.

12. The acts of respondent as set forth in paragraph 8 above, occurring in connection with the operation of respondent's business as set forth in paragraphs 1 and 2 above, have a close, intimate, and substantial relation to trade, traffic, and commerce among the several States and have led to and tend to lead to labor disputes burdening and obstructing commerce and the free flow of commerce.

13. The acts of respondent hereinbefore set forth constitute unfair labor practices affecting commerce within the meaning of section 8, subsections (1) and (5), and section 2, subsections (6) and (7) of the act.

Wherefore the National Labor Relations Board, on the 14th day of January 1946, issues this, its complaint against General Motors Corp., a corporation, respondent herein.

HAROLD A. CRANEFIELD,
Acting Regional Director, National Labor Relations Board, Seventh Region.

EXHIBIT A

LETTER SENT TO HOURLY RATED EMPLOYEES IN BARGAINING UNITS UNDER UAW-CIO NATIONAL AGREEMENT

The employees of General Motors have been singled out by the international officers of the UAW-CIO to spearhead their attack on the country's wage and price control policy. Accordingly, a strike vote is to be taken Wednesday by the National Labor Relations Board among all General Motors factory employees under the UAW-CIO agreement.

All of us would like an increase of 30 percent in our wages or salaries if all we had to do to get it was to vote for it. However, in this case you will not be voting yourselves a 30-percent raise—you will be voting for or against a strike. In such strike votes the vote is usually overwhelmingly in favor of the strike. Probably most employees who vote for a strike really don't want one and hope the threat of a strike will be enough. But a majority strike vote invariably results in a strike.

General Motors has endeavored to make clear its position and the necessity for refusing the UAW-CIO's demand made August 18, 1945, for a 30-percent increase in the present wage rates of all General Motors employees covered by the UAW-CIO national agreement. Mr. C. E. Wilson, president of General Motors, replied to the union on October 3, 1945, and advised the union of General Motors' position on this demand. Because the welfare of the country is also involved, General Motors ran ads in newspapers throughout the country setting forth its position on this matter.

I believe Mr. Wilson's letter and the ad will be of interest to you so I am sending them along with this leter. Also included is a reproduction of a newspaper story which ran in the Detroit Times on Friday, September 14, 1945.

The same information was sent to all United States Senators, Congressmen, and State governors.

I earnestly suggest that you take the time to read these because, as I said before, this strike vote may result in a long strike.

If and when the strike goes into effect I sincerely hope that you conduct yourselves as law-abiding citizens, respecting the legal rights of others, and under no circumstances should you cause or permit damage to the plants and equipment with which you must earn your living when the strike finally ends.

Our Domestic Problems and the British Loan

EXTENSION OF REMARKS
OF
HON. FOREST A. HARNESS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 16, 1946

Mr. HARNESS of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on January 7, 1946:

Good evening, ladies and gentlemen, this is Congressman FOREST HARNESS in another weekly report, brought to you from my home in Kokomo.

This past week has been filled with conferences and visits with people from all parts of my district. These discussions have been all the more interesting because of our steadily growing domestic problems, and the necessity of finding an immediate solution to these critical issues. The home front labor picture continues to grow darker by the hour. Most disturbing news of the past few days was the decision of the employees of the meat packing industry, and the workers of Western Electric to join the caravan of strikers. If all these employees join with the steel workers in a general strike, the Nation will be paralyzed. Is there any wonder that people in every walk of life are disturbed and uneasy about the days and weeks just ahead? There are many people who feel that legislation is necessary to meet this most critical issue, and there are others who contend that the Administration has all the power and authority needed to protect the national interest in such a crisis.

You may take whichever side of this question you want, but it is my guess that nothing will be done by the present administration until public indignation, approaching anger, is manifested by the American people. Farmers are worried about their livestock in the event of the closing of the packing houses by strikes. They realize that if there is a rush to market hogs and cattle to beat the strike, the market will be glutted and prices will topple. They also realize that if they hold their livestock and the strike continues for any great length of time, that their losses will be equally as great through the increased cost of feed and labor. Veterans just returned from the war are wondering if they are going to be forced into idleness and deprived of the opportunity of earning a living for themselves and their families. Thousands of families now on short rations because of idleness in the auto industry too must view the future with a gloomy attitude. Small businessmen and retail merchants who very largely depend upon the big industries to supply them realize that they must also take an unwanted holiday if these strikes occur. Do you think that all this suffering, turmoil and strife will be enough to arouse public anger and force a more courageous national labor policy? If it doesn't, then the American people will tolerate more imposition than I ever dreamed they would. It is readily understandable that our people would hold their patience and submit to impositions and restrictions of their liberties in time of war, but now that peace has been won they may be excused if they revolt against a weak and vacillating administration that tolerates such a reign of tyranny. This ominous outlook was not brightened in the least by the President's report to the Nation last Thursday night. He offered little hope and certainly no leadership for the American people in this dark hour.

As if these domestic worries were not enough, we are informed in dispatches from administration leaders in Washington that the first order of business when the Congress meets next week will be the matter of authorizing a four and a half billion loan to England. Apparently our leaders are more concerned with the welfare of our European neighbors than they are with our own. It occurs to me that our own domestic problems are far more pressing and in need of congressional attention. The irony of this so-called loan to Britain is that Mr. Leski, Chairman of the British Labor Party, now in charge of what our socialists continue to call "our mother country," declared in a speech in New York that the American free enterprise system has been a total failure, while at the

very same moment one of his countrymen was telling our President that unless we cancelled $25,000,000,000 of British lend-lease and loaned England four and a half billion dollars more, his country would collapse. Does this make sense? It was free enterprise, Mr. Laski, yes, the only free enterprise nation in the world, that won two wars and saved your socialistic neck. And moreover, the twenty-five billions that we gave your socialistic government would have built 5,000,000 houses for our returning veterans at $5,000 each. This same Mr. Laski, while still our guest in New York, and while his colleagues were in Washington wheedling billions of dollars from our Government, said that free enterprise and a market economy mean war; socialism and a planned economy mean peace. Well, after all, hasn't it been the so-called "planned economy boys," such as Hitler, Mussolini and Tojo, who started wars? Indeed it was not the free enterprise nations which planned international conquests.

The nerve of these Englishmen is unbounded. They criticize our system of government and at the same time demand our bounty. They first demanded an outright grant of $4,500,000,000 and later reluctantly agreed to take the money as a loan, provided we gave them free access to our markets. It was argued the loan or grant is necessary because the war has so impoverished the Empire that she will be forced into a policy of economic isolationism unless America generously supports her in the reconstruction period. State Department officials who support this grant to Britain contend that it is necessary for our own industrial export trade, but the fact is, American markets will absorb our entire production for at least 10 years. I should also like to remind those who urge this huge grant of American property and resources, that Britain has always preached free trade for the other countries, but is the worst offender in actually blocking free trade with other nations. Did she not, in the years just before the war, when we were knocking down our own trade barriers through reciprocal trade agreements, maintain a trade killing empire preference system which was the essence of economic isolationism? Was she not second only to Germany in the support and maintenance of national cartels and trade monopolies? This loan, or gift, is not intended to help our industrial export trade. We are the only nation in the world capable and strong enough to take over world trade. I pointed out once before on this program that to grant this huge sum of money to Britain, following our lend-lease gifts, would establish the precedent and obligate us to make similar grants to Russia, France, China, and a half dozen other nations. I do not believe we have the wealth and the resources to carry out such a program. We have recently joined and underwritten the Bretton Woods plan, which means that we will finance a huge world stabilization fund and international bank. Here we obviously pay a major part of the freight, and the British Empire will reap a major part of the advantage. You will remember when this plan was before Congress, we were assured that it would afford sufficient assistance for Europe to reconvert her peacetime economy.

If this tremendous American prop is not sufficient to keep Britain afloat, certainly it will not do the trick for a dozen other nations which are relying upon it. There is no doubt that we are in the same international boat with Britain now. Events of the past 6 or 7 years, engineered by No. 10 Downing Street, and our own White House, simply leave us no alternative, whether we like it or not. But it should at least be our privilege in this situation to demand that our British companions at least pull their own full weight in the boat.

The critical shortage of housing continues as one of the major headaches in the country. Every time a married veteran comes home, the need becomes more acute. Real-estate men, home builders, and construction contractors tell me that building in our State is almost at a standstill because of the lack of lumber, brick, electrical equipment, in fact about everything that goes into a new home. They tell me that our wartime system of bureaucratic restraints have stifled production practically from the tree standing in the forest, right down to the smallest little gadget in the new home. They say they are prepared to produce the largest volume of good housing in the history of the country, provided they are given the building materials and released from governmental regulations and competition. They are fed up with controls and with crackpot theories, criticisms by professors, housing experts, and social planners, both in and out of Government. Well, maybe the President's new housing czar will use some of the authority now granted to the Executive to crack the whip over OPA and other agencies that have created this housing bottleneck and get materials flowing. Obviously no new legislation is needed because the Office of War Mobilization and Reconversion has the authority to force OPA to grant price increases to insure production. Free initiative and free enterprise can do the job if given half a chance.

As much as I agree with Chester Bowles, that rent controls must remain in critical areas until this bottleneck is broken, I think that the short-sighted policy of his agency has totally stifled all possible investment in rental home building. The man who ordinarily puts money in rental property would simply be a "tee-total" fool to do so under the restrictions which OPA has imposed. And these same restrictions which discourage the private investor, are denying hundreds and millions of homes to individuals who desperately need them today. We really need about 20 times as much new housing as we shall be able to produce this year. Do you think we shall get it under the present restraints which make it impossible for the average real-estate investor to break even on the money he has tied up in real estate? Well, that answer ought to be obvious. When an investor starts losing money, he is going to start pulling out.

And while on the subject of OPA, I want you to know of other complaints that are continually coming to me from small businessmen, who complain that established manufacturers are given ceiling prices often less than cost of materials, while new manufacturers of inferior competing goods are given higher ceilings. Well, OPA says these are isolated cases, but recently in Washington, the National Retail Dry Goods Association began hauling in the evidence—suitcases, fabrics, toy blocks and scooters, electric irons and heaters, dresses, blouses, aprons, robes, enough to fill up a committee room the size of a small barn. All were labeled and bore the sign in stand-out red lettering, "The consumer pays." Hundreds of people visited this display, and to just mention a few, there were two blouses displayed, one good, the other obviously poor quality. A sign read: "Blouse made by established manufacturer A, at a ceiling price of $2.50. Blouse is well finished, taped seams, one-piece sash, shaped front. OPA permits him to make only restricted numbers, not nearly enough to meet the demand." The other sign: "Blouse made by newcomer (that is, new manufacturer) gets the highest ceiling of all, $12. Finish poor, seams pinked, sash is pieced, edging is chain stitched." Another table of toys had two children's scooters. One was a big scooter with foot pads, stand, 10-inch wheels, a bell brightly painted, stands a good foot higher than its rival. The other was drab, no stand, wheels 4 inches high. The big scooter was tagged "OPA ceiling $1.92." The inferior product held the line at $3.75. It was apparent throughout the exhibit that no line is being held, general disorder in business is promoted, many old firms being crushed, new ones given a sort of royal grant to take their places. Is there any wonder that small manufacturers and purchasers complain to me about such OPA practices? In spite of all these complaints and injustices of wartime controls and restrictions, the President recently urged that all price control must be continued beyond June 30 next year. I wonder if much of our labor-management trouble, and the dissatisfaction of so many people, does not spring from these wartime controls that the President would continue in the peacetime era?

These are some of the problems that will give us plenty of headaches in the weeks to come.

That's all, folks, until next week at this same time.

Criminal Code

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 16, 1946

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report made on my behalf as chairman of the committee on the criminal code by Charles J. Zinn, a member of the committee, before the section on criminal law at the annual convention of the American Bar Association held at Cincinnati, Ohio, on December 17, 1945:

REPORT TO THE SECTION ON CRIMINAL LAW ON H. R. 2200 (79TH CONG.), TO REVISE, CODIFY, AND ENACT INTO LAW TITLE 18 OF THE UNITED STATES CODE ENTITLED "CRIMES AND CRIMINAL PROCEDURE"

The bill H. R. 2200, to revise, codify, and enact into law title 18 of the United States Code, entitled "Crimes and Criminal Procedure," having been unanimously reported to the House of Representatives by the Committee on Revision of the Laws, is now pending in that body. Inasmuch as this is the first effort since 1909 to revise the Federal criminal laws, it is appropriate that serious consideration be given to it by the section on criminal law of the American Bar Association. In his message to this section last year the Attorney General of the United States said:

"During the past year another undertaking of great interest to the bar has been inaugurated by the Committee on Revision of the Laws of the House of Representatives. I refer to the revision of the Federal Criminal Laws which will eventually replace the Criminal Code of 1909. A preliminary draft of part I of the revision, relating to crimes, has been printed and will be followed shortly by drafts of parts II, III, and IV, relating respectively to criminal procedure, prisons and prisoners, and juvenile delinquency. Despite the enactment of many new laws and the amendment and repeal of those previously in existence, there has been no codification of the Federal criminal laws for 35 years. In adopting a new Federal criminal code, the Federal Government will be following the excellent example of the States, most of which are now equipped with modern criminal codes and penal laws governing their citizens. A detailed study of the preliminary draft is presently being made by the Criminal Division, and its comments will be forwarded to the reviser and House committee. Again I suggest that the section on

crim.nal law may find it desirable to scrutinize the preliminary draft of the proposed revision and t_ submit to the House committee and to the reviser its suggestions and comments relative to this matter."

The Criminal Division of the Department of Justice prepared a memorandum to the Committee on Revision of the Laws in which it stated:

"There is vital need of a revision and recodification of Federal criminal laws. The action of the House Committee on Revision of the Laws in undertaking the project is exceedingly well-advised and should receive support and recommendation. The committee and the revisers, to whom the actual task has been entrusted, have performed their function in a highly competent manner. It is suggested that the proposed revision should be approved and its enactment into absolute law recommended.

"It is important that the revision, when it assumes final shape, should be enacted into absolute law rather than be placed in the same status as that of present title 18, United States Code, which is only prima facie law. The enactment of the revision into absolute law would obviate the burdensome task of referring to the original Statutes at Large and tracing the exact text of every criminal statute through numerous volumes whenever occasion arises."

The existing Federal criminal laws are now set forth largely in title 18 of the United States Code, although there are additional penal provisions which are integral parts of over-all legislation relating to taxation and national banks, for example, which are classified to the respective titles of the United States Code concerned with those subjects. Wherever feasible, H. R. 2200 has transferred those penal provisions from the other titles, so that the new law will contain all penal provisions as far as possible.

Before discussing the provisions of H. R. 2200 it seems desirable to present briefly the background of the existing criminal code and the urgent need for a revision. Title 18 of the United States Code is based principally upon the Criminal Code of 1909, and you will have noticed that the 1909 code section numbers are set out in parentheses after the number of the section in title 18. Congress did not preserve the code structure set up in 1909 and almost immediately thereafter enacted penal provisions which were amendatory of, or inconsistent with, the provisions of the 1909 code but did not specifically amend or repeal those provisions. One of the results of that method of legislating was that in preparing title 18 of the United States Code in 1925 it became necessary to abandon the numerical arrangement of the 1909 code and to insert the later provisions wherever they logically fit in. Another effect of such legislation is that the Statutes at Large now contain provisions which either duplicate or are inconsistent with provisions of the 1909 law which were not specifically repealed and are therefore still on the books—often requiring a judicial determination as to whether they are still in force.

H. R. 2200 is a comprehensive bill of almost 500 pages, in which section 1 sets forth the new code and the remaining sections amend provisions outside the proposed code and specifically repeal existing law which is incorporated in or inconsistent with the new code.

The lawyer will immediately recognize that the proposed code contains an altogether different arrangement from present title 18, which employs the arrangement originated in the Crimes Act of 1790 and carried over into the Revised Statutes and the 1909 code. Because of the limited criminal jurisdiction of the Federal Government, the original classification of crimes was according to offenses against the existence of government, etc. Such a classification, while logical in a broad sense, is not conducive to easy access to the particular provision sought. In the code proposed by H. R. 2200, there is a different principle of classification adopted, similar to that used in many of the State penal codes, namely, the alphabetical arrangement of crimes. A helpful feature of the arrangement of the 60 chapters is that only odd numbers are used at present, leaving room for internal expansion by the insertion of a whole even number without interfering with the alphabetical order in the event of later legislation defining a new crime. In order to permit the adoption of an alphabetical arrangement, new general provisions have been added defining the Federal jurisdictional limits.

Discrepancies in punishment provisions as to misdemeanors and felonies in existing law have been corrected in the proposed code. For example, there are more than a score of sections now in the law defining a crime as a misdemeanor but providing a felony penalty, i. e., imprisonment for more than a year in a penitentiary. Section 1 of the proposed code defines felonies, misdemeanors, and petty offenses according to the penalty provided.

Because the existing law has grown in a rather haphazard fashion there are, in almost 100 instances, inconsistencies in the amount of punishment provided for in crimes of comparable gravity. These inconsistencies have been resolved by increasing punishment in 16 sections and decreasing it in about 70 sections.

Simplicity of language has been achieved throughout the proposed code without harm to the substance. For example, a proposed penalty provision reads as follows:

"Whoever violates this section shall be fined not more than $500 or imprisoned not more than 6 months, or both."

Compare that provision with the existing law contained in section 394 of title 18, reading:

"For each evasion or violation of, or failure to comply with any provision of sections 391–393 of this title, any person, firm, corporation, or association, upon conviction thereof, shall be punished by a fine of not more than $1,000 or by imprisonment for not more than 3 months, or both."

It should be noted here in a revision and codification of existing law, under the principles of statutory construction mere changes in phraseology are not deemed to change the law as it stood prior to the revision, so that fears of changes as a result of simplifying and clarifying language may be allayed. Of course, changes in the amount of punishment provided or other changes in substance are legislative in character and do change the existing law.

In many instances several sections of existing law have been consolidated into a single section, thus eliminating repetitions, redundancies, and overlapping.

In the present law the general conspiracy statute provides a punishment of up to 2 years' imprisonment or a fine of up to $10,000, or both, regardless of the punishment provided for commission of the offense itself. The result is that a person convicted of conspiracy to commit a misdemeanor is subject to a felony penalty, while conviction of a conspiracy to commit a most heinous felony carries with it the same penalty as conspiracy to commit a misdemeanor, except in those cases where there is a special conspiracy statute. In the new code there is a general conspiracy provision which takes into consideration the gravity of the substantive crime which is the subject of the conspiracy.

Part II of the proposed code deals with criminal procedure. It should be of interest to the bench and bar to know how this subject is handled in view of the Supreme Court's proposed Federal Rules of Criminal Procedure which have been reported to Congress by the Attorney General. There are a number of substantive matters relating to criminal procedure which are not properly the subject of court rules and these have not been incorporated in the proposed rules by the Supreme Court. The code proposed by H. R. 2200 contains all these statutory provisions as sections of part II. As to the matters covered by the proposed rules part II of the code furnishes them with section numbers and catchlines in their logical order, but instead of setting out the text of the rules there are merely cross-references to the rules themselves. The reason for this is that, although it is desirable to have the statutes and the rules in one place, inasmuch as Congress has restored to the Court its rule-making power, there should be no suggestion by the incorporation of the text of the rules that Congress intends to enact the rules into law. When the code is enacted into law the text of the rules will undoubtedly be carried as notes to the respective sections of title 18 of the United States Code referring to them and the convenience of the bench and bar will be thus best served.

Part III of the proposed code is entitled "Prisons and Prisoners" and in this part the program of simplifying the present law is carried out.

Part IV deals with youthful offenders and although no substantive change is made in existing law the arrangement of the chapters makes it easily adaptable to future amendments.

A distinctive feature of H. R. 2200, and one which has too often been lacking in other proposed revisions, is the specific repeal of existing laws which are inconsistent with, or incorporated into, the new code. This feature is also carried over into the field covered by the proposed rules of criminal procedure. The advantage of the specific repeal is readily appreciated by the bench and bar and needs no elaboration here. The chaos and bewilderment created by a revision which does not specifically repeal existing laws will be totally eliminated in this case.

Brief reference should be made in this report to the procedure adopted by the Committee on Revision of the Laws in the preparation of this bill. The committee engaged the services of the West Publishing Co., of St. Paul, Minn., and the Edward Thompson Co., of Brooklyn, N. Y., law publishing companies which have served in the preparation of each edition and supplement of the United States Code. The editorial staffs of the companies were augmented by William W. Barron, former Chief of Criminal Appeals in the Department of Justice, as reviser. They also procured the services of an advisory committee consisting of Floyd E. Thompson, former chief justice of the Illinois Supreme Court; Justin Miller, associate justice of the United States Court of Appeals for the District of Columbia; and John T. Cahill, former United States attorney for the Southern District of New York. They also had as special consultants Alexander Holtzoff, now United States district judge for the District of Columbia, and George F. Longsdorff, of California, both of whom are members of the Supreme Court Advisory Committee on Rules of Criminal Procedure. All worked closely with the chairman of the House Committee on Revision of the Laws, Congressman Eugene J. Keogh, and the committee's counsel, Charles J. Zinn and John F. X. Finn.

Conferences of the advisory committee and special consultants were held at which the drafts of the bill were thoroughly studied. No change in substantive law were made without their concurrence.

A public hearing was held during the Seventy-eighth Congress on H. R. 5450, the predecessor of H. R. 2200. At that hearing Justice Justin Miller stated:

"It has never been my privilege to work with a research and editorial group more conscientiously devoted to the task under way. * * * As a judge I was concerned

with simplification and clarification of language, the removal of ambiguities, uncertainties, duplication, redundancy, and conflict. To the achievement of this objective the editorial board was conscientiously and effectively alert. * * *

"With respect to chapter titling and arrangement and the arrangement of sections, I feel that a very substantial improvement has been worked out. * * *

"As a consequence of all this I am ready to say that the result is the best product that could be expected. * * * Considered as a whole it must be noted also, that absolute perfection should not be asked for or expected in a work of this kind."

Your committee on the proposed criminal code respectfully urges that the section on criminal law approve the bill H. R. 2200 to revise, codify, and enact into law title 18 of the United States Code, entitled "Crimes and Criminal Procedure," and advocate its prompt enactment by Congress.

Respectfully submitted.

COMMITTEE ON CRIMINAL CODE.
EUGENE J. KEOGH, *Chairman.*
CHARLES J. ZINN.
WILLIAM W. BARRON.

Food for 1946

EXTENSION OF REMARKS
OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 16, 1946

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit a copy of an address delivered by me over the Columbia Broadcasting System, Tuesday, January 1, 1946:

Ladies and gentlemen of the radio audience: A happy New Year to you all.

The subject assigned me for discussion is Food in 1946.

My first statement will, I hope, meet with your unanimous approval. It is this, the food situation will not be as bad in 1946 as it was in 1944 and 1945. What the food situation will be in 1946 depends largely on whether the producers, the processors, and the distributors of food will again be hampered by governmental regulations and restrictions, or whether they will be permitted to operate with the freedom that is necessary to produce adequately and to distribute efficiently.

The doctrine of enforced scarcities advocated by those who killed the pigs and plowed the crops under has been thoroughly discredited. But some of those who advocated these unnatural theories are still in high positions in Washington. Full, free, adequate production of food commodities is the only sane and sensible doctrine. Nobody ever got fat on scarcities, and nobody ever went hungry on abundance.

The Government should not engage in the food business except to prevent scarcities and to assist in distribution of surpluses.

The food business is the greatest business in the world. More money is invested in food than in any other commodities—and more people are engaged in this business than in any other.

There are four great groups vitally interested and actively engaged in the food business:

First, the producer group. This includes the producers of grains, vegetables, meats, fruits, and dairy and poultry products.

Second, the processors. This group includes the canners, the meat packers, the creameries, and ice cream makers.

Third, the distributors. This group includes the transportation agencies and the wholesalers and the retailers.

And fourth, the largest group of all, the group that includes all of us—the consumers. The best interest of the consumers is the most important factor in this great business. The consumers' interest has been sadly neglected.

There is a natural sequence of relationship between these four great groups. The person in whom the producer should be, and is most vitally interested, is the ultimate consumer. And the ultimate consumer is vitally interested to know that the producer of his food is not unduly hampered.

Food is like a river. If it is not interrupted it will flow naturally from its source—the producer, to its destination—the consumer.

Therefore, the function of Government is to encourage the natural flow of food by removing unnecessary regulations and obstacles, and to guarantee adequate production that there may be no inadequate consumption. It must not be forgotten that the most helpless, as well as the most numerous, of these four groups is the consumer.

There has been great advancement in the production and processing of food. In the early days of our country, 90 percent of the people were engaged primarily in the production of food. Now about 20 percent of our people can produce sufficient food for us—and about 10 percent can do the processing and distributing.

Production has been increased by improved machinery and by the use of fertilizers and adoption of more scientific methods. Food processors have made great advances in packaging and preserving, and in refrigeration.

The Food Study Committee, of which I am chairman, has been giving consideration to plans to make available to the consumer new and better methods of preparing and using food. Much food value is wasted. Consumers should understand the relative vitamin and caloric value of the various foods. This is a field in which science can render a great service to the people—for it is a sad fact that there are still many people in the world who are undernourished. Many of these can be found in our own country.

The Department of Agriculture has made some progress along this line—but not enough. All food is produced to be consumed. The fact that millions of dollars' worth of food spoils every year in our country, while some of our own people are undernourished, proves that there is a great field for improvement in methods of food consumption.

Every year for the past 7 years we have had very favorable weather conditions. Providence was good to us. Weather is normally a 25 percent factor in food production. Because of record-breaking good weather conditions—and because of improved machinery making it possible for the producer to plant his crops faster and harvest them faster—we have been blessed with bumper crops every year for the past 7 years. If we should encounter a bad-weather year in 1946 we might have some trouble. Our production is so wide and varied, however—and our capacity to substitute one food for another is so much greater now than formerly—that with the unhampered cooperation of all food agencies, we should be able to reduce greatly the danger of food shortages because of bad weather.

During the war we had many serious food situations. Much of our trouble was due to fallacious policies and unwise and inefficient administration.

A great mistake was made in fixing price control at the consumer level. We tried to regulate the river by damming up the mouth. This put the greatest burden on the small man—the butcher and the grocer. To try to equalize prices we paid many billions of dollars in subsidies. But the butcher and the grocer did not get any of these subsidies.

From this condition, created by the Government, rose the greatest system of black markets the world ever saw. Law-abiding businessmen lost their profits and went out of business. The black-market man had a big business. He violated the law—people paid him exhorbitant prices—and his profits were tremendous.

There are two factors that formerly contributed mightily to a successful food business. One was efficient distribution. The other was quality of merchandise. Many thousands of successful grocers and butchers, who had made themselves successful by courtesy and cleanliness and efficient methods, were forced out of business by ruthless regulations. Those who wrote the regulations gave no consideration to courtesy or quality. Quality was subordinated to price.

When the Government gets the authority to fix the prices of every commodity, our cherished system of free enterprise will be gone and socialism will scourge us.

Let us see how this price fixing is affecting some of our foods today.

Why is it that in spite of a high production of milk this year we can get little or no butter? Why couldn't you get butter for Christmas? Here is the reason. The price of butterfat in milk is higher than the price of butter. The farmer can get more for the butterfat if he sells it in the milk than he can if he takes the trouble to separate the cream or to make the butter. The Government in 1945 paid the milk producers a subsidy of about $700,000,000 in order to hold the price of milk down. It took money out of one man's pocket to pay for another man's milk. It took money out of the butter man's business and put it into the milkman's business. Our butter supply in 1945 has depended on the price fixers in Washington. What will happen in 1946 will depend largely on whether Congress permits price fixing of foods to continue or whether it abolishes OPA control over food products.

What about sugar for 1946? In 1943 and 1944 it was pointed out to the Government price fixers that a dire shortage of sugar was imminent. The excuse was that there were no ships to bring sugar from Cuba. This was not true. Millions of pounds of sugar molasses were poured into ditches in Cuba. Millions of pounds of sugar went to waste, and millions of housewives went without sugar. All this was due to unwise attempts to fix prices. We will have a shortage of sugar in 1946, but it should not be as bad as 1943, 1944, and 1945.

Let's talk a little about chickens and eggs. In 1944 the Government purchased great quantities of eggs; 150,000,000 dozens of eggs in one purchase proper were allowed to spoil. These spoiled eggs were sold for $30 a carload. The Government guessed wrong. Today the Government price fixers are guessing again.

Here is the story: Because beef and pork were kept off the market for such a long time in 1944 and 1945, it was only natural that the production of chickens would increase. Now the number of hens has increased so that there is a threatened overproduction of eggs in the next few months. To avoid this, the Government is trying to reduce the number of hens. They hesitate to order the killing of hens, as they did the pigs, so they are trying to reduce the number of hens by cutting off feed supplies to poultry growers. Feed manufacturers have been asked to cut down their production of chicken feed. If they refuse to do so voluntarily, they will probably be ordered to do so.

Forcing chicken growers to reduce their flocks by cutting off their feed supplies is an example of bureaucracy in action. There

is plenty of feed in this country. Why not face the situation as statesmen and businessmen—and not follow the lead of inexperienced theorists.

There are many coffee drinkers in our country. No coffee is produced in the United States. It is likely that in 1946 you will continue to pay 33 cents a pound for coffee that ought to be selling for 23 cents. OPA price regulations prevent the better grades of coffee from coming to this country. Coffee importers have to operate under a quota. We are paying $24,000,000 in subsidies to secure even inferior coffee. That's why you pay 33 cents for 23-cent coffee.

The food industry and the Department of Agriculture and Congress are much concerned about the disposition of our future food supply. The matter of surpluses is bound to present itself. This is not only a problem of business methods, it is a matter of statesmanship—both national and international. From the days of the McNary-Haugen bill, 25 years ago, down to the present, no satisfactory solution has been found for the disposition of surpluses. A surplus, though small, can disrupt the market for that commodity. The great necessity for food supplies in the war-torn countries of the world offers an outlet for these threatened surpluses for this coming year.

It may be necessary for the Government to set up some kind of an agency that will be empowered to take over our agricultural surpluses and trade them for the surpluses that other countries have of commodities that we need and can import.

The Food Study Committee to which I have referred is giving this matter serious consideration.

Although the problem of surpluses may become an important one, still the problem that is presently before us is to rehabilitate our food business in our own country so that it can again operate as a great free industry—the better to produce and distribute adequate supplies of food of the highest quality, in a free over-the-counter market. Black markets thrive only when legitimate business is hampered by unwise restrictions.

Nineteen forty-six will be a great year if industry and labor compose their differences—and if the Government takes government out of business.

Has Ownership Any Rights?

EXTENSION OF REMARKS
OF
HON. DUDLEY G. ROE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 16, 1946

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the Democrat and News, of Cambridge, Md.

The editorial follows:

HAS OWNERSHIP ANY RIGHTS?

Only Congress can remodel our one-sided and ineffectual labor laws so that they will represent fairness and equality. Under present labor legislation, all manner of biased rulings have been secured by labor leaders against industry. Abuses have become so odoriferous that they have finally reached the public's nostrils.

One of the latest moves of labor leaders to alienate public as well as congressional good will is their attempt to compel executive or supervisory employees of companies to join labor unions. This is nothing more nor less than an attempt to gain control of management without any financial obligation or responsibility.

If managerial and supervisory employees can be forced into unions, management might as well turn the industries over to the unions to operate, for there would be no one left on the side of management to represent the owners. If Congress fails to correct this situation, there will be no more freedom of enterprise in the United States.

A Letter From a Soldier

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 16, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter received from a soldier at Belem, Para, Brazil.

Mr. Speaker, the Army charts show that on January 1 there were 18,000 soldiers, mostly from the air wing, in Africa and the Middle East. The letter I am inserting in the Appendix of the RECORD is from a soldier in the air wing and he wonders why he is being kept in Brazil. He even suggests that the ports are being kept open so the "brass" in Washington can fly down with their C–54's and M–17's, and use that port as a stop-over to Rio, for a vacation at Government expense. Apparently that is being frequently practiced by the Army. This letter gives another reason why a great many soldiers are disgusted with the present demobilization plans of the Army.

The letter follows:

BELEM PARA, BRAZIL, *December 26, 1945.*
Hon. A. L. MILLER,
Kimball, Nebr.

DEAR MR. MILLER: My father sent me your answer to his letter. It brought several things to my mind. So I thought I would write to you.

First, I am not writing this on my own behalf. But for all the rest of the boys in this wing that are wasting precious time here in Brazil doing nothing. We have lost enough of our best years already. Maybe I shouldn't say lost, for we have brought peace for a time. We pray it is an everlasting peace.

Your statement, "I don't understand what he is doing in Brazil anyway." The fact is we are doing nothing. These are ATC bases which have served their purpose. There are no more aircraft passing through here to the States from ETO or CBI. The green project ended last September. There are no soldiers being hauled through here to their homes. Yes, I sternly believe that the South Atlantic Wing, ATC, has served its purpose.

It is true the number of men in this wing has been greatly reduced since the close of the green project. But there are a lot of men left here doing absolutely nothing.

It is costing a lot of money to keep this base open. Looks to me there are more useful places to spend Government money.

Most of us feel we are playing defense on a political football team. Just holding fast until some commercial airlines can get usage rights on these bases. We feel we are right in this belief because there seems to be no other conceivable reason.

There are very few people in the United States that know we are in Brazil.

I might add this. These bases made it nice for the brass in Washington. They can hop in a C–54 or B–17 or any plane in fact but they like the big ones, and fly to Rio for a 2-week vacation at Government expense.

I am 27, will be 28 in March, been married 4 years, lost our first child at birth. I have the best wife in the world to go home to.

If you can tell us a logical reason why this wing is being kept open we will be grateful to you.

Sincerely yours,
A SOLDIER IN BELEM PARA, BRAZIL.

James E. Moss

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 16, 1946

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include therein a letter which I received from Admiral R. R. Waesche relative to the outstanding record of service of a civilian, James E. Moss, during the war period:

UNITED STATES COAST GUARD,
Washington, D. C., December 18, 1945.
Hon. SCHUYLER O. BLAND,
Chairman, Committee on the Merchant Marine and Fisheries, House of Representatives, Washington, D. C

MY DEAR MR. BLAND: As Commandant of the United States Coast Guard, which is responsible for the regulation of the merchant marine, I wish to bring to your attention the outstanding record of service of a civilian during the war period.

So far as I know, there does not exist at present any appropriate way in which such service to the Nation performed by a civilian in wartime can be properly recognized. Under these circumstances it seems most appropriate to bring this record of service to the attention of the four committees of the Congress which are interested in commerce and the merchant marine.

Prior to our entry into the war it was foreseen by the Coast Guard that merchant shipping and especially tankers would be vital to our service of supply. Arrangements were therefore made under which Mr. James E. Moss, manager of one of the large United States tanker fleets, would be available from time to time for consultation.

The importance of this service to the war effort was so apparent a few months after we had entered the war that I requested his full-time service as my consultant. Accordingly Mr. William R. Boyd, Jr., president of the American Petroleum Institute, arranged for the raising of a fund by the petroleum industry for the defraying of the wages and all expenses of Mr. Moss.

Since that time Mr. Moss has been constantly available to the Coast Guard for consultation, and during this period his contribution to the successful prosecution of the war with special reference to the safety of life and the security of ships has been outstanding.

Examples of his contribution to the war effort are as follows:

(a) He created and developed the system which was established for the reporting and analysis of war casualties to merchant ships. On this system of casualty analysis the Coast Guard based its program of greater wartime safety which resulted in the saving of many lives of seamen. Based on the same casualty

analyses, Mr. Moss prepared many safety procedures and methods which were printed and distributed to our merchant ships in large numbers.

(b) He made the original draft of the national code of regulations for the security of vessels in port which was signed by the President in 1942. This code provided the basis for the protection of all of our shipping in all of our ports during the war period. From the day it became effective until it was revoked at the conclusion of hostilities it was never found to need correction.

(c) He rendered outstanding assistance in establishing the policy for the investigation of the failure of welded ships and he carried a large part of the great responsibility which was unavoidable in developing methods for preventing such failures.

(d) He developed the ballasting handling procedure for naval and merchant vessels, preparing the general orders and methods for avoiding the pollution of our harbors and rivers by oil.

He brings to a conclusion this valuable record of service to the country on this December 31.

Very sincerely,

R. R. WAESCHE,
Admiral, U. S. C. G., Commandant.

Postage for Newspapers

EXTENSION OF REMARKS
OF
HON. DUDLEY G. ROE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 16, 1946

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter I received from Mr. G. Arthur McDaniel, of the Federalsburg Times, Federalsburg, Md.

Inasmuch as the Post Office Committee has before it the question of postal rates for newspapers, this letter is very instructive. It shows that the Federalsburg Times, a weekly newspaper in my district, with a circulation of about 2,000, during the war gave the Government 24,271 inches of free space. This represents more than 162 pages and, at the regular advertising rates, would amount to over $8,000. The information is broken down into different items and, I think, makes very instructive reading.

The letter follows:

THE FEDERALSBURG TIMES,
Federalsburg, Md., December 31, 1945.

The Honorable DUDLEY G. ROE,
Sudlersville, Md.

MY DEAR CONGRESSMAN: As a member of the important Post Office Committee in Congress, which we understand had under consideration a bill to greatly increase costs of postage for newspapers, we thought perhaps you might be interested in the following data compiled in our office.

The Federalsburg Times, during the period of the war, contributed no less than 24,271 inches of space to the war activities without 1 cent of compensation from the Federal Government.

Broken down into classifications this space included 2,434 inches on rationing publicity; 1,436 inches on civilian defense; 322 inches on salvage; 807 inches on bond-drive publicity; 776 inches on recruiting and war charities; 3,686 inches on morale building and servicemen activities; and 14,800 inches in direct war-bond advertising.

This represents more than 162 pages, which had they been billed at the regular advertising rate would have amounted to over $8,000.

In addition to the above we have always published without cost the Federal Government announcements on post-office and civil-service examinations and also information from the War Department on matters of rivers and harbors.

We feel that in consideration of the abovementioned extensive educational and publicity program which newspapers are glad to perform as a public service that our Government should be willing to continue its present nominal rates for postal service on second-class permits.

Will you be kind enough to write me a line or two expressing your views on this matter.

With all good wishes for a most prosperous and successful New Year, we are,

Sincerely yours,

G. ARTHUR MCDANIEL.

A Social Creed for All Americans—Part I

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 16, 1946

Mrs. LUCE. Mr. Speaker, on December 1, 1945, at Buck Hill Falls Inn, Cresco, Pa., the department of Christian social relations and local church activities reported to the woman's division of Christian service of the board of missions and church extension of the Methodist Church on the many problems facing us today.

Mr. Speaker, in my opinion the report made by these women displays such height and depth of feeling and comprehension and has such wide social scope and appeal that it could well be a challenging program for any major political party.

To those of my colleagues on either side of the aisle who wish to know where the conscientious American stands on many a controversial issue today, I recommend a close scrutiny of the social creed of these Methodist women. Here is the conscience of America at work. Neither communism, with its regimentation, and its godlessness, nor reaction, with its laissez faire, and mere lip service to Christianity can take any comfort from this document. This is as comprehensive and as Christian a program as any Member of this House is likely to come upon in this session of Congress. These are the things in which American women of good will are interested and wish to see accomplished in order that peace should come to America and to the world.

The report follows:

REPORT OF THE DEPARTMENT OF CHRISTIAN SOCIAL RELATIONS AND LOCAL CHURCH ACTIVITIES TO THE WOMAN'S DIVISION OF CHRISTIAN SERVICE, CRESCO, PA., DECEMBER 1, 1945

The year 1945 has brought one world-shaking event after another, making an unprecedented impact on the life of this Nation, and on the whole world. The death of President Roosevelt, the San Francisco Conference, the expulsion of the atomic bomb, the cessation of hostilities, and finally the steps toward the formulation of peace treaties, and plans for the initial meeting of the agencies of the United Nations Organization—all have brought new questions, fresh opportunities, and enlarged responsibilities on both the domestic and the international front.

The problem of reconversion after the war is upon is. The nerves of the Nation are taut with fear of unemployment. Labor and management find themselves on opposite sides of a gulf of misunderstanding at many points. Both are powerful pressure groups. The forces of labor have demonstrated a new dynamic in wartime. The demand for full employment, full production, and full pay will be relentless in the days ahead. The church is called upon to live its social creed which proclaims "the right of labor to organize and bargain collectively."

The demobilization program for both service personnel and war workers will bring increased race tensions all over the country. Seeds of race riots are evident across the land. Jim Crow patterns of many years standing have been disturbed in the war period. The new day calls for a new way of life where the Negro, the Mexican, the Jew, or the Japanese-American can secure and keep a job commensurate with his skill without fear or hurt. The Christian Church is in a position to lead the way in creating a conscience that means justice for all.

In these times the institution of the family is gravely threatened. Widespread social and economic adjustments have resulted in increased frustration and insecurity. Social drinking, gambling, and cheap amusements daily furnish personal escapes and create national degeneration.

During the past 4 years the peoples of the Allied Nations banded themselves together to win a military struggle against fascism in the world. That job has been accomplished, leaving the aftermath of the most destructive war in history, and powerful nations, the victors, filled with fear of one another. Collective action for peace is not as easy as collective action for war, either on the home front or in the international scene. The appalling hunger, starvation, and utter misery now existing in Europe and Asia involving millions of human beings calls for immediate relief.

The Christian Church must generate a new spiritual power and continue to work to create a public conscience that will act for the best welfare of all people in our Nation and the world. Therefore, the Department of Christian Social Relations and Local Church Activities recommends continuing action in the following areas:

1. The full cooperation and active participation of each member of the local society in all phases of the crusade with special emphasis on stewardship in 1946.

2. That the woman's society of the local church cooperate in undergirding the church program for youth, student, and adult groups in developing Christian fellowship through a program of social, recreational, hobby, and cultural activities.

3. That we continue to serve uprooted people, returning service personnel, conscientious objectors, and new church members, by study of the special needs of these groups and cooperation with other community agencies that can help meet these needs.

4. That we promote a two-way relationship between the church and community agencies by becoming familiar with these organizations and their programs, cooperating with them on matters of common interest, urging church women to serve on community committees and to participate in the work of the agencies, and interesting women related to such organizations in the program of the Woman's Society and church.

5. Continued work for the removal of unfair voting restrictions.

6. Continued work for equalization of educational opportunities for all peoples in the United States regardless of race, creed, or place of residence.

7. Support of legislation to prevent lynching, and development of means of insuring equality of protection before the law.

8. Opposition to compulsory universal military training.

9. International control of atomic power.

10. Building of public understanding that international economic cooperation is necessary to the survival and prosperity of the American economy as opposed to the present trend toward economic isolationism.

11. Support of conscientious objectors and their dependents, now and after demobilization.

Some organizations, including the Commission on World Peace of the Methodist Church are urging President Truman to grant amnesty on Christmas Day to the 3,500 men in prison for "conscience sake." Personal letters to the President will evidence a desire to implement religious freedom.

12. Complete participation of the United States in the UNRRA program in the light of the priority of the whole relief problem.

To allow criticism of specific failures of UNRRA administration to prevent full support is inexcusable.

13. Cooperation with public and private agencies seeking to meet postwar problems of the community, and with the provisions of the GI bill of rights and Public Law 16 for veterans' education, home and business ownership.

14. Study wage scales and conditions of workers, child-labor practices in the community working toward more adequate laws and better enforcement of existing laws.

15. Acquaintance with the practices of State Departments of Labor in the Administration of unemployment compensation, lest pressure groups bring about discrimination in the administration.

Example: The women in one conference found in 1 week 276 skilled and semiskilled Negroes not allowed unemployment compensation by State Department of Labor, when they refused to accept the offered jobs of domestic service at $5 to $9 per week.

16. Attention to our own employment of domestic service and to the employment standards of maintenance of clerical and professional workers in the local church.

17. Study of the concrete possibilities of socially significant uses of war plants and other war properties in the communities.

Illustration: In one State, church and civic groups procured a war plant to be used as a tuberculosis sanatorium, and in another State the use of a war plant for specialized Negro education has been suggested.

18. That we continue to work for the principles and proposals in the original form of the following bills promoting full employment, full production, full pay, full security, prevention of inflation: Extension Social Security Act and national medical program (S. 1050, H. R. 3293), minimum wage bill (S. 1282, H. R. 3837), emergency unemployment compensation bill (S. 1274, H. R. 3891), maternal and child welfare bill (S. 1318), equal pay for equal work bill (S. 1178), Permanent Fair Employment Practice Committee (S. 101, H. R. 2232), full employment bill (S. 380, H. R. 2202), national housing bill (S. 1342); for adequate appropriation for FSA and OPA, and the extension of the Price Control Act beyond its expiration date, June 30, 1946.

19. Continued action of the jurisdiction standing committee of Christian social relations and local church activities in the study of and work for improvement in State laws regarding law enforcement and alcohol control and public welfare, and that local societies continue to plan family conferences in their communities, acquaint themselves with factors in the community working for and against spiritual security, and provide family participation experiences within the church which will strengthen family life.

GENERAL

We recommend:

1. An approved study in the field of alcohol education.

2. That each jurisdiction sponsor a 3-day seminar on a regional basis on the alcohol problem.

* * * * *

3. That a national seminar on Christian social relations and local church activities be held at DePauw University, Greencastle, Ind., July 3 to 17, 1946, with a program emphasis on "Rural Community Living and Changing Social Frontiers."

That invitations for representation at and participation in the seminar be sent to home and foreign departments and the home and foreign divisions.

That the seminar be jointly planned and sponsored by the department of Christian social relations and local church activities and the bureau of town and country work of the home department.

4. That the department provide an informal study in the area of International Relations and World Peace, centering around relationship between the United States and Russia with a view to creating sympathetic understanding and good will between the two countries.

5. That we use the study material on the Social Creed, by Dr. Karl Quimby, appearing in the June and July (1945) issues of Adult Student, as an informal study.

6. That the department publish an Information and Action Bulletin to be issued bimonthly and mailed from the Cincinnati office to the conference secretaries of Christian social relations and local church activities for channeling to the local societies.

That the woman's division suggest to conferences, in view of the necessity for the bulletin, that they see that the districts and/or conferences provide sufficient funds to carry forward promptly the mailing of these bulletins.

7. That local societies make a study of the civil-rights laws and their enforcement in the respective States of our Nation.

8. That the department prepare a free question-answer leaflet for study by the local society on postwar employment of women, and a pamphlet questionnaire to be called An Inquiry to determine gains made during the war in the area of race relations.

9. That jurisdiction, conference, and district organizations seek to provide a cultivation fund adequate for the promotion of the program of Christian social relations and local church activities by the jurisdiction, conference, and district secretaries. * * *

THE CHURCH'S MINISTRY TO THE FAMILY

The department recommends:

1. That local societies initiate or cooperate in plans for services in Christian counseling in the local church and community by studying ways and means of counseling, and by working with the pastor to make community services in family counseling available where needed.

2. That the local societies in cooperation with the Crusade for Christ and other agencies in the church, provide the kind of educational experiences which will enable parents to enrich and stabilize family living by the use of the family altar and, by giving religious significance to the varying aspects of family life, and utilizing them for worship experience.

3. That the local society work with its town or county board of education to have courses in the public schools on courtship, marriage and parenthood, and that similar courses be added in schools of the woman's division.

4. Support of the principles and proposals in the Patman housing bill (to prevent speculation in sale of old housing, to reestablish allocation of scarce building materials for houses costing $6,000 to $8,000, and to insure the availability of real estate at fair prices for home building).

5. That we work for a continuation of rent control, and work to insure that increased cost of manufacturing be absorbed, wherever possible, along the line without increasing cost to the consumer.

6. Work for legislation that would lift the income of the small farm and farm laborer and would conserve our resources of land, water, and forests.

7. Work for legislation that would provide for the Federal control of the United States Employment Service.

8. That in accordance with Methodist long-standing support of collective bargaining as expressed in the social creed, we oppose all current efforts to weaken rights of labor and management to arrive at mutually satisfactory agreements through collective bargaining.

9. That we recognize the urgent necessity to be alert to the gravity of the situation accompanying the demobilization of Negro service personnel, as evidenced in increased racial tension, lynchings, mob violence, and deplorable discrimination in employment, education, and housing. That we work with other community groups to eliminate the causes of tension and correct these injustices.

That we be alert to and cooperate with other agencies to combat the rise of repressive organizations once again often cloaked in religious phraseology, such as the Ku Klux Klan, the I Am, Free Enterprise, the Christian Front, the Commoner Party, etc.

10. That we favor legislation that would place Indian affairs in the same regular Government bureaus, departments, and courts which deal with the affairs of the white man, and we suggest

That women in the local church in communities where Indians are found in the population work for participation of the Indian in local, State, and National elections.

WORLD ORDER

1. As the United Nations Organization stands now at the threshold of actual existence, we recommend:

a. Immediate action by the division, and by local women supporting the full participation of the United States in the organization by the grant of the necessary authority to our representative and by making available specified military forces.

b. Also long-range study of the progress of the United Nations Organization and encouragement and support of the humanitarian and Christian principles inherent in the Charter, and full economic cooperation.

2. Whereas the whole relief problem is a priority on the humanitarian conscience of the world, we recommend that Methodist women write the President and the State Department requesting adequate allocations of food and supplies to Germany and Japan through the American Army of Occupation, and urge our Government to make it possible for private and church agencies to enter enemy countries for relief services immediately.

3. We recommend that Methodist women supplement UNRRA by immediate and generous response to every call of United Protestant agencies for food and clothing. (At present these should be sent to United Church Service Center for Europe, New Windsor, Md.; for Asia, Modesto, Calif.)

4. We recommend that we ask the Government to define objectives with reference to the kind of economy the United Nations are enforcing on the conquered nations.

5. We endorse the principle embodied in the bill introduced by Senator J. WILLIAM FULBRIGHT which proposes that credits established through the sale of surplus war properties abroad may be used for the promotion of international good will through the ex-

change of students in the fields of education, culture, and science.

6. That women throughout the church take advantage of every opportunity, through such agencies as the World Federation of Methodist Women, to develop better relations among women of all countries by encouraging an exchange of visitors—these to come from Europe as well as Asia, and to include former enemy countries; and that through the federation information be given to the women in local societies of the presence in their locality of these visitors, and of students from other nations, so that invitations to their homes, opportunities for participation in community life, and other courtesies be extended to them.

THE FOLLOWING SPECIFIC SUGGESTIONS INDICATE POSSIBLE WAYS OF WORKING IN SOME OF THE AREAS LISTED ABOVE

1. Participation of local societies in the program of local units of such organizations as the Conference of Christians and Jews, the National Association for the Advancement of Colored People, the Urban League, and other interracial or interfaith groups.

2. Basic to international cooperation and the extension of Christian fellowship is the cultivation of new people in the community regardless of race, culture, or economic status through home-calling, cooperating with church departments and community organizations.

3. That local secretaries seek a conference with pastors on the work of the Christian social relations and local church activities committee as suggested through activities for 1946 and the information and action bulletin.

4. That conference, district, and local secretaries of Christian social relations and local church activities acquaint themselves with and make use of material available for their work from the board of education and the United Council of Church Women.

5. In order to channel into the church the valuable experience and training of women who have been volunteers in wartime services we suggest that local women give careful consideration to an adequate interpretation of the importance of the church's program and the ways their particular skills and interests could be of the greatest use to the church and the greatest satisfaction to the individual.

6. In order to improve their approach to volunteer leadership training in the church, local women might study, observe, or cooperate in volunteer leadership training courses of community agencies.

That members of local societies be helped to bring to bear the Christian approach to questions discussed in the secular organizations to which they belong.

7. We remind Methodist women of their opportunity to influence public opinion and practices in their community through expressing their attitudes in their private conversation and in any incidents of racial tension such as those which occur on busses, trains, public places, and in their neighborhoods.

8. Study the pamphlet on how a bill is introduced and its successive steps and how a woman in the local society can follow through.

Write to the Washington office of the Federal Council of Churches, directed by Benson Y. Landis, Room 316, Woodward Building, Fifteenth and H Streets NW., Washington 5, D. C., for analyses of pending legislation.

Send letters indicating approval or disapproval to Congressmen.

Use the bimonthly bulletin of the Department on Information and Action.

9. Cooperate with local, State, national, and international organizations having program of study and action similar to ours.

10. Stress need for total registration and participation in voting.

11. Initiate State-wide conferences of organizations with similar programs of welfare. (Illustration: In one State, Methodist women cooperated with 21 organizations in a rural health conference.)

12. Request that the social creed be read to the congregation at least once a year as provided by article 20 of the creed. Refer to social creed in passing judgment on current issues.

13. Take the lead in discovering facts on both sides in labor and management disputes as it concerns the welfare of the people as a whole, judging each case on its own merits and in terms of spiritual and human values.

14. Study wages, conditions, opportunities for employment for all people in the community. (Helps: The industrial committee of the Y. W. C. A., labor unions, manufacturers, employers, farm organizations, urban league.) Pick out of the survey the most pressing need and work toward the solution with the above-named groups, through appeal to employer, through the press, and through legislation.

15. Study State labor laws and their enforcement in your community and State.

16. Add labor, Negro, Jewish, Latin American, and liberal press to our reading of the press and magazines.

17. Find and publicize facts concerning community issues through forums, bringing together members of groups concerned.

18. Visit all residential sections of town. See if you discover any correlation between housing and human welfare. Make similar experiment in the nearby countryside.

19. Study housing, health needs of community (facts gained from city or county departments of health, education, and courts).

20. Consider taking such action as taken by a workshop group—North Georgia Conference: "We call upon the people who call themselves Methodists to look well at the property they own and rent lest their income be from that which makes for the economic insecurity of the poor and the spiritual insecurity of the owner."

The Fight Against Inflation

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 16, 1946

Mr. COCHRAN. Mr. Speaker, under the permission granted me, I am including as part of my remarks an address by Hon. Chester Bowles, Administrator of the Office of Price Administration, over a Nation-wide hook-up. The address follows:

I wonder if you happened to notice the headlines the other night, about the stock market hitting its highest peak in 15 years? Or if you heard about those department stores, up in New York, which reported sales of a million dollars a day, just before Christmas time?

These are just two of the things that have happened recently to highlight the fact that individual savings in this country increased by over a hundred and forty billion dollars during the war.

Now, all that's wonderful news, of course. But I think it points one lesson very clearly.

It shows you why this broadcast—this tribute to 4 years of faithful service by the war price and rationing boards—can't just be a get-together celebration for a job that's all wrapped up and done.

On the price- and rent-control front far too much remains to be accomplished for that.

What the war price and rationing boards did in helping to keep prices in line during the war deserves the highest praise. Their work on the rationing programs is right there on the record, too. They made it easier for this country to have the best-fed, best-clothed, best-equipped Army and Navy in the world. Yet everybody here at home got his fair share of everything scarce. Along with a hundred and forty million other Americans, I can't say enough for that magnificent achievement.

But when we look at the problems that lie ahead, in the light of the tremendous inflationary pressures for higher prices today, the best anyone can say is that their people have done a grand job—but it's only half done.

Today the battle lines against inflation are sharply drawn. Your pocketbook, your savings, and what the money in it will buy are at stake. Your very jobs may be in danger. If the inflationary pressures aren't held in check now, this country may be headed for an inflationary price rise and a collapse that would dwarf by comparison anything we have ever known. That sounds like scare talk, but it's the cold, sober truth.

The battle to keep prices and rents within bounds isn't going to be won here in Washington. It will be won in community after community all over the United States—in cities and towns where hundreds of thousands of price-controlled items—from shirts and shorts to sewing machines, from apples and apricots to automobiles—are daily changing hands.

I want you to hear the story now from just a few of the thousands of loyal, hard-working, unpaid local board workers who are sticking to their price-control jobs. At a microphone in Cleveland, Ohio, the first of these speakers is waiting. He's Dr. Sanford A. Helsel, who has worked on a local OPA board in Cleveland ever since right after Pearl Harbor. Go ahead, Dr. Helsel in Cleveland.

Mr. HELSEL. Thank you, Mr. Bowles. Perhaps I ought to say that the "doctor" part of my name means I'm a practicing dentist. In the last 4 years, however, my dentistry has sometimes seemed like a part-time vocation. The board of which I'm chairman—Price Control Board No. 13—is in Cleveland's densely populated, highly industrialized Collinwood neighborhood and there's certainly always plenty to do there. Just in the areas served by our board there are something like 3,600 retail stores. About a quarter million people live in the neighborhood and trade in those stores.

Our board members and staff employees feel that they have an obligation to every one of the 250,000 residents in our area. If you people could attend one of our price board conferences and listen to the angry complaints of people who have been overcharged buying a used car, a secondhand radio, or a new tire, you'd get a clearer idea of how prices can get out of hand. No matter how honest the vast majority of dealers and individuals are, you'll always find a few chiselers with their eye on all the money that's flying around. That money's inflationary dynamite. Our job is to see that illegal price increases don't set it off.

Now that the one remaining rationing job—sugar rationing—is to be handled by the district OPA offices, we're free, like all the other price boards, to concentrate all our efforts to holding ceiling prices in line. But the best efforts of the local price boards won't be worth too much without cooperation of every citizen here in Cleveland and everywhere else. The public must support OPA's price-control program until it is no longer needed, if the boom and bust which followed World War I is going to be prevented.

The thing to do—if you think you've been overcharged—is to report that overcharge to your local board.

Now, out in California, another board chairman, is waiting to speak to you. I've

never met him, so I'll just say "glad to meet you, Mr. Paulsen," and let him take over.

Mr. PAULSEN. This is Oscar Paulsen, chairman of the San Francisco Price Control Board, speaking from San Francisco, Calif.

We've seen a lot of changes out here on the west coast during the past 4 years. We have had, and still have, the biggest population and the biggest pay rolls in our history.

We know that a lot of the people who came out here during the war are going to stay with us. We hope that our pay rolls will stay in the upper brackets, too. But we know that big pay rolls will not mean very much unless we can keep prices at or near present levels.

That was our problem all through the war, and it is our most important problem today. I have been an active member of the OPA in San Francisco ever since price control was started back in 1942. I have given my time and services to this program because I realized the tremendous importance of a balanced economy.

Now that the war is over I know that its more important than ever that we hold the line on prices and rents until we are out of danger. I have been in the banking business for many years. As a banker and businessman I think I may lay claim to some experience in practical economics. In the simplest terms, we cannot have prosperity unless we can maintain our ability to buy. Our ability to buy depends on the size of our pay envelopes, and on the prices we have to pay. That's all there is to it.

During the past 4 years many new industries have been started here on the west coast. I am convinced that fair and equitable price control is necessary to the well-being of these new industries during the difficult months just ahead. I am also convinced that price control is the best protection for the working man and woman during this reconversion period.

Actually, we are in better shape today than any of us expected to be 5 months ago when the war ended. We have less unemployment and our general business picture is brighter than we hoped it would be.

We can't afford to lose the ground we have gained and held. We can't afford to let a few selfish individuals break down the safeguards we have built up during the past 4 years.

There is one more point I would like to make. A personal point. My two sons served their country during the war, one in the merchant marine, one in the Navy. Now they are starting all over again as civilians. I want to see them get a good start and a fair chance for success. If we can hold the line, if we can make price and rent control continue to work, I know that they will have a real chance.

Now, in Boston, Mass., another OPA volunteer worker is waiting to give you her side of the story. She's Mrs. Vernon C. Stoneman, a New England housewife. Come in, Mrs. Stoneman in Boston.

Mrs. STONEMAN. I am a New England housewife; yes. But more than that, I am an American housewife.

Like millions of other American homemakers, I do most of the buying for my family and home. Because of that, I am particularly aware of the prices of the groceries and other things I buy, and of the rent we pay.

I suppose that's the chief reason that, right from the start, I have had a personal interest in this business of keeping prices down.

There are two more reasons. When war struck our country—and the call went out for volunteers—I naturally wanted to do my part. The men of our Nation went to the battle front. But we soon found out that there was a home-front battle to win, too—the battle against rising prices and inflation.

I remember when I volunteered as an OPA worker hearing people say: "You can't stop inflation. It comes with every war. History proves it."

Now we New Englanders believe in history * * * we have a rather long one of our own. But we believe even more in our democracy—and what it can accomplish.

So when our country called for volunteers to fight inflation, I was among the tens of thousands from every corner of the United States who joined up. And I'd like to say right here and now that I'm staying joined up until the job is finished.

Now I don't know too much about the economics of inflation, but I do know this: If prices were to go higher and higher, I wouldn't be able to buy food and all the other everyday things, or pay our rent, let alone get a new radio and some of the other things we've needed around the house for a long time. And if prices were to get completely beyond our reach, we might even have to sell our bonds just to keep food in our mouths.

As I said, I'm no economist, but I do know we're in for a lot of trouble here in Boston—and your town, too—if we don't watch out. That's why I'm not only willing—but glad and proud—to do my part in helping fight inflation. I can't do a lot myself, of course, but millions of others are also doing their part every day, and that gives me a lot of confidence that things are going to come out all right.

Now, goodbye from all of us in Boston and let me introduce to you Thomas Ratigan, a member of a price board in Gary, Ind., speaking from Chicago.

Mr. RATIGAN. Hello from Chicago. You see a lot of gold discharge buttons along Michigan Avenue these days. But next to my service pin I also have the privilege of wearing an OPA volunteer emblem. You see, I was an OPA volunteer before I joined the Army, and when I got back in civvies again the least I felt I could do was to get back in the fighting lines against inflation, too. I suppose my experience as a serviceman has made me appreciate more than I ever did before the value of the dollar.

Some of my buddies had to raise large families on an allotment, and any inflationary rise in prices would have taken all the stretch out of that allotment. I saw how vital was their need for price control.

I thought of those men more than once when I returned to civilian life and saw the unyielding pressures on prices. I thought of them when I saw what happened to the prices of items removed from price control—like citrus fruits, for example. Service families wouldn't have a chance if all prices of everyday necessities were to skyrocket.

When I went back into business again as a member of a furniture firm in Gary, Ind., I saw that business, too, wouldn't have a chance in the viselike grip of inflation.

As a businessman, I realize that the success of my business—all business—depends on large-scale orders. These stem from volume production—from sales at popular prices, not inflated prices. Sky-rocketing prices bring only buyers strikes—a falling off of orders, inventory losses—failures. Inflation leaves many casualties in its wake—just like the physical enemy. On the price panel on which I serve in Gary, we, as volunteer citizens, are doing what we can to make our community a good place to live in so that it may realize its full possibilities in the prosperous postwar years that we see ahead. Inflation has no place in this picture, and we are devoting our whole-hearted energies to combat it. As a representative of these volunteers, it is a great pleasure for me to take part on this anniversary broadcast.

Mr. BOWLES. This is Chester Bowles in Washington. Thanks, Mr. Thomas Ratigan, Mrs. Vernon Stoneman, Mr. Oscar Paulsen, and Dr. Sanford Helsel—for taking part on this program.

More people like yourselves, and the many thousands who served so faithfully on War Price and Rationing Boards during the war, are needed urgently now. The fight against inflation, the fight against higher rents and prices, needs 90,000 volunteers. I'd like to say to everyone listening to this program, if you have any time at all, even an hour or two a week, that you can spare, please go to your nearest local Board and say, "I want to help." Some day, when you look about you at a country enjoying sound prosperity, with reasonable prices and good jobs for everyone, you'll be glad you did just that.

Welles Says United States Foreign Policy Lacks Essential Dependability

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 16, 1946

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks, I am inserting an article by Sumner Welles, former Under Secretary of State, from the New York Herald Tribune of Wednesday, January 16, 1946:

WELLES SAYS UNITED STATES FOREIGN POLICY LACKS ESSENTIAL DEPENDABILITY—POINTS TO BYRNES' REVERSAL ON BALKAN REGIMES; DECLARES AMERICA'S MORAL LEADERSHIP IN WORLD HINGES ON CONFIDENCE OF OTHERS IN OUR WORDS

(By Sumner Welles, former Under Secretary of State)

If the United States is to exercise any potent influence in promoting world peace and in establishing a better international order, other nations must be confident that this Government will abide by its professions. American foreign policy must possess the all-important quality of dependability.

For example, other nations should be able to have faith that if the United States in the month of September 1945 takes a definite position upon certain basic principles, this Government will maintain that position 2 months later.

Unfortunately, precisely the reverse has proved to be the case.

Naturally, this Government, if it is ever to find grounds for agreement with other governments, must frequently compromise upon matters of procedure, or yield some of its material demands. But that is very different from abandoning its announced position upon international questions of high principle.

At Yalta, as a result of the insistence of President Roosevelt, it was agreed by the Big Three that the governments to be installed in the occupied countries of eastern Europe and of the Balkans should be freely elected and truly representative of the will of the peoples involved.

In accordance with that commitment, the United States later announced that it would not recognize any governments in those countries until they were constituted in accordance with the principles agreed upon at Yalta. It delivered official warnings in that sense to the de facto authorities there installed. Last September, at the London meeting of the Council of Foreign Ministers, the United States took the position that peace treaties could not be negotiated with the Balkan States until representative governments had been freely elected in those countries. At the same conference this government further made it plain that it intended to insist upon the right of France to participate in the negotiation of the Balkan peace treaties.

BYRNES SHIFTS VIEWS

Mr. Byrnes, after much eloquent lip service to the cause of international democracy, later assured us that it was because of the insistence of the United States upon these principles that the London meeting broke up in failure.

What has happened since?

At the Moscow meeting Mr. Byrnes agreed that the United States would recognize the Bulgarian and Rumanian Governments and negotiate final peace treaties with them provided the present governments of those countries each added to their Cabinets two members of "democratic parties" not presently represented in them, and gave certain pious assurances as to the way in which future elections would be conducted. Under existing conditions no one can be so gullible as to believe that such an agreement will result in the creation of governments which will be either truly representative or disposed to hold free elections.

At Moscow, the United States agreed that France should have no part in the negotiation of the Balkan peace treaties although France possesses vital interests in the eastern Mediterranean and in the Balkans.

At Moscow, th United States agreed that the final European peace treaties would be dictated solely by the Big Three. There is no smaller member of the United Nations which will be deluded as to the real character of the so-called peace conference to be held before May 1 next, at which the lesser powers will be permitted to make recommendations, but will be given no assurance that their recommendations will be adopted.

The course now followed by the United States constitutes a complete reversal of what this Government had previously maintained.

Can it be surprising that the French Government has bluntly asked whether the so-called peace conference is summoned merely to ratify decisions already taken by the Big Three? Or that it serves notice that France is "interested in all important questions concerning Europe or any region whatever of Europe"?

"MERE WORDS" CHALGED

Have we any reason to wonder that Francois Mauriac, in a bitter allocution to the French people, quotes these words of La Bruyere:

"It costs the powerful so little to bestow mere words upon us, and their power makes it so unnecessary for them to carry out the fine promises which they have made, that it is really true modesty on their part not to make even more sweeping promises."

The promises previously given by the United States that it was determined that free and representative governments were to b installed in the occupied countries of Europe, and that it was solemnly committed to the great principle of "the sovereign equality of all nations, great or small," have thus proven to be mere words. The smaller powers of Europe and the lesser powers of the Western Hemisphere which, in the days of President Roosevelt, had looked with such hope to the leadership of the United States in the creation of a free and democratic world order, can today have but little faith in our future protestations. Our recent acts have clearly belied our fine words.

The United States continues to possess the influence in world affairs which is derived from its military might and from its material resources. But the moral influence which it possessed during the war years because of the belief that this Government was determined to support those principles which are indispensable if a peaceful world is to be established is rapidly vanishing.

It would be far better to refrain from giving assurances, however noble they may be, than to fail to carry them out. For the United States cannot exercise any effective leadership until all nations know that it means what it says.

Gen. Carl A. Spaatz

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 16, 1946

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an address which I delivered in presenting Gen. Carl A. Spaatz, of the Army Air Forces, as the honored guest at a "Salute to Scott Field" testimonial dinner sponsored by the Belleville (Ill.) Chamber of Commerce.

The address follows:

I am greatly honored to have the assignment which has been bestowed upon me tonight. Just a little over a year ago I was a private in the ranks of the Army. And now I have the privilege of introducing to a home audience one of the Army's highest ranking officers.

In America such incidents are not uncommon. In fact, they are so commonplace we hardly think anything of them. Yet, there is some importance that should be attached to them.

They show the greatness of America. They show that here democracy really works. That in time of war, and in time of peace, all men work and serve together to preserve that democracy. We differ in opinions on many subjects and on many occasions, but when the majority casts its decision we get together to work in the interest of the Nation.

But America's greatness came through hard struggle. It has been preserved in the same way. We must realize good things are not easily obtained and they are not easily held after we have obtained them.

We have peace now, but to hold that peace we must work. And it is not enough to work among ourselves, we must work with all the people of the world to hold that peace. Without world cooperation there isn't anything we can look forward to but world destruction. We must appeal to the hearts and reasons of all men for a mutual understanding that will preserve the peace we have won at such a great cost.

If you speak ill of your neighbor long enough he will begin to speak ill about you. The climax of word arguments is usually physical clash. Let us speak kindly of our neighbors throughout the world today, so they may regard us kindly and be interested in joining with us in securing the peace.

America has the power to lead the way and to encourage all other nations to hold securely the peace of the world. Let us hope that power will be used wisely in the formation of postwar policies among nations.

In peacetime our armed forces are small in number and in equipment. Too little attention is paid to them. It is nothing short of a miracle that they develop into victorious forces in time of war. Someone is responsible for such miracles. We honor here tonight one of the handful of men who through the years of peace give their thought to any emergency which might arise to endanger our national security. We are fortunate that the men who direct our armed forces are not militarists, but are peace-loving Americans who much prefer that the occasion would never come when they had to be leaders in war. But we are thankful that when the crisis was here they rose to the heights and gave to our arms the kind of leadership that has been our American heritage since our first Commander in Chief, George Washington.

Scott Field, Belleville, and adjoining communities are honored by the presence of our distinguished visitor. A West Pointer, our guest began his active duty in the Army in 1916. His career has been an outstanding one since. He served in France in command of the Thirty-first Aero Squadron and on other assignments in World War I.

He is a pioneer in the Army Air Forces, having continued his active duty in the air services since World War I. His commands included Kelly Field and Ellington Field, Tex., and his achievements in the development of aircraft for military use are too numerous to mention. He has been one of the key men in his arm of the service since its creation.

In January 1942 he was assigned Chief of Air Forces Combat Command in Washington. In March 1942 he was assigned to headquarters, Army Air Forces at Bolling Field, Washington, and in May of the same year he became commanding general of the Eighth Air Force.

In July 1942 he was sent to the European theater of operations. In November 1942 he became commanding general of the northwestern African air force and in March 1943 he assumed command of all United States Army Air Forces in the north African campaign.

It is hardly necessary to recall the record he set in command of the United States strategic Air Force in the European theater through the h..rd struggle from January 1944 to the close of the war in Europe. His leadership in that battle of the air which brought ultimate victory to our arms has been recognized throughout the world and many special honors have come to him. His long years of experience in military aviation paid dividends to the Nation which placed so much confidence in his judgment.

In June 1945 he was returned to service in the headquarters of the Army Air Forces but within a month was assigned to transfer his strategic bombing operations to the Pacific. He is now back in Washington and we are hopeful that his vast store of aviation knowledge will be of service to our country for a long time.

He is rated a command pilot and a combat observer—he has the Distinguished Service Medal with an Oak Leaf Cluster, the Distinguished Flying Cross and the Legion of Merit.

But more than all these he has the thanks of the people of America for a job well done.

It is my great privilege and I am honored to present to you Gen. Carl A. Spaatz.

The Montana Method

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 16, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, I have spoken many times on the outstanding bond record made by Montana during the course of the various drives. We are proud of the contribution our State has made and we think that the team which conducted all the loan campaigns is outstanding because of the hard work, cooperation, and patriotism they have shown. The men who directed the activities in Montana were A. T. Hibbard, of Helena; Bill Bartley, of Great Falls; and Fred Martin, of Great Falls.

Mr. Speaker, under unanimous consent, I am inserting in the RECORD an

article on The Montana Method, taken from the magazine Minute Man of December 15, 1945:

THE MONTANA METHOD—STATE RECORD MADE ON STRAIGHT COMPETITION

Only a champion can make news by taking a defeat. Although barely nosed out by North Dakota, as the first State to achieve the E bond quota in the Victory Loan, Montana maintains its record of five straight, having led in the Third, Fourth, Fifth, Sixth, and Seventh War Loans. On the opening day of the present drive six Montana counties achieved their E bond quotas. No other State has ever achieved this excellent record.

These results have been obtained practically without special events, glamour, or cheese cake.

At the beginning of each drive Chairman A. T. Hibbard, a banker in Helena, has conducted a series of ten 1-day meetings to lay out the campaign After the district meetings the campaigns have been a matter of straight competition between counties. A map was published every little while, with those counties printed in red which had already reached their quotas. The counties vied for position in the roster of successful campaigners.

So well were the citizens stimulated that they usually came to the committee headquarters to buy their bonds, with a steady stream of customers standing before the tables waiting to buy.

All loan campaigns in Montana have been conducted by the same team, Chairman Hibbard; collector of customs at Great Falls; William H. Bartley, now the vice chairman; and Fred J. Martin, who, after a turn with the marines, is now the executive director.

Montana is sometimes called the Treasure State, on account of its mineral and agricultural wealth, but its prime asset is its people, who give more than they demand.

Do You Want Errand Boys or Lawmakers?

EXTENSION OF REMARKS

OF

HON. JAMES A. ROE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 16, 1946

Mr. ROE of New York. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an article which appeared in the American magazine entitled "Do You Want Errand Boys or Lawmakers?" by a former Member of this House, Matthew J. Merritt:

DO YOU WANT ERRAND BOYS OR LAWMAKERS?

(By Matthew J. Merritt, former United States Representative from New York)

This is open season on Congress. Every man-Jack or Jill who could get a publisher, a 3-cent stamp, or a sawed-off shotgun has taken a crack at the Nation's lawmakers. Never before in our history have the elected representatives of the people been so vilified, ridiculed, and distrusted by the people who elected them. Thousands of words have been written on penny post cards, in newspapers, magazines, and $3 editions—telling Congress off.

To refer to the Senate of the United States or the House of Representatives as "the Illustrious Dunderheads" or "the Monkey House" seems to assure a writer's popularity. Some of these critics make helpful suggestions. Some are simply abusive. But all of them imply that the men who come to Congress are incompetents, loafers, or worse.

Granting that Congress is not so efficient as it might be, I think it's high time someone put the blame where it belongs: On the people.

If criticism of the character of our National Legislature is justified, then surely the people who choose its Members should come in for their share of it. If you were to buy a house the way you select your Representatives in Congress, you'd acknowledge that you deserved to get stung. Before the real-estate agent got your name on a contract, you would satisfy yourself that the plumbing and furnace were in working order and that the roof didn't leak. But the average American doesn't bother to know the man or woman he sends to Washington to make laws which will affect the lives of himself and his family, the conduct of his business, his bank balance, and the security of his later years.

Chances are 100 to 1 that he makes no attempt to inform himself of his Congressman's views on domestic issues or on the position the United States should take in world affairs. He votes the straight party ticket, checking names of candidates who are as much strangers to him as the natives of Guam. This at a time when in both Houses of Congress the vote on major issues is divided by the way men think, not by their party affiliations. The wonder is that this pig-in-a-poke system produces so many able and intelligent legislators.

When the voter discovers that the candidate he sends to Washington with blind and unquestioning approval does not represent his own views, he feels no self-reproach. What, he asks, can you expect of a blankety-blank politician? Actually, he expects a lot. Among other things, he expects his Congressman to be a social-service worker, banker, employment agency, father-confessor, and errand boy. He expects his Congressman to get his son out of the Army, to get the price of milk or steel boosted, to get him a date with Jeanette MacDonald, and to get his widowed Aunt Susan a job.

If Aunt Susan and Uncle Ned arrive in Washington on their uppers, it is not unusual for the Congressman to provide them with a pair of shoes, a winter overcoat, or a hotel room for their job-hunting expedition. And if they fail to land a job, more often than not it is the Congressman who pays their train fare home. One of my colleagues kept an account of one year's expenditures for charity to his constituents. It amounted to $2,800.

It is popularly believed that anyone who goes into politics is too lazy to support himself in private industry. In a recent poll the parents of high-school-age boys were asked whether they wanted their sons to go into politics. None of them did. One woman went so far as to say, "No; I want my son to go to work." This attitude is consistently reflected in the demands constituents make upon their Congressman's time.

When the average citizen visits his Congressman in Washington he feels privileged to require that the greater part of the day shall be devoted to him. After a leisurely discussion of his difficulties with some Government bureau, he frequently suggests that the Congressman should visit the bureau with him to personally appeal his case. After that he suggests lunch, and is hurt if his host declines. Luncheon over, he announces that he has nothing to do the rest of the day, and if the Congressman cannot devise some entertainment which appeals to his visitor, he is stuck with him for another hour or two, usually given to a recital of the constituent's personal problems, interlarded with home-town gossip. It is obvious that the caller thinks that, like himself, his representative in Washington has nothing else to do.

Believe me, your Congressman works hard at his job. The incidence of heart disease in the Senate and House of Representatives is grim evidence that the Members of both Houses are overworked. The average Congressman belongs to one major committee which meets four or five times a week from 10 in the morning until noon or 1 o'clock, when the Legislature convenes. He belongs to three or more minor committees which meet less frequently. From the middle of the day until 5 or 6 he attends debates on the floor of the House or Senate and discusses legislation with his colleagues in cloak-room sessions.

When the Congressman can manage a quiet evening at home he takes along a brief case bulging with committee reports and new legislation. More often he must attend banquets given by civic, labor, and industrial organizations, or late meetings with his colleagues to discuss legislative strategy. Week ends he tries hopelessly to bring his correspondence up to date.

Most Congressmen receive from 75 to 100 letters a day from their constituents. A veteran wants to know why he hasn't yet received his pension. There are a dozen or more letters from constituents who have been enlisted by pressure groups and who demand to know how their Congressman will vote on various bills. Another dozen or so letters ask for copies of Department of Agriculture bulletins and other Government publications. A hopeful author sends the manuscript of her novel with the request that it be copyrighted. A home-town moralist wants to know if it's true that her Congressman has a bar in his Washington apartment.

The Congressman's mail bag is weighted with letters of this kind, many of which require the exchange of half a dozen phone calls and letters with Government agencies, and the more persuasive letter writers imply broadly that if they do not get the right answer they will have their revenge at the polls.

Obviously, there is little time left for the Congressman to inform himself about the thousands of bills which are introduced at each session of the Senate and House. When I first went to Washington, I remember asking one of my senior colleagues what he thought of an important piece of legislation on which we were voting. He said, "I haven't had time to read it." Nevertheless, he voted for the bill. When you realize that between 8,000 and 13,000 bills are introduced each session, it is apparent that lawmaking is a full-time job. Nearly 10,000 bills were introduced in the last session of Congress, and 1,500 were reported out of committee.

It has been proposed that congressional machinery should be modernized, the number of committees reduced, and that Congressmen should be given adequate staffs, so that they may have more time for the job they were sent to Washington to do. Such reforms would help, but so long as Members of Congress are required by their constituents to spend 90 percent of their time at trivial chores, under compulsion of political disfavor, no amount of streamlining will make it possible for the legislative branch to serve the purpose for which it was created.

There can be little understanding of the real responsibilities of Congress by ladies of the garden club who call their Congressman from Washington to make awards at the annual petunia exhibition, by the constituent who sends his Congressman a model of his latest invention and asks to have it patented, by the job-seeker from my own district who got at least 50 of his friends to write urging me to help him get employment, or by the voter who asked me to send him a copy of the World Almanac.

Newcomers to Capitol Hill charged with ambition and enthusiasm are quickly discouraged by these unending selfish demands. The cynicism with which people regard their Representatives in Washington is matched by the cynicism with which their Representatives come to regard them. This is illustrated by a popular cloak room story:

A candidate for reelection was distressed to find that one of his oldest friends was not

supporting him in the campaign. When they met, the Congressman asked for an explanation. "Jim," he said, "I can't believe you're not going to vote for me. What does this mean? You must have forgotten all I've done for you. Remember your Uncle Jake? Well, I got him appointed postmaster, didn't I?"

The voter admitted this.

"And I got your wife's brother the rural mail route, didn't I?"

"Yup," agreed the voter.

"And your son, Billy," the Congressman persisted, "I got him an appointment to West Point."

"That's so," said his friend grudgingly. "But you ain't done nothing for me lately."

One of my colleagues, who had never distinguished himself as a lawmaker, was returned to Congress for more than 20 years by his constituency. He never failed to answer their letters. He wrote them friendly notes on their birthdays, sent them post cards when he traveled out of the country, and unfailingly expressed his sympathy for the farmer whose silo burned down or the grocer whose till was emptied by thieves. He is a throwback to the early days of our history, when we were an isolated nation of small communities with small interests. He cannot mature in public service until his homefolks grow up to take their place as world citizens.

The final and decisive power in our system of government is granted by the Constitution to elected officials, particularly legislators. These lawmakers have the responsibility of maintaining the balance of power. If they fail we must resign ourselves to some form of executive control.

Representative government will survive only if Congress continues as the chief policy-making branch of government. It will not survive if Congressmen vote with blocs and yield to pressure groups because their calendars are too crowded with the affairs of individual constituents to allow them time to study legislation. It will not survive if, when we the people speak, we ask favors for ourselves without regard to the national interest, if we compel Congress to think in terms of the jobs its constituents want done instead of in terms of national welfare.

The people are willing to give Congress the responsibility for curing unemployment, for adapting our domestic economy and national policies to new world conditions. They are willing to trust it with their money and their lives. But they are not willing to take it seriously.

Congressmen are regarded as comic-strip characters given to windy harangues on local power projects, with which they lull their colleagues to sleep. They are regarded as servants, not of the public, but of the individual voter. They are underpaid and overworked. Because their salaries are paid by the Government it is assumed that they aren't worth their salt. They are burdened with tasks to which an efficient business manager would assign an office boy—and threatened with political defeat if they demur.

Yet these are the men to whom the world looks for peace. Whether your children will go to war will depend on the kind of peace confirmed by the men and women you have sent to Congress. Without their cooperation and consent, as we discovered in 1919, there can be no respite from the dying, impoverishment, and weariness of war.

In his speech to Congress after Yalta, the late President Roosevelt said, "The question of whether my long journey is to be entirely fruitful or not lies to a great extent in your hands. For unless you here in the Halls of the American Congress—with the support of the American people—concur in the general conclusions reached at Yalta and give them your active support, the meeting will not have produced lasting results."

This is a challenge to our greatest wisdom. But our greatest wisdom cannot be enlisted to meet the challenge so long as honor and security are denied to men in public service. The strongest urge of nearly every human being is to have the approval of his fellowmen. If this approval goes to the businessman, then our bright young men will go into business. If it goes to the politician, they will go into politics.

Upon his return from Moscow, Eric Johnston, President of the United States Chamber of Commerce, said admiringly of Mikoyan, the People's Commissar for Foreign Trade, "He is highly intelligent. He'd be prominent in any country. In America he'd be a big businessman or industrialist." The implications of that statement are clear.

So long as "politician" is a word of derision and contempt, business will continue to attract our "highly intelligent" young men. Unless political life is made equally attractive to them, our domestic future and the hope of world peace are threatened.

The aversion Americans have to government is outdated. In the days of the frontier, men were a law unto themselves. Before the First World War, people were so intent upon developing our natural resources that they ignored government. They could afford to. The need was for men who would risk their lives in unbroken wilderness, for speculators and businessmen who would risk their money to open uncharted veins of our national wealth. There was little need for good government, or for honest and capable politicians.

Today we need the talent that has contributed to making this a great industrial nation to make this a stable and peaceful world. We need men with wisdom and courage to make us pre-eminent in world affairs as we are industrially. The scarcity of such men in public life is one of the greatest weaknesses in our Nation.

We must induce into the service of our Government the most capable young men in America. They must be rewarded in prestige and pay comparable to that enjoyed by brokers, engineers, doctors, and manufacturers. Unless young men of vision and understanding attack the problems of domestic readjustment and world reorganization, we shall have failed to meet the challenge of history.

It is not enough for America to give Diesel engines and alms to the world. The world needs our boldness, our imagination, our genius—in political leadership.

Finally, I believe that Congressmen should be elected for a single term of 6 years, the same as Senators. As it is now, a Congressman spends his first year in office showing proper gratitude to his constituents for having elected him and the second year trying to win enough votes to get reelected. At the end of 2 years the average Congressman has learned the ropes. If he is not returned for another term, the time he has spent in Washington is wasted. Voters would think twice about the qualifications of their Representatives if they realized that they were selecting men and women who would become their spokesmen in Washington for 6 years.

Limiting congressional service to a single term would clear the legislative branch of dead wood and give more young men and women an opportunity to help make representative government work. Their understanding of government would spread to their communities and colleagues when they went home, and Washington would no longer seem remote and mysterious to most Americans, as it does now.

If Congress is to be revivified, seniority rules must be abolished, and only those Congressmen who have demonstrated qualities of leadership and a grasp of legislative problems should be rewarded with positions of influence.

Having selected good men, and freed them from political pressure by the single-term rule, we should pay them at least $25,000 a year. Each Congressman should have an assistant whose entire time would be devoted to the personal affairs of constituents, so that the Congressman himself need not be diverted from the job of lawmaking.

Only a vigorous and informed Congress can save this country from the paralyzing growth of bureaucracy and protect it in its world relations. Only the intelligent self-interest of the voting public can recreate a Federal Congress of men and women who are carefully selected, decently paid, and liberated for the vital tasks which face them.

Montana's Outstanding Reclamationist

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 16, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent, I am happy to put into the RECORD an article from the Miles City Star, Miles City, Mont., containing a tribute to Mr. O. S. Warden, of Great Falls, Mont.

As newspaper publisher and citizen, Mr. Warden has contributed untiringly of his time and energy to Montana's and the Nation's advancement. We of Montana owe him much and we are proud that we can produce one such as him. Words cannot express adequately the love and admiration of Montana's citizens for this outstanding man. It is our hope that he will be with us for many years, to guide and advise us so that we may grow soundly, steadily, and progressively.

MONTANA'S OUTSTANDING RECLAMATIONIST

We have recently been in attendance at the fourteenth annual convention of the National Reclamation Association, an organization born in the still vivid days of the worst depression this country has experienced in its relatively short life. The National Reclamation Association came into existence in those dark days, as a sort of self-defense group for the 17 arid Western States of the Union. While the national reclamation act had been in effect as a law of the land since 1902, the pressing conditions of the depression were bringing about a drastic and gradual throttling of the activities of the Bureau of Reclamation. Eastern Congressmen, under the pressure of their industrial constituents who wanted more bread and butter in the eastern sections which did not produce that bread and butter, were constantly raiding congressional appropriations made for reclamation and irrigation development in the West. True, this was a short-sighted policy; a policy of literally killing the goose that was laying the golden eggs of food for the distraught eastern cities. But Congressmen are not always free from short-sightedness. Quite often they do kill the goose.

It was under these unhappy circumstances that the National Reclamation Association came into existence. Mr. O. S. Warden, publisher of the Great Falls Tribune, attended that forlorn and almost hopeless meeting, which was held in Salt Lake City. An organization was perfected; a little money was scraped—and that is really the word—together to maintain a 1-man office in Washington, which would look after the interests of the reclamation areas of the 17 Western States. And from that humble beginning the

fight was carried on with varying degrees of success.

Each of the 17 States was entitled to 1 representative on the board of directors of the association, which in turn elected the officers. Mr. Warden represented Montana on that board for 10 years and became the second president of the organization. Not only that, he served as president for 9 years, during which time his name came to be known throughout the length and breadth of the western States as a constant and willing fighter for more and more and greater and greater appropriations for irrigation and reclamation. He spent his own money traveling back and forth to Washington in the interests of this arid region. As time went on the Reclamation Association set up a meager budget to cover its activities and accepted voluntary donations to meet it. Among the items of the budget were $2,000 for traveling expenses of the president. But Mr. Warden never took a penny of that appropriation and at the end of each year it was turned back toward a small surplus which the association was accumulating. Not only that, but many times he dug into his own pocket to meet the $1,000 assessment made upon Montana as its share in sustaining the national organization. Sometimes he was reimbursed by late contributions within the State; sometimes he was not. And all that went on for the greater part of the 14 years of the life of the National Reclamation Association. Such was the faith of O. S. Warden in reclamation and such was his foresight into the possibilities of what reclamation could and would do for a State like Montana, with its vast agriculture resources. That faith and that vision is today bearing fruit in every State of the West. All over Montana, reclamation and irrigation projects are under way, bringing water to more and more thirsty acres which will and are producing new wealth and abundant crops in this hitherto drought-ridden area. Other States of North and South Dakota, Kansas, and Nebraska will have cause to extoll the name of O. S. Warden when that name shall have become a memory.

While interested in reclamation since knee-high to a hop toad, we had not had occasion to attend the meetings of the National Reclamation Association in its early years of discouragement and despair. But for some time past now we have had the pleasure and privilege of so attending and meeting many of the men who have lived through those years since 1931 with Mr. Warden. On those occasions we have heard them speak eloquently of the "giants of reclamation"; the men who first conceived of the reclamation plan and who fought to bring the Government around to the viewpoint that it was for the good of the Nation to develop these western agricultural lands.

At the recent annual meeting of the association in Denver, O. S. Warden stepped out of his long and active roll as a director and president of the organization. For 10 years he had been the Montana director thereof; for 9 years its hard-working president. And in this connection and at this time we salute O. S. Warden as one of those "giants of reclamation"; those men of the West who took a new viewpoint to Washington; those men who battled Congressmen from the industrialized East for appropriations to carry on this highly important reclamation work, without which development the United States would have indeed been in a sorry plight in the recently closed World War II.

Montana, too, owes much to O. S. Warden for his constant and untiring work, both in Washington and at the State capital in Helena, which has brought about an entirely new conception of the duty of government to its citizens; a thought that the welfare of the greatest number is served by the combining of the financial and engineering resources of the State and Nation in the production of more and better food and fiber for the 130,000,000 people of this greatest nation of all nations.

Yes, O. S. Warden, of Great Falls, is one of the "giants of reclamation" in the West and well entitled to take his place alongside of those who have labored in the same work for the past 43 years.

Montana is proud of his work in the National Reclamation Association and the United States is better fed and better clothed because of his efforts. We hope that the reclamation interests may long have the benefit of his wise and effective counsel in all matters looking to the development of these many Western States.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 16, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New York Times of January 16, 1946, entitled "Labor Legislation":

LABOR LEGISLATION

The present labor crisis did not spring out of a vacuum. The foundations for it were being laid for months and even years by a combination of inaction and bad policies. Long ago either the President or Congress, or both, should have appointed a commission of experts to recommend a rounded program of labor legislation and labor policy. But many men in Congress, after waiting until the Nation's industrial life is disrupted by grave strikes and threatened by still graver ones, now talk of quick and angry action.

It is right, it is imperative, that action dealing with the present labor crisis be taken without undue delay. But the real question is what the proper action should be. Any attempt to forbid strikes or to impose compulsory arbitration would only make the ultimate situation incomparably worse than the present one. Nor does hope of a real solution lie in the enactment of a bill for setting up so-called fact-finding boards, as recommended by the President. The weaknesses and the hazards of that remedy have already become clear from the prompt consequences of the decisions of the fact-finding boards appointed by the President without benefit of legislation in the General Motors and oil-industry cases. The moment the General Motors board recommended a wage increase of 17½ percent practically every other union decided that this was the minimum increase to which it was entitled, and that the Federal Government would support it in imposing such an increase upon employers.

When one considers that the automobile workers were already among the highest paid in the country (actually standing in the upper third of the Nation's income receivers) this conclusion on the part of other union leaders does not seem unnatural. As Prof. Sumner H. Slichter wrote in the Yale Review before these fact-finding decisions were announced: "Collective bargaining will not develop * * * if the Government abandons the role of a neutral and virtually compels employers to grant better terms than the unions could win by bargaining. * * * Government wage setting and collective bargaining do not mix. * * * Where the Government wishes collective bargaining to flourish, it must not seek to impose settlements."

The real task before Congress today is not to attempt to throw the Government's weight onto either side of the scales, but to establish the conditions under which a peaceful, amicable and two-sided collective bargaining is encouraged. One way to do this would be to balance the Wagner Act so that an employer or a nonunionized worker, as well as a union, could complain to the National Labor Relations Board against unfair labor practices, including intimidation and coercion. But it would accomplish almost as much good if, short of that, any union that sought the protection of the Wagner Act would itself be required to come before the board with clean hands. Today a union that has shown itself to be irresponsible, and that may even be led by known racketeers, can bring accusations against an employer while the board is not even authorized under the law to take cognizance of the union's own transgressions.

This situation suggests its own remedy. The Wagner Act should be amended to authorize the National Labor Relations Board to refuse to extend the protection of this law to any union which has been guilty of enforcing its will through intimidation or violence, which has struck in violation of a labor contract, which excludes members on arbitrary grounds, which charges unreasonable initiation fees or dues, or which engages in similar antisocial activities.

Such amendments would go little further than those passed by the House of Representatives, by more than a two-thirds majority in June, 1940, but later buried in a Senate committee so that the full Senate never had an opportunity to vote upon them. These amendments separated the judiciary and the prosecution functions of the Labor Board. They prevented the Board from ordering reinstatement of striking workers who had willfully engaged in violence or unlawful destruction or seizure of property. They insured liberty of expression of opinion for employers on labor matters when not accompanied by acts of coercion, intimidation, discrimination, or threats thereof. They permitted employers to petition the Board for elections to choose collective bargaining representatives. They made the Board's decisions and findings of fact subject to review by the United States courts of appeal.

A measure of this sort would not deprive even the most reckless and irresponsible union of any rights which it had prior to 1935. Its sole penalty would be the refusal of the privileges and protections of the Wagner Act to unions that had done nothing to deserve them. It is true, on the other hand, that such a measure would not completely end strikes. Nor would any measure that did not threaten a free enterprise system and American liberties. But such a statutory recognition of irresponsibility and unlawfulness where they existed, and a refusal to encourage or reward them, would reduce existing sources of conflict and constitute an essential step toward industrial peace.

Veterans' Housing—"Curbstone Lament"

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 16, 1946

Mr. ENGLE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an item from the Army Times entitled "The Curbstone Lament," which graphically

pictures the problem of the returning serviceman who is seeking a home for himself and his family and points attention to one of the most critical problems facing our Nation today:

Ah, chill were the Normandy foxholes
And bitter and dank was Attu
But far more disturbing
Is life on this curbing
Where the cold is fast turning us blue.
The Housing Committees are buzzing,
But though their proposals sound fine
There's no satisfaction
In words without action—
It's shelter we need, me and mine!

My wife has turned suddenly frigid,
The winter winds wrinkle her face.
Her once-fetching dimples
Are lost in goose-pimples,
Can't somebody find us a place?
The building authorities holler,
"Priorities keep our hands tied!"
And we've been unable
To locate a stable
Or Chic Sale that is not occupied.

All vets, states the FHA's Blandford,
Should "double-up" now without fuss.
But letters from mother
And my younger brother
Say they plan to move in with us!
The landladies laugh at our misery,
The future's appallingly black.
We're plumb out of plumbing
And Christmas is coming—
Oh, Santa, please bring us a shack!

Four walls and a roof are sufficient
Just cardboard—we don't hope for brick.
I've begged and petitioned,
For my wife's heir-conditioned
And we've got to be off the streets quick.
Dear Congress, I'm not a brass monkey,
And I long to defrost my poor spouse.
Be assured my selections
For next year's elections
Will be men who can find me a house!

—*Ye Olde Vette.*

Root Cause of Labor Troubles Seen Revealed in Wire Strike

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 16, 1946

Mr. RICH. Mr. Speaker, under leave to extend my remarks, I am inserting an article by Mark Sullivan from the New York Herald Tribune of Wednesday, January 16, 1946:

ROOT CAUSE OF LABOR TROUBLES SEEN REVEALED IN WIRE STRIKE—MARK SULLIVAN SAYS FAILURE OF TRUMAN TO ENFORCE WAR LABOR BOARD DECISION IN THAT DISPUTE NULLIFIES ALL OTHER REMEDIAL ACTION

(By Mark Sullivan)

WASHINGTON, January 15.—A country harassed by labor troubles seeks cure, and in order to find cure needs first to find the root cause.

The root cause can be identified in one of the strikes. The Western Union Telegraph Co. and a Congress of Industrial Organizations union of its employees had a dispute about wages. The dispute was laid before a Government body, the National War Labor Board. The Board made a decision. The union refused to accept it, and struck.

The strike has lasted 8 days. For 8 days the public has been forced to endure interruption of an essential public service, telegraph communication. President Truman has not acted to enforce the decision of a Board which was part of his administration and part of the Government.

Here is failure of the administration to act upon an authority it already has. As long as this condition exists, it is idle for Mr. Truman to ask Congress to enact his request. For the authority he already has, and has not used, is greater than the new authority he now asks Congress to give him. In the Western Union case, he already had an official fact-finding body, the War Labor Board. He has a decisio made by the Board. And this decision is official and enforceable—decisions by the Board have been enforced countless times. On the other hand, Mr. Truman, in asking Congress for authority to set up fact-finding boards, stipulated that decisions of these boards should not be binding upon the parties, that they should not be enforced by Government, that they should depend for their effect entirely upon public opinion.

RADIO TALK CALLED USELESS

As long as this condition exists—simple failure of the administration to act upon authority it possesses—nothing else amounts to anything. Mr. Truman's request for legislation amounts to nothing. The thousands of words in his radio address to the people amount to nothing. The other thousands of words in his messages to Congress amount to nothing. The thousands of still more words by his personally appointed boards without statutory authority amount to nothing. The coming and going of labor leaders and corporation heads to the White House do not meet the issue. The swirling about all the strikes—steel, telephone, meat packers, motors, the electric industry—all go around the real issue.

As long as the administration does not enforce a decision by one of its own agencies against a labor union, all else that it does creates impressions of ineffectiveness or worse. Upon the public, the impression must be one of the administration running around in circles, or of an attitude toward labor unions and leaders which must be either fear or favor. And in either case weakness.

Upon Congress the impression must be that it would be futile to pass the strike legislation Mr. Truman has requested, and that the administration is not prepared to do anything really effective about strikes or labor relations.

IMPRESSION ON LABOR

Upon labor leaders the impression is, as the New York Times put it the other day, "that under no conditions will the Federal Government stand up to a strike, that under no conditions will it seriously penalize unions for striking."

That impression is borne out by the facts. The attitude, as it grew up under Mr. Truman's predecessor, is that labor unions and leaders are a group apart and above, to be given immunities and privileges denied to others. It has the effect, if not the intention, of conferring upon labor leaders and unions a power which denies the superiority of Government itself, which denies that the interest of the people as a whole is superior to the interest of any group, as is just now abundantly shown.

This attitude is the root cause of trouble. As long as the attitude continues, the trouble will continue and grow worse. Mr. Truman, inheriting the attitude, has seemed not quite willing to embrace it, not quite willing to depart from it. Forces within the administration tend to hold him to it, for the attitude is deeply embedded in bureaus and agencies. For the President to go counter to an attitude thus embedded takes resolution. Besides, politicians in the administration or close to it press continuation of the attitude for political purposes.

New York Foreign Freight Forwarders Association

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 16, 1946

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speeches of Fred Bennett, the outgoing president, and Harold D. St. John, the new president, of the Foreign Freight Forwarders Association, at the annual dinner held at the Hotel Roosevelt in New York City on Tuesday, January 8, 1946:

SPEECH OF FRED BENNETT

Gentlemen, the bylaws of our association require that at this, our annual meeting of the year, we elect the officers of the association for the ensuing year.

We have, through a nominating committee, designated a member for each of the offices of the association. No other nominations have been presented. Accordingly I shall ask the secretary to cast one ballot in favor of each of the nominees proposed by the nominating committee.

I now have the pleasure to present to you the new officers of the association for the year 1946.

First, I will present Mr. Walter van Hoesen, who will undertake the duties of vice president. Mr. Van Hoesen has been an active member of this group for a number of years, is well established in the forwarding business, is capable and conscientious in the performance of his work and in the interest of the industry as a whole. The association is fortunate, indeed, to have Mr. Van Hoesen in this important office of vice president.

The treasurer of our association for so many years it is difficult to know when he entered that office, is Mr. Joseph E. Lewis. No one could have performed the duties of that office with the faithful regard for the interests of the association as Joe Lewis has done over this long period of years. It is impossible to find anyone who would be his equal in this office. The association has urged Mr. Lewis to continue in his faithful and efficient work for the association and I am glad to say he has agreed to do so. I am very happy to introduce him as our treasurer for the year 1946.

Both the office of vice president and treasurer carry with them very heavy responsibilities, but the burden of carrying on the work of the association falls most heavily upon the president. This burden will probably be greater in the coming years, with postwar trade, than in any time for perhaps 20 years or more. The association has seen fit to seek the services of a young and vigorous member who has a thorough knowledge of, and experience in, the field of forwarding, and whose ability as an executive is highly regarded. I know of no one who could undertake to carry on the work of this group better than the next president of the association, and with my best wishes and confidence in a successful administration, I have the sincere pleasure of introducing Mr. Harold D. St. John, and to whom I now present, for his use, the gavel of the association.

SPEECH OF HAROLD D. ST. JOHN

Mr. Bennett, honored guests, and friends: tonight marks another milestone in the history of overseas transportation, victory has been won—you gentlemen here tonight may well feel proud of your accomplishments in the war effort—yes, a job well done, aptly expresses it.

Such an outstanding performance could only have been possible through the fine spirit of teamwork and cooperation which prevailed among the shipping and allied industries represented here this evening—be it trucking, railroad, air line, steamship, underwriter or foreign freight forwarder—all played their part in the crushing defeat of our enemies. No one agency alone could have functioned without the other in the complex handling of the voluminous tonnage of war material and goods which cleared through this great port of ours during the past 5 years.

With peace at hand, we must now lend our efforts in this same spirit of cooperation toward hastening and effecting the reconstruction of the war torn countries through the prompt and efficient exchange of goods and services, so that peoples all over the world may enjoy, once again, the comforts of their homes and families to which they are justly entitled and have a right to expect.

The foreign freight forwarding industry will continue to play its important role in the promotion of our foreign trade. Now, more than ever before, the knowledge and experience of the freight forwarder in the handling of overseas shipments will be sought after by buyer and seller both here and abroad—already this is in evidence.

Visitors from all over the world are coming to our offices to discuss their shipping problems with us. We are being flooded with inquiries, cables, telephone calls—all having to do with shipping. Foreign trade is on the march. We must be ready and prepared to render the service required to promote good will and understanding to the overseas buyer. The foreign freight forwarding industry has made great strides since World War I and is rapidly becoming recognized as an essential intermediary in the expeditious and efficient handling of overseas shipments.

Great and important steps remain to be taken by every facility, every organization, serving foreign trade, and we forwarders who deal with all of you and act as buffers between you and the United States and foreign businessmen, can probably see them as clearly as anyone.

The American merchant marine must be restored to private ownership and operation, with regular sailings of suitable ships, well trained and loyal personnel, whose care of cargo and service to the traveling public will be second to none.

The Port of New York must be modernized to preserve its enviable position as the largest and most active port in the world. New business must be created for it. Particularly through economies in handling cargo and greater speed of turn around. Port efficiency directly concerns you steamship lines, the stevedore companies, the railroad and lighterage companies, and the workers they employ.

It is of interest to note that our new mayor, Mr. William O'Dwyer, takes cognizance of this situation. At his first press conference held last week he remarked that New York faces a challenge in shipping and would have to rehabilitate its water-front facilities lest its commerce be diverted to other ports.

I urge you exporters to allocate a percentage of your goods for export, instruct your employees in sound export practice, and in foreign languages. In this sellers' market, cultivate the overseas buyer, whose present need assures you that friendships begun now will last for lifetimes. Answer your mail and make your invoices and packing lists accurate.

We forwarders, like the rest of you, have lost three generations of junior clerks, junior salesmen, junior operating men, junior everything, because of the war. As these young men return, we who live by foreign trade must train them well, both in principles and practice, to make good use of their ability, to restore them to wealth-creating activity and to useful membership in a peacetime economy.

I urge you to participate in every educational activity relating to foreign trade, in any phase—for knowledge is power.

Uncle Sam, are you listening? You consuls, too. Let us have reduced red tape. As little regulation as possible, and a wise, constructive administration of the regulations we must have. If we are to get "one world," barriers must be broken down, beginning with the artificial ones.

The United Nations Organization deserves the last and most important part of these remarks. It must be made to work. Top level people can help it along. But bottom level people, like you and me, who are constantly adding to their international friendships, are laying the real foundation for its success. If this has never occurred to you before, the atomic age will soon convince you.

It will be my earnest desire as president of this association to bring about a closer relationship between us whereby we may arrive at a common understanding of our mutual problems. That is the American way and the only way for us to strive for. With your cooperation and patience we will attain that goal.

Thank you.

Nebraska

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 16, 1946

Mr. STEFAN. Mr. Speaker, by leave granted me, I include in my remarks a poem on Nebraska written by Mrs. Harold Gilman, one of my constituents. This poem indicates how deeply Nebraskan people appreciate our great State.

NEBRASKA

Nebraska has been woven on a loom
By marching feet. The red man closely laid
The warp, as north and south, he sought his food.
The restless feet of white man wove from east
To west and back, this homespun fabric strong.
No winter's wind however keen, or sun
In summer's sky, can change this sturdy web.

Green tones of cornfields, seas of grass; and gold
Of ripened grain, pure blue of open skies,
The red of apples, wine of grapes, and black
Of fertile soil, does rival artist's blend.
But prints of patient men who lived and died
To bind the girders of our Nation's soul
Have beautified this texture more than gold.

This is the homespun cloth from which America
Has cut her freedom loving heart!

Universal Military Training

EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2d

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, January 17, 1946

Mr. BANKHEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a statement by me on the proposed universal military training legislation, broadcast on WSGN, a radio station at Birmingham, Ala., on January 6, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

What is the purpose of the proposed universal military training program?

The President stated to Congress, "Some should be trained for combat, others should be trained for whatever war service they are physically and mentally qualified to perform."

It is provided in section 2 of the administration bills pending in the Senate and House that "every male citizen and every alien residing in the United States shall upon attaining the age of 18 years, or within 4 years thereafter, be subject to military or naval training, and shall be inducted into the Army or Navy of the United States for this purpose alone!"

It is clear that the training contemplated is entirely for war purposes. Are we ready so quickly to weaken our position in total support of the San Francisco Charter? Such action is unthinkable.

Until the machinery of the United Nations Organization is in good working order and until full acquiescence in its decisions has removed the friction caused by the after-war adjustments, we need not be alarmed by the absence of newly trained reserves in the United States. If we adopt the tactics of the recent totalitarian countries and train millions of men for war, will not our leadership cause other countries to follow our example. The result will be a race for quick preparation and the building of large armies. There seems to be no surer way to militarize the world—a situation which would inevitably result in countless wars.

The universal military training plan proposes to go in time of peace into every home and school where there is a young man under 22 years of age who has not had 1 year's military training, and subject them all to military law in charge of Army and Navy officers not selected by the people and not responsible to them. It proposes to put these young men under the control of commissioned and noncommissioned officers, whose training is associated with control by force, and who too often entertain the viewpoint that nothing but force can maintain peace between nations. Every young man is to be exposed to a life in encampments which is not as wholesome as is the influence of their homes. There is a fundamental difference between military training in the schools of this country and training in military cantonments. School attendance does not remove the boy from his home and from his parents and from his community and local church. Whatever school he attends is in charge of teachers responsible to the public or the child's parents. Building the finest possible good character in youth should be the most important consideration in the training of boys and young men. If military

training of our boys is necessary, they should receive the requisite training while in school, in the national guard, and in ROTC, or some similar organizations during vacations. In addition to other advantages, that plan would not cause the loss of at least 1 year's time by boys and young men in acquiring academic, vocational, or professional training for life's pursuits.

What benefits would accrue to the Nation by such a plan? We have engaged in war in cycles of approximately 20 years. If the United Nations Organization fails to preserve peace and we have another war in about 20 years, what good will training boys next year, and each following year for years to come do in the matter of supplying soldiers at the time of the next war? How long will it take boys trained for 1 year to get soft and unsuitable for stringent military service? Probably 2 or 3 years. If a war comes 20 years from now the training for the next 17 or 18 years will be in large measure wasted, insofar as quick action in combat is involved. If a war comes before we can set up an effective peace organization, then we have available millions of men who have been thoroughly trained for a much longer time than the universal military training plan provides. What good will trained reserves do in a war waged with atomic bombs and other scientific discoveries? Japan had millions of well-trained soldiers and a large navy with which she planned to conduct offensive and defensive warfare. Did her martial forces, regular armies, and reserves successfully serve her nefarious purposes? Because of the destruction of her navy, as recounted to Congress recently by Admiral Nimitz, the destruction of munition plants by our bombers, and the appearance of our atomic bombs, with their almost unbelievable power of destruction, she suddenly surrendered before an American soldier had landed on her homeland.

Germany was armed to the hilt and equipped with fighting equipment superior to that of any nation of the world. She had every available male in her country in her armed forces. She did not win the war.

The point I am presenting is that trained soldiers and reserves, however numerous they may be, will not hereafter be rated as sufficient to win a war against an army equipped with modern weapons and fortified with atomic energy or similar power. The truth is, and we should frankly face it, that if we fight another war it will be fought with atomic energy and other explosive powers so horrible and destructive that man's imagination has not yet visualized the possibilities involved. It is the opinion of most leading scientists that the results of another war could be total destruction of the world's entire population and of the earth itself.

The atomic bomb, and all other forces of destruction heretofore or hereafter developed by any nation, should be made exclusively available to some agency of the United Nations Organization, or some new agency, which should be vested with authority and power to take such action as it finds necessary to prevent other wars. The situation demands that the executive, congressional, and military leaders devote their talents and powers to developing such a program. All agencies, instrumentalities, and secrets and use of atomic energy and all other powers of destruction should be placed under the exclusive control of the agency established to preserve peace. If the veto power stands in the way, it should be suitably modified or repealed.

All resources should be exhausted to induce every nation to cooperate in an all-out effort to secure enduring peace. The attention of the American people should be centered on this human-preserving project rather than on whether we shall now begin the universal military training of our boys in the art of fighting wars. If later it develops that some strong nation will not cooperate with us in a program that will assure peace, we can then begin preparation for the next war.

If all nations do not want to end wars, then it is likely that the next war will be fought with explosive forces similar to the atomic energy and not between armies composed of young men on each side. Wars will then no longer be won or lost by trained reserves. It should be recognized that we have crossed the threshold of a new era in the evolution of civilization.

At this time, instead of following the old way of seeking army supremacy, we should devote our efforts and resources toward research and securing developments in the field of science that will tend to end all wars.

Germany, Italy, and Japan entertained the philosophy that it was well to be ready for all eventualities by retaining large standing armies and reserve forces. It did not secure for them victories. It did not assure them peace. Excessive preparation led them into aggressive wars. History may repeat itself with other nations, including our own.

The War Department has advised the House Military Affairs Committee that the cost of providing military training per boy per annum would be $2,500. The Bureau of the Census estimates the American male youths reaching the age of 18 years in 1946 will be 1,170,000. The President's message to Congress said no exemptions would be allowed except for total physical disqualification. If 1,000,000 boys enter training the cost will be $2,500,000,000 next year, and will increase each year. The military training plan will add a staggering load of additional costs each year to the many billions now required to meet the annual stupendous reparations for past wars and the billions necessary to meet yearly requirements for administering the Government.

Why should we turn suddenly from our long-sought objectives of peaceful security of the world, when realization of our dreams is at hand?

The discovery of the way to harness the indescribable and limitless power contained in the atoms and the use of that energy under rigid safeguards and limitations by the United Nations to preserve and enforce world peace presents a new instrumentality for answering the centuries-old longings of people everywhere for security and peace. We should be patient during the current rapidly unfolding events and continue with determination our support of the world's hope for the enduring success of the United Nations Organization.

The Housing Problem

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, January 17, 1946

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered on the subject of housing before the Cincinnati Chamber of Commerce on January 7, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, I have been working for several years to formulate a national housing program. In 1945 I was appointed chairman of a subcommittee of the Senate Committee on Postwar Economic Policy and Planning to consider the housing program.

A COMPREHENSIVE PLAN

During the early part of 1944, we held long hearings at which all interests testified fully, and we explored every solution proposed. After we wrote our report, a bill was worked out by Senators WAGNER, ELLENDER, and myself, all members of the subcommittee, which deals more comprehensively than any former bill with the entire subject of housing. Heretofore bills have been introduced and pushed through Congress by groups interested in only one phase of the problem. This is the first attempt to deal with the whole subject from a broad standpoint—and I may say that 90 percent of it is devoted to encouraging the construction of homes by private builders.

Some of the provisions of the bill are, frankly, experimental. I believe those dealing with rural housing should be eliminated for the present. Some of the other provisions extending the FHA will require careful revision. The Senate Committee on Banking and Currency is now holding hearings, and I certainly welcome any criticisms or suggestions for amendments in detail.

While various provisions of the bill have been criticized, the real objection comes because we have extended the program of public low-rental housing for a period of 4 years at the rate of 125,000 homes per year, about 10 percent of construction necessary during that period.

NOT INTENDED TO DEAL WITH TEMPORARY EMERGENCY

Let me make clear that this bill is not intended to deal with the immediate emergency situation which now exists. It is intended to deal over the next 5 years with the great shortage of housing which has developed since 1932. It could not be passed by both Houses in any event until June, and it is unlikely that the projects under it, public or private, could proceed until 1947. The present temporary emergency is brought about by the present shortage of materials and labor. An expeditor has been appointed to attempt to break bottlenecks in lumber and many other building materials. He will have the full support of Congress. In my opinion, Government pricing regulations must be relaxed to stimulate production and get rid of a lot of the red tape which hampers builders today. We have appropriated money to make available to veterans all the Government's temporary war housing, but all are opposed to any further use of materials or labor for temporary housing to be built by the Government or otherwise. All of the materials available in 1946 should be channeled through the private construction industry, as much as possible for residence construction. In view of our productive ability, under any reasonable Government policy of prices, priorities, and expediting, materials should be fully available for building in 1947.

FEDERAL GOVERNMENT HAS A RESPONSIBILITY IN THE HOUSING PROBLEM

The present bill is designed to deal with the permanent situation. I suppose the first question is whether the Federal Government should concern itself with the housing problem at all. It is somewhat late, however, to discuss that question, because it has long done so. Under President Hoover we set up the Federal Home Loan Bank System to assist building and loan associations more adequately to finance housing. Under President Roosevelt we established the Federal Housing Administration, which by mortgage insurance has revolutionized the financing of homes and thus substantially reduced the cost of occupying homes when they are built. The

public housing program has been in force for more than 8 years. The Federal Government cannot avoid the responsibility of considering the whole problem.

The question we debate here is whether the Federal Government shall continue to assist States and local authorities to provide public housing at rents below the rents possible in privately constructed dwellings. I believe that it should, if that assistance is confined to the lowest income groups. Such assistance is in line with Government activities in many other fields. Public housing is not socialism by any stretch of the imagination.

The free enterprise system rightly claims the credit for the tremendous improvement in standards of living in this country. Undoubtedly, those standards, on the average, are the highest of any country in the world. Probably without Government action we could go on improving that average standard and keep the average well ahead of the rest of the world.

But the free enterprise system has certain definite faults. We have not learned to eliminate ups-and-downs, booms, and depressions—and so there is unemployment at times, and poverty and hardship if the Government does not assist. Our system is necessarily based on incentive, and a reward for ability and hard work. That means a wide range of wealth and poverty. Those who have not the capacity must fall behind. The system cannot pay more for the product of labor than that product is worth in comparison to those other products, where, for example, mass production methods or more use of machinery can be applied. Also there are many who for one reason or another cannot do a full day's work. So, apart from unemployment, the work done by many of the employed does not bring them sufficient to maintain a decent standard of living for their families. In short, while the average is high, the necessary inequality of the system leaves many poor, some deservedly, and some unfortunate.

The philosophy of socialism is to raise all to the average, which necessarily will bring all others down to the same dead level, and take all life and progress out of the system. There may be more equality, but I am certain there would be lower standards of living for the great majority.

The extreme philosophy the other way is to "let the devil take the hindmost," and let those who are unable to keep up suffer poverty and hardship, on the theory that in the end general progress will be faster. I read a book recently based on this philosophy, claiming that slums are necessary to drain off the ills of the body politic just as sewers are necessary to a city.

Without arguing the economics of this theory it is enough to say that it offends every humane sense, and that Americans are humane people. If the free-enterprise system does not do its best to prevent hardship and poverty, even for those who can't be shown to deserve it, it will find itself superseded by a less progressive system which does.

Our policy is to maintain a minimum standard floor under subsistence, education, medical care, and housing. I believe that our people have decided that our productive ability is so great that we will undertake to put a floor under essential things, to give to all a minimum standard of decent living, and to all children a fair opportunity to get a start in life.

This is really no new principle in America, nor has it ever been considered contrary to freedom. We long ago adopted the principle of universal, State-supplied education for every child, and we have gone further along that line than the most socialistic state in the world. We have adopted the principle that medical care shall always be available, whether it can be paid for or not. Witness the Cincinnati General Hospital. Certainly it was not socialism to build that hospital and provide free medical care for those unable to pay for it. We have always undertaken to provide poor relief and minimum subsistence, although it ha not always been well organized. In the depression of 1932 the Federal Government had to come to the relief of States to furnish this subsistence. It may be necessary again, although I hope through Federal aid to States and not through a federally administered WPA.

It is quite true that in providing this floor under essential needs, we should see that it is not too high to destroy incentive; that it is not so costly as to bear heavily on the other four-fifths who have to pay the bill; that it is administered locally by independent local agencies with Federal aid, if necessary, but not dominated by Washington bureaucracy.

I believe that the Government must also interest itself in seeing that every family has a minimum standard of decent shelter. Housing is a more difficulty problem than education, health, or medical care. Yet, in many ways, it is the most important. Every family must have shelter of some kind. Even though he is furnished free education, every child who is to have anything like an equal opportunity in life to make the most of his abilities must have a decent home in decent surroundings.

HOUSING A UNIQUE AND COMPLEX PROBLEM

Special problems arise in housing, because housing is permanent. Once built, it is likely to remain indefinitely and it is therefore more complex than the problem of furnishing a current supply of food, clothing, and medical care.

If all families are to have decent housing and decent surroundings, the whole housing plant must be constantly in reasonably good shape. Thirty-five million homes costing perhaps $200,000,000,000 cannot be built, repaired, or replaced overnight. Only slow progress and gradual improvement can be hoped for.

Is the plant in good shape today? Our best information comes from the census of 1940. Leaving out the farm homes, which present a special problem, there are some 29,000,000 urban and rural nonfarm residential units. Of these, nearly 4,000,000 are listed as needing major repairs and are, therefore, in bad physical condition. Of those in good repair, over 3,000,000 have no running water of any kind. Two million four hundred thousand have no private toilets or baths. Perhaps half of those without toilet facilities are in locations where water is not available or is limited, but many of them are in cities where the failure to have running water certainly indicates a very low standard of sanitary living conditions.

Our committee came to the conclusion that at least 6,000,000 of the 29,000,000 nonfarm residential units were in a condition which does not meet a low minimum standard of decency. Most of these are in city slums, where the quality of the residences is accentuated by the bad surroundings.

The problem the Nation faces is how we can get rid of these 6,000,000 homes, or if the surroundings are proper, renovate them. Of course, no one is saying that private builders or any one else are to blame for the present situation, but undoubtedly it has been brought about by the necessary faults of the private enterprise system as a whole, which as I have said, produces the highest average but does not necessarily do so well for the lowest income groups.

Taking prewar figures on income, rent, and costs, about 30 percent of our nonfarm families, or 8,500,000 had a family income of $1,000 and less. These families and others with a slightly higher income were able to find some 11,000,000 homes which rented for less than $20 a month. Nearly half of them were in rural districts and largely acceptable. Many of these low-income families were apparently able to find reasonably decent homes in proper surroundings at $20 a month and less, but the 6,000,000 substandard homes are rented by 6,000,000 of these low-income families at rents certainly averaging less than $15 a month. They rent for that sum because they are bad housing.

It is quite true that some kind of shelter is provided by our present system at rents which can be paid, but the lowest-income groups have necessarily gravitated to the substandard housing—for the most part in city slums.

As our committee analyzed the situation, the principal difficulty, assuming a proportion of low incomes, is the cost of new housing, and a disinclination to scrap old housing, no matter how dilapidated, as long as there are persons who must rent it even at a very low rent. It does not pay anyone to renovate or improve the homes. In other words, the so-called hand-me-down theory works, but it works to provide indecent housing for those who get it on the last handdown. As a matter of fact, the hand-me-down theory as a method of taking care of the lowest-income group at low rents is inconsistent with that group getting good housing. If a house has not deteriorated either in its condition or location, it ought to bring nearly the same rent as when new, providing that it is properly maintained. I live in a house in Washington which is 75 years old, and worth a good deal more than when it was built. Our committee could see no reason why, if the Government did not intervene, there would be any improvement in the over-all situation.

It is somewhat tricky to deal with the cost of housing, but as far as we could determine a four-room family house could not be built for much less than $4,000 in 1939, probably more in Cincinnati. A man who earned $30 per week at that time, or $1,500 a year, could afford to pay perhaps $30 per month for rent, or $360 a year, which would just about justify the purchase of a $4,000 home, old or new. Over 13,000,000 or nearly half of all the nonfarm families were earning less than $1,500 per year in 1939. Of course, income has increased, but costs have also increased, so that relatively the situation today is probably about the same as in 1939. In other words, today, because of costs and income, the market for new homes is confined to less than half the population and many millions of these are not in the market because they are permanently situated in the houses where they expect to live the rest of their lives. We ought to build 1,250,000 homes a year for the next 10 years. With the present cost of housing and the limited market, I am afraid that so many new homes cannot be sold by private builders. New homes, therefore, have never been built fast enough to eliminate the slums at the lower end of the hand-me-down process. The process is so slow that when slums are eliminated deterioration and blight have created other slums. If the market for new homes could extend to 75 percent of all families, the hand-me-down process might reasonably be expected to work.

The ultimate and permanent solution for the housing problem would be a reduction in the cost of housing. That cost is out of line with other costs. The Government has succeeded in reducing the cost of financing, but industry and labor have not succeeded in reducing the cost of housing. A much higher percentage of families is unable to pay for decent shelter than the proportion able to pay for decent food and clothing.

When present wartime conditions have been removed, I hope that the building industry can be reorganized and do the job of reducing prices. The more it can do so the more it can eliminate Government from the field of housing.

AID TO PRIVATE INDUSTRY

The present bill does what can be done to help the construction and sale of homes by private builders. It strengthens the Federal home loan bank system by giving many additional powers to the building and loan associations. It extends the operations of the Federal Housing Administration as far as that can be done on sound business principles. In fact, we are accused of going a little too far in reducing the rate of interest and the term of the mortgage, and we may have to make some modification. In particular, we are trying to encourage especially favorable terms, including an 85-percent firm commitment to builders for the cheapest possible type of housing which meets proper standards. We are thus trying to encourage private industry to find the best methods of reducing the cost of building.

We are broadening the provisions for the insurance of rental projects on a major scale, including sound mutual plans. We are establishing a form of yield insurance to encourage insurance companies and other large aggregations of capital to invest their money as owner in rental housing projects. As you know, several of the insurance companies have already undertaken such projects, well planned and protected from deterioration. In my opinion, rental housing, well operated, should be as good an investment as loans or corporate bonds. I greatly favor home owning, but we have to recognize the situation that many families prefer to rent. Even in Cincinnati only 33 percent own their own homes. We must recognize a condition and see that adequate rental housing is encouraged.

We have proposed an urban redevelopment plan which will assist cities to buy up slum areas, tear down the obsolete buildings, and redevelop the area by constructing public works, like parks and playgrounds, by selling or leasing sections for commercial use, or for private residential development, or for low-rent housing, or a combination of all four. Such projects may be undertaken without any public housing if the city so determines.

LOW-RENT PUBLIC HOUSING NEEDED

But, in my opinion, all of these proposals do not as yet eliminate the need for public low-rent housing. The committee estimates that there will be required in this country during the next 10 years 6,000,000 new homes to take care of new families, and about 6,000,000 to replace obsolete dwellings to which I have referred. That means a needed construction of 1,250,000 new homes per year. The bill authorizes 125,000 units a year of subsidized low-rent housing for the next 4 years. That is 10 percent of the total need as we see it. It is no more socialism than any other Government plan to take care of the lowest income group of the population in health, education, and subsistence. Private builders do the building.

The bill provides that this housing shall be available only to persons whose income is 20 percent less than that required to pay the rents for private housing, not necessarily new, available in the community. Constant checks of income are to be made, and those whose income rises above the point at which they can rent old housing are to be rigidly excluded. Private builders have criticized the existing public housing projects because many higher-income tenants have remained in such projects. This has been due to the Government policy of providing war workers with housing. In the emergency they could not be excluded from the only housing available in the neighborhood of the place where they worked. This bill insists on this situation being corrected.

We fully agree that public housing must not compete with private builders, but there is no competition in providing housing for those who are unable even to rent private housing in decent condition. The doctors are stenuously opposed to socialized medicine, reaching 95 percent of the people, but they will all tell you that they are not harmed in the least by the Government taking the lowest 25 percent of the people off their hands. What the doctors do for them is in any event charity.

The bill makes it clear that public housing can only be assisted if the project is initiated by the local governing authority, and, of course, authorized by State law; and if the State or locality is willing to contribute some part of the cost of the subsidy, by tax exemption or direct cash contribution. If Ohio or Cincinnati does not want low-rent housing they can save their money, and try some other method of eliminating slums by encouragement to private builders only.

One problem which has always concerned me is the fact that a 10-percent Government building program does not meet the whole need as I have described it, and may lead to an expanded program covering the entire 30 percent of the urban population which had incomes in 1939 of $1,000 or less. There are two answers to this. In the first place, if the private building industry succeeds in reducing costs in selling houses, the number requiring aid will be greatly reduced. In the second place, nearly half of these eight and a half million families have already found reasonably satisfactory homes at rentals of $20 and under, for the most part in the outskirts of cities or in rural areas where surroundings are satisfactory and the lack of modern facilities makes much less difference. Many other families succeed in finding reasonably good second-hand homes in the cities and keeping them in good condition. Efficient city administration can force repairs and improvements in some other inadequate homes without forcing their destruction.

I would certainly adopt as a principle that public low-rent housing should never go beyond 10 percent of the total supply. I hope that the percentage may gradually decrease.

Our committee considered all kinds of alternatives, but found none that were satisfactory. We considered the subsidizing of private projects for low-rent housing. That is done to some extent in New York City, but it would be necessary to regulate the rates charged, the condition of the premises, the tenants to be subsidized, and so many other features of the project that I am quite certain private owner would be loath to proceed. It would be difficult to enforce the regulations. It would cost the Government much more direct cash subsidy, because it could not give tax exemption or exempt the borrowing from taxation. I certainly would not object to any reasonable plan along the lines of subsidizing low-rent housing, under $20 a month, by private companies, but we could not work out any practical plan. We have attempted to give every possible assistance through sound FHA insurance for middle incomes, but without subsidies you cannot reach the low-income groups through FHA.

We considered the giving of rent certificates to all those who cannot afford to pay the going rents for decent private units. The giving of rent certificates, however, does not necessarily improve the condition of housing in which they live. It may merely raise the rent acquired by the owner of slum housing. No one is going to build new homes for people who may or may not have rent certificates 10 years from now. It is a very indirect and uncertain method of improving the housing plant. Furthermore, if we attempt to give rent certificates it will have to be a universal plan, and any man with $1,000 a year income or less would have a claim for some assistance. There are some eight and one-half million such urban families. We believed it would certainly not be cheaper than public housing, and it would not accomplish the purpose of improving housing conditions.

What we face today is a condition and not a theory. It is to improve or get rid of 6,000,000 substandard dwellings and at the same time provide decent shelter for the 6,000,000 families who have occupied them. The problem must be attacked from every angle. I don't believe we can pour in all the assistance from the top, and that is all private industry can do, or be expected to do. I think we must also attack it from the bottom. No doubt there are faults in our public-housing system. They should be eliminated. Our committee would favorably consider proposals for any proper requirements or restrictions which would improve the administration of public housing.

But those who are opposed to the entire bill because it adopts public housing as one of the tools to solve this problem are doing their own industry a disservice, and are assisting the critics of free enterprise in the United States for years to come.

No one has been more concerned to limit Federal regulation than I. But this is no more regulation as to housing than we have long adopted as to education, subsistence, and medical care. No one has been more concerned to save Federal money than I. But $100,000,000 or $200,000,000 a year of Federal subsidy to assist in solving our most serious social problem, out of a total Federal budget of more than twenty billion a year, does not seem to me an extravagance.

There can be no greater responsibility than to assist States and local governments to provide for all the children who are born in the United States decent home surroundings, so that they may actually enjoy the freedom and equality of opportunity for which our forefathers came to America.

International Problems Abroad and Economic Issues at Home

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, January 17, 1946

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the annual chamber of commerce dinner at Gastonia, N. C., on January 11, 1946, on the subject of serious international problems abroad and critical economic issues at home.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

America is facing serious international problems abroad and critical economic issues at home. Both require the best thought of the Congress and the leaders of the Nation. They cannot be settled by taking arbitrary positions and insisting upon our own particular viewpoint. We must be willing to recognize the reasonable contentions of other nations and pursue a policy of mutual understanding among our people at home.

Many laws have been enacted to implement our participation in world affairs and to assure other peoples of our world-wide interest and willingness to help stabilize the disrupted economy of our allies and other nations devastated by the war. We have also contributed lavish sums to help relieve the suffering and distress in the stricken areas of the whole earth. We have led the way for the establishment and maintenance of world peace.

It now becomes our duty to devote our best efforts to aid in the solution of the domestic problems which involve the highly important questions of inflation, full production, the prevention of strikes, and the removal of all bureaucratic controls at the earliest possible moment.

We have fought for freedom and liberty for the world. We must not fail to preserve this liberty and freedom for the people of America. We are standing at the crossroads. There are strong forces in the country seeking to infiltrate our democratic processes of life with so many socialistic or communistic philosophies that our whole economic system and our boasted free enterprise is seriously endangered. These groups want the Government to take charge of all business and provide a planned economy and they are carrying these policies just as far as they dare go now.

A planned economy means a regimented people and this results in a totalitarian government. Our laboring people would have the most to lose by the destruction of democratic processes, and yet by the policy of continued strikes they are playing into the hands of the very forces which would destroy their freedom and liberty. They ought to investigate the condition of labor in all totalitarian countries and see the practical serfdom which prevails among the workers. National socialism or state communism buries the workers in the mass of controlled and regimented subjects denied the right to live their own lives or enjoy the fruits of their own labor.

We must not have drastic inflation. There are many plans for dealing with this vexed question. The one sure remedy is to attain full production. Governmental controls will have to be maintained on products which are so scarce that prices would spiral if the controls were removed. Wild inflation would endanger permanent prosperity and result in destroying established values and delaying the recovery of our whole business structure. The effort should be centered on increasing production and OPA should adopt the wise policy of granting reasonable increases which would encourage industry and farmers to meet the needs of the Nation by producing an abundance. As soon as an adequate supply of any product is available, all controls should be removed. The law of supply and demand will take care of the situation.

The hindrances to full production today are twofold. One, the refusal of OPA to grant reasonable and just increases in the price of much-needed materials like lumber, brick, and other building materials, and many manufactured products in the field of textiles, and especially as relates to the cheaper goods. As a result of this policy we have not achieved full production and much of the lumber and other scarce materials have gone into the black market and the public and legitimate dealers suffer. The other chief hindrance is the continuous strikes all over the country.

In my opinion the Congress should take definite action in the field of labor relations. Without delay the National Labor Relations Act should be amended and its one-sided and unfair provisions repealed. There should be equality before the law for labor unions and management. Now there is unjustified discrimination in favor of labor unions. Both labor and management should be held equally responsible for their contracts and made to respond in damages for violating agreements. Both should be held accountable for their acts.

The right to strike is guaranteed under the law. This carries with it the right to peacefully picket. But there is no authority of law for using violence or force to prevent the owners of a plant or workers from crossing picket lines and entering to work, even though a strike is in force. However, this is seldom observed and in Connecticut, Michigan, Pennsylvania, and other States, plants have been closed and strikers refused even to let the owners of the plants enter, and beat up any workers who dared to offer to work. This could not happen in North Carolina. We maintain law and order in this State, and I wish to congratulate both workers and management upon the fine relationship which prevails and the splendid cooperation which has existed. There have been comparatively few strikes and practically no violence.

The unions must realize that the right to work is just as sacred as the right to strike, and the law must guard zealously the right of any person to work, regardless of strikes. So many of these strikes which paralyze business and cause widespread suffering, like the recent coal strike and the present General Motors strike, are unauthorized and brought about by ambitious labor leaders and a minority of the workers in the union, but all of them suffer as a result and lose public sympathy. The public is thoroughly fed up on strikes and properly demands legislation to curb these wildcat strikes and provide protection to workers who do not wish to strike and to a long-suffering public.

I believe in reasonable wages and good working conditions for all workers and the whole country sympathizes with all legitimate demands of labor for just compensation to meet the increased cost of living, but I am not in favor of determining this question by the amount of profit a business may be making, or its ability to pay. Should that method be employed, then when profits decreased and business was bad, the workers would be the sufferers. The Government has no right to take charge of the business of any company for the purpose of regulating its management or controlling its profits. If free enterprise is to continue and jobs be provided for the workers of America, we must have business freed from governmental controls and regulations—so long as the law is obeyed—and give full encouragement to industry to grow and expand. We cannot afford to penalize efficiency and good management by making them pay higher wages than their less successful competitors, merely because they have the ability to pay. The interest of the public must be considered in the decreased cost of the product manufactured.

The time has come when this whole question should be dealt with from the standpoint of the public interest. Pressure groups and minority factions have too long been favored in legislation and by the courts. The people should demand equality before the law for all, and cease this special favoritism for organized groups. The public interest should be paramount.

With the adjustment of our domestic disturbances and the gearing of industry and agriculture to full production, America should enter upon a period of unprecedented prosperity and of abundance for all. The common man should attain a higher standard of living and greater opportunity for his children in the tomorrows to follow.

Address by Senator Morse on the Twenty-fifth Radio Anniversary

EXTENSION OF REMARKS

OF

HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, January 17, 1946

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech which I delivered on November 10, 1945, at a citizens' committee banquet honoring the twenty-fifth radio anniversary.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Politics are not what they used to be in America, thanks to radio. Students of political science in and out of Congress recognize that radio has become the most effective instrumentality for political education and campaigning available to the candidate for office. Radio has produced such a high degree of political enlightenment and such a thorough grasp of the pros and cons of national issues on the part of our people that it deserves much credit for our national unity in meeting the great crisis of recent years. It has done much to elevate political campaigns from exhibitions of demagoguery and medicine-show techniques to the educational plane of reasoned discourse on campaign issues.

The calm atmosphere of the voter's home living room, the sense of independence which accompanies our American doctrine that our home is our castle render ludicrous the politician who, over the radio, seeks to win votes by appeals to prejudice and non sequitur arguments. Blind partisans may still follow a candidate who, over the radio, substitutes sound and fury for reasoned discourse, but the intelligent independent voters who fortunately for our democracy, outnumber myopic partisans, as nimble of finger in turning off the radio as they are in marking their ballots when a candidate insults their intelligence.

Radio must continue to be maintained as the great open forum of American politics. Freedom of political discussion becomes a frustrated ideal unless the media for discussion are freely accessible to our people and to our candidates for office. I do not mean financially free, although even there financial barriers can be so high as to make politics a rich man's service. But the type of free radio I'm talking about involves a freedom from any industry or Government policies expressed or concealed, direct or indirect, which may hamper freedom of lawful discussion of problems of state. Such freedom is as essential as our cherished freedoms of speech, press, and assemblage if we are to remain a free and democratic nation. I have every confidence that those now directing the course of American radio policy both in the industry and in the Government can be trusted to preserve this freedom of which I speak. I am so impressed with the educational force of radio for developing a strong and vital political conscience among our people that I would welcome broadcasting at least many of the historic sessions of the Congress. Maybe broadcasting a few which are not so historic would be educationally valuable to the American people, too. Such radio waves emanating from the halls of Congress might produce atomic political effects quite constructive in nature.

Needless to say, it has been an honor for me today to pay honor in behalf of the Congress to the great radio industry of America. It is very appropriate that representatives of free men and women should acknowledge at such a grand occasion as this the Nation's debt to the industry which provides our people with their most informative and enlightening political forum. Let us keep it the Nation's greatest disseminator of the truth so that we may remain free.

The American Future

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, January 17, 1946

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The American Future," delivered by Wheeler McMillen, editor in chief of the Farm Journal, before New Jersey Chapter of Pro-America, at East Orange, N. J., on November 8, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The future of this country of ours will depend upon the American ability to continue to produce goods and services. Our productivity depends upon the continuance of freedom.

Under freedom we have done a job so remarkable that all the world looks with admiration upon American achievements. Here we have only 7 percent of the world's people. Yet we do about one-half of all the world's business, own 60 percent of the world's life insurance, use 60 percent of the world's rubber, own a third of the world's railway mileage and a third of the world's improved highways, use half of the world's telephones, and have four-fifths of the world's automobiles.

Our resources are not remarkably different from those of other continents. The only fundamental difference is that Americans have been free. Freemen in America, a small percentage of the total number of men in the world, have accomplished a tremendously high proportion of all the advancements in invention and science that the human race has experienced. Here as nowhere else men have become productive. Free to think, free to serve their understanding, they have become masters of the revolutionary principle that man does not conquer nature but he obeys her. The more he learns about the laws of nature, the more willingly she yields up the riches inherent in her materials.

Americans thus unfolded the application of steam, discovered the uses of petroleum, and applied the power of electricity.

The world was poor for thousands of years because all the work of the world had to be done by muscles of men and animals, aided occasionally by wind and water. We have created engine muscles. When we need to produce more goods we have only to build more engines. Engine muscles will work from dawn to dark and on until the sunrise again without exhaustion or weariness. When there is work to do that demands bigger muscles, we build bigger engines.

In the free pursuit of knowledge it was American scientists and industrialists who created the atomic bomb. It is always scientists and industrialists and workers who create things. Kings and generals and statesmen are not creators and are not producers.

Now the atomic bomb sizzles in the hands of statesmen who do not know what to do. Neither do I, but I cannot help but wonder. I wonder why, if an atomic bomb for the destruction of life can be devised, comparable efforts should not instantly be organized to develop atomic power for constructive uses. We now know how to destroy civilization with atoms. We would do better now to try to build civilization with atoms.

The most fundamental threat to peace among men always is poverty. Work which produces food and goods and services is the remedy for poverty. With engines to do work, Americans have left much of their poverty behind them. Can't we build an atomic engine able to do enough kinds of work cheaply as to add so hugely to world production that poverty instead of civilization may be atomized by this power?

I am not sure that the statesmen are going to know how to manage the power of the atom. It fits all too well into the old patterns of statesmanship seeking agents of destruction. Forty years ago a couple of our Iowa farm boys conceived the idea of putting an internal combustion engine on wagon wheels and making a tractor. They believed they had made a contribution to civilization by creating a new engine to do man's biggest annual lifting job, the job of turning over billions of tons of earth with the plow. When the statesmen and generals saw the tractor they conceived the idea of putting armor on its sides and cannon on its insides and making a tank, a new weapon with which to kill people.

When the Wright brothers invented the airplane they thought they might be giving civilization a new means of transportation and communication. The statesmen and generals seized upon it as a new engine of destruction.

I don't know what was in Fritz Haber's mind when he worked out the process by which nitrogen can be crystallized from the air and made an abundant fertilizing element to increase the production of the soil. In any event, his achievement eliminated the need that men shall starve for want of nitrogen to make their fields more productive. But Kaiser Wilhelm looked upon that achievement and decided that Germany finally had an abundant source of nitrogen for explosives and was ready to start a new era of bloodshed and war.

The affairs of the world might better be trusted to the scientists and engineers, and the workers and farmers, the businessmen and managers, rather than to the statesmen. The effects of what we call statesmanship appear to be all too destructive.

We agree that America's rich past has been built on freedom. The experience of the past reinforces the importance of preserving freedom as the fundamental ingredient of our future.

If we really believe in freedom, our thoughts and efforts will be directed toward constant restraint of the expansion of the power of government. We will externally exalt the individual. We will devote ourselves to make certain that government goes no further than is necessary to preserve the individual's freedom, to make certain that my liberties end where yours begin.

Our basic principle must be that government shall always be the servant of the people and never the master of the people; that government shall have no powers except those derived from the people, just as it has no money except that which it takes from the people.

All of us will admit that the United States is not a completely perfect country. In a century and a half we have not quite had time to accomplish everything. Yet, we have not done badly.

It has been repeated time and again that one-third of Americans are ill-housed, ill-clad and ill-fed. What other country on earth can boast that two-thirds of its people are well-housed, well-fed, and well-clad?

Under freedom, our advance for 140 years was almost uninterrupted. Every 10-year period saw more new wealth created, more new jobs brought into being than had existed in the decade previous.

The only decade in our history which did not produce more wealth and more jobs than its predecessors was the decade of the 1930's.

Could that have been because in the 1930's for the first time Government was permitted to exert powers which never before in our national history has been allowed?

During the Constitutional Convention of 1787, important decisions as to articles and clauses of the Constitution were made from day to day. They were decisions which have affected our lives enormously. One day after one important decision, one member turned to another delegate and asked, "What do you suppose the people of the United States will think about this decision of ours today 150 years from now?"

The other delegate leaned back in his chair and laughed heartily. He was amused at the very idea of anything that convention decided being even remembered for a century and a half.

I think that delegate was entitled to his laugh. He knew history. He knew that during all the thousands of years of human existence, the greatest struggle in society had been the constant conflict between power on one hand and freedom on the other. He knew that up until that day freedom had always lost and authority had always won. He knew that this convention was, for the first time, trying to create forms for a government which could be restrained from getting in the way of men who wanted to work and produce and live their individual lives. With his knowledge of the history of the past, he could hardly be blamed for doubting whether the effort would succeed. He could not have been expected to know that it would be followed by the greatest spurt of civilization in human experience.

It is not easy for us in the midst of our comforts and luxuries today to realize how tremendous were the consequences of that Constitution a document which Samuel Pettengill has called the greatest postwar plan ever written.

It may help to visualize the extraordinary speed of progress since the Constitution if I tell you about Joseph B. Case, a friend of mine who died just 2 years ago at his home over here in Lambertville, N. J.

Joe Case was in his 103d year. He was born in 1841. This Constitution of ours was only 52 years old in 1841. There are a few here today who with me can testify that 52 years are not very many.

When Joe Case was born the reaper was only 10 years old and only a dozen or so had been made. The first steel plow was only 3 years old. Joe Case himself was 3 years old before the word of man could be communicated beyond the reach of his voice faster than the speed of a horse. It was in 1844 that the telegraph was established. He was 7 years old before the sewing machine was invented. He was 18 years old before kerosene lamps came into general use. He was 35 years old before the telephone was invented. He was 37 years old before there was an electric light in the world. He was past 40 before there was an internal combustion engine or an electric dynamo. And he was past 50 before there was an automobile.

All these and the many marvels which have come since are the products of freedom. Our automobiles, our radios, our comfortable homes are the tangible results of free government. They were conceived and created within the life span of a New Jersey neighbor who walked the earth until 2 years ago.

Under freedom we have proved that the philosophy of production is infinitely more desirable than the ancient predatory philosophy which taught men to believe that they could get ahead only by taking things away from others. It was the philosophy of conquest and theft, the philosophy that might makes right. It was on the predatory philosophy that Rome built an empire and that other empires since have been erected. It was a predatory philosophy that inspired Mussolini and Hitler and the Japanese military people.

That philosophy is not extinct. Not long ago a famous prelate was heard to say, "It is true to say that the more one has, the less there is for others; so that each man's success represents corresponding failure on the part of his neighbors." I quote this only to illustrate how far into our so-called civilized society the predatory concept extends and how completely the philosophy of production fails to be comprehended.

The American philosophy is the philosophy of production. It is based on our discovery that freemen, finding an understanding of the laws of nature, are able to convert the materials of nature into abundant wealth. Freemen have enriched their country by producing things while the totalitarian spreads poverty by his effort to take things.

Growing and making things pays better than taking things.

Under the philosophy of production there is little excuse for individuals and groups in the United States to devote their full energies to contention over division of what there is. Far more profitable is the exertion of energy to increase the national output. Then there will be more to divide among all.

The production philosophy under freedom has worked in the United States. I wonder if we are not too modest in making clear to the rest of the world how well it might work elsewhere. Our production machinery and our managerial know-how will produce goods in any language and under any sun. Perhaps part of the destiny of Americans, when recognized, will be discovered to be to help others to help themselves.

If we believe in freedom, why do we not teach freedom? Other philosophies of government seek to impose their ideas upon their neighbors. Why should not we raise our voices and be heard speaking the voice of freedom and shouting the praises of freedom around the earth?

There was a time when Americans had that faith too strongly to keep it to themselves. When the Spanish colonies in South America revolted against the tyranny of Spain, the voice of Americans was raised in their behalf. When the Greeks sought to win freedom for their nation, the aid and sympathy of Americans crossed the seas to help them. When Baron Kossuth came to the United States to plead the cause of a free Hungary, freedom for Hungary became important to Americans.

Those events took place a century or more ago. Have we lost so much of our faith and freedom as to be disinterested when pleas in its behalf now arise in Europe or Asia?

Is it not possible that the best way to make freedom safe in America, the only area where still it stands, is to exercise our influence toward making freedom safe elsewhere in the world? Wouldn't we do well to exert more effort toward making it abundant instead of rare? When freedom does prevail everywhere, we shall have less need to be vigilant for its preservation in the United States.

I am happy to have this occasion to speak to you who stand foursquare with "Pro-America" inscribed on your banner. No one needs to apologize for being pro-America.

Scientific Research Foundation

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, January 17, 1946

Mr. SMITH. Mr. President, at the request of some of my scientific friends, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Newark Evening News, of Newark, N. J., under date of November 29, 1945, entitled "Solely for Science." This editorial comments on a letter sent to President Truman under date of November 24, 1945, by a group of scientists commenting on the Bush report and on the so-called Kilgore and Magnuson bills for the setting up of a scientific research foundation with Federal support.

In asking that this editorial be inserted in the RECORD, I desire to add the comment that this subject is one of first importance and one that should have very careful study before any hasty legislation is enacted.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOLELY FOR SCIENCE

Well before the projected National Research Foundation has chance of taking tangible shape many of the country's leading scientists are fearful that it will be overlaid with politics. Nobody knows better than they the dangerous shortage in scientific training and personnel caused by the war. They heartily approve the report on the subject last July to President Truman by Dr. Vannevar Bush, Director of the Office of Scientific Research and Development, who had been ordered to make the study by the late President Roosevelt, and it is their earnest desire that most of its recommendations be embodied in law. But they see a double danger of its being swayed by political influence and its dilution by the inclusion of social studies.

The consequence is that a large committee of scientific experts, including such men as Presidents Bowman, of Johns Hopkins; Conant, of Harvard; Doherty, of Carnegie Institute of Technology; Marvel, of the American Chemical Society; and Stearns, of the University of Colorado, have written to President Truman, urging him to back the Bush plan as incorporated in a bill by Senator MAGNUSON (Democrat), of Washington, and not the bill by Senator KILGORE (Democrat), of West Virginia. Creation of a National Research Foundation, to provide annual scholarships for 24,000 undergraduates and some 900 graduate fellowships and endowments for continued long-time research, is indispensable to our national security. And it should not be padded by nonessentials to its special purpose, like sociology, political science, economics, and law. Its one aim is scientific research.

The committee is outspoken in its objections to any single director of the proposed research board, as proposed in the Kilgore bill. No better reason for such opposition could exist than this of the committee: "No single person, however eminent or competent, could, except in a great emergency, command the confidence and support of all branches of science and the many organizations and agencies, private and public, whose cooperation would be required." That is plain speaking; the most outstanding scientist, the most distinguished university administrator on the committee rightly disclaims ability to fill any such post. If these men admit they are incapable, where is Mr. Truman, sitting in the White House and pulled and tugged at by those with axes to grind, going to find the man who is?

We agree with the committee that "this is a great adventure in government for which there is no peacetime precedent," full of risks beyond the capacity of any individual. It wants no "subordinated board" with ex officio members. It certainly is no place for political officeholders of either party, however well intentioned. What the committee wants is a board capable of instituting or supervising all the work and itself responsible for the appointment of its chief administrative officer whose function it would be to look after its internal affairs. The board, consisting of scientists and nonpolitical laymen, would keep in close touch with all scientific agencies in and outside of the Government; it would know about and influence by its help the plans of Army and Navy, but not control them, as the committee members view the plan. What it wants is enlarged scientific personnel and wide scientific research with politics kept out. Is that too much to ask?

The White House Department

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Walter Lippmann:

TODAY AND TOMORROW

(By Walter Lippmann)

THE WHITE HOUSE DEPARTMENT

Mr. Truman dwelt on the fact that while in foreign affairs Congress has been willing to legislate, his own proposals for domestic legislation are for the most part stalled in committees of the House of Representatives.

Where shall we look for the explanation? First of all, it seems to me, in the White House itself. For if, as Mr. Truman himself said, "the great mass of our citizens who have no special interest * * * find it difficult to make themselves heard," it must be because the President himself has failed to make it quite clear to them what they are to make themselves heard about.

They certainly cannot make themselves heard distinctly and strongly and with one voice about 30 or 40 assorted proposals.

The great mass of the citizens cannot support a complicated program consisting of many detailed measures; what they can support is a policy which the program is designed to put into effect. Thus, the people are supporting the policy of international cooperation, and that is the reason why, without their understanding fully the detailed measures as such, they have been behind intricate proposals like the Charter of UNO and Bretton Woods.

But Mr. Truman's recommendations are a program of which no one, not he himself, can say what the policy is. In his radio speech Mr. Truman in effect admitted it

when, speaking of the dangers of the reconversion period, he said he was trying "to avert the dangers of inflation and deflation." Is it astonishing that the people do not understand a program which appears to be moving in two opposite directions at once? How, without a much fuller and clearer explanation of what he is trying to do, can Mr. Truman expect great popular support for a program which, on the one hand, would increase purchasing power and the inflationary demands for goods, and, on the other hand, would control prices and the use of raw materials in order to refute the excessive demand for goods?

Presumably what the President has in mind is that in the present reconversion period there is inflation in certain sections of our economy and deflation in others. He is aware, then, that until civilian production is considerably greater than it is, there will be a predominating inflationary pressure on prices which may, if it is not controlled, be extremely inconvenient and troublesome. Beyond that he realizes that at some time in the future, the postwar boom will exhaust itself, that consumption and investment will fall off and be quite insufficient to sustain a high level of employment, and that a dangerous depression is indicated unless measures are prepared well in advance to correct the deficiencies.

This is probably what he is meaning to say since it is what the ablest economists in the Government service are predicting. It is, obviously, a rather complicated prediction, and it cannot easily be made clear and convincing to a large audience. But if that is to be done, the President will have to get his speeches on the subject written by men who really understand it.

What he is doing instead is to have men, who do not themselves understand very well what it is all about, explain what little they know in words of one syllable. But a really difficult subject cannot be explained simply except by someone who has mastered it thoroughly. Yet it is very evident that the men who helped him compose this speech, or at least those whom he listened to finally, had only a recently acquired smattering knowledge of what they were talking about.

Mr. Truman's troubles can be traced directly to the fact that he is just beginning to learn what the office of the President really is. He certainly did not realize at the beginning that the White House has now become itself a department of government. The Presidency is not just a man with some secretaries and some clerks. It is the central department of the Government where all other departments meet, and have to be guided, corrected, superintended, and made a team. This requires a White House staff of men who are so able and so versatile that they can settle many issues in the President's name, can select the issues the President himself must decide, and can prepare the issues so that he can know enough to decide them.

Now while Mr. Truman saw the need to reorganize the Cabinet and to use it, he did not see that he needed also to make the White House itself an efficient department. The Truman Cabinet is by any reasonable standard a good Cabinet. But the White House is deplorably weak, and since Mr. Truman is a modest and unpretentious man who must feel his way without benefit of much inspiration through a maze of problems, he has little hope of being a successful President if his own immediate official family remains what it now is. The blunt truth is that the men nearest him do not have enough brains, and have practically none of the wisdom which comes from experience and education, to help him to be the President of the United States.

The other day the Emperor of Japan told his people to abjure the myths and legends that he is divine. There is an American myth and legend, which it would be well for us to abjure, that "the plain people" who "made this country great and keep it free" like mediocre men in their Government, and do not respond to excellence and distinction. This is a politicians' fable. For the plain people are in fact not so plain, or as Franklin P. Adams once put it, the average man is above the average. If the polls are to be trusted at all, they prove that statistically. Furthermore, it is not true that the so-called common people like to have common men to lead them and govern them. They much prefer men of uncommon ability and character whom they have reason to trust. Any list of American leaders whom the people have liked is a list of men who, no matter what their background and origin, were distinguished men in any company: Washington, Jefferson, Cleveland, Lincoln, Wilson, the two Roosevelts among the Presidents; men like Root, Hughes, Stimson, Al Smith, Willkie, who played a great part in American life.

The cult of mediocrity, which is a form of inverted snobbery, is not democracy. It is one of the diseases of democracy. For what democracy demands is equal rights for all men because they are men and, at the same time, equal opportunity, so that what is best and exceptional in each man may come forth and flourish. Faith in democracy is justified by this promise that it will release talents and gifts that would be suppressed in a society of caste, and, therefore, that it brings into the service of the Nation and of mankind men who have rich and varied and excellent abilities.

Our Homeless People

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1946

Mr. PATMAN. Mr. Speaker, hundreds of thousands of ordinary American men and women today are unable to find shelter for their children and themselves because of the lack of an adequate Government program to provide houses.

How homelessness affects people is ably expressed in an editorial of December 9, 1945, in the St. Louis Post-Dispatch, often quoted as one of the strongest newspapers in the Nation. Under permission to extend my remarks in the CONGRESSIONAL RECORD, I should like to include this description of what is happening to our people, for the edification of the Members:

THE FACES OF THE HOMELESS

Homelessness does something to people. It is doing something to at least 5,000, perhaps as many as 10,000, in St. Louis right now. Some of the distraught faces of these thousands of our people are portrayed in the pictures section of the Post-Dispatch today. There are more in any real estate office, on any bus, at any corner.

What does it do to them to be torn up, drifting, obsessed with the one problem that becomes more and more depressing every day?

They are bewildered. What they have always been able to obtain as a matter of course, a place to live in, they can obtain no longer. They are set apart from other people who have a place to live in. Others have or can rent living quarters or can afford the exorbitant prices at which houses are sold; they cannot.

They are embarrassed. The feeling of insecurity weighs heavily on their spirits. Are they pariahs, are they suckers, are they the forgotten men and women and children? Why should they lack a family's first necessity, a home?

They are on nervous edge. Some of them are living beyond their means in hotels and tourist courts, harassed by the knowledge that they can't afford it indefinitely, but not knowing whether it will be 3 months or 6 or 12 before they can find anything. Some are doubling up with relatives or friends, continually subjected to the continuous small irritations of overcrowding, always cramped and unsure of comfort, never able to relax from the strain of work and house-hunting and work again without any of the blessed privacy of home in between.

They are just plain mad. Not grammatically angry, but mad. They have a decided impression that they have been let down. They don't see it getting any better, and they do see it getting a lot worse. They are certain of one thing: That if the only people who can do anything about it know how urgent the need is, they ought to be moving a lot faster and to a lot more effect than they are. They think they are getting a raw deal, and they expect to remember it.

These are the homeless, the people who have come home to a reception as cruel and disillusioning as if the warmth and trust of homecoming had been rewarded by a fist smashed into their faces.

What Can the People Do?

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1946

Mr. BENNETT of Missouri. Mr. Speaker, having been granted unanimous consent by the House, I extend in the RECORD the following editorial from the Springfield (Mo.) News and Leader of Sunday, January 6, 1945:

WHAT CAN THE PEOPLE DO?

President Truman's speech Thursday night spotlighted one of the most complicated, difficult, and perplexing problems of a modern democracy—how to make effective, in the complexity of modern life, "government of the people, by the people, and for the people."

To be sure, the President presented many specific problems—foremost the labor crisis that is hindering reconversion and a return to peace and normality, and increasing the danger of inflation. The only normal way to deflate without disaster is to go ahead with such a lavish production program that competition and plenty will gradually and normally force prices downward toward a safe base. On the other hand, no production, scarcity, high prices, and a pressure expending the inflation balloon to the bursting point. If it is allowed to pop, everybody will suffer, labor not least.

The present labor situation is the very logical—almost inevitable—result of Government policies during the past 14 years under Democratic and New Deal administrations. Now it has passed the point where the administration can handle it—and, indeed for years past it often has looked as if labor were handling the administration, rather than the administration handling labor. At any rate, an impasse has been reached—and at this late day, the President rather helplessly, passes the buck to the people, just as he passed them the buck of responsibility for Pearl Harbor a few

months ago, apparently not knowing what else to do with it.

One phase of this labor crisis he did not mention—perhaps could not mention: That much of the striking now under way is not, in fact, either industrial or economic in origin, as is normal, but that it is politically inspired. Many men are striking today, not for the normal things—better working conditions, higher wages—but, under the leadership of Communists, for a new order of things and a communistic or socialized setup in this country.

And of course this—and the whole cocked-trigger labor situation—are quite as sensitive a spot with Congress as with the President himself.

There are a good many things which could be said about the President's speech—and most of them have been, many of them quite pointedly.

But these things we skip for the present, along with comment on the other specific matters he mentioned, each of which would require a full editorial for adequate discussion, because we want to contemplate further that appeal to the people which was the real core of his talk.

But the President was wrong about "the great mass of citizens who have no special interests" being "the most powerful pressure group in the world." They are not a pressure group—they are not a group at all, in any organized sense. That was the President's very point, we take it—that all these great majorities of disinterested citizens ought to be exerting some pressure, and are not. Their influence is too diffuse to be felt—while the special interest lobbies, with infinitely less potential power, have their small influence so concentrated and focused that it is keenly felt, and becomes potent. You're hardly aware of the ordinary humidity in a room—but you're pretty keenly aware of the steam out of a teakettle spout if it's turned on you.

Anyhow, if the people actually ever did put the pressure on Congress that the President seems to suggest they would no longer be the people, but just another and bigger pressure group or lobby.

So what can be done about it? How can the voice of the people be heard? How can they make their influence effective, as the President asked?

In the old days, when government was chiefly local, everybody involved could meet in a town meeting and thresh the thing out in free and open discussion—a truly democratic procedure.

As populations increased and societies became far more complicated and unwieldly, representation was evolved. The men who used to go to town meetings, since they no longer could handle the government directly and personally, delegated selected representatives to do it for them—an extension of simple democratic procedure. In theory, Congress is the voice of the people. Perhaps it is the President who should listen.

And what is the real job of a real Representative?

There are, of course, two kinds of employees—the ones who do what they are told and wait to be told what to do, and the ones who assume they are employed to do their job and go ahead and do it.

There are both kinds in Congress. The first are so jittery for their jobs that they are afraid to take any stand—the ones who always keep an ear to the ground and finger to the wind, in the hope of sensing public sentiment and acting accordingly. They are not representing public sentiment—they only try to reflect it, and they flicker and fumble accordingly.

The others feel it is their responsibility to represent the people's interests—and they realize their obligation to know what those interests are and to understand and protect them. They realize that today it has become physically and literally impossible for every citizen to follow all the intricacies of legislation personally, and that they have been employed for the specific purpose of doing the job for them.

What Mr. Truman proposes, we take it, is that the folks back home should get busy and tell their Congressmen what to do. If they could, that would make it easier for everybody. But the simple truth is that they cannot, and should not be expected to. They don't know. That's what they hired their Congressman for—to study and understand such things for them, and to act in their best interest accordingly.

Government is important, and each citizen and voter certainly should feel his responsibility to see that it is competently handled—but he shouldn't be expected to handle it himself.

So as we see it, the voter's biggest job is to see that his representatives are the best men he can find to represent him—carefully selected men of superior caliber; sound men; men of character, knowledge and good judgment; men who understand principles, economics, and the law; men who will keep informed, who know what the interests of the people are and will serve them honestly and disinterestedly, and who will accept the responsibility for representing them with all their skill and energy.

From this point of view, our voters have reason to be proud of themselves— for our Congressman is honest, intelligent, very conscientious and industrious, and a man we can be glad to have represent us. He may make mistakes—so might any of us, or all of us. But he is a man whom we can trust to represent us, one in whom we can have confidence.

Mr. BENNETT said yesterday that he "welcomes" expressions of opinion from his constituents.

We believe that they, in turn, should be careful to express opinions only when they really know what they are talking about. Opinions to be helpful must be informed, considered, and intelligent; those which are ignorant and prejudiced are dangerous, not helpful.

Senator Morse Takes Over

EXTENSION OF REMARKS

OF

HON. GUY CORDON

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, January 17, 1946

Mr. CORDON. Mr. President, in the Portland Oregonian of January 8 there appears an editorial in the nature of an appraisal of the distinguished services performed by my colleague the junior Senator from Oregon [Mr. MORSE] during his first year of service in this body. The editorial is perhaps more than an appraisal. It may even partake of prophecy. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR MORSE TAKES OVER

Whether or not Senator WAYNE L. MORSE's challenge of Senator TAFT and the congressional old guard has any effect in shaking loose President Truman's legislative program, it will have a great effect upon the off-year elections coming this fall and no doubt upon the Presidential elections of 1948.

This could be the turning of the tide toward a new—or a revived—Republican liberalism. The scene has been set for it. And Oregon will watch with increased interest and considerable awe because her junior Senator, in office only 2 years, has violated all the rules of silence imposed upon first-termers and escaped unscathed. Rather, he has achieved a definite leadership of the reform movement in Congress—perhaps the leadership—by sheer brilliance and forthrightness. His is the outstanding case of its kind within our memory. And there is no telling how far Mr. MORSE will go, particularly if his demand for the choice of liberal Republicans in the 1946 elections should have sweeping results.

Not that we have any great faith in President Truman's delayed legislation. We have said that it seemed inadequate to its job. Nor do we know that Mr. MORSE has any great faith in it.

Nevertheless, the Oregonian shares Mr. MORSE's disgust with the fact that Mr. TAFT should have taken advantage of the situation by attempting to fasten upon the Republican Party an antilabor, antiliberal program. If Mr. TAFT's statement linking the Truman legislation with the CIO's Political Action Committee had gone uncriticized by his own party, it would have done irreparable harm by tending to set the tone of the coming campaigns. Unchallenged, it would have amounted to announcement that the diehards on the Republican side of the aisle in Congress were still the spokesmen, so far as the spokesmanship resided in Congress, for the party.

The prompt retort by the Oregon Senator has obviated that danger. He has in effect served notice of a revolt against the old leadership which will be carried to the voters this fall, to the Republican National Committee as the opportunity offers, and to the national convention and the elections 2 years hence.

This background of conflict within the party is not, of course, unknown to any intelligent voter. Dynamic and liberal republicanism has extended from Abraham Lincoln through Theodore Roosevelt to Wendell Willkie. It is a liberalism which sees no paradox in preserving and extending free enterprise and at the same time giving greater security to the masses of people who are increasingly thwarted by the closing of the frontier and the crystalization of industry. It is the opposite of that reactionary attitude which becomes established during lean years on the Republican side in Congress, among those who survive by virtue of personal popularity at home and look upon themselves as the proper directors of party policy. It is the attitude of those who must win office, not those who merely hold office. It is the attitude, in general, of the young Republican governors who have sprung up all over the country and who have fought the congressional group in the national committee and the party councils.

Under these circumstances the rise of Senator MORSE is dramatic, though it could not be described as unforeseeable by those best acquainted with him and his record.

He did not go to Washington as a novice so far as the pitfalls and problems of that city are concerned. He had had the hard training of the War Labor Board. And there was plenty of significance in the fact that he had taken the leadership in that Board, and that so far as general policy is concerned little has been added or subtracted from his written opinions to this day. It was Mr. MORSE who established the policies of the Board; and during the war period, for which they were designed, they worked.

He entered the Senate with that unorthodox daring unabated, and he arrived at a time when the long-gathering revolt against the career Republicans was still without adequate leadership. He has undertaken that leadership without blinking an eye, where so many before him had either avoided the test or, after rebuffs, have thrown up their hands. And thus far the intelligence which made him the John Marshall of the War Labor Board has forced Congress to a respect which

has not been shown to a beginning Member in generations.

It is quite possible that Oregon and the Nation have far more in Senator MORSE than anyone bargained for. We hope so.

Unification of the Armed Services

EXTENSION OF REMARKS
OF
HON. WAYNE L. MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Thursday, January 17, 1946

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Portland Oregonian of December 21, 1945, entitled "Why Take It to Congress?" The editorial discusses the question of the unification of the armed services and the power of the President to act in the premises.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY TAKE IT TO CONGRESS?

The national Constitution designates the President of the United States as Commander in Chief of the Army and Navy. The scope of his power in that regard has been passed upon a number of times by the United States Supreme Court. The ruling decisions hold that by virtue of his position he has undoubted power to establish rules and regulations for the government of the Army and Navy, or may modify or repeal or create them anew, and that such rules and regulations cannot be questioned on the ground that they are unwise.

This page is not opposed to coordination of the armed forces. We are for it. But it seems to us that in determining upon the manner in which coordination shall be attempted, the power of the President of the United States to establish rules and regulations and change them at will has in its flexibility a profound advantage over acts of Congress, which if found of poor or questionable workmanship can be corrected or modified only by convincing a majority of two Houses of Congress just what ought to be done about it.

Mr. Truman, in his message urging Congress to enact laws unifying the armed services, acknowledges by strong implication his own power to coordinate the Army, Navy, and Air Force. He argues that with other problems before him, the President cannot be expected personally to balance either the organization, the training, or the practices of the several branches of national defense, but should be able to rely for that coordination upon civilian hands at the Cabinet level.

Granted. But we believe that the President has the authority, without sanction of Congress, to summon chiefs of staff and designated high commands into round-table discussions presided over by the Secretary of War or the Secretary of Navy, whichever he may choose, and with that Cabinet officer empowered in the President's name to umpire points of controversy, direct removal of duplications, establish change in practices, and weigh claims for dominance in men and equipment of this or that branch of the service as the science of defense shall dictate.

The President can obtain reliance for coordination upon civilian hands at the Cabinet level without, in this period of fluidity of ideas on relative importance to offense and defense of the three armed services, basing it upon the rigidity of an act of Congress.

The Nation is at peace. There is no foreseeable prospect that it will soon be drawn into another war. It is a time that lends itself to exploration into the field of unification of the armed services. But if by unforeseen circumstances we should be drawn into war before an inflexible act of Congress has been given the test of trial and error, we may find a less effective coordination than we had in the war that has ended.

The unification plan that has the presumptive indorsement of the President comes from the War Department. It is supported by the Army from top to bottom. It is opposed by the Navy from top to bottom. Each service has its friends and sympathizers in Congress. In so complete a split of opinion, one who is of open mind is prone to suspect that the scheme in its scope is founded in jealousy on the part of the Army and that opposition is founded in the pride and traditions of the Navy.

Since the founding of the Republic the Navy has been, in the sense of permanency, the Nation's first line of defense. We have never had a real Army except in time of war. We have built up the Navy, and at times have sent it round the world to awe other nations. When it came home or made periodical visits, we in ports received it with banners and bands and the blowing of whistles. It has embodied glamor and romance and popular notice. But in peacetimes a skeleton Army has been immured in mainland, Alaska, or island posts where nobody pays any attention to it except civilian neighbors. We have in consequence a Navy puffed up with its importance and an Army that in peacetime suffers an inferiority complex.

As we have said, we are for coordination; but we question whether, in this background, Congress will be able to act fairly and intelligently, and with a foresight that will provide unification equal to a coordination by the direction of an executive who can instantly correct flaws in the system if any shall develop.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1946

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of January 16, 1946:

LABOR LEGISLATION

The present labor crisis did no spring out of a vacuum. The foundations for it were being laid for month and even years by a combination of inaction and bad policies. Long ago either the President or Congress, or both, should have appointed a commission of experts to recommend a rounded program of labor legislation and labor policy. But many men in Congress after waiting until the Nation's industrial life is disrupted by grave strikes and threatened by still graver ones now talk of quick and angry "action."

It is right, it is imperative, that action dealing with the present labor crisis be taken without undue delay. But the real question is what the proper action should be. Any attempt to "forbid strikes" or to impose compulsory arbitration would only make the ultimate situation incomparably worse than the present one. Nor does hope of a real solution lie in the enactment of a bill for setting up so-called "fact-finding" boards as recommended by the President. The weaknesses and the hazards of that remedy have already become clear from the prompt consequences of the decisions of the fact-finding boards appointed by the President without benefit of legislation in the General Motors and oil industry cases. The moment the General Motors board recommended a wage increase of 17½ percent, practically every other union decided that this was the minimum increase to which it was entitled, and that the Federal Government would support it in imposing such an increase upon employers.

When one considers that the automobile workers were already among the highest paid in the country (actually standing in the upper third of the Nation's income receivers) this conclusion on the part of other union leaders does not seem unnatural. As Prof. Sumner H. Slichter wrote in the Yale Review before these "fact-finding" decisions were announced: "Collective bargaining will not develop * * * if the Government abandons the role of a neutral and virtually compels employers to grant better terms than the unions could win by bargaining. * * * Government wage setting and collective bargaining do not mix. * * * Where the Government wishes collective bargaining to flourish, it must not seek to impose settlements."

The real task before Congress today is not to attempt to throw the Government's weight onto either side of the scales, but to establish the conditions under which a peaceful, amicable and two-sided collective bargaining is encouraged. One way to do this would be to balance the Wagner Act so that an employer or a nonunionized worker, as well as a union, could complain to the National Labor Relations Board against unfair labor practices, including intimidation and coercion. But it would accomplish almost as much good if, short of that, any union that sought the protection of the Wagner Act would itself be required to come before the Board with clean hands. Today a union that has shown itself to be irresponsible, and that may even be led by known racketeers, can bring accusations against an employer while the Board is not even authorized under the law to take cognizance of the union's own transgressions.

This situation suggests its own remedy. The Wagner Act should be amended to authorize the National Labor Relations Board to refuse to extend the protection of this law to any union which has been guilty of enforcing its will through intimidation or violence, which has struck in violation of a labor contract, which excludes members on arbitrary grounds, which charges unreasonable initiation fees or dues, or which engages in similar antisocial activities.

Such amendments would go little further than those passed by the House of Representatives, by more than a two-thirds majority in June 1940, but later buried in a Senate committee so that the full Senate never had an opportunity to vote upon them. These amendments separated the judiciary and the prosecution functions of the Labor Board. They prevented the Board from ordering reinstatement of striking workers who had "willfully engaged in violence or unlawful destruction or seizure of property." They insured liberty of expression of opinion for employers on labor matters when "not accompanied by acts of coercion, intimidation, discrimination, or threats thereof." They permitted employers to petition the Board for elections to choose collective bargaining representatives. They made the Board's decisions and findings of fact subject to review by the United States courts of appeal.

A measure of this sort would not deprive even the most reckless and irresponsible union of any rights which it had prior to 1935. Its sole "penalty" would be the refusal of the privileges and protections of the Wagner Act to unions that had done nothing to

deserve them. It is true, on the other hand, that such a measure would not completely end strikes. Nor would any measure that did not threaten a free-enterprise system and American liberties. But such a statutory recognition of irresponsibility and unlawfulness where they existed, and a refusal to encourage or reward them, would reduce existing sources of conflict and constitute an essential step toward industrial peace.

More Dictation

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Carroll County Independent of January 4, 1946, entitled "More Dictation":

MORE DICTATION

Mr. Petrillo, head of the musicians union, appears to be one of the most powerful and dictatorial men in the whole country.

As head of the union, he has done a fine job for his men. Wages and hours have been much improved over a period of years until the lot of the musician has changed far from the ancient status of the wandering minstrel playing for his supper.

But Petrillo seems to have gone too far. His latest edict is that broadcasting companies cannot rebroadcast European music, that is, music that originates in Europe, as played by European musicians. He takes the position since European musicians do not belong to his union, and are not American musicians, this is unfair competition. He is going to see it stopped.

As far as we know, very little European music has been rebroadcast for listening pleasure in the United States. It is not so much a question if we shall hear European music from time to time, but as to whether or no one man has the right to dictate what we shall or shall not hear.

Mr. Petrillo has recently ruled that broadcasting companies cannot pipe or transmit music from their regular stations to be rebroadcast by frequency modulated stations without having and paying an extra orchestra.

Mr. Petrillo's theory is sound from his viewpoint. The broadcasting company is using one orchestra for both a conventional station and also for a frequency modulation station. That is, it is getting two for one.

As far as the public is concerned, most FM stations today are of limited range, have a limited number of listeners, and simply cannot afford to pay for an idle stand-by orchestra.

For several years we have listened to FM station WMTW, on top of Mount Washington. No matter what the weather conditions, this station always comes in clear and strong. Listening pleasure is great, because FM is never bothered by the northern lights, thunderstorms, or local interference. The effect is almost as if the speaker or musicians were in the next room.

Thanks to Mr. Petrillo, New Hampshire folks who have enjoyed WMTW cannot get the same wide scope of program as formerly enjoyed. Records, speeches, and news will be the program.

From the viewpoint of the musicians in his union, the man is working for their interests every day in the year.

From the viewpoint of the public, Mr. Petrillo has come into every home, dictating what can or cannot be heard and in what form music may be enjoyed.

It is fair to ask if this is not more power than should be enjoyed by any one man in a democracy?

North Dakota's Prohibition of Corporation Farming

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 17, 1946

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Old, Old Fight," published in the Bismarck (N. Dak.) Leader of January 3, 1946. It is one of the most inspiring editorials that I have read, and should be of interest to every man, woman, and child in the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN OLD, OLD FIGHT

The people of North Dakota won a very important battle when the Supreme Court of the Nation upheld the right of the State to prohibit corporation farming.

The American system of democracy is based on home ownership. The corporations do not aid in our democratic way of life. They have no individuality. The small farm, the family sized one, the size depending on the portion of the State where the land is located, is the ideal size for the development and continuous growth of democracy. (And small, individual business is in the same category, of course.)

Most of our readers will agree with the statements in the two foregoing paragraphs.

It was fighting that got the law on the books which prohibits corporation farming and holding of large tracts of land by corporations in our State. And that battle was won. But it was only one of many that have been fought, and likely will have to be fought over again in the future.

Just how old do you think this fighting for land ownership for the man who actually works the land really is? A couple of thousand years does not cover the period, and that is a long time.

As all students know there was a Roman republic in existence many years before our era. It was a very enlightened group of men who formed and ran that republic. But in those days the coining of money had already been in use for some time, and money could buy land. The rich people liked to own land and used their money to buy it up, just as they have geen doing for generations in modern times. The Roman farmers could not hold onto their land. It cost so much to run the ever more extravagant Roman Republic, so they were taxed out of business. They were forclosed on and the rich owned the land, working it with slave labor. The farmers had to go to town and live on relief.

That sounds very familiar to some of you, doesn't it?

One Roman, a man elected to the "lower house" of the Roman Legislature, a Tribune, as they were called, saw what was developing and that the condition was becoming worse. He had a law made. But he had to campaign for reelection, and had to stay in office to have the law enforced. He did make a campaign, and his campaign talk is memorable—so memorable it has come down to us in history. We'll identify the man for you. His name was Tiberius Gracchus, and the campaign mentioned was about 135 years before Christ.

Here is a portion of his campaign speech:

"The beasts that prowl about Italy have holes and lurking places where they make their beds. You who fight and die for Italy enjoy only the blessings of air and light. These alone are your heritage. Homeless, unsettled, you wander to and fro with your wives and children. You fight and die to give wealth and luxury to others. You are called the masters of the world; yet there is no clod of earth that you can call your own."

A campaign talk made more than 2,000 years ago, but with a few amendments it applied to North Dakota in the 1930's, and applies today in many parts of the southern sections of the Nation.

It is an old, old fight, this fight for land and ownership of it. Our farmers lost much of their land between the two world wars, and many of them may lose it again, many of those who have been fighting this late war, too.

We won the fight in the courts to keep the big corporations from farming our land with the help of a few hired men. But such fights are never won for good.

The first historical fight of this kind was perhaps the fight of Tiberius Gracchus in Italy for the small farmers of his day. You old Leaguers who might be tiring of the fight we have been having for the past 30 years under our own banner might bear in mind how ageless such a fight is, and impress it on your children. They also will be called on to fight to hold what you have won for them. You may be sure that the past few years of agricultural prosperity are not a sign of a permanent prosperity for you on the land. Your children will have to learn this, and learn to help win such fights when they come.

Since we mentioned Gracchus, since he is in fact the hero of this piece, perhaps we should tell you about the outcome of the fight he led for reelection. He won. But he was killed by the members of the senate, who were the rich landowners and did not like his reform. Ten years later a younger brother who had taken up the fight and tried to enlarge on the program by including votes for some groups of Roman citizens, was also murdered, even the landless for whom he was fighting turning against him. Another man, a century and a half later, said the same words the Gracchus brothers had used in their campaigns, framing them slightly differently. He also was murdered, and the people were turned against him too, as they had been against the younger Gracchus. We call Him Jesus Christ and celebrate His birthday, which we call Christmas, each year.

The fight was perhaps not started 2,000 years ago. It may be older. But you may be sure it is not ended, so do not let yourself become discouraged. And, bearing in mind the fate of the reformers of 2,000 years ago, weigh well all propaganda used against your own leaders.

Bonus for Veterans

EXTENSION OF REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. LANDIS. Mr. Speaker, I have just introduced a bonus bill which provides an adjusted compensation to the veterans

of this war in sum equal to $1.50 per day for each day of military service rendered outside the continental United States and $1 per day for each day of military service rendered within the continental United States.

I have received petitions from midwestern war mothers of World War II containing 30,000 signatures which I today presented to Congress in support of the bill.

I believe that it is high time that we pass a bonus bill for our veterans before the New Deal administration gives all of our money to foreign countries.

Our Latter-Day Deification of Change

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1946

Mr. HALLECK. Mr. Speaker, under unanimous consent, I am happy to insert in the CONGRESSIONAL RECORD an editorial appearing in the New Orleans Item, of New Orleans, La., on January 7, 1946.

I have taken particular interest in this editorial, not only because it is well written, well reasoned and timely, but also because the man responsible for it is a native Hoosier, having been born in Green Forks, Ind. He is Ralph Nicholson, who is president and publisher of the Item. His course has taken him through the public schools of Indiana, a stretch in World War I, Earlham College, the Harvard Graduate School, and then on through various assignments in the newspaper and radio field to eminent success with the New Orleans Item. He is typical of forward looking yet sound American leadership which is so needed today. This editorial is leadership in that direction.

OUR LATTER-DAY DEIFICATION OF CHANGE

An old school of shallow philosophy is coming of late into fuller flower in the discussion of our economic, political, and governmental affairs. It is placing its curse on "resistance to change." Anybody who resists any change that these philosophers desire, no matter how foolish or fantastic, is immediately classed as backward, stupid, and selfish—sometimes, indeed, as disloyal to the Nation and a traitor to the human race.

Ways that are old are damned on that account. Some of these philosophers, in fact, seem to believe that the ancient but once-popular idea that two and two make four should be rooted out because it conflicts with their economical mathematics. Everything that is old must be discarded for any new thing that they propose. We deny all such tosh for the nonsense that it is—whether it springs from the itch of self-interest or the vaporing of ignorance.

Every intelligent person knows, and should be happy to admit, that all human progress is the result of change—changes in our ways of thinking and doing, growing out of new knowledge in the realms of physics, economics, and politics. But everybody who has observed or read a little also knows that mankind has suffered untold woes by breaking too enthusiastically, without due consideration, from old ways to new notions that have failed.

We have a brilliant example of this in our own country these past 12 years. Mr. Roosevelt did a number of new things, especially in his first term, that needed doing. We have these yet. But he also did many new things and adopted new methods that have failed egregiously. Our national graveyard is cluttered with their costly tombstones bearing countless alphabetic names which were so numerous that none of us can remember for what they stood. These have imposed frightful costs on the country without any offsets in benefits. Their results have accumulated in the horrible mess in which we now find ourselves. Yet self-seeking politicoes and unbalanced idealists still clamor for irrational, unquestioning public acceptance of still more crackpotty notions of their own.

Out of their ranks rise the philosophers who make a god of change—their change—and condemn all their intelligent fellow-citizens who ask for proof of their wisdom, and decline to swallow it until this is produced. Yet all of us know that it is intelligent, rational skepticism that keeps society from flying apart under the cross-pulls and whirls that would result if every new notion, however fantastic, were swallowed without question.

Some of these philosophers of the sanctity of change have been drawing an illusory parallel between the late British elections and our American conditions. The British turn toward socialism, they say, make a similar turn necessary and inevitable over here. "It has energized the forces of conflict here; it has encouraged labor and alarmed our conservatives," they add, etc., etc.

But, through ignorance or dishonesty, they don't add that the British majority was impelled by a desire for the superior advantages enjoyed by the American working people and middle classes. The knowledge of this was brought home to them by 4 years of close personal association with millions of Americans in England and on the battle fronts. Their own observation of the vast superiority of the food, clothing, housing, equipment, and pay, of these millions of American boys raised their gorge.

They discovered for the first time, cheek by jowl, from the talk of their American companions-in-arms, these better wages and working conditions, the greater comforts, conveniences, and even luxuries, enjoyed by the plain people of our country, by comparison with wretched conditions in their own. These boons that the British majority sought were brought long ago to our people by our system of democratic free enterprise—which our philosophers of sacred change are trying to destroy.

Perhaps the British were right in turning toward socialism. We don't know. Their set-up has been different from ours. Socialism carried to its limit means complete dominance of a very few over all the rest. It leads to unchecked domination of government by politicians. This our people will never accept, knowing what they do. The philosophers of change must hide the meaning of their design.

But that idea is probably not so obnoxious to the English as to us because the politician's entrusted with the management of British affairs have traditionally been more competent, by and large, than our own politicoes. You have an example of this in the huddle of these now in Washington. There they present a sorry show of unwillingness or incapacity to do anything worthy of the name to save this country from deeper descent into a chasm from which only intelligent and courageous action can save it.

Roosevelt, with smug artistry, showed his political trailers how to smear public men who would not swallow his medicine without gagging. Among their other imitations of the master, they are now reviving the famous "fireside chats." We had one last week. But the master is gone and the fireside had already lost its fascination before he went.

So don't be dismayed by the foolish fantasies and fictions of the philosophers of change. It is Britain's desire for the greater blessings which our people enjoy that has turned the majority of them to a trial of socialism. But our absurd philosophers of change still say:

"Let us turn to socialism too. Let us abandon the system of free enterprise which has brought and is still bringing us the good things which the English covet. Let us abandon the way that has made us the wealthiest and most powerful Nation on earth—and kept us free all the while—in order to accept a system that has never been tested long anywhere, and has never brought any people any of those blessings so far as it has gone."

All such counsel is goofy. Regardless of the epithets of selfish or self-deluded philosophers of change, let us stand with those who still trust such aged commonplaces as the Ten Commandments, the Golden Rule, and the idea that 2 and 2 make 4.

Judaism and Race Relations

EXTENSION OF REMARKS
OF
HON. FRANK P. BRIGGS
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Thursday, January 17, 1946

Mr. BRIGGS. Mr. President, Rabbi Ferdinand M. Isserman, of St. Louis, recently made a very enlightening and a most informative statement on Judaism and race relations. I ask unanimous consent to have the statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

JUDAISM AND RACE RELATIONS

I. THE TEACHINGS OF JUDAISM AND RACE RELATIONS

One of the most disturbing maladies of our age is the oppression and exploitation carried on in the name of race. Millions of human beings have been stripped of their dignity and relegated to a status of inferiority by the forces of prejudice and greed which wear the pseudoscientific mask of racism. In this crisis, Judaism has a message for mankind. It speaks out of its age-old tradition of concern for justice to demand in the modern world respect for the sanctity of every individual child of God. It finds in the moral principles implicit in the doctrines of Israel's prophets and sages a source of faith and a guide for action toward full human brotherhood. Judaism teaches the belief in one God and the oneness of mankind. This faith is the foundation stone of Biblical and Rabbinical doctrine which stresses the equality of all races and nations in the sight of God. In the words of Isaiah (Isaiah xiv: 25), "Blessed be Egypt my peoples, and Assyria the work of my hands, and Israel mine inheritance." Attacking the myth of group superiority, Amos exclaimed: "Are ye not as the children of the Ethiopians unto Me, O Children of Israel, saith the Lord' (Amos ix: 7). As the fundamental verse of the Torah, Ben Azzai selected Genesis v: 1: "This is the book of the generations of Adam." He chose this verse because it epitomized the unity of mankind. For the same reason, Akiba preferred the verse: "But thou shalt love they neighbor as thyself" (Leviticus xix: 18). In response to the question, "Who is meant by my neighbor?" Akiba

explains: "Every human being is beloved by God, since he is a creature of God, made in His image."

So that no man or nation might be able to claim superior birth or descent, Rabbinic legend teaches that Adam was created from dust gathered from the four corners of the earth. In the same spirit we are told that the Torah was given in the uninhabited wilderness and in the "70 languages of mankind" in order that it might be heard and accepted by all the people of the world. The attitude which the majority should adopt toward the minority has been formulated in the Biblical injunction: "The stranger that sojourneth with you shall be unto you as the homeborn among you, and thou shalt love him as thyself, for ye were strangers in the land of Egypt" (Leviticus xix: 34).

Specific issues of race relations have long confronted us in the conditions of American life In the world at large a crisis in race relations now challenges us. Conferences of rabbis have applied the above declared traditions of Judaism to the solution of racial problems. The Jewish religion teaches us that all men are made in the image of God. Judaism recognized only one race, the human race, from which there follows directly the basic equality of all peoples.

In the light of these religious convictions, we work and pray for the realization of these ideals:

1. We assert that no race has the right to dominate another.

2. We deny that God has selected some races for special favors and others for debasing servitude.

3. We urge the education and full emancipation of all peoples without exceptions. And we look with especial concern upon the exploitation of many millions in Asia and Africa and urge their admission as equals into the councils of nations.

4. We do not regard conflict between races as inevitable.

5. All racial discrimination and segregation must be banned by the laws of states and nations.

II. SCIENCE AND RACE

Theories of racial superiority and inferiority have no foundation in modern science. The differences which exist among the peoples of the earth are far less important than the similarities. There have been countless numbers of classifications of men based on traits or combinations of traits arbitrarily selected, such as stature, head form, and pigmentation.

These classifications have too often been accepted as stereotypes and have been accorded false values. Science recognized that within each type there exist wide individual differences, that present races are the products of intermixture, and that the traits classified are not merely the results of genetic inheritance but reflect as well the influence of environmental and cultural conditioning. One example of the racial falsehoods current in the modern world is the use of the terms "Aryan" and "Semitic" to designate biological types. These terms have no justification, for they denote linguistic families and no genetic differences.

Science provides no basis for discrimination against any people. There are no grounds for describing any of the existing human types as more primitive on an evolutionary scale. The present cultural status of any people is not an index of its psychological potentialities, but reflects the opportunities or lack of opportunities which history has provided for their fulfillment. Our present culture is a composite product of the contributions of all races.

False theories of race have been used as political instruments of antidemocratic forces the world over. The Nazis have used them in Germany and Fascists everywhere have made them serve as divisive forces and instruments of dominance. They have played upon the insecurity and frustrations of peoples, and have manipulated the basest aspects of personality, snobbery, malice, and hate.

The race theories which they have used have no validity in science; they are rationalizations designed for political purposes to justify exploitation, discrimination, terror, and violence. They have served as tools of disruption by dominant groups interested in maintaining and extending their political and economic control.

The antidemocratic practices which discriminate against racial groups and prevent their full and complete participation in American society impede the progress of our culture. All of us are deprived of the creative gifts which remain unfulfilled because of the impediments which frustrate the aspirations of oppressed peoples. There is overwhelming and convincing evidence that when complete economic, educational, and social equality are given to them, they are able to make major creative, intellectual, and artistic contributions to the progress of mankind. No truly democratic society can be lenient toward the doctrine of a racial elite.

III. THE NEGRO IN THE UNITED STATES

The war against fascism has been marked by some gains for our Negro citizens. Among these may be enumerated the recognition of the fine heroism and patriotism displayed by Negro troops in combat and other essential military services; the establishment of the Fair Employment Practice Commission (FEPC) which should be made permanent; the provisions embodied in the Federal aid bills guaranteeing greater educational opportunity to Negroes; the United States Supreme Court rulings requiring equal treatment for Negroes in cases involving the franchise, education, and union memberships, the campaign now being waged by many labor groups to root out the "color line" in unions, and the interracial activities of many religious bodies.

But we cannot be lulled to sleep by such gains which are far short of the demands of both justice and democracy. As long as Jim Crow laws exist, as long as thousands of Negroes live in virtual peonage as sharecroppers and tenant farmers, as long as houses unfit for human habitation are the lot of many Negroes; as long as health services are inferior and woefully inadequate; as long as brutal lynchings disgrace the land and mock our institutions; as long as segregation is practiced by the armed forces; as long as equal opportunity is denied to Negroes and thousands must face unjust union discrimination and are denied the right to live in desirable areas, hotels, and apartments; as long as opportunity and advancement are denied them in the professions, in industry, and in educational institutions; as long as they are denied equal rights to share amusements and other facilities; as long as hospitals, even those conducted under denominational auspices, continue to deny medical treatment and training opportunities to Negroes, we cannot abate our efforts to end discrimination. Hence, it is incumbent upon all Americans—especially those whose silence or inaction made such discrimination possible—to wage incessant war upon all manifestations of injustice to the Negroes. Hatred and prejudice against them must be rooted out.

These considerations are valid for all Americans. Because they are so deeply consonant with Jewish teaching and reinforced by Jewish experience, we shall lend our strongest efforts to secure justice for the Negro.

IV. COLORED RACES IN THE PACIFIC

The United States, but recently hailed throughout Asia and the Pacific as the champion of oppressed peoples, today seems to be lending its influence to the resubjugation of hundreds of millions of colonials, by force of arms where necessary. The dependent areas of the region still are administered primarily in the interests of alien merchants and investors. The aspirations of Burmese and Anamites, of Indonesians and Malayans no less than those of Filipinos and Koreans, all for the encouragement of freedom-loving people everywhere.

Manchurians and Koreans have been released from the Japanese yoke. In Outer Mongolia, Chinese prudence has permitted an ancient people of herdsmen to gain political independence without bloodshed. China itself, despite the unresolved political conflict, gives evidences of a new respect for the rights of her racial and religious minorities. India's 400,000,000 are struggling for political independence which we trust she will achieve. This is an essential first step toward that unity without which the inequalities in the nation's social system cannot be finally abolished. Further south in the Malay Peninsula and in the East Indies another 100,000,000 likewise assert their undeniable right to independence through revolutionary movements which, outwardly, political, derive in part from social discontent long held in check. The great capacities of the varied peoples inhabiting Oceania have been demonstrated not only by native arts which flourished before the impact of European influence, but also by the advances made by those like the Hawaiians and the Maori of New Zealand who have been given the opportunity for self-development.

The heart of Israel goes out to all who aspire to freedom. We are convinced that the age of imperialism—political, economic, and cultural—is ended. The Indians, Burmese, Koreans, Filipinos among other peoples, should be aided in the solution of problems incident to their immediate entry into the community of self-governing nations. In remaining dependent areas as a first step toward self-government, international trusteeship under the United Nations Organization should supersede colonial control. The relation of east and west must be one of equal partnership in the administration and enjoyment of the common resources and common cultural heritage of the world.

V. THE LAW AND RACE RELATIONS

The fundamental equality of all men is affirmed without limitation or distinction in the basic documents which are the foundation of our democratic legal system, from the American Declaration of Independence with the conviction that "all men are created equal, and endowed by their Creator with certain unalienable rights" to the United Nations Charter which stands for "human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion." These documents express the insight drawn from the Judaeo-Christian tradition that human brotherhood must be unqualified and all-inclusive. We believe that this insight must be translated into legislation adapted to the exigencies of modern society.

The potentialities of the law in helping to break down racial bigotry and its chief objective manifestation—racial discrimination—have, however, not been realized. The failure to distinguish between prejudice and discrimination, the ignorance of the role the law plays in creating and reenforcing racial attitudes and the active opposition of antidemocratic forces are responsible for the lack of adequate legislation.

The entire apparatus of Jim Crow is employed to confine the Negro to roles which symbolize inferior status and thus by daily example lend support to the claim of white supremacy.

Even in the North, the law is far from neutral in the field of race relations. Covenants in real-estate contracts which bar certain minority groups could not be enforced without the aid of our equity courts. The tax exemption granted to quasi-public educational institutions despite their discriminatory admission policies is another gift of the

law to racial prejudice. But the law can be converted from a supporter of bigotry to its implacable foe. It can best be utilized by forbidding discrimination because of race, color, religion, national origin, or ancestry in any vital relationship. Segregation, the legally camouflaged form of discrimination, needs likewise to be outlawed.

In employment, the discriminatory denial of equal job opportunities means not only humiliation, but a threat to life itself. No employer should have the right to reject an otherwise qualified applicant because of irrelevant factors of race, or religion, or place of birth. The employer's right to choose his employees freely must be subordinated to society's greater stake in promoting equality of opportunity.

Because of the strategic role labor unions play in the labor market, their eligibility rules often mean the difference between a job and a bread line. The right of a union to act as exclusive bargaining representative carries with it the correlative duty not to deny membership because of racial or religious grounds.

We therefore favor the enactment of legislation by Federal and State governments for the establishment of Fair Employment Practice Commissions (FEPC) empowered to combat discrimination by issuing cease and desist orders enforceable in the courts.

Toward educational and other quasi-public institutions, our task is equally clear. The Constitution which forbids racial or religious discrimination by agencies of the state should likewise be applied to such institutions. We favor the denial of tax exemption and other governmental support to any such institution which discriminates.

In housing, not only must the restrictive covenant be outlawed, but landlords should be prohibited from selecting their tenants on the basis of race, religion, or color. Housing is as much affected with a public interest, as transportation, recreation, or public dining, already protected in some States by civil-rights laws.

In our suffrage, unquestionably, the law should be color blind. We favor Federal legislation outlawing the poll tax and the white primary.

In our immigration and naturalization laws, we must eliminate every vestige of outmoded racial doctrines. The decision to admit or exclude an alien should depend upon his own worth and not upon the color of his skin or the accident of his place of birth.

In every place which solicits public patronage—trains, hotels, restaurants, theaters, retail stores—we oppose not only discrimination but segregation as well.

Another aspect of the fight against discrimination is the effort to curb the instigators of racial prejudice. Such prejudice is often strengthened if not created by the circulation of false and malicious defamations of a race or religion or members or adherents thereof. Such hate literature or utterances incite the susceptible to violence and discrimination. Existing legislation against such literature must be vigorously and imaginatively utilized. Racial incitement in public is usually a breach of the peace and should be punished as such. Racial incitement on the floor of Congress can be curbed simply by the enforcement of existing congressional rules. We believe further that groups which have been libeled should have the right by private civil action to sue for an injunction, compulsory retraction, or a minimum penalty. This type of legislation avoids the danger of censorship or arbitrary governmental action, provides no obstacle to unhampered discussion of public issues, and furnishes a legal measure of speedy self-defense to groups directly affected. We urge also the further exploration of this issue with a view of drafting, within the framework of our constitutional guaranties, other remedial legislation to cope with the evil.

Finally we urge vigorous Federal protection of all civil rights, including enactment of a Federal antilynching law.

Our stress upon the utilization of legal sanctions does not minimize the importance of the complementary process of education without which no solution is possible. In this process of education, legislation and its vigorous enforcement play a significant and salutary role in molding public opinion.

But combatting race prejudice is not a mere matter of striking at its more obvious manifestations. In a country which is ill-fed, ill-housed, and ill-clothed, where men scramble desperately for jobs, and where insecurity is rife, racial suspicion will fester into racial hatred. This hatred in the long run is best prevented by eliminating the conditions under which it thrives. We favor legislation assuring full employment, social security, decent housing, education for all, which promise more than any direct attack. Victory in this struggle will mean an America in which all races, all faiths, all nationalities, can live in peace and security.

An International Creed

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, January 17, 1946

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Statement of International Creed issued by me on January 5 prior to the first meeting in London on January 10 of the United Nations Organization.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A STATEMENT OF INTERNATIONAL CREED

1. I believe the United Nations Organization will be a success and will be adequate to its responsibilities.

The world's crying need for a peace of justice and continuity is such that UNO cannot fail.

The carnage of World War II stares us all in the face.

The threat of the atomic bomb and rocket warfare hangs over mankind.

Our very fear that we may be inadequate should spur the nations to make them adequate in UNO.

2. I believe that all of the Allies, including ourselves, must eliminate the "little foxes" of hate, distrust, and suspicion between ourselves.

These "little foxes" have been gnawing dangerously at the infant vines of Allied unity.

We must all replace the "little foxes" with the will, intent, purpose, and desire for a just and lasting peace.

3. I believe that America must be a good samaritan to the world, helping it to help itself.

This means adequate relief for all peoples in distress. That includes the prevention of inhuman suffering in Germany and Austria.

I believe that common justice, Christian charity, and common sense demand that Germany and Austria be rehabilitated along with the rest of Europe so as to contribute to the peace and prosperity of the globe.

4. I believe that the Moscow Conference of the Big Three, with its give and take, its compromises, is an excellent omen for the future.

Its results are neither grounds for extreme optimism nor extreme pessimism.

It indicates that the first steps have been taken to eliminate discord between the Allies.

If it is followed up in the Far East by complete respect for the statesmanship of General MacArthur, our progress will continue there.

5. I believe that the unsettled problems of bleeding Poland can be solved satisfactorily with Russia.

So, too, the well-being of the Baltic, Balkan, and other European peoples, now in doubt, can be provided for through agreement with Russia.

The near eastern and Asiatic problems are no more unsolvable than any other problems, if we will allow right, reason, and justice to prevail.

Fair Employment Practice Committee

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, January 17, 1946

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Alfred Baker Lewis to the Washington Post commenting upon the activities of the Republican Party in several Northern States respecting the Fair Employment Practice Committee, and particularly calling to the attention of the Post readers the fact that the Republicans in the State legislatures have practically been unanimous against the proposal.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEPC

President Truman's endorsement of the proposal for a permanent Fair Employment Practices Commission is welcome proof that he intends to follow the Roosevelt policies in the important work of trying to eliminate racial discrimination in job opportunities. It is also a significant comment on the unreality of party platform pledges, for the Democrats did not in their 1944 platform promise a permanent FEPC bill, out of deference to the strength of the reactionary southern Democrats, while the Republicans made a specific pledge to support such legislation. Yet in most Northern States, except New York, the Republicans in the State legislatures voted almost solidly against FEPC bills and the Democrats voted solidly for them. In Connecticut, for example, every Democrat in the State legislature voted for such a bill and all the Republicans, except four, either voted against it or, with the same effect, voted to bury it in committee. In Massachusetts, Ohio, Pennsylvania, and Michigan there was the same pattern of overwhelming Democratic support and equally overwhelming Republican opposition.

Citizens who believe that racial discrimination is un-American and should be stopped in employment policies by law ought to support President Truman wholeheartedly by writing their Congressmen accordingly. Especially the Republican leaders need to be reminded of their party's pledge.

ALFRED BAKER LEWIS.

NEW YORK CITY, *January 11.*

Prevention of Dental Decay

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, January 17, 1946

Mr. TOBEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement entitled "The Prevention of Dental Decay," prepared by the dental profession of New Hampshire, supported by the State board of public health, making recommendations on the care of the teeth, which, if carried into effect, would manifestly be in the interest of the public health and welfare.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PREVENTION OF DENTAL DECAY

(The following statement is authorized by, and has the approval of the New Hampshire Dental Society, the New Hampshire Council on Dental Health, and Division of Dental Services of the State Department of Health.)

The New Hampshire State Board of Education is deeply interested in cooperating in the reduction of dental disease in the New Hampshire schools.

THE STORY OF DENTAL DECAY

Dental disease is more frequently found in this country than any other disease.

About 98 percent of all the people in the United States are affected by dental decay and it is reasonable to say that at least 50 percent of dental decay could be prevented by the application of the knowledge now available to the dental profession.

Dental disease is not confined to any one group of people. It can occur at all ages in any race, or locality.

It occurs in families with all levels of income, in either sex.

Dental diseases, if untreated, lead to toothache, tooth loss, crooked teeth, inflammation of the gums, and later loss of the teeth.

In addition, diseases of the teeth, if neglected, may be the cause of many ailments, including abcesses, infections in other parts of the body, resulting in arthritis, neuritis, neuralgia, valvular heart disease, and diseases of the kidneys and gastro-intestinal tract.

When the first 2,000,000 draftees of our Army were examined, dental defects caused more rejections than any other ailment.

The standards for admission to the Army were lowered to the minimum requirement of 12 teeth out of the usual requirement of 32, providing that they were in the right place.

Our Army could not be raised with dental standards so high, therefore they were lowered again so that some men were taken into the United States Army without any teeth.

It is appalling to find any such physical condition in our young manhood in this Nation which leads the world in opportunity, education, scientific achievement, and individual development. This country has the highest standards of living in the world and the highest per capita income.

Dental decay destroys most of the teeth that are lost by young persons. More than 9 of every 10 children, at the age of 6, have one or more decayed teeth. In New Hampshire there are approximately eight decayed teeth at 6 years of age.

At the age of 18—9 teeth on the average have decayed and several teeth have been lost. The loss of these teeth results in many dental complications. In New Hampshire approximately 11 teeth are decayed at 18 years of age.

There are not enough dentists in the country to correct the dental disease that now exists in the American public.

In this country there are about 70,000 dentists, including those serving in the armed forces.

The ratio of dentists to the population in 1940 was smaller than in 1930. There is approximately 1 dentist to 2,000 people in New Hampshire. Fifty-five percent of these dentists are located in 6 cities.

Appropriations from the treasuries of our Federal, State, and local governments for the purpose of providing more widespread dental service will probably be forthcoming, but these must increase the already heavy tax burden.

HELP PREVENT DENTAL DECAY

It is just simple, plain common sense to apply to the problem all available information possessed at this time regarding the prevention of dental decay.

Through research, knowledge on this subject will be increased some as the years go on but it is conservative to say that if we could apply the knowledge now possessed, we could cut the problem in half.

Research has confirmed the findings of dental authorities that the greater part of dental decay is caused, generally, by the consumption of too much sugars and starches, that dental decay results from acids from sugars and starches which are retained in the mouth; that a few individuals may consume more sugar and starches than they need but may not, because of certain individual conditions of the mouth, retain appreciable quantities resulting in tooth decay; that, on the other hand, there are more individuals who do not consume too much sugar or starches but who retain in the mouth much of that which is eaten, and hence develop dental decay; that individual characteristics of immunity or susceptibility are variables in the process of dental decay.

The consumption of free sugar has increased from 17 pounds per person a year in 1824 to approximately 115 pounds just before the war.

In 1823 the estimated per capita consumption of sugar in the United States was less than 10 pounds, whereas in many of the last 20 years it has exceeded 100 pounds. Not until 1845 did the per capita consumption reach approximately 20 pounds.

The total consumption of sugar in the United States has increased since 1923 from a few thousand tons to more than 500,000 tons. In 1927 the total consumption of candy was 1,733,000,000 pounds, or a per capita of 14.7 pounds. In 1943 the total consumption was 2,561,000,000 pounds, or a per capita of 19.0 pounds, which was sold for a total of $336,000,000.

Sugar causes a much larger percentage of decay than starches.

It is, therefore, recommended that:

1. Less sugar be consumed. Candy assumes a very prominent part among the forms of sugar causing decay. It is concentrated, lingers a long time in the mouth, and it is many times eaten alone, so that the sugar may remain in the mouth in contact with the teeth for a long period of time. Nearly all dental authorities, through research and observation, have reached this conclusion.

2. The practice of mouth hygiene by rinsing with water after eating concentrated sugars and other foods, is done by forcing the water between the teeth by tongue and cheek action; through brushing of the teeth with a good toothbrush so that all food particles are removed.

3. Systematic attention by your dentist to receive instruction in mouth hygiene and repair of dental damage.

4. The application of these principles to young children, avoiding the cultivation of artificial appetites for candy. No baby was ever born crying for candy.

The major portion of dental decay is connected with our excessive consumption of sugars and starches.

There are many subordinate factors which have an influence on the condition of dental decay, some of which are:

The general physical condition and the emotional status of the individual; mouth hygiene, and the presence or lack of certain minerals in the soil and the presence or lack of certain elements in the diet. Irregular arrangement of the teeth and abnormal conditions of the gums and other tissues of the mouth are unfavorable factors influencing mouth hygiene; hereditary influences; future research will undoubtedly reveal other factors bearing on the cause of teeth decay.

A simple diet which contains water, fruit, vegetables, milk, and its products, whole grain cereal with a moderate amount of eggs and meat and fish will produce the essential elements for a balanced nutrition. Candy, excessive sweets and starches tend to destroy the appetite of a child for an adequate quantity of more essential elements, resulting in a variable degree of malnutrition.

Present-day research is exploring the effect of the mineral fluorine, and other substances upon dental decay. The use of fluorine may prove helpful in the prevention of dental decay, but it must be borne in mind that the fundamental causes of dental decay are the excessive consumption of sugars and starches, in most individuals.

The dental profession of New Hampshire feels that it is obligated to convey to the citizens of this State this brief statement of available knowledge at the present time on the subject of dental decay and its prevention.

Prophecy of Republican Victory

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, January 17, 1946

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement issued by me on January 14, 1946.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SENATOR WILEY PREDICTS VICTORY OF CONSERVATIVE REPUBLICANS AND REPUDIATION OF NEW DEAL BLUNDERS

Since the Senate last met the best interests of the American people have been jeopardized.

(a) The Nation has been bumbled and fumbled into the worst strike chaos in a quarter of a century.

(b) The Nation has been brought closer to the greatest menace facing America in years—the menace of inflation which will make our bonds, our insurance policies, and our money valueless.

(c) There has been a reversion to the technique of the former administration, that of sabotaging the public's respect for the National Legislature.

The administration, and by that I mean the leaders of the second edition of the New Deal (leaders like Hannegan), has done this and further prepared the way for its own suicide—for its own elimination from the national scene.

By its inept and irresponsible acts it has helped insure the election in 1946 of a conservative Republican House of Representatives, the election in 1948 of a conservative

Republican Senate and House and President of the United States.

This is no mere wishful thinking. This is indicated by all the signs of the times, by the mail which floods my desk from common folks everywhere protesting the Administration's spiritual bankruptcy in our hour of national crisis, its surrender to leftist influences, its failure to get stability and harmony in America.

What do I mean by conservative Republicans? I mean those men who seek to conserve the best of the present and the past, the best traditions of constitutional Government, the best national habits of work, of industry, of thrift, of tolerance. I mean those men who recognize that change is the order of the day and who, therefore dynamically adapt to changing conditions, who offer constructive future programs, who utilize the best in the heritage of the present and the past, who do not fall to every crackpot scheme because it has a sincere name or a deceptive title.

New Dealers within and outside the Democratic Party have unsuccessfully sought to besmirch these conservative Republicans, by calling them "reactionaries" which they are not.

A reactionary is obviously one who blindly seeks to retreat to the outmoded conditions of the past, forsaking all progress.

Americans do not like to bandy terms about. But Americans know that the rightful use of the above terms demands that the term "reactionary" be reserved for the New Dealers.

It is they who would have us blindly retreat to the outmoded conditions of the past, the conditions in which a small group of arrogant men could dictate to and sabotage the welfare of the great American people.

That is the condition in which the reactionary Eureopean dictatorships of the right and left find themselves.

That was the condition of America, too, in bygone days. Then a small group of arrogant men, men of great wealth, violated the public welfare—thought they were the United States.

Today, it is the racketeering labor bosses—arrogant, grasping, reckless—who would duplicate this condition. It is they who, stimulated by the New Dealers, would halt American progress by a ruinous strike epidemic.

This, then, is first of the points I make now against the administration—that it has miserably failed to cope with the strike evil. Only a law with teeth in it can solve the strike problem now and protect the public interest. That's the way we handled the racketeers of capitalism.

Such a law would set up compulsory arbitration machinery to be used as a last resort to forestall strikes in vital industries. Such a law would revise the Wagner Act and make it an instrument for the people, for management as well as labor. It would make unions responsible for illegal acts.

The strikes and threats of strikes in the telephone, steel, telegram, auto, electric, and other industries, are intolerable in their harmful effects on the public welfare.

The President says this is the year of decision. Where are the decisions? We are only playing blind man's buff with this strike situation. Let's, Mr. President, make a decision. Your party at present controls the Government. Speak up. Let's meet the situation head-on, now, before it gets worse. The people are looking for that very action.

The following is a letter I received from a union official:

"JANUARY 8, 1946.

"Hon. ALEXANDER WILEY,
United States Senator,
Washington, D. C.

"DEAR MR. WILEY: This is to acknowledge receipt of the CONGRESSIONAL RECORD containing your speech of October 4, 1945. I want to state that I am in full accord with its contents and congratulate you for your stand in the matter.

"It is high time that something be done to eliminate the un-American methods used in strikes today. You have broken the ice. Keep up the good fight.

"I have one suggestion to make. Why not establish an industrial labor court in each State? Pay the members of the court an adequate salary so as to eliminate any forthcoming bribes. Have said court weigh the facts of all labor disputes and make the decision of said court become final. Also set time limits on decisions not to exceed 30 days. This is merely a suggestion. Maybe you have a better one. At any rate keep up the good work. It may cost some of us our jobs, but I believe it is time for some of us Americans to talk American.

"Sincerely."

He approved my remarks of October 4, 1945, made on the floor of the Senate. In that speech I laid out a 10 point program, including the reevaluation of the entire Wagner Act, the enactment of legislation for compulsory arbitration to protect the public interest, enactment of legislation making unions responsible for violation of contract, requiring a full and accurate reporting of union finances, the same as corporations, amend the Sherman antitrust law to make labor organizations engaged in interstate commerce subject to the act and prohibit them from engaging in unreasonable restraints of trade. This is what was approved by the letter I just read. It confirms a further statement made in my speech that "it is our job to see to it that the racketeer does not damage the general welfare."

Also intolerable is the increasing menace of inflation—a menace which threatens our 85,000,000 war-bond holders, our 70,000,000 owners of insurance policies, our 45,000,000 bank depositors.

The administration, which has been posing as the heroic little boy covering the holes in the dike against inflation has actually been attempting to smash great big holes in that dike.

The administration has, by its one-sided labor policy, by its attack on corporations and on their financial integrity, actually encouraged strikes. By thus reducing production, it has given impetus to inflation.

It has also stupidly applied price controls, penalizing manufacturers for production, making them operate at losses or for negligible returns. In this way, too, it has reduced production.

The administration set out bait for Congress and sought to trap it into smashing the line against inflation instead of holding that line. The President recommended to Congress that it increase the salary of legislators. But Congress refused the bait.

Only recently, the Senate refused to enact its own wage increase. In so doing, it acted with statesmanship and leadership.

I believe that everyone of my colleagues believes as I do that the Congress is entitled to a wage increase. Yet, we know that the justice for such an increase is but one element of the whole picture we have to consider.

Had we enacted the increase, we would have set a dangerous precedent, we would have started an endless cycle of wage increases (which the administration has since started by other means) that might bring on inflation.

I am not arguing that the present wage level is equitable. The unions are claiming that they must have a 30-percent wage increase in order to meet the increased cost of living. Perhaps this is correct. But unless we get production, unless we can prevent inflation, what good will the wage increase be?

All of my colleagues are now preparing their tax returns. Let me take a moment or two to cite the bare facts about my own income as an illustration of the point I am making.

My own net taxable income for 1945 was approximately $13,000. Deduct from that:

Four thousand six hundred dollars for income taxes—State and National. In 1939, when I came to the Senate, my taxes—State and National—on same would have been about $1,000. That represents an increase of $3,600.

One thousand five hundred dollars for expenses at business luncheons with my constituents. Nearly every day I have one to five constituents as my guests in the Senate dining room. This is not entertainment; it is not politics. Luncheon often provides the only time I have to talk over with my constituents their problems, their questions, their suggestions. Thus, this represents an increase of $1,500 over my expenses in 1939.

Were I in private business, my company would pay these expenses and deduct this item from its own returns.

One thousand eight hundred dollars—the rental cost alone of maintaining a separate residence in Washington, in addition to the home which I must maintain in Wisconsin.

Were I in the employ of another, the residence expense would be borne entirely by him while I was on company business—just as I am now on the Nation's business.

When you add up these expenses—$3,600, $1,500, $1,800—you get a total of $6,900 over my expenses in 1939. This increased cost of living represents over half of my 1945 income. When you add to it the increased cost of living in food and all other items which affect all citizens, you see that Senators have been hit harder by price increases than has American labor. Our wages have not gone up one cent, although American labor's wages have gone up considerably.

I trust that these facts in my personal case will point up the situation in which my brother Senators find themselves.

We did not and we will not, however, vote ourselves a wage increase until we are certain that its effects will in no way be harmful to the best interests of the American people. We have thought this problem through.

That means we will not increase the danger of inflation, no matter how much the administration would entice us to do so.

If money becomes valueless, wage increases become meaningless. Is that not the lesson of the inflation-stricken lands of continental Europe?

The strikers are not alone at fault. Their leaders are. Labor has simply been shown the increase in the cost of living and sold the idea that they should have an equivalent increase on that basis only. No consideration has been given to the other factors. The truth has not been told these men. The public interest has been shunted aside. The old poison of capital imperialism, hate of capital, and of men who build and construct has been thrown in their eyes. It is the old technique used through the ages: "Whom the gods would destroy, they would first make mad."

What factors were ignored?

(1) The rights of the rest of the 139,000,000 Americans (there is estimated a million out on strike; there are 50,000,000 others working) and our need for production.

(2) The Government of the United States, which needs the taxes and a healthy economic current in its vitals, not a diseased current.

(3) The returning veterans who need the homes, the cars, the washing machines, and the jobs.

(4) The world, which just now, when our representatives in London are trying to get underway with the UNO, needs the example of a United States harmonious.

(5) In discussing what factors were ignored, apparently the function of the OPA, which is to hold the line, the threat to inflation, the problems of management in this reconversion period, all appear to have been ignored by the strikers.

The Senate didn't ignore these factors. That is why it refused to increase the salary of Senators.

The third and last point I wish to make now is that the administration has continued its efforts to undermine the American people's faith in the legislature which they themselves elected.

The President in his recent radio address sought to move the blame of the muddled national picture from downtown Washington, where the blame belongs at the doorstep of his own agencies, to Capitol Hill, where the blame does not belong.

For some reason or other, soldiers abroad are given the impression that Congress is to blame for their failure to be demobilized. Who's pulling that fast one? Speaking in the Senate on this very subjec on December 7, 1945, I said: "Who is propagandizing the servicemen or who is failing to tell them the truth?" If any blame belongs to Capitol Hill it is the administration's failure for 13 years to enact a constructive labor policy into law in the interests of labor, management, and the people. As a result we are today reaping the whirlwind.

It is true that the Congress has rejected some of the President's recommendations for legislation. In so doing Congress has put a definite brake on the continuance of these New Deal policies. If the people want New Deal legislation to continue, if they want New Deal philosophy to continue to shape the future of this country, then they should follow Hannegan's recent advice at Boston and elect New Dealers next November. But I am positive, as I have stated heretofore, that such is not the desire of a large majority of the American people. Congress knows that the only way to get production is by work, not by following the fetish of legislation. Had all the President's proposals been enacted, we would not have had a smaller debt but a larger debt; not more production but less production; not more domestic harmony but less harmony.

I conclude with this thought. The tide of new dealism is at last at its ebb. The end of deficit-spending and deficit-thinking is at hand. The hour draws close for the demobilization of bureaucracy and the end of Federal regimentation.

The floodtide of creative, constructive, conservative republicanism will soon be with us to sweep away the unlamented vestiges of new dealism.

The New World Court

EXTENSION OF REMARKS

OF

HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, January 17, 1946

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The New World Court," published in the New York Times for January 15, 1946. I think the editorial is one of the finest I have read on the subject of the world court and in support of the compulsory jurisdiction of that court, in keeping with the resolution which I have pending before the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NEW WORLD COURT

The first step toward the formation of the new International Court of Justice provided by the Charter of the United Nations has been completed with the nomination of 78 eminent international jurists to its bench. The Court itself will consist of 15 members to be elected by UNO's Security Council and Assembly at their present session. But the large number of nominations is in itself evidence of the high prestige and wide acceptance enjoyed by the Court by virtue of the work of its predecessors. It is a special tribute to this country's role in the development of international tribunals, as well as to its juridical system, that although the United States proposed only one official American candidate, two other Americans were likewise placed in nomination by other nations.

The official American candidate is Judge Green H. Hackworth, legal adviser to the State Department, who has participated in the drafting of many treaties and the codification of international law, and who was the successor to Elihu Root on the Permanent Court of Arbitration. But, in addition, Venezuela has nominated Prof. Charles G. Fenwick, distinguished political scientist and specialist in inter-American affairs; and, what is most noteworthy, six other nations have combined to nominate Manley O. Hudson, who was for many years a distinguished member of the old World Court even though the United States had rejected it, together with the League of Nations.

Under the statute of the Court, only one of these three candidates may be elected, but the election of one is assured. So, presumably, is the election of one member from each of the other Big Five. This means that the new Court will rest on a far broader foundation than the old. For it will have not only an American as one of its judges, but also a Russian, and both the United States and Russia, which were absent from the old Court, will now be official members, thus bringing in effect two new worlds under its jurisdiction.

Under the United Nations Charter, all signatories are obligated to seek a peaceful settlement of all disputes likely to endanger international peace and security. Judicial measures are specifically enumerated as one method for such settlement. Indeed, the Security Council is enjoined, if it deems necessary, to call upon the disputants to use such methods, and the Charter specifically provides that all "legal disputes" shall be referred to the Court as a general rule. In addition, the statute of the Court itself provides that it may act in all cases which the parties refer to it, and in all matters specially provided for in the Charter or in treaties or conventions. This wide jurisdiction is usually limited in practice by the very nature of the Court, which brings before it, not intrinsically political disputes which can be settled only by political means, but rather justiciable issues subject to judicial decision. This makes it more important than ever that as part of mankind's new effort to escape destruction the jurisdiction of the Court should be anchored even more securely than it is at present.

Under the present statute, the jurisdiction of the Court depends ordinarily on agreement between two states to refer a dispute to it. But there is also an "optional clause," providing that in a limited number of cases, dealing primarily with interpretation of treaties and questions of law, the member states accept the compulsory jurisdiction of the Court, which would bring before it automatically all disputes of this kind in which such states may become involved. Both the United States and Russia have hitherto opposed compulsory jurisdiction for much the same reasons that induced them to insist on a veto power in the Security Council. But developments since the statute was drafted, in particular the arrival of the atomic bomb, make it essential that the very idea of a settlement of international disputes before an international tribunal should be strengthened. The United States has now an opportunity to make up for its neglect of the old Court by taking the lead in strengthening the new. A resolution to that effect is already pending before the Senate. We are confident that the great majority of the American people would be in favor of such action if the issue were presented to them.

The Pearl Harbor Inquiry

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, January 17, 1946

Mr. LUCAS. Mr. President, I think it is generally recognized that the New York Times is one of the leading newspapers in the United States. It reports the news as it finds it, and its editorial policy is fair and factual. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Pearl Harbor Inquiry," published in the New York Times of January 5, 1946.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PEARL HARBOR INQUIRY

The Congressional Pearl Harbor Investigating Committee has completed perhaps two-thirds of the task it assumed as it goes into recess to allow its new chief counsel to familiarize himself with the context of the approximately 1,000,000 words of testimony thus far recorded and with the outline of testimony still to be heard. On the basis of what already has been adduced, especially with the testimony in the record of the top State Department, Army and Navy command in Washington at the time of the Japanese attack on Pearl Harbor, it is possible to draw some general conclusions that hardly can be changed by any further testimony.

One conclusion is that neither President Roosevelt, Secretary Hull, Secretary Stimson, Secretary Knox, nor any Army or Navy commander actually expected the December 7 attack on Pearl Harbor, had any prior knowledge of Japanese plans, or, most importantly, had deployed our forces for the purpose of inviting a Japanese assault to "get the United States into war," as the prewar—and postwar—isolationists have so recklessly charged and have so desperately been attempting to prove.

If the Pearl Harbor investigation has done nothing else, it has laid the ghost of that charge. The wild stories that have been circulated since December 1941 of preknowledge, of White House commitments to other nations, and of White House maneuvering to bring about what actually happened have been proved either false or a biased distortion of what actually occurred behind the scenes. Admiral Stark, Chief of Naval Operations at the time of the attack, tersely summed up the informed opinion of the insiders when, in answer to a question from Senator LUCAS as to whether he believed that any man or group of men in the Government "trapped the Japanese in order to get them to attack Pearl Harbor so as to make it easier to get a declaration of war from Congress," he said: "I do not. The Japanese were the real cause of the attack on Pearl Harbor."

Another general conclusion that emerges from the hundreds of thousands of words of testimony—one that may not be so evident to the casual reader but is, nevertheless, ex-

plicit in much of the testimony of Army and Navy witnesses—is that the prewar lack of cooperation between the Army and Navy from top to bottom, was an important contributing factor—if not the principal one—to the tragic consequences of the Pearl Harbor attack. What cooperation existed was of the casual social sort, dependent largely on personal relations. There was a continual overlapping of functions. When the vital question of strengthening outlying bases in the Pacific arose, General Short—according to the committee record—demanded Army control of the islands if Army fliers and ground troops were used there, and Admiral Kimmel replied: "Over my dead body." Maj. Gen. Sherman Miles, the chief of Army Intelligence in Washington in 1941, previously had testified that Army-Navy jealousies blocked for months before December 7, 1941, the establishment of a joint intelligence office. "This sounds a litle ridiculous now," the general said, "but that is what was going on in those days."

In the first report on the disaster to President Roosevelt by the late Secretary Knox, a report which was just released last night, it was revealed that this lack of interservice unity frustrated the Navy's attempt to find and pursue the Japanese force. The Army, through use of its radar, tracked the attacking planes back to their carriers to the northward of the island. The Navy, searching in the wrong direction to the southeastward, did not receive this intelligence for 2 days.

There still are important witnesses to be heard, including General Short and Admiral Kimmel, our respective Army and Navy commanders in the Hawaiian Islands on the day of the Japanese attack. But the main outlines of the picture have been drawn. The record of the hearings, if properly digested and condensed, should be an important document for the future. For between its covers the ghost of Presidential duplicity is laid and the skeleton of Army-Navy jealousy is rattled.

Importation of Swiss Watches

EXTENSION OF REMARKS

OF

HON. GUY CORDON

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, January 17, 1946

Mr. CORDON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter appearing in the Sunday Portland Oregonian of December 23, 1945, written by Mr. Tom Burns, dealing with the importation of Swiss watches.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEMAND—"MADE IN U. S. A."

To the EDITOR:

The undersigned and thousands of other storekeepers recently received a 151-word, $2.88, night letter telegram from Mr. S. Ralph Lazrus, 200 Hudson Street, New York City. This gentleman signs himself, "President American Watch Assemblers' Association." As this outfit assembles Swiss watches, only the use of the word American should be a criminal offense. Mr. Lazrus requested me "to petition Oregon's congressional delegation, and the State Secretary Byrnes, to prevent the United States Government reducing the number of Swiss watches now being imported."

In thoroughbred Chaucerian lingo I refused. Reasons for refusal follow: T. Albert Potter, president, Elgin National Watch Co., Elgin, Ill., wrote me: "For 3½ years the American watch industry has been the only source of supply for the highly critical timepieces, and timing mechanisms without which we and our allies could not have won the war." And Walter W. Cenerazzo, president, American Watch Workers' Union, wrote me: "Don't forget that the German-Swiss watch cartel made military timing devices for such brute beast war criminals as Hitler, Himmler, Hess, Goering, Ribbentrop, Raeder, Schact, Keitel, Doenitz, Mussolini, Laval, Quisling, Hirohito, and Yamashita."

The Appendix of the CONGRESSIONAL RECORD, page A5357, contains an insert by Hon. ROBERT F. RICH, of Pennsylvania, which is headed, "Who's to Make the Watches?" from which I quote: "The number of importers of Swiss watches has increased from 50 in 1940 to more than 500 at present.

"A total of more than 28,000,000 Swiss watches have been brought into the United States since the start of the war, representing a total of 14 years of work for 8,000 American watchmakers. Imports in October alone amounted to 2,100,000 watches."

Walter W. Cenerazzo writes me: "We have only three factories left, making American jeweled watches—Elgin, Hamilton, Waltham," and that labor, at long last has begun to awake to the harsh fact that importing competitive foreign goods is simply a way of exporting American jobs. Which is 100-percent correct. Therefore, the undersigned, for 60 years a student and practitioner of horology, with American and European factory experience, pleads with you, Mr. Genuine American, to buy, "Made in U. S. A."

TOM BURNS.

Statement of General Eisenhower on Demobilization

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1946

Mr. FEIGHAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement by General of the Army Dwight D. Eisenhower, Chief of Staff, United States Army, supplementing his remarks on demobilization made to Members of Congress in the Auditorium, Library of Congress, Tuesday, January 15, 1946:

INTRODUCTION

I have come here this morning because a very human desire to get soldiers home in a hurry has clashed with the Army's manpower needs to do the job which has been assigned to us by the Government. It is a big job. Even with the fighting over it takes a great many men to carry out our mission. Overseas requirements in manpower for the long-term occupation job and for the temporary, but still unfinished, business of winding up the affairs of our great war establishment in both Europe and the Pacific are matters of cold, hard fact. They cannot be obscured by emotion and near hysteria. Evidently the relation of demobilization to these tasks which remain to be done is understood only partially by some and not understood at all by others. I believe the thing needed now is the fullest clarification.

There is no mystery in demobilization. There are no hidden ball plays. Long before our victory in Europe, General Marshall approved a master plan which has served and still serves as the basis of establishing priority of men for discharge. In any job as big as this one there are bound to be modifications made in the light of experience. But I assure you that I have made and intend to make no changes in the basic plan. The plan was simply this: to discharge men as quickly as possible and to the limit of available shipping with priority on those with the longest and hardest service—that is, with the most points. These criteria were to govern until we reached the point where minimum personnel requirements to do the jobs in hand were threatened by the rate of discharge. We have been in the business of discharging veterans from the Army under the point system for 8 months, with the system at full blast for the past 4 months since VJ-day. Men have been discharged so fast that the five millionth passed through one of the separation centers last week.

We used shipping to the utmost and secured the complete cooperation of the Navy in our zeal to get every man and woman back from overseas who could be spared. There is no longer any shortage of transports, and the shipping people assure me they will have vessels where and when we need them to bring troops home. The fact is that we worked so fast that about 10 days ago we had to slow the pace so that the work of our forces in Europe and the Pacific would not suffer too much from lack of manpower. The announcement of that slowdown was what touched off the fireworks.

If there has been any confusion in the minds of the soldiers overseas or their families at home, I propose to clear it up now.

CAUSES OF CONFUSION

Primarily, two underlying causes are responsible for the present confusion, which for a time has quite evidently exceeded the power of any information program to control. The first is that the Nation's release from the urgency of war started an emotional wave to get men out of the Army. This is wholly understandable. It was to be expected. But I am frank to say that I had never anticipated this emotional wave would reach proportions of near-hysteria. I am confident that members of the Congress are as anxious as I that straight thinking be substituted for emotion in this matter which strikes close to the firesides of several million families. The second cause of our present discontent rises, I believe, from the almost incredible speed with which the War Department moved in bringing men home from VJ-day to the close of the year. Including discharged men and women who were already in this country, more than 5,000,000 members of our VE-day army, 80 percent of them veterans of foreign service, have now returned to civilian life. While the vast majority of the combat men are home, there still remain some who have not been returned. These men are our greatest concern, and every effort will be made to return them as soon as possible.

All sorts of emergency measures were devised by the War Department to step up the speed of its demobilization processes. Performance has far exceeded the most optimistic schedules announced by our planners at the time Japan surrendered.

WAR DEPARTMENT ESTIMATES AND PERFORMANCE

Between the close of hostilities in Germany and the collapse of Japan, we had discharged just under 600,000. When General Marshall addressed a joint meeting of the Congress last September he told you that estimates then called for the release in September of 450,000; in October of 550,000, and during each month thereafter of between 700,000 and 800,000. (See charts: "Cumulative Returns to Civilian Life" and "Progress of Demobilization.")

But compare performance with prediction. In September, instead of 450,000, the number actually released was 597,000; in October, we more than doubled our estimate, releasing 1,270,000 instead of the 550,000 predicted.

In November, instead of between 700,000 and 800,000 we discharged 1,186,000; in December, the number was 1,112,000. So that, with the estimates for those months fixed at about 2,500,000, we actually exceeded our prediction by 1,665,000. This means that 1,665,000 men and women who had no expectation in September, of coming home so soon, were already reunited with their families by the close of the year. That is the extent to which the War Department has exceeded any so-called commitment to the men.

The very stepping up of these returning shipments undoubtedly helped to create confusion by stimulating optimism among servicemen and their families. But, in addition, during this same period a great many misleading statements were made by individuals some of whom were in the Army itself, that served to cloud the issue. All this time, which was long before I came to Washington, the War Department was doing a job which I believe must be considered as one of its greatest achievements. Certainly, there has never been such a planned movement of men over great distances in the history of any nation. Yet, in the face of this unprecedented performance, criticisms based largely on individual cases were deliberately confusing matters further. The presence of a high-point man still in service at some one station, because of some special need at that station, came to be interpreted, loudly, as a failure of the entire demobilization program. We must admit that there have been irregularities caused by the immensity of the problem, by the fact that the Army has been spread all over the world, and that we could not have a perfectly uniform application of the point-score system. Discovery of the fact that a man had been released as surplus, with fewer than the critical number of points, raised cries of injustice.

While these criticisms were being aired, ships poured the combat veterans of long service into home ports in schedule-breaking numbers. The War Department and overseas commanders made every effort to get as many men home for Christmas with their families as was humanly possible.

THE INCOMPATIBLES

But in this spectacular success of demobilization between VJ-day and the first of the year, the Army was rapidly approaching the foreseen juncture of two incompatibles: The speed of demobilization and our duties at home and overseas—the occupation mission delegated to us by higher authority and the protection and disposal of millions of tons of Government property throughout the world, representing billions of dollars of American taxpayers' money.

When General Marshall spoke to you last September, the War Department planners estimated that the point of definite interference between these objectives would be reached some time in the coming spring. The simple fact is that the speed-up in demobilization during the fall and early winter advanced that situation to the present.

That is the crux of the whole matter.

If we were to continue shipping men home at the rate we reached during the past few months, about April we would have nothing left but a woefully inadequate number of volunteers—we would literally have "run out of Army." That is the reason for the slowdown. There is no change in policy; there is no change in plan. We have merely reached a point in the pursuance of our plans and policies which we knew we must face when the time came. That time is now. We took all possible steps to meet inescapable needs without slowing the pace of demobilization. We pressed the recruiting campaign to the utmost in order to bring volunteers into the Army who could take the place of those overseas. We urged that positive steps be taken to provide us our full quotas of 50,000 men monthly through the Selective Service System. We required all theater commanders overseas to institute the most searching drive to cut down their estimates in manpower needed for occupation duties, for supply, and for the extensive personnel required to close up overseas depots, ports, warehouses, bases. We had also to cooperate with the designated disposal agencies in disposing of Government property as expeditiously as possible while still taking all necessary precautions to protect it. Similar instructions were issued to all commanders at home.

Pursuant to the instructions both General MacArthur in the Pacific and General McNarney in Europe have made extensive economies. The training of recruits in this country was recently cut from 17 to 13 weeks so that these men would be available sooner for overseas. We have taken every measure we could think of, and by no system of mathematics or sliderule magic is it possible to make the flow of available replacements equal all the men we should like to bring home now but who must be replaced if we are to do our job.

Now, understand this—the men who do not need replacement when their jobs are finished will come home immediately. So far as possible this will be in the order of their point scores and length of service. These will be the surplus men, the men available for discharge. But if we are not to disintegrate our occupation forces certain men must be kept until trained replacements are available or their job finished.

Now, whenever there are individual exceptions to a general rule, bitterness is sure to arise—especially in the hearts of homesick boys. I realize that fully, and it is absolutely essential that the immediate commanding officer of every man so affected realizes it, also. He must personally explain to him how he fits into the big picture and what his duty is.

Surely, where remaining on foreign duty for 1, 2, or 3 months longer—that is the most involved here—makes the difference between our Army's doing its job or failing to do its job—I believe I know the American soldier well enough to be certain what he will do—if he understands the need. He will stick there and do a good job—and gripe.

LAG IN REPLACEMENT SYSTEM

One thing right here on this matter of replacements which I believe is generally misunderstood is why, if we recruit 5,000 men today, we cannot release 5,000 men from the Army tomorrow, or next week, or next month. The answer is quite simple when you analyze the problem. So far as essential jobs in the theater are concerned, the recruits become available not when they enlist but only when they arrive overseas, trained to take over their assignments. If an 18-year-old enlists or is inducted through selective service in this country, he goes off to a camp for 3 months to learn the rudiments of being a soldier.

If a trained man already in the Army chooses to volunteer for regular enlistment, he is entitled to a furlough in the United States which will make him useless as a replacement until he returns. Any way you work it, there is bound to be a lag of 3 to 6 months in this replacement business. It cannot be avoided. The men who enlist or are drafted between now and next July will not be available in time to solve the immediate problem before us, even if there were enough of them. They are the effective replacements for men to be discharged 3 to 6 months from now. The lack of replacements facing the Army now is due to the shortage of selective-service men and the volunteers of the last 6 months in 1945. Because they did not come in fast enough, we must slow down our discharge rate now.

OUR JOB OVERSEAS

The people at home must understand this, too. Acceptance of the need for keeping large numbers of men overseas at the present time lies, I believe, in an understanding of all the necessary tasks they must perform. I was a theater commander myself, you will remember, until I was brought back here. I am thoroughly familiar with the problems which General McNarney, the present theater commander, faces in Germany. From my personal knowledge of conditions in Europe, it is easy to project in my mind the comparable, and in a geographical sense, far more difficult problems which General MacArthur faces in the Pacific.

EUROPE

Perhaps we sometimes speak in too general terms of what our troops are doing in Europe, obscuring the manifold tasks to which men are assigned. We speak of commitments and obligations. Let me translate such words into a picture of their meaning, as an army of occupation goes about the daily task of policing an enemy country and disposing of the prodigious stores assembled to fight the war.

Start with our primary and continuing mission of occupation duties. Troops assigned to this work supervise the German and Austrian Governments. It is a complex job. We are going through the throes of reconversion on this country. No one is more familiar than you gentlemen with the problems and the difficulties encountered even in this peaceful land. Germany and Austria are going through reconversion, too. In our zones in those two unhappy countries the Army is responsible for supervising all the headaches of a change-over from war to peace, with the added directive that we must make certain these people are so disarmed, both economically and in a military sense, that they cannot make war again. Reconversion measures in those two countries are enormously complicated by devastation. Normal facilities of living have been destroyed in all the cities and there is scarcity of even the barest essentials in consumer goods which Americans expect to find in any corner store. It requires a great many men to supervise the local governments in our zone in Germany and Austria with a civilian population of over 15,000,000. However much you may delegate local work to Germans, you still have the responsibility for policing these people, their industry, trade and commerce, food and agriculture, education, finance, telephone and telegraph and transportation. For details of the men used see chart attached, Overseas Employment of the Army. The figures represent the total air and ground troops required.

On January 1 there were 622,000 American soldiers assigned to the European Theater. General McNarney estimates that this number will be cut to 400,000 by April 1 and to 307,000 by the 1st of July. In the Mediterranean Theater on January 1 we had 51,000 American troops, a number which will be gradually reduced to 28,000 by July. The sum of the July figures for both European and Mediterranean theaters—335,000—is the total number of American troops who will remain stationed in those areas at the end of the first half of 1946.

Let me tell you in some detail what our men are doing in Germany and Austria. Demilitarization of Germany, for example, means demolition of her fortifications and other installations, including industrial plants selected for destruction under our economic program. Approximately 3,000 enemy military installations will be destroyed under the supervision of American soldiers in Germany.

The total area of our zone is about 60,000 square miles and contains 55 major centers of population and much rural territory. We have turned over the job of maintaining law and order to local police forces, but they have to be supervised and reinforced by a mechanized constabulary force of American soldiers. Two thousand miles of international or interzonal boundaries must be patrolled. If this is not done effectively, thousands of

refugees from other sections of Europe infiltrate into our zone adding to our burden of feeding, housing, and extending medical care to these victims of war. Military stores, telephone exchanges, electrical plants, road and railroad bridges, and other points which might be targets of enemy sabotage must be guarded.

Then there is the extensive intelligence and counterintelligence work required to carry out the work of denazification and pacification. This includes a constant watch for subversive activities, evaluation and processing of Nazi documents, supervision of civilian censorship, and the conduct of counterintelligence which alone is expected to result in the arrest of an over-all total of 500,000 persons. Unquestionably, many prominent Nazis are still at large because of a shortage of trained counterintelligence personnel.

I must remind you that we are operating in an enemy country where the most constant surveillance must be maintained over the civilian population to make certain that no elements are allowed to develop organized opposition. In addition to this, serious crime, minor thievery, and pilferage are a constant concern of our military police. Post exchanges, railroad trains, and supply depots are frequent targets, and vehicles are stolen. In most cases the thieves are quickly taken, but happenings of this sort are so frequent that we can never relax our alertness.

Discipline in this respect has a wider significance than the simple protection of the lives of American soldiers and of Government stores. Our example in maintaining law and order throughout the conquered countries will have the most far-reaching effect in hastening the pacification of the German people. If, through curtailment of manpower, lawlessness and contempt for the American brand of justice should be permitted to develop, it would not only hurt our progress in Germany but would weaken our prestige throughout Europe. Quickly, our commanders and forces would be in an impossible position.

In addition to these operations, recruits from this country, who have already been given their basic training as soldiers, must be further trained in occupation duties after arrival. This means that experienced men from the occupation force must be detailed to instruct them—another drain on the over-all manpower assigned to this work.

These duties have taken no account of the men who must be assigned to the procurement, storage, and distribution of supplies. Besides the normal function of supplying the military forces, General McNarney's theater has the responsibility of providing for such agencies as United Nations Relief and Rehabilitation Administration and the Foreign Liquidation Commission. The problem is complicated by the limited amount of rail transportation. Although civilians are employed as much as possible, there are limits to the effectiveness of their use. In order to reduce stealing in a land where goods are very scarce, civilians are usually worked in depot areas where they can be closely supervised. To give you an idea of the economies in military manpower obtained by the use of civilian labor, the theater engineer employs 59 percent German prisoners of war, 20 percent German civilians, and only 21 percent American soldiers.

The task of providing communications throughout the United States zone was greatly hampered by the damaged and chaotic condition in which the established lines of communication were found when we took over. These facilities must provide not only for the occupational forces but for the minimum needs of the civilian population. Considerable construction of bridges and, to a lesser extent, of highways and waterways is necessary. Civilian labor under military supervision is utilized in construction, but because of the technical nature of the work our own Signal Corps troops are required to perform maintenance on signal communication facilities. German civilians are operating such ground transport as exists, under our Army's supervision. The system of air transport must be operated entirely by our troops.

DISPOSAL OF GOVERNMENT PROPERTY

Of considerable importance is the disposal of United States property remaining in the theater, as well as the storage and orderly destruction of captured enemy material. The size of this latter part of the task is indicated by the fact that 100 depots and dumps are in operation for storage of material captured from the enemy. One such depot alone contains over 400,000 tons of ammunition.

At the present time United States property valued at more than $7,000,000,000 is being stored, guarded, and maintained by troops in the European theater. A great deal of effort has gone into the roll-up and concentration of this property, but there still remains a vast amount to be done.

Regardless of whether this property is stored for the use of our occupation forces, returned to the United States for current and future needs of the Army, in process of being declared surplus, or already declared surplus but not disposed of by the disposal agencies, the Army has the complete responsibility for care, maintenance, protection, delivery, and fiscal accounting for such property. These responsibilities also apply to captured enemy property. All of these vast stores require a large force of men not only to inventory, pack, and supervise their disposal but to guard them. This is property belonging to the United States Government, its care entrusted to the Army. Some of it is machinery or instruments requiring special mainteance for protection from deterioration.

That is a very brief and a very rough summary of the present duties of troops engaged on the strictly military duties incident to occupation. This work now requires the assignment of some 298,000 American troops. General McNarney's estimate is that by next July 1, their number may be cut to 171,000, of which 98,000 will be performing the duties of supervising the German Government and population and 73,000 will be performing the direct supply requirements of this force. The figure includes the considerable number who carry on constant occupational negotiations with British, Russian, and French members of allied control councils.

SUPERVISION OF ENEMY PERSONNEL

Another of our duties is the guarding, screening, supervision, administration, and eventual release of enemy personnel held by United States forces. In addition to persons in this category already in the theater, a large number of enemy prisoners of war are being returned from the United States to Germany. General McNarney estimates that 735,000 will be under detention in the United States zone in May 1946. We are now operating about 150 camps, inclosures, and hospitals for various classes of enemy personnel.

The care of displaced persons has been an enormous problem from the time of our entry into Germany. The repatriation of millions of these individuals has already been carried out with sympathy and high regard for the humanitarian nature of the problem involved. Estimates are that some 462,622 displaced persons still remain in our zone in Germany on the 1st of January, and that this number might be cut to 200,000 by June. We are now operating 365 installations for these tragic victims of Nazi brutality. But despite our sympathy for them they do add tremendously to our responsibility for police security, housing, and medical care. In the United States zone in Austria there were on January 1 an additional 150,000 displaced persons housed in 86 camps. Their number is expected to decrease to 109,000 by June 1, with UNRRA and the Austrian Central Government administering many camps.

Numbers of our troops are also engaged in the emergency program of providing supplies in Germany and Austria to minimize starvation, disease, and disorder among the civilian population. In Austria we are also helping to sustain vital economic projects on a minimum scale. Before the winter is over the distribution of emergency food supplies will undoubtedly become necessary.

At the present time some 50,000 of our men are directly concerned in control and direction of prisoners of war and displaced persons. By July 1, 1946, their number will have been reduced by half—to 25,000.

Some 111,000 service troops are now assigned to the European theater, to take care of the needs of the occupation force and troops engaged in winding up our surplus property installations. They include Medical Department personnel—doctors, nurses, technicians—Signal Corps, Ordnance, and Engineer troops. These men staff the camps, run the railroads and truck routes, man the hospitals and lines of communications, see that roads are kept repaired, run the post exchanges, the Army Postal Service, and furnish all the customary services which must be provided to men in the field. Our troops are scattered over a wide area. Lack of the usual civilian facilities has placed unusual burdens on the service units. These service units must also carry on a limited amount of construction and considerable maintenance work. This includes airfields, laundries, American Red Cross installations for the recreation of the troops, winterized billets, and hospitals. Maintenance is constantly necessary in all the ports. Prisoners of war and local civilian labor are largely used in this work under our military supervision, but the problems are so extensive that thousands of Americans are required for these jobs.

Last in this category I mention the graves registration service, which involves the location, identification, concentration, care, and disposition of the remains of our heroic dead. There are still many unlocated graves and bodies to be moved to established military cemeteries. We have 37 United States cemeteries requiring administration of records, supervision of construction, reburials, and the general upkeep of graves. According to present plans, the graves registration project will be completed by May 1946.

At present, as I have said, some 111,000 troops are assigned to these various service missions. By July 1, 1946, General McNarney expects to have cut this total to 61,000.

There is a final manpower category for the theater consisting of men temporarily unavailable for duty which the Army calls ineffectives, for want of a better word. This lumps together individuals who may be charged against the theater roster but are actually not, for one reason or another, performing any part of its duties. In this category are troops who are being moved in order to be discharged or to replace those troops; men on sick leave, pass, and recreation; men in schools, in confinement, or in transit to station; men absent from the theater on rest, recuperation, and rehabilitation; men on furlough in the United States after reenlisting in the theater. The total number of these individuals on January 1 was about 163,000. This number will be cut to 50,000 by July 1.

I have gone into this description in some detail because I wanted to show you how ramified are the duties on which our troops must engage to carry out their mission overseas. And I wanted to put some flesh on the bones of those two words "commitments" and "obligations." They are something more than high-sounding generalities. I can assure you that they are very real to the men in Europe and to their commander who is responsible for discharging them.

Within the broad categories I have indicated I believe you may imagine the thousands of daily tasks which must be performed by thousands of men. I know, and you know, that many of them are homesick men. But there is a job to be finished. Although our allies are carrying a heavy load, Americans have assumed the definite commitment and the responsibility of carrying out their own share. To the Army has been delegated the principal job in performing this work. The work cannot be done without men. Remember, this is your army—not the War Department's army and not the generals' army. It belongs to the country—to the Congress and the people. It carries out their wishes and their orders.

PACIFIC

Let's turn now to the Pacific where similar heavy responsibilities are being carried out by troops under command of General MacArthur. In addition to occupation duties, closing up supply bases, ports, dumps, etc., and the disposal of great stores of property assembled for the invasion of Japan, this theater has an additional duty in occupying bases which our troops seized in the island campaigns during the advance toward the home islands. The build-up of supply, concentrated in Hawaii and in the Philippines, was well along when the Japs gave up. As a matter of fact, our tonnage of supplies in the Philippines actually increased after the close of hostilities in the Pacific, due to the great number of ships nearing port and our uncertainty at that time of what our needs would be when we landed in Japan. While the majority of these ships were coming from the United States, many others of them carried supplies redeployed from Europe and other inactive theaters to support the invasion of Japan scheduled for November 1945.

General MacArthur has reported 7,000,000 tons of supplies as being on hand January 1 in the Pacific theater. The duties our troops are performing out there are almost exactly similar to those I have described for the European theater. Our occupation functions involve most of the islands captured from the Japanese as well as Japan proper. We have a force in Korea. We are still accepting the surrender of Japanese troops in the Philippines, Ryukyus and other localities, long after their nation had surrendered.

In Japan our forces are engaged in the destruction of enemy fortifications as well as in the numerous other tasks growing out of enforcement of the surrender terms. Law and order must be maintained. There is considerable work to the disposal of great quantities of enemy property seized in the home islands, some of which is destroyed, some salvaged, some shipped to the United States and our allies. The remainder is disposed of according to the most practical use that can be made of it. All this requires the services of a considerable force. The supply system, operating over thousands of miles, is a formidable problem in the Pacific. The Army is exerting every effort to maintain a never-ending flow of fresh foods to all bases and areas where our forces are located, but transport by air, water, and land is made difficult by great distances.

I should like to speak in some detail of the care of Government property in the Pacific, because the direct connection between its efficient handling and the availability of competent manpower is so obvious. It takes expert officers, experienced in the handling of supplies—men qualified to direct the dismantling of a hospital, a power plant, or a laundry, for example. Of course, a great many of such officers are being taken off the job constantly by the operation of the point system.

A great part of the work our men are now doing on many of those small Pacific islands whose conquest made savage headlines for a brief spell 2 and 3 years ago, is concerned with the disposition of property. Once these islands were battlegrounds, hard-won steps in the progress of our troops through the southwest Pacific. Then they were forward bases, with perhaps an airstrip from which the dogged Japs on other islands just ahead were bombed. Their development for military use required engineers with bulldozers and other heavy equipment to widen and lengthen the airstrip and clear the jungle for buildings and supply dumps. When islands were big enough, docks were constructed so that ships could come in to unload their cargoes instead of having them brought to the beaches by landing craft and ducks. Such islands became the springboards for further progress—overwater hops to other islands, which left many as rear supply areas in the backwash of war.

Then the war itself ended, and all need for these bases ceased. The business of "closing out" these bits of temporary American soil began. Our troops commenced to "roll them up," in the phrase the soldiers use.

This process of rolling up our bases occupies the time of a great many soldiers in the Pacific. These islands have been piled high with American goods, brought in to push our soldiers along the seaway to Tokyo. This is Government property, and now these things which the Army no longer needs must be disposed of through the proper disposal agency. They must be inventoried, inspected, packed, and guarded until the Army's responsibility is discharged. But out in the Pacific there is an enemy of property far more dangerous than thieves. It is the tropical elements which mildew and rot and destroy unless the utmost precaution is used. Trained and disciplined soldiers are needed for this work, men who know their jobs and who feel a sense of responsibility for the preservation of this property while it remains in the hands of the Army.

All too often these men are veterans of long service through these islands. Many of them went home with the first loads of high-point troops who returned from the Pacific. More are leaving every day. For each one who departs without a trained replacement, the danger is increased that the roll-up will not be accomplished efficiently and speedily. There is no question but that the normal operation of the point system is slowing us up in this process. It was bound to. With the veterans gone and garrisons reduced, the task of preparing for the disposal of the infinitely varied items which our troops used in the Pacific is made more difficult. The danger of deterioration is likewise enormously increased. The machinery rusts, the planking of docks and buildings rots, the dampness destroys delicate instruments. It is this aspect of the task and the tremendous distances involved which govern demobilization in the Pacific.

The property-disposal problem is a definite part of this Nation's mission in the Pacific. It is my responsibility, it is the soldier's responsibility out there—in the end it is your responsibility, as Members of the Congress, to the American people. Except where necessary for health, safety, or security, we do not have the authority to abandon this property; it must be taken off our hands by properly constituted civil authority. It is one of the incompatibles defying unrestricted rate of demobilization. It will continue to be a charge against our military manpower until it is liquidated.

ROLLING UP BASES

Don't let me give the impression that, in spite of difficulties, we haven't been making progress in rolling up bases and rear areas which were once battlefields or great forward points of supply. As an example, there were 44,000 troops and 314,000 tons of supplies on New Guinea September 1, 1945, when the Japs signed the terms of surrender. These figures were reduced to 7,000 troops and 42,000 tons of supplies by January 1, 1946. All troops and supplies are expected to be completely evacuated from these bases by April 1, 1946.

In Australia our first great far-Pacific base, about 104,000 long-tons of supplies remain on hand. The theater expects them to be finally disposed of and all Army activities there completely closed up by April 15, 1946.

On Okinawa a garrison of approximately 33,000 air and service force troops will be permanently stationed. In this strategic location our heavier occupational air strength remains secure against potential civil uprising, but yet in position to strike a deadly retaliatory blow against any section of the Japanese homeland.

PHILIPPINES

I will not go into the service functions of our Pacific troops in detail, since in most particulars they parallel those I described for the European theater, complicated by long supply lines, the tropical enemy, and difficulties of transport within many areas. But I should like to say a special word about the mission of our troops in the Philippines. You are familiar with the tragic destruction perpetrated by the Japanese during the final days of fighting. Their unwarranted and bestial acts of savagery destroyed not only lives and property but much of the functioning of orderly government and its agencies. There is no effective Philippine agency now in existence to maintain law and order. As a result of the war the Philippines were left without an effective police force and the splendid Philippine Scout organizations were practically destroyed. Now armed bands of guerrillas roam the hills, bent on pilferage which only our active presence controls. We are now engaged in recruiting a force of 50,000 Filipinos to replace a comparable number of our men in the Philippines and elsewhere in the Pacific, but it will be many months before this force becomes effective enough to accept the responsibility of policing the islands. It is our clear obligation to assist until that time arrives. In addition to this activity, American troops have here also the familiar task of liquidating the bases and immense stores of Government property which were assembled at a time when these islands were our principal forward base for the planned assault on Japan's home islands. With the exception of air and supply bases on Luzon and Leyte, our Philippine bases and supply points will be progressively reduced and closed out by July 1, 1946. On January 1 we had approximately 279,000 troops in the Philippines. These will be reduced as rapidly as possible to a garrison of approximately 79,000 which will be needed on July 1 to carry out our continuing responsibilities there.

There are now 865,000 American troops engaged in carrying out our over-all mission in the Pacific. General MacArthur has made a careful restudy of his requirements and assures me that he can operate with a total of 375,000 as of July 1, 1946. This number will later be gradually reduced.

OTHER THEATERS

In India-Burma our strength has been rapidly withdrawn since the end of August. From a figure of 166,800 on VJ-day it reduced to 55,000 on January 1. It is being further cut by large slices until on July 1, 1946, only 4,000 soldiers are expected to remain in the theater. Their mission is entirely concerned in guarding surplus property or in providing services and supply for those who are doing so.

Last August 1 we had some 63,000 troops in the China theater under command of General Wedemeyer. Following the Japanese surrender, the great majority was withdrawn. By January 1 the army had but 9,000, a figure which will be reduced to 6,000 on July 1. While there may be some reduction in this number later on, General Wedemeyer has informed the War Department that he will require this small force of Army Air Force and ground troops. As part of our Potsdam commitment, this Government as-

sumed responsibility of assisting and advising the Chinese in repatriation of Japanese nationals to the home island.

We have no considerable amounts of supplies in China. Most of what we have is designed for the use of our smaller number of troops. While our airmen flew thousands of combat missions against the Japs in China, our ground support of the Chinese Army was confined to training and liaison work. We had no army combat ground units in the China theater.

What I have said of the Pacific and of Europe applies to all the other areas overseas where we have American troops and property. The same problems exist in varying degrees in all theaters, and in the last analysis, we must rely on the professional judgment and ability of our theater commanders to find the solutions. I have the utmost confidence in them.

I have spoken to you thus fully of the situation and the mission of our forces overseas because only in the light of all these jobs, which complete the commitments and obligations placed on the Army by higher authority, is it possible to understand the continuing necessity of adjusting the demobilization program to the job in hand.

THE JOB AT HOME

These foreign commitments and obligations cannot be met, our demobilization cannot continue in an orderly fashion, we cannot carry on the business of our far-flung forces unless we keep a proportionate force on duty in the United States during this interim period. In this respect we are like a snake swallowing his tail. We are trying to gobble ourselves up as fast as we can but we must take care to keep the head big enough to absorb the body passing through it. The head of the snake is the force in this country. This force varies as the gobbling-up process goes on.

As of January 1 there were 2,100,000 on our rolls in the United States, including over 100,000 officers already on terminal leave. Of the 2,000,000 men of the ground, air, and service forces in this country nearly 1,000,000 are operating personnel administering our posts, camps, stations, ports—generally engaged in housekeeping and supply activities, and caring for the sick and wounded. For example, 100,000 of these alone are engaged in what we call processing duties, that is, they are operating the separation centers through which 7,750,000 individuals will have passed between VE-day and next July. They also operate induction centers and handle the selectees and volunteers as fast as they are brought into the Army. Another 100,000 of the 1,000,000 are engaged in the care of the 150,000 sick and wounded in our hospitals on the first of the year. Approximately 350,000 are engaged in the administration and training of individuals for air crews and the maintenance of our planes, transports, and ferrying activities. A total of 150,000 trainers are required for ground and service troops, including some housekeepers at schools and depots.

Another 50,000 are guarding prisoners, both our own and enemy prisoners of war. Finally, some 50,000 others are at ports and staging areas taking care of the flow of personnel in and out of the country. The rest (200,000) are engaged at posts, camps, and stations, and in manufacture and storage of supplies, in special activities, such as the USMA, care of returnees, housekeeping details, proving and demonstration activities, and other home-front jobs.

Aside from the 1,000,000 of the operating personnel there are the 150,000 that I mentioned in hospitals, at least 350,000 actually in process of separation, 200,000 or more on furlough and in transit, 200,000 students in training and a balance of 100,000 in units and miscellaneous activities.

This is a rough break-down only, the detail of which will be brought out no doubt in the subcommittee hearings which will be held these coming days. What I have endeavored to show here in a general way is merely what the head of the snake is doing and why it must be kept as large as it is. By July 1, 1946, it is estimated that our forces in this country will be cut to 654,000. This figure is broken down between 360,000 operating personnel and the balance to cover men in training or en route overseas, and to provide a small reserve of combat air and ground troops.

The question may well be asked—and it has been—If you have 2,000,000 men in this country now and are cutting these to 654,000 by next July, why not send some of the difference overseas to replace veterans who might then come home? That is exactly what we are doing. All of the replacements going overseas are carried as strength in this country until they arrive at a foreign port. But there is no economy in sending a man overseas if he is so close to eligibility for discharge that we should have to turn him right around and send him back. Nor is there any sound reason for keeping him in the Army if we no longer have a job for him here. So we discharge him. I realize that it is a source of irritation to veterans overseas to have a man discharged in this country with fewer points than the veteran over there. From his angle, it is rank injustice. But from the point of view of the country, the only realistic and practical decision is to let him out. We can't make an omelette the size of this demobilization job without breaking a few eggs.

THE SCOPE OF THE PROBLEM

I have described for you the composition and duties of our January 1 Army of 4,200,000 and of our Army of 1,500,000 as it will be next July 1. Our present problem lies wholly between these two figures.

Between now and the 1st of July, based on the best estimates of the performance of Selective Service and the Army Recruiting Service, we expect that 400,000 men will enter the Army from civil life. Three million more soldiers will return to civilian life. A million of these individuals are in the separation process already. They should be civilians again no later than early February. This leaves 2,000,000 men to be discharged in late February, March, April, May, and June. (See chart—"Progress of Demobilization.")

Many of these would not have been discharged in any case until May or June. They will still be discharged by that time. Many others will be discharged in February, March, and April just as they expected. The soldiers who are actually affected by this necessary readjustment over the next few months are approximately 700,000 (the red area on chart) 2-year men who hoped for discharge in March and April and who, because no replacements are available for them will not now get out until May or June. Of these 700,000, an estimated 300,000 are now overseas.

TWO-YEAR MEN

These 2-year men looked for discharge in March because of the statement which General Marshall made in his talk efore you last September. I should like to refresh your memories on the text of his statement. General Marshall said: "We hope by late winter we will have reached a stage in carrying out the point system—which is now governing policy and which we must not emasculate unless we want a morale situation almost chaotic to develop—when, in effect the point system may be relaxed and 2 years of service will govern. That will mean that men of 2-years service will be eligible for demobilization."

Later on, a War Department spokesman set the date for the expected discharge of 2-year men as March 20.

Now, this estimate was based on all the facts available at that time. As was stated at the same time, the initial discharge rate was not geared to any definite Army strength which might be required to complete our duties in the war, but to shipping facilities. In discussing this point, General Marshall said: "There has been no relationship whatsoever between the rate of demobilization and any future plans of the Army. I mean by that that all the facilities available in transportation and in personnel trained to handle demobilization have been devoted to release from the service as rapidly as possible the largest number of men. It will be next spring, presumably—and if the estimates in occupation forces now forecast are accurate, it will be even later than early spring—before we will reach a point where the rate of demobilization will be influenced in any way by consideration of the strength of occupation forces."

General Marshall based his statement on the best forecast that could be made at the time. Factors governing the entire demobilization picture have changed frequently in the five intervening months, all but once resulting in an acceleration of the rate of return from overseas and discharge. It gave me a great deal of satisfaction to consider the happiness of the 1,665,000 men and women who returned to their homes long before they expected because of the speed-up in demobilization. I am equally sorry that the failure of the replacement rate to meet our continuing obligations overseas has now forced a much smaller number of individuals to wait 1, 2, or 3 months longer for discharge.

Unfortunately, the War Department has no choice in this matter. I repeat that every feasible measure was taken before our announcement was made on January 4. We had no alternative. To declare every soldier with 2 years' service eligible for discharge on March 20 would mean that, in addition to the 1,000,000 now in process of discharge, another 2,000,000 would have gone out by that date. The results would have been catastrophic. Our operating forces in this country would be far short of the numbers required. Among other casualties it would mean the complete collapse of the Army Airways Communication system. Without technicians there would have been a consequent grounding of our air forces all over the world. It would mean the practical abandonment of billions of dollars in American equipment. It would mean such a complete rescramble of our occupational forces as to jeopardize the results of months of work in bringing order out of chaos. It would mean such a collapse of military organization in this country as to impair gravely our ability to care for our hospitalized veterans or to supply the soldiers remaining overseas. In a final burst of irony it would delay these very veterans for days and possibly weeks in the ports and the separation centers because the technicians who ran the centers would themselves have left the Army.

If there were any possible way to discharge all 2-year men on March 20 without disrupting the Army it would be done. We simply cannot do it.

I have the utmost respect and a most profound affection for the American soldier, and I believe that he knows me well enough to have confidence that I will always deal justly with him. I believe I am doing that now when I say—to him and to you—that we cannot discharge all 2-year men on March 20 and that this is dictated solely by the necessity of adjusting our discharge rate to our replacement rate and to the continuing job which the Army must do, both in this country and overseas.

I state categorically that he is not being held in the Army to get a Universal Military Training bill or any other legislation through the Congress. It should be unnecessary to say that, but the point has been raised, so I call attention to the fact that the President's program of Universal Military Training stipulates training only and does not provide for

any service. No trainee would replace a single soldier.

In this same connection I have seen the point made several times that the Army is deliberately being kept at greater strength than is needed so that the generals could keep their stars. I believe a single statement will answer that. The Army is proceeding with dispatch to retire or reduce or relieve from active duty its temporary general officers in the Army. To date, 789—more than half the 1,550 general officers of the VE-day Army will have been either reduced, separated, or are now under orders for such action and by June 30, 261 more will have been processed.

THE PRESENT PLAN

To each man who expected to be discharged in March or April and who will not be out until May or June, I say as I say to you—that the War Department is taking every possible measure to insure that he is not held in the service one day longer than is absolutely necessary. In order to insure this and to make clear to every man in the Army exactly where he stands, the War Department has issued an order to all major commanders. It is appended in full to the statement. The salient points affecting enlisted men are:

(1) By April 30, 1946, all enlisted men (except volunteers) with 45 points as of September 2, 1945, or with 30 months' service as of April 30, 1946, will be separated from the Army or aboard ship returning home.

(2) By June 30, 1946, all enlisted men (except volunteers) with 40 points as of September 2, 1945, or with 24 months' service as of June 30, 1946, will be separated from the Army or aboard ship returning home.

Whether or not these criteria can continue to be observed after July 1 depends directly upon the rate of inflow. Failing the necessary monthly intake either these criteria will have to be abandoned or competent authority—I presume the Congress itself—will have to relieve the Army of its vitally important missions. None of us can escape the realization that this will be a most fateful decision, therefore let me repeat at once that the commitment I now make is limited to July 1, 1946.

ANALYSIS OF REPLACEMENTS

Now let me talk of the replacement rate itself. Present estimates are based on past performance of Selective Service and our recruiting service. Only if future rates keep pace can the Army's rock-bottom requirements of 1,500,000 men in the service on July 1 be met. Let me examine these data for you. First, as to Selective Service: In July, the Army received 88,000 men through induction. In August, with the capitulation of Japan at hand and with the consequent easing of pressure by local boards, this figure fell to 55,000. Beginning with September, the Army arbitrarily reduced its monthly call to a total of 50,000. In September we actually received through Selective Service 41,000; in October, 37,000; in November, 35,000; and in December only 21,000.

As to enlistments, the Personnel Procurement Service, consisting of over 10,000 officers and men, is exclusively concerned with obtaining the maximum number of enlistments from every source—men in the service, those who have had previous service and now discharged, and from the vast number of men in civilian life who are eligible to serve. The most stringent orders are in effect to stress to the utmost all the inducements for enlistment which the Congress so recently authorized. Through the press and radio, a most comprehensive program of advertising has been launched. In November, when this program actually got into full swing, all previous records were broken when the Army enlisted 185,000. In December this number dropped off to 131,000. By January 1, our enlistments totaled slightly less than 400,000, but of this number approximately 44 percent are men who have enlisted for the minimum periods of 1 year or 18 months service. A great many in this latter group are men who have been discharged from the Army shortly after their induction to enlist for the purpose of determining their own date of release, or are men who enlisted for the minimum period rather than await induction. Of those who have enlisted for 3 years, a large number are old Regular Army soldiers whose previous enlistments had run out, and who have reenlisted to protect their seniority and retirement privileges. Our enlistment record has been good, but, taken together with selective service, it has not been high enough to provide required replacements. We shall continue to push this enlistment program, but only if selective service is able to provide the 50,000 men per month we are asking for will the 1,500,000-man Army be guaranteed under our present discharge policy.

THE POSTWAR ARMY

Let me make clear that the basic figure of 1,500,000 has no connection with the permanent peacetime Military Establishment. In this regard, I should like to dispel once and for all the confusion which apparently exists in the minds of many in the meaning of the term, "Postwar Army." The Army that won the war needs no definition, apology, or justification by me or anyone else. Its record speaks for it. It was the finest military organization the world has ever seen. It was perfectly adapted in quantity and quality to the tasks assigned it. In the accomplishment of these tasks it covered itself with everlasting glory.

But that Army no longer exists! Most of the long-service combat veterans are already back in civilian life. They are largely among the 5,000,000 who have already been discharged. As I said before, we are particularly concerned about the combat man still in service.

What we have today is the remnant of that combat Army in a state of reorganization and reduction to an interim Army assigned an entirely different mission or task. It is still a World War II task, but is not yet a task for a permanent peacetime Regular Army. It is the task of reconversion and of "securing the peace." When we have secured the peace, and liquidated our emergency tasks, we shall then have a third task—to preserve the peace. This is the long-term continuing peacetime mission of the Army. It will be the job of our permanent peacetime Military Establishment. The size and composition of that establishment are, of course, up to you.

But that is not the issue here. We are not talking about our permanent peacetime Military Establishment but the establishment to do the job now on hand. I know of no responsible officer who would not infinitely prefer to have both our present interim Army as well as our future Regular Army on a 100-percent voluntary basis at the earliest possible moment. The War Department will recommend the immediate termination of Selective Service as soon as it is assured of a stady flow of replacements adequate to maintain the size of force required to perform the tasks assigned to us. But we cannot escape the simple fact that Selective Service and voluntary recruiting together have been unable to furnish an adequate flow of replacements to compensate for the rate of discharge under our demobilization policy until the rate was necessarily changed on January 4.

EFFECT OF PRESENT DEMOBILIZATION PLANS

Now just where does this leave us? On VE-day we had 8,300,000 troops. We have already discharged 5,000,000 and by July 1 we shall have discharged another 2¾ million men who were in the Army the day Germany collapsed. This leaves but half a million or so of the VE-day men. Except for veteran volunteers, this is all that will be left of our own VE-day Army on July 1, 1946, less than 14 months after the last shot was fired in Europe. All the rest will be recruits. It is with this relatively untrained Army in the throes of reconversion that we must undertake the grave tasks still ahead.

This has been the most rapid and broad-scale demobilization in history. I consider our July 1 figure to be almost without a safety factor. It is a risk which, under any other circumstances than the vastly appealing one of reuniting men with their families, I should be unwilling to take.

The order on 2½-year men means the release of 2,200,000 by the end of April. It takes an estimated 500,000 men now in the Pacific, 400,000 in Europe, 400,000 from other areas overseas or already en route home, 900,000 now on duty in this country. This order has not been issued without the gravest consideration. As an example of how close this pares manpower by the end of April, General McNarney has just informed me that to continue performance of duty in his theater it will be necessary to eliminate the present rest and recuperation programs and drastically curtail leaves and furloughs, to suspend all military training except on-the-job training, to abandon or transfer to liberated countries certain types of Government property surplus to his needs, and to scrutinize more closely all requests for emergency returns to this country. From these measures you will appreciate how close the margin is between the efficient performance of duties and virtual abandonment of them.

THE RISKS

It certainly will indicate to you that should we fail to obtain the 1,500,000 men we require on July 1, something would have to break in the tight little net which we have now woven to perform our job in this country and discharge the Nation's overseas commitments. If we are not relieved of the still huge supplies of Government property entrusted to our custody overseas, we shall have no choice but to abandon them where they lie. But even if you gentlemen should approve such action on the choice between two evils, I know you would not tolerate the reduction of occupational forces below the levels required by General MacArthur and General McNarney to carry out their duties. There is no possible doubling up of work load which could enable us to accomplish that part of our present mission with fewer men. If that situation should develop, you gentlemen will have to decide what we must do. Other functions would have to be abandoned, too, with tragic results. Pared down to the bone, the Army air, ground, and service troops are still just able to discharge the duties I have outlined to you. We can function with no less. For my part, I can assure you that the Army will continue to carry out faithfully its planned reduction through the coming months, in accordance with the directive I have read to you. In the light of its terms, there will no longer be any useful purpose in such demonstrations as our troops have conducted during the past week in various areas around the world. Unfortunately, such meetings are always subject to misinterpretation. No disorders accompanied them. They were occasioned by homesickness. I sympathize with the depth of that longing for home and loved ones. For 3½ years in Great Britain, in North Africa, in Italy, and on the continent of Europe I shared the feeling of every soldier in wanting to come home.

CONCLUSION

During the war in Europe I had the heavy responsibility of sending into action the gallant sons of America, knowing full well that many would not come back alive. That is a commander's responsibility in a time of impelling need to defeat a menacing enemy. I did everything in my power to insure a

sound plan of action and to implement this plan with the necessary troops and matériel to keep our losses at a minimum. Throughout this campaign the welfare and best interests of our men were always close to the hearts of their commanders of every grade. I regard the responsibility placed upon me in the current situation as a continuation of what I bore during the war. Along with that responsibility I carry the same vital interest in the welfare of our men and the same determination to see that their interests are fully weighed and protected. In no question involving the GI will I ever appear except as his friend and his advocate, although I may be of the "brass." I feel confident that when the reasons for the change in pace in the demobilization program are recognized by our soldiers and they have full knowledge of their outlook for the next 6 months, they will accept, with that mature judgment Americans always show, their own responsibility for finishing the job. The time has now arrived to replace hysteria with calm judgment and sound discipline.

The War Department is prepared to answer any further questions which you gentlemen may have to propose. The Acting Secretary of War is appearing before the special subcommittee designated by the chairman of the Senate Military Affairs Committee for this purpose. I have placed myself at the disposal of this same committee.

One last thought I should like to leave with you. The War Department has no intention of abandoning the mission assigned to it by the Government, the Congress, and the people of the Unted States, so long as we have the troops to accomplish it. For myself, I feel it as a personal trust. I should be unworthy of those who gave their lives to gain the victory if I failed now to do everything in my power to protect it. We want to bring home quickly any man that has borne the brunt of battle and replace him, when necessary, by a man who has not.

My sole purpose, which I am certain you share, is that the Army which did so much to win the victory will be left fit to preserve it.

FIRST ATTACHMENT—DEMOBILIZATION DIRECTIVE OF JANUARY 15, 1946

WASHINGTON, D. C.

To: CG, USFET, Main, Frankfurt, Germany; CINCAFPAC, advance, Tokyo, Japan; CG, IBT, New Delhi, India; CG, USF, China theater, Shanghai, China (pass to Secretary of War); CG, USF, Middle East, Cairo, Egypt; CG, MTO, Caserta, Italy:

1. Effective immediately, the following will govern the demobilization of the Army until June 30, 1946:

(a) By April 30, 1946, the following will be separated from the Army or aboard ship returning home:

(1) All enlisted men (except volunteers) with 45 points as of September 2, 1945, or with 30 months' service as of April 30, 1946.

(2) All enlisted WAC (except volunteers) with 24 months' service as of April 30, 1946.

(3) All male officers (except Regular Army, volunteers, and Medical Department officers) with 67 points as of September 2, 1945, or 45 months' service as of April 30, 1946.

(4) All WAC officers (except volunteers) with 36 months' length of service as of April 30, 1946.

(b) By June 30, 1946, the following will be separated from the Army or aboard ship returning home:

(1) All enlisted men (except volunteers) with 40 points as of September 2, 1945, or with 24 months' service as of June 30, 1946.

(2) All male officers (except Regular Army, volunteers, and Medical Department officers) with 65 points as of September 2, 1945, or with 42 months' service as of June 30, 1946.

(3) Separate instructions covering the discharge of WAC personnel, officer and enlisted, for the period after April 30 will be issued by the War Department.

(c) Medical Corps officers will be demobilized by separate criteria established by the War Department.

(d) As soon as the tabulation of the desires of officers according to category as prescribed in War Department Circular 266, 1945, has been made, further instructions on their separation will follow.

(e) It is emphasized—repeat emphasized—that release of all personnel will follow the principle of priority of release for those with highest points and longest length of service, particularly combat.

2. Computation of length of service will include total active commissions and enlisted honorable service, continuous or interrupted, since September 16, 1940.

Time lost under AW 107 will not be included.

3. Eligibility for separation of personnel made eligible by previously published criteria is not affected by this message. Such personnel will be given priority for separation over personnel demobilized in accordance with paragraph 1 above.

4. The term "volunteers" as used herein includes enlisted personnel who have volunteered under provisions of change 2 of RR 1-1 or who have enlisted in the Regular Army. Officer volunteers are those who sign certificates under War Department Circular 366, 1945, as category I, II, or III, or category IV until date specified in the certificate.

5. Scarce category personnel whose MOS appear in Circular 321, WD, 1945, and in Circular 332, WD, 1945, may be retained in the service until replaced provided they are utilized in their specialty, but in no case longer than 6 months beyond date upon which he would be discharged under these instructions.

6. The above constitutes the War Department program of demobilization for the period until June 30, 1946. Z/I and theater commanders are responsible for the immediate release of every individual for whom there is no military need, and for releasing officers and men in sufficient time to carry out these instructions. However, no individual will be discharged under this directive with less service or smaller scores than set forth herein. The bulk of the men made eligible for discharge by this order should be discharged in the early part of the periods January to April and May to June, respectively. Theater commanders will notify War Department without delay of revised shipping requirements by month through June.

OPA Controls Should Be Continued

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. PATMAN. Mr. Speaker, I am inserting herewith a very fine editorial which appeared in the Marshall News Messenger, Monday, January 7, 1946, on OPA Controls Should Be Continued. It is as follows:

OPA CONTROLS SHOULD BE CONTINUED

Restoration of ceiling prices on citrus fruits illustrates again to all of America the absolute necessity of continuing price and other controls for some time to come.

It's no time to trust to the ordinary economic laws of supply and demand. The sharp increase in citrus fruits, which followed end of ceiling prices last November 19, emphasizes this point strongly.

Our tremendous, dormant purchasing power—accentuated by a 100-percent increase in local bank deposits in 2 years—must be held in check artificially until supply can more nearly swing in line.

Oranges and grapefruit gave us a simple and fortunately inexpensive example. Despite relative good production this fall, we saw the price swing up sharply just because people had lots of money to spend.

Coconut taught us another lesson. Unessential as it is to existence or even comfortable living, its price jumped 600 percent when controls were removed. Why? Those tremendous bank deposits—and the bonds cached in safety-deposit boxes—are burning holes in the collective pockets of America. So we bought coconut and paid the price.

Priorities were removed a short time ago from building materials. What happened? In the mad scramble for any kind of lumber at any price, the industry reached an almost chaotic condition. Controls were reimposed hurriedly to give the returning veteran half a chance to build a place to live.

And so it goes—the man who carefully thinks things through reaches the conclusion that only the OPA can hold the line against disaster for the wage-earning American public.

Yet the clamor to crucify Chester Bowles and kill the OPA is terrific. Each selfish interest—the citrus growers, the building materialman, the real-estate agent—shouts his complaint.

Only the little man—the one who stands to lose everything by inflation—remains relatively voiceless.

At best, OPA faces a grim fight for life when the question of extending its powers beyond June comes up shortly in Congress. Because of the clamor from selfish interests, many Congressmen will vote against the one agency which can protect the bulk of his constituency until America gets back on a real peacetime foundation.

It is time for the man who depends on wages for his existence to enter the fight. It is time for him to inform his Congressman that he must be protected against inflation, which would wipe out what little security he has gained.

Every businessman, every investor, every man who has purchased bonds, likewise has a stake in OPA's fight. Uncontrolled inflation, which make a mockery of merchandising, which wipes out bonded indebtedness with every turn of the printing press, is their enemy, too.

Americans must let their representatives in Congress know that they approve of Chester Bowles' fight for America.

There is so little time to act.

Lumber Prices

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. WOODRUFF. Mr. Speaker, today I received a most interesting letter from Mr. T. P. Dixon, president of the Lewis Manufacturing Co., at Bay City, Mich. Mr. Dixon was for 26 years the general manager of the company and since 1930 has been its president and treasurer. For many years this company has been one of the leading producers of read-i-cut houses. Houses produced by this company have been of the modest type. They have been beautifully planned, splendidly finished,

and composed of high grade materials. They have been and are thoroughly modernized. They are most attractive and desirable. The prices of these houses have been reasonable.

As a matter of fact, they are exactly the type of house our GI's are looking for. If permitted to operate, this company can provide the type of a house any GI desires and within a most attractive price range.

Today's housing problem is recognized as the most important one immediately confronting us. It has been difficult indeed for Members of the Congress to understand why we find ourselves in this situation. There can be no possible excuse for the failure of the administration to provide the builders of this country with the necessary materials to in part meet the demand for houses which has been growing since the very beginning of the war.

The labor disturbances in the lumber areas of the country, where men have remained on strike months at a time, has not contributed to the solution of this problem. If any attempt was made by the administration to quickly settle these strikes the result was an abject failure.

Mr. Speaker, undoubtedly all organizations manufacturing supplies for housing find themselves in the same position the Lewis Manufacturing Co. finds itself in, provided they are obeying the law and avoiding the black market. I think you will agree with me that something must be done and in the immediate future if we are going to, even in part, meet the desperate situation which our discharged soldiers and sailors as well as many, many others, find themselves in locating a decent piace in which to live. I believe the proper committee of this House should take immediate action so far as they can to bring order out of the chaos that exists throughout the country in our construction industry.

Mr. Speaker, I enclose herewith the letter referred to:

LEWIS MANUFACTURING CO.,
Bay City, Mich., January 15, 1946.

Hon. ROY O. WOODRUFF,
House of Representatives,
Washington, D. C.

DEAR ROY: Realizing how busy you are under the chaotic conditions that prevail today, I have hestitated up until this time in writing you on a subject which I have felt should be brought to the attention of yourself and all other Congressmen. I now feel, however, that I can hesitate no longer, unless I am willing to sit by and watch this company, now entering into its fiftieth year of continuous operation, slowly strangled into enforced bankruptcy or liquidation.

As you know, I have been with this company during practically my entire business lifetime, coming with them in 1914. For the past 26 years I have been general manager, and have been president and treasurer since 1930.

During these many years we have had to operate under many varied conditions, but up to now, no matter what the problems were, our system of free enterprise at least gave us the opportunity of exercising whatever initiative and ingenuity we possessed to meet and surmount these problems. As a result we were able, in good years and bad, to keep on operating and providing low-cost housing for thousands of home-owners throughout the eastern section of the United States.

Today this is all changed. In the face of the greatest demand for moderate priced homes this country has ever known our factory stands practically idle. Up until 1942, at which time civilian home-building was practically stopped to conserve materials for war purposes, we manufactured and shipped from 600 to 750 complete homes annually. Our factory employment ran around 200 men and our office personnel was around 50. Today our factory employment is 35, most of whom are doing nonproductive work, and whom we are only retaining because they have worked for us continuously for from 15 to 40 years. The same situation exists in our office.

In the face of the above situation, we are being literally deluged with orders for small homes, a substantial portion of which are from returned veterans who are desperately trying to provide shelter for their families, but we are compelled to turn them all away, as under present conditions we are unable to obtain the lumber, millwork, and so forth, necessary to produce houses. This condition has existed for the past several months, but has been progressively getting worse.

We fully realize that there are many reasons that could be given for the unprecedented shortage of materials that exists. Strikes and manpower shortages have had their effect. Inability of the mills to get trucks, machinery, and equipment has curtailed production, and so on. None of these reasons, however, either individually or collectively, can explain why no lumber suitable for home-building purposes can be obtained through normal legitimate channels.

Present efforts of the administration to channel 50 percent of the lumber produced into the low-cost home-building field, through new restrictions and regulations, will not, in our opinion, provide the answer. Until the mills are encouraged or forced to produce lumber products needed for house construction, there is nothing to be gained by trying to channel a larger percentage of their product, which at present is not suitable for this purpose, into the house-building field. This will probably immediately raise the question: "Why don't they produce the lumber products needed for house construction?"

In answer to the above question we submit the following facts:

During the war, in order to obtain the vast quantities of lumber items needed for military purposes, the OPA set ceiling prices so as to discourage the manufacture of items usually produced for house construction, such as flooring, siding, ceiling, small dimension, and so forth, and, conversely, set ceiling prices so as to encourage the manufacture of items needed for war purposes. As the demand for lumber for war purposes intensified, ceiling prices were periodically revised, widening these differentials, so that during the last stages of the war practically no civilian items were being produced and almost 100 percent of lumber production was for war purposes.

In addition to the above, under the urge of military demand, the custom of drying and grading lumber was largely abandoned, lumber being almost entirely shipped green from the saws, with no pretense of grading or sorting. In other words, the mills could ship almost anything as long as it met the required dimensions, and invoice it at whatever grades they decided in the office they could get away with. It is true, of course, that many of the larger, responsible mills did not juggle grades as above, but nevertheless their product was largely shipped green with all known grades included.

This policy of OPA was successful. It provided the lumber required for war purposes and effectively stopped the manufacture of civilian items, as it was not profitable for the mills to manufacture same.

The war, however, has now been over for months. The greatest need today is to meet the unprecedented shortage of housing facilities that exists in every section of the country, and it would seem logical to us that the OPA would now be doing everything in their power to get housing construction under way. What are the facts, however?

The same price set-up that was created during the war for the specific purpose of stopping or discouraging production of lumber items for house construction remains in effect. As a consequence the mills continue to produce premium price items suitable for ship decking, heavy construction, airplane stock, etc., and refuse to produce such items of small dimension, flooring, ceiling, siding, trim, etc., as the ceiling prices on same are too low to allow their production on a profitable basis. Let me give you some typical examples:

The ceiling price on 1 by 4 B and better flat grain fir flooring is $45 per thousand, f. o. b. mill. This is about $5 more than it was in 1941. No mill can afford to make an item today at approximately 10 percent higher than 1941 prices. Consequently the mill refuses to make flooring. Instead they saw the same part of the log into 4 by 4's, and under OPA ceiling prices they can sell them for $57 per thousand f. o. b. mill, giving them $12 more without the cost of kiln drying, resawing, working to pattern, etc. Suppose the dealer, in his desperation to get flooring, buys these 4 by 4's and has them shipped to a remanufacturing plant for working to flooring. Under OPA ceilings he will be charged $10 for kiln drying, $3 for resawing, $7 for working to flooring, $1 for bundling, $1 for grading, $4 for unloading and reloading. His flooring then costs him $83 per thousand, mill basis, or $38 per thousand over the OPA ceiling price on the same item if it was manufactured, as normally, by the mill. By the time he adds his freight his cost per thousand is $98. His OPA retail ceiling price to his customer is $91, which is based on the $45 per thousand mill price.

The ceiling price on 2 by 4 No. 1 fir dimension is $34.50 per thousand f. o. b. mill. However, you cannot buy it. What you can buy is 2 b, 4¼ dressed to 1⅝ inches by 3⅝ inches, which is the same thickness as a standard dressed 2 by 4 and one-quarter inch wider. The cost? 2 by 4¼ inches under OPA regulations is measured as 2 by 6, plus $1 per thousand additional for odd or fractional widths, so your 2 by 4 costs $52.75 per thousand f. o. b. mill instead of $34.50, and it's all legitimate according to OPA, but your retail selling price again must be based on a $34.50 cost.

Dozens of similar examples could be given, but the above two are enough to show why standard lumber items are not being produced. These remanufacturing plants have sprung up all through the lumber-producing sections. If they added to the output of lumber, their existence might be justified, but they don't add one foot to the amount of lumber available, and while they are all operating to capacity, converting rough, green odd-sized lumber to commercial items, which must either go to black-market operators, or be sold by dealers in violation of OPA retail ceilings, many of the completely equipped sawmills have shut down their dry kilns and planing mills and produce nothing but rough, green planks and timbers for these remanufacturing plants.

After 50 years of legitimate operation, we do not propose to become a party to this racket. The alternative apparently, however, is to go out of business, either voluntarily or involuntarily. I have been purchasing lumber for about 30 years, running into hundreds of carloads per year before Pearl Harbor. During the past several months I have I been in constant contact with the dozens of mills from whom we have purchased lumber in past years. In November I purchased two carloads, and one in December. None of these were standard items.

It seems inconceivable to us that OPA would allow this situation to exist. We fully subscribe to their objective of trying to prevent run-away inflation. We do not believe that ceiling prices should be removed from scarce items until production overtakes demand, but we submit that their unrealistic attitude toward lumber prices is not only inflating the cost of lumber items to the consumer, but is forcing him to patronize black market and illegitimate dealers. A proof of this is the fact that millions of feet of house construction lumber items are being produced in the above manner and eventually find their way into the consumers' hands at prices away beyond OPA retail ceilings. Some types of dealers are doing a land-office business. Other dealers have empty sheds and warehouses. Draw your own conclusions.

In conclusion, let me say that before Pearl Harbor our annual volume ran around $1,250,000. Today, with the biggest demand for our products in our history, our volume is running about $10,000 per month, which is just about what our monthly overhead amounts to. A continuance of this situation for even a few more months will compel us to make one of three decisions:

1. Follow the lead of many other concerns who are in the same situation of disregarding these unrealistic and crippling rules and regulations, get materials where we can at whatever price we have to pay, passing same on to our customers in violation of OPA price ceilings.

2. Lay off the majority of our remaining employees, shut down our factory, and reduce our overhead to a minimum, in the hope we can sweat it out until either OPA sees the light, or passes from the scene.

3. Call it a day and liquidate before our capital is seriously dissipated.

I realize I have written a lengthy letter, but even so, I have just touched the high spots. I have confidence that if our duly elected representatives, who actually represent the American public, can be fully informed of this situation, it will be corrected, as it is inconceivable that at a time when housing is so desperately needed our Government officials should, apparently, create obstacles that are doing more to retard building than everything else put together.

After all, this is the United States of America—or is it?

Sincerely yours

LEWIS MANUFACTURING CO.
T. P. DIXON, *President*.

Cable From Our GI's Abroad

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1946

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include herein a cablegram signed by 233 GI's in Vienna. It is deserving of the attention of every Member of Congress.

VIENNA, *January 14, 1946*.

Hon. VITO MARCANTONIO,
Washington, D. C.:

We, the undersigned, as a committee of three represent the enlisted men of the Five Hundred and Fifth Military Police Battalion, Vienna. The great majority of this group were members of infantry and armored divisions and include men who wear the Purple Heart, Silver Star, and Bronze Star earned in combat. We intend to refute the opinions and statements expressed by leading military and civilian officials in their attempts to justify the slow-down in demobilization. We are furious with the apparent misinformation or willful falsification by Lieutenant General Collins as evidenced in his statement that the number of men still overseas who heard a shot fired in this war is not very great. To now abolish a system by which men could almost count the days until they would be home is prima facie unfair, and we do not feel that we should accept it without expressing our position. We know from what we see about us daily, not from month-old reports, that the staff of 14,000 American soldiers in Vienna with minor reorganization could be reduced to 7,000 immediately without impairing the efficiency of the military task here. We are told that a similar condition exists throughout the entire American occupation zone. The highly mobile force that could handle the job is out of gas. Why? Draft boards cannot furnish men to replace soldiers who served when soldiering was dangerous. Why? The statements of our high military officials indicate that they have no facts or are afraid to use them. A smoke screen of words are being used to cover ulterior motives. We are angered with being misrepresented and lied about. We cannot accept more weak excuses Won't the people of the United States help us in our struggle for release from these brass chains?

Signed with 233 signatures, Five Hundred and Fifth Military Police Battalion, APO 58, Vienna.

Health and Plunder

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1946

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol Courier of Tuesday, January 15, 1946:

HEALTH AND PLUNDER

President Truman again is demanding that his national health program be passed.

Congress had tried to pigeonhole the proposal for two reasons. The first is that it would lead to the socialization of medicine.

The other is the extravagant cost. How much the plan would involve no one can say. Under the list of activities, the suggested czar of medicine, the Surgeon General, might find excuse for laying out ten to twenty billions of dollars a year, with a pay roll running into millions of new employees.

Quite aside from these reasons for opposition to the strongly communistic scheme of President Truman, there is another which should interest all citizens who are concerned about good government.

The Wagner-Murray health bill which the President finds so urgent would open the door to the biggest political racket ever invented.

The plan goes much further than the mere nationalization or socialization of medicine. It makes the professions of medicine, surgery and dentistry, as well as the allied enterprises of research, dispensaries, schools and hospitals, subject to the one-man control of an individual who would be beyond the power of Congress, States, courts, the medical and dental professions, and anyone else involved.

That man would be the Surgeon General, an at-will appointee of the President, answerable to no one. He would in effect collect his own taxes, make his own rules, spend the public's money according to his own whim, punish States and individuals and institutions as he saw fit—and, as a crowning touch of irony—sit as judge to review his own acts.

The bill is a 78-page document which is worth careful study. Many passages on first glance appear to make the plan a joint State-Federal project, to provide fair yardsticks for the allocation of funds, to arrange for appeals and reviews, to give the professions a voice in their management, and to permit doctors and dentists to remain independent of the Federal set-up.

But the final effect of the various qualifications and jokers in the bill is to strip away the effectiveness of every restraint apparently placed upon the Surgeon General.

Dealing with funds which do not come to him from regular congressional appropriations, he is independent of Congress. It is provided that appeals from his decisions are to be heard by himself, not the judiciary. As for the States, he sets the allocations for each, and pays or withholds them, without having to answer to anyone for mistakes or for prejudice.

The methods of financing appear to set at defiance the whole plan of the Constitution that Congress levy the taxes and distribute the public funds. A direct pay-roll tax would be charged against the earnings of substantially all employees, and this money would be placed in a new subdivision of the National Treasury—what the bill calls a separate account to be known as the personal health service account.

The account could be augmented by Congress, if it wished; but once in the Treasury the money would be under the sole authority of the Surgeon General. The bill provides that he would draw out what he thought he needed every 3 months, balance the books at the end of the fiscal year, and at that time report to Congress. This is a spend-as-you-go procedure, with no budget, and with Congress being advised only after the money was gone.

The White House has not yet explained how this plan can be reconciled with the Constitution, which says: "No money shall be drawn from the Treasury but in consequence of appropriations made by law."

The Surgeon General is empowered to set up the standards by which those who share in these funds expend them. The standards do not have to be uniform, nor do they have to conform, in the last analysis, to any other yardstick than the official's personal opinion.

He can give hand outs to hospitals and medical schools that he thinks deserve it, can finance various kinds of research, can make agreements with hospitals—and of course can withdraw his generosity any time he fails to get cooperation.

Repeated many times in the bill are provisions for the Surgeon General to take over the training of candidates for the jobs which would be needed to carry out the health program. This authority makes somewhat silly the statement sometimes heard that the Federal plan would not dictate the pay roll in States, hospitals, and the like.

The Surgeon General's power over those engaged in the practice of medicine and dentistry is immense, although indirect.

In the first place, every patient, according to the bill, is to be handed a list of "approved" doctors and dentists, and, if he is going to need hospitalization, of hospitals and similar institutions. He could, but probably wouldn't, disregard this list.

But not if he seeks the services of specialists and consultants. Such experts can only be used if they are on the approved list of professional men who have sworn in with the socialization program.

Further, the Surgeon General fixes the fees that can be charged, without having to make them uniform; and can limit the number of patients whom doctors are allowed to treat.

Quite aside from the socialization of medicine, this is too much authority for a free people to put in one pair of hands—no matter how eager President Truman may be to see it placed there.

It could hardly be said that the provisions of the bill would compel the Surgeon General to become a political racketeer. But study of the details of the plan makes it painfully obvious that nothing in the bill prevents such a result.

The Surplus Property Problem in Montana

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, the people of Montana should be given every possible consideration in the disposal of surplus property. To date we have received little attention in this respect so, in behalf of Montana's citizens, I have sent the following letter to W. Stuart Symington, Chairman of the Surplus Property Administration:

HOUSE OF REPRESENTATIVES,
Washington, D. C., January 17, 1946.

Mr. W. STUART SYMINGTON,
Chairman, Surplus Property Administration, Washington, D. C.

DEAR Mr. SYMINGTON: For some months now I have been endeavoring to get the Surplus Property Board to establish a depot for the disposal of surplus property in Montana for residents of that State. As you can well understand, it is an extremely difficult proposition for Montana people to have to travel, as they have to, to places like Seattle, Denver, and Nebraska in order to look over materials in which they are interested. On occasions that our people have done this, they found that the surplus property in which they were interested was nothing but junk; consequently, their time and money both have been wasted.

In my opinion, insult has been added to injury in the lack of consideration given Montana in the disposal of surplus property because, you will recall, Montana received no industries during the war and suffered a large decline of population because of this. However, Montana's contribution to the war effort led the entire Nation, insofar as manpower on a percentage basis was concerned, and was in excess of 65,000 Montana men and women (out of a population of 450,000) serving in the various branches of the armed forces. In the matter of bond drives, Montana led the entire Nation in five out of the seven drives and finished second in the other two. In the matter of food and mineral production our farmers and miners contributed greatly to the waging and winning of the war and on these bases alone, though there are others, I feel that we merit the attention of the Surplus Property Board to this particular matter. For the past 4 weeks I have been doing my utmost to get the Surplus Property Board to send a representative to Montana to look into the situation so that you could be made fully aware of the problem which confronts us out there. I should like to urge that you send a representative of the Surplus Property Board to Montana so that our people could be given every possible consideration and our needs could be attended to on the basis of parity with the rest of the Nation. This is a very serious situation because there are needs for such things as jeeps, fire trucks, surplus clothing equipment, sheets, etc., in which our people, especially our veterans, are interested and I feel, therefore, that it would be to the best interest of both the Surplus Property Board and the people of the State of Montana to send an investigator out to the State for the purpose of meeting with Montana citizens so that this matter could be settled in a way which would give my State a fair deal. I should appreciate your doing what you could about this at your very earliest convenience.

Must close now, but with best personal wishes, I am

Sincerely yours.

Walter Lippmann on Fact Finding

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1946

Mr. VOORHIS of California. Mr. Speaker, one of the clearest arguments which I have yet read in favor of the proposal that Congress authorize by law the setting up of fact-finding bodies in connection with important labor disputes is contained in the column of Walter Lippmann appearing in the papers on January 15.

I include it with my remarks herewith:

TODAY AND TOMORROW

(By Walter Lippmann)

STRIKES: ONE CLEAR THING TO DO

The board in the General Motors strike has, it seems to me, made one thing quite clear. It is that fact finding can be done effectively without the trimmings which unions and management have objected to in the President's proposal of December 3. Mr. Lloyd K. Garrison and his associates found the facts that needed to be found without examining the company's books and without imposing a cooling-off period on labor.

These trimmings raise issues which have nothing to do with fact finding as such—for labor the right to strike, for management the right of privacy in a system of private competitive enterprise. They could and they should be separated out and considered separately. For the purpose of fact finding is to induce labor and management to agree—the purpose of the trimmings is to coerce them into agreement.

There is no certain reason for thinking that indirect coercion of the kind the President proposed would be successful even if it is desirable. But there is no doubt whatever that fact finding, as Mr. Garrison and his associates have practiced it, is desirable and necessary. The trimmings call for a thorough debate, whereas Congress could without hesitation and delay give legislative approval to fact finding as such—since that would mean only that it was giving its moral support to something which the President has the power to do anyway.

Those who point out that Mr. C. E. Wilson has rejected the board's recommendations and that the strike continues should ask themselves what reason they have for knowing that Mr. Wilson would have given in if his books had been opened or that Mr. Reuther could have kept the men cool if there had been a compulsory cooling-off period. There is, in other words, no certainty that the trimmings would accomplish by indirection what no one would, in an industry like the automobile, think of doing directly—namely, to forbid strikes and to substitute compulsory arbitration and the fixing of wages by law.

Industries where interruption of service is intolerable to the community may require this—for example, utilities and communications. They should not be lumped together, as the President did, with "steel, automobiles, aviation, and mining," where stoppages, though inconvenient and costly, do not affect immediately the health and security of the community. What would be sound public policy for the vital industries should not be confused with what would be sound for industries that are merely big and important. The Railway Labor Act has worked—on the railways, which are Government-regulated monopolies; it does not follow at all that it would work for automobiles and steel, which are privately managed and in considerable degree competitive.

It is for these unregimented industries that fact-finding as such is the first necessary measure to promote industrial peace. What does fact-finding do, as Messrs. Garrison, Milton Eisenhower, and Stacy have practiced it? It does not unearth new and hidden facts. It does not find facts. It takes the facts as they are alleged to be by management and by the unions. It then compares these partisan allegations, analyzes them, screens them, refines them, deflates them, and, if I may say so, delouses them. Then it measures them by established standards of public policy and makes a public report which says what these men, chosen because they are disinterested and rational, think would be the reasonable settlement if all the exaggeration and the propaganda were squeezed out of the argument.

I do not see how anyone who wishes to be rational, who means to be fair, who prefers information to dope and proof to demogoguery, cannot want fact-finding of this kind.

It is indeed a necessity where collective bargaining involves great numbers of workingmen, stockholders, and customers. Mr. Wilson and Mr. Reuther might as well admit it. They are supposed to be bargaining. But let no one think that bargaining as they do it is like bargaining in a horse trade or over the sale of a piece of real estate. In ordinary commercial bargaining the seller and the buyer make bids and offers one to the other. They do not buy newspaper advertising space, run high-power propaganda machines, to convince Tom, Dick, and Harry that the horse is a thoroughbred and not a spavined nag, or that the seller is a hold-up man and the buyer a greedy monster.

But in large-scale collective bargaining this is just what happens. Mr. Wilson and Mr. Reuther do not bargain only with each other; they spend large sums of money, and no end of ingenuity, talking to Tom, Dick, and Harry about the proposed deal. Why? Because they know perfectly well that their bargaining power depends upon Tom, Dick, and Harry. Neither believes what so many ideologists and doctrinaires pretend to believe: that without public support the owners can in fact, though theoretically they have the right, shut up shop, or that the employees can strike indefinitely. Both Mr. Wilson and Mr. Reuther have large constituencies, and their power to refuse to agree is, as they know perfectly well, dependent on how long and how enthusiastically they can keep their constituents in line. That is why they do not merely bargain across the table but use the printing press and the microphone to address the public.

That being the case, it would be foolish for the public, including editors, broadcasters, and commentators, to submit meekly to being deluged by unverified information and prejudiced argument. They must have some protection against the fine art of bamboozlement, and some way—since they have other things to do besides reading about General Motors—of not wasting their time trying to

decide which public relations expert is pulling their leg.

That is what fact finding of the Garrison type can do. It is considerable. No doubt it is not everything that needs to be done before there is industrial peace and all men are brothers. But it is one thing that can be done at once which will at least introduce the element of reason into industrial disputes, and enable men to act, if not as loving brothers, at least as rational human beings.

There is no telling what greater wisdom we might not hope to achieve once we decided that to begin acting rationally was the way to go about it.

A Social Creed for All Americans—Part II

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks on the very significant and moving program reported by the Methodist Church Department of Christian Social Relations to the General Conference of the Methodist Church, a special importance attaches to the following recommendations for elimination of Jim Crow practices within the church itself and in the community activities of church members.

More, perhaps, than any other one objective in the ultimate aim of building a peaceful world, the rooting-out of racial discrimination and prejudice is essential to true understanding. Here again is a program to which all American women of good will can give thoughtful consideration.

SPECIAL RECOMMENDATION

(For reference to the General Conference Commission to Study Race Relations in the Methodist Church, December 1, 1945)

The statement adopted by this department in 1943 and published in Activities for 1944 is recalled because of its present relevance. "Racial tensions and anti-Semitism have increased during the past year. The treatment of minorities in America has been a constant embarrassment to the United States in the present world conflict. If this country is to take its place of leadership in planning for peace and in the postwar world there must be a closer relation between the theory and practice of democracy. Likewise the church by the nature of its faith is constrained to become more adequately Christian in its own practice. It is deadening to the effort to achieve brotherhood to assume that we have it when it has not yet been achieved. The jurisdictional organization of our church tacitly accepts the principle of segregation. Methodist women have an obligation to stimulate within the church an increasing awareness of the contradiction between our Christian ideals and our plan of organization."

This statement clearly emphasizes objectives that are immediately imperative and practicable and objectives that will involve long-range planning and gradual realization. Certain actions of the general conference of 1944 similarly emphasize immediate and long-range objectives.

The general conference of 1944 urged "the active participation of our churches * * * in the preparation of communities to welcome and assimilate Japanese Americans from the relocation centers" (The Discipline, par. 2015, p. 571). The church can best implement this wish of the general conference by welcoming and assimilating Japanese Americans into its membership and fellowship in already established local congregations.

The fluidity of the situation now existing encourages the inclusion of people of varying race and cultural heritage in the active fellowship of our churches. To do so will enrich the churches and convincingly demonstrate their basically spiritual character. It is for Caucasian and Japanese Methodists together to make this venture of faith in building a genuinely Christian fellowship in the local church.

There are noteworthy instances in which Japanese and Caucasian ministers are effectively associated in the pastorates of Methodist churches. We urge the exploration and pioneering of ways for a larger and more varied use of Japanese Methodists in positions of leadership in the church.

The general conference also expressed its desire for "the ultimate elimination of racial discrimination within the Methodist Church." It accordingly asked "the Council of Bishops to create * * * a commission to consider afresh the relations of all races included in the membership of The Methodist Church and to report to the General Conference of 1948." It specified that "the members of this commission" would desirably include "the most complete representations of all racial groups possible" (The Discipline, par. 2015, p. 570).

Since the Negro is the largest minority group in the Nation and in our church, their assimilation has supreme importance. The shift in population makes practicable and imperative new patterns of church life and administration.

We urge that every such occasion be utilized for the assimilation of Latin Americans, American Indians, Orientals, and Negroes into nonracial congregations and conferences.

We believe that the future pattern of the Methodist Church should be based on Jesus' teachings of brotherhood, and we plead for the ultimate integration of racial groups into the membership and fellowship of our total church.

With this goal in view we urge that wherever possible work should be carried on across racial lines. Such action is illustrated in the demobilization workshops of the department of Christian social relations and local church activities, which were successfully conducted in New Orleans, Atlanta, Detroit, Louisville, and on a district basis in Georgia.

Methodist history furnishes heartening examples of the incorporation of foreign-language groups into the fellowship of local churches and annual conferences. Our faith encourages us to look toward a similar incorporation of all groups into a Christian fellowship, where race does not determine the pattern of participation. Only so can the Methodist Church of the future bear its most effective witness for Christ among the racially diverse populations of our Nation and of the world.

Draft Rejection Fallacy

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Christian Science Monitor, upon the subject Draft Rejection Fallacy:

DRAFT REJECTION FALLACY

President Truman's citation of draft rejections as a compelling reason for the introduction of compulsory sickness insurance in the United States loses its plausibility on comparison with draft rejections in Britain where this insurance prevails.

In his message recommending Government medical care insurance, the President said, "The number of those rejected for military service was about 30 percent of all those examined."

But in Great Britain, which has had compulsory sickness insurance since 1911, the draft rejections were far higher. How they ran is indicated in the published annual reports on the British Army. Rejections for the 10 years ending with 1936 are available in the annual report for that year.

During all the 10 years, 677,515 were served with notice papers and 400,775 were rejected, or 59 percent.

Even allowing generously for the effects of a lower standard of living, if Britain, after 25 years of sickness insurance, had a rejection rate practically twice that of America, there seems to be little argument in the draft rejections for socialized medicine.

Open Letter to Mr. Byrnes

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to bring to the attention of the Congress an editorial which appeared in the Oneonta Star, Oneonta, N. Y., entitled "Open Letter to Mr. Byrnes" written by Mr. Wilmer E. Bresee as guest editorial writer. The editorial follows:

OPEN LETTER TO MR. BYRNES

(As guest editorial writer, the Star this morning presents Wilmer E. Bresee, second vice president of the Oneonta Department Store, who has written an open letter to Secretary of State James Byrnes. Each writer is given the widest latitude, and his views do not necessarily represent those of the Star.)

(By Wilmer E. Bresee)

I have just read Mr. George E. Sokolsky's article on the recent Moscow Conference, and I feel that the time has come for Americans to make their viewpoint known to the State Department.

As a veteran of World War II, I have watched with a growing feeling of concern the many indications that we, as a Nation, are prepared to give up our insistence on many of the policies first expressed by Mr. Roosevelt in the Atlantic Charter; and I think that I am justified as a citizen and a veteran in registering my personal objection to any background steps away from the principles and policies of bringing freedom and equality to all peoples of the world under the United Nations Organization.

My particular interest in the problems of the peoples of Asia and the East Indies stems from the fact that for 2 years I was an enlisted instructor and interpretor in the Chinese training program of the United States Army Air Force. My work brought me into close personal contact with the Chinese Air

Force, enlisted men, cadets, and officers who were in the United States, receiving training in this program. While working with these men, who, I believe, represent the finest elements in China today, I was frequently queried as to the policy of the United States in regard to the freedom of the peoples of India, Java, Sumatra, and other colonial areas, from the old European colonial system.

I learned that our Chinese allies feel a deep cultural and racial bond with these people. They bitterly resent the colonial system with its policy of exploitation and oppression of native groups. They look to the United States for enlightened leadership to end this situation and to guarantee the right of self-government to all colored races.

I know that, on VJ-day, our prestige among these people stood at an all-time high. It is unfortunate, indeed, that we now seem to be tacitly and actively giving our approval to a reestablishment of the prewar status quo in the colonial areas I have mentioned. This, I believe, is a betrayal of the ideals for which Americans fought in World War II, and for which Americans have fought and died for centuries.

It is not yet too late for the United States to take a position in regard to these matters, that will justify and enhance the respect and friendship which the people of Asia have shown us.

However, if we persist in our present policy of defending England, Holland, and France in their colonial claims, and bartering the rights of other nations for doubtful Russian support, we will forfeit the friendship of all the native peoples of Asia and create a block of enemies that will some day rise to destroy us.

It is your high privilege, Mr. Byrnes, to be entrusted by the American people, through their President, with the decisions that will mean freedom and democracy or serfdom and oppression for millions of colonial peoples.

In making these decisions, millions of veterans of World War II are hoping that you will remember the ideals for which they fought.

Amvets Promote Veterans' Hospital Educational Program

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to take the opportunity to congratulate the American Veterans of World War II on the effective work they are doing in behalf of disabled veterans. This new group of war veterans are rapidly making their presence felt in all sections of the country and recently have formed several active chapters in the Twenty-second Congressional District of Illinois.

At Granite City, Ill., a new chapter of Amvets has been taking the lead in assisting returning veterans to cope with the housing shortage. They have gone about the matter in a logical way by conducting a city-wide survey among veterans to actually determine the seriousness of the situation and by stimulating local interest in the problem through cooperation of the Granite City Press-Record.

I include herewith a statement from the national legislative director of the Amvets which bears on one of the recent accomplishments of the organization in the interest of the disabled veteran:

AMVETS WIN APPROVAL ON HOSPITAL EDUCATIONAL PLAN FOR DISABLED VETERANS

(By J. H. Leib, national legislative director, Amvets)

Last September a veteran who had contracted TB while in the service of his country came to this writer with a very pitiful case. Prior to his enlistment in the United States Army this veteran was studying law at one of the eastern universities. The war abruptly ended his formal education like it has done to so many others.

Upon discharge from the armed forces—however—this veteran was ordered to a TB veterans' hospital for further treatment. The boy was heartsick because he could not return to college and complete his education now that his war service was over.

It was while discussing his dilemma that an idea popped up—why not ask the Veterans' Administration to adopt a program to give disabled veterans correspondence courses while hospitalized for lengthy periods.

So a letter was sent to the Veterans' Administration recommending such a plan, etc., and attached herewith is the reply received. It is also further suggested that the VA take under consideration setting up classrooms in its hospitals whereby direct teaching can be undertaken.

The letter in which the Veterans' Administration announces that it will adopt such a program follows:

VETERANS' ADMINISTRATION,
Washington, D. C., January 12, 1946.
AMERICAN VETERANS OF WORLD WAR II,
Washington, D. C.

DEAR SIR: Thank you very much indeed for your kind letter of October 4, 1945, raising a question about correspondence courses to be taken while hospitalized in a Veterans' Administration hospital. Reply to your letter has been delayed pending program developments.

We certainly agree with you that where a veteran is to spend a considerable period of time in the hospital he should be enabled to pursue his education. Accordingly, arrangements are being made whereby correspondence courses may be offered to hospitalized veterans in Veterans' Administration hospitals as occupational therapy, without charge against entitlement under Public Law No. 346 or Public Law No. 16. It is hoped that these arrangements will soon be completed and that the hospitals located throughout the United States will be able to offer veterans the correspondence instruction of their choice.

In the meantime, if you are a patient in a Veterans' Administration hospital and will advise this office as to where you are—in what hospital of the Veterans' Administration—we shall be glad to see if we can give you special attention in the way of making available to you the correspondence course which you desire. We shall request the regional office to send a vocational advisor to assist you in deciding what course to undertake so as best to tie up your study while in the hospital with that which you may pursue when you get out of the hospital.

We are glad to have had your letter, and trust that we shall hear from you further and that we will be able to be of assistance to you.

Very truly yours,

H. V. STIRLING,
Assistant Administrator for Vocational Rehabilitation and Education.

Improvement in Medical Care

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article which appeared in the Baltimore Sun, written by Francis F. Beirne, on the subject of improvement in medical care:

IMPROVEMENT IN MEDICAL CARE

Those who are agitating for an elaborate federally controlled national health program, such as that proposed by President Truman in his message to Congress, lay great stress on the shortcomings of the existing system. They thereby create the impression that individual States and communities have failed to solve the Nation's health problem, and that therefore it is time for the Federal Government to take over the job.

In making that assumption they ignore an impressive movement looking toward improved health care that is now showing intense activity throughout the country. It is a movement not inspired from above but initiated by the communities. It is not revolutionary, but a continuation of a health program that has been going on for years. It is what used to be called typically American, in that it is an effort on the part of the people to help themselves instead of waiting for somebody else to help them.

Recently there was presented in these columns a summary of the health care now available to the people of Maryland. Though it contained an impressive list of medical services that have been established, it also showed clearly that our local medical authorities are aware of its many gaps and are taking steps to fill them. But, it might be argued, Maryland, with its two medical schools in Baltimore, and its wealth of expert advice, is exceptional in seeking to fill the gaps in medical care. Inquiry, however, reveals that what is happening here is merely part of a broader movement.

No complete and accurate survey of this Nation-wide movement has been made. In fact, such a survey would be well-nigh impossible, since statistics are out of date before they can be assembled. While some important programs may be overlooked, enough information can be presented to give an indication of the nature and variety of the movement.

For example, Maryland has made a survey of medical care in the counties and is completing one for Baltimore. But Maryland is not alone. Alabama, Georgia, and North Carolina also have made or are making similar surveys, and the North Carolina Legislature recently appropriated $100,000 for a continuation of the program. Virginia has appointed a medical commission to study the State's needs. In New York State the Mailler committee, appointed by the legislature, has been at work for several years making surveys of medical care in the counties upon which to base a State-wide program. Several other commissions, appointed by the Governor, are studying other phases of medical care. In New Jersey a general advisory committee is working out plans for the integration of all health services.

More widely distributed are the hospital surveys, sponsored some years ago by the American Hospitals Association and recently stimulated by the bill now before Congress

providing an appropriation for hospital construction. These surveys are not concerned alone with construction. In modern medical practice the hospital is an indispensable factor in all health work. In the very nature of the case, such surveys must include existing facilities and a program of future needs. In fact, they virtually constitute a State-wide health survey. At the latest report 22 States were actually making such surveys and most of the others were planning to do so.

Another part of the picture involves the activity of private foundations. They are, for example, the Kellogg Foundation, which has labored to raise the health standards of seven rural counties in Michigan; the Bingham Associates Fund, which has linked medical care in Maine and certain other rural communities with the New England Health Center in Boston, and the Commonwealth Fund, which is making a similar experiment in the Rochester (N. Y.) area. From the Middle West come reports of the Great Plains Health Council, with subsidiary councils in North and South Dakota, Montana, Nebraska, Wyoming, and Kansas, cooperating to solve the health problems of that vast area.

Here, then, are some of the evidences of the local strivings to provide improved medical care. But when the provision for improved care has been made, the next question of vital importance, to the hospitals and medical profession, as well as to the patients, is how it is to be paid for. President Truman recommended compulsory medical-care insurance. It is interesting to see how far the American people have gone on their own initiative in providing voluntary insurance.

Consider, first, hospital care alone. In this field the Blue Cross plan of insurance is outstanding because of its sudden and phenomenal growth. Eight years ago it had a membership of 500,000. Today membership in the many State and local Blue Cross plans is approaching 21,000,000, with new members being added at the rate of 70,000 a week. The Blue Cross is now operating in 45 States.

Local Blue Cross plans do not, as a rule, include that important item, the doctor's bill. But in some localities they are experimenting with the possibilities; and right here in Maryland the Blue Cross was authorized to do so by the last legislature. And there are other plans that do. There are today industrial plans, medical-society plans, private-group clinics, consumer-sponsored plans (fraternal, union, cooperative, etc.) and governmental plans. Contracts show wide variations. Doctors', surgeons', dental and hospital fees appear, some or all of which are paid in whole or in part. The number of individuals included in these prepayment organizations is estimated at from 4,000,000 to 5,000,000. The number of individuals in the United States who carry some form of health insurance has been estimated as high as 29,000,000.

Especially significant are the State and county medical society plans, since the medical societies have been for the most part opposed to the Federal program, and since the average individual is eligible for them. Willingness of the doctors to cooperate provides an alternative. In 1943 medical-society plans covered 942,000 persons. By last October 1 the membership had jumped to over 2,000,000. Conspicuous has been the growth in Michigan, with a membership of 868,322 and 3,543 participating physicians, or 69 percent of the membership of the medical society. Massachusetts also is outstanding with 183,000 members, more than double the number in the previous year.

In these varied programs is found striking evidence of the widespread consciousness of the need for better medical care looking to the ultimate goal of adequate care for all. Some of the programs may fail, for this is a typical American approach to a problem by the trial-and-error method. But where one succeeds other communities will be prompt to adopt it to their needs. Whatever may come out of it, we may be sure that health care will be far better than any we have known before.

Should this movement be ignored and discarded before we learn what it can do? Should we abandon this richly varied experimental approach for a set of alluring blueprints? That is what the advocates of a comprehensive scheme of tax-supported medical care, centrally administered by the Federal Government, are asking us to do. They are asking the country to throw away a system of medical care which despite many defects is fundamentally sound, and which is subject to constant improvement as experience points the way, for an entire new and untried plan.

Petrillo Ban on Foreign Music May Be Last Straw

EXTENSION OF REMARKS
OF
HON. GEORGE F. ROGERS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. ROGERS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Rochester Times-Union, Rochester, N. Y., under date of December 29, 1945:

PETRILLO BAN ON FOREIGN MUSIC MAY BE LAST STRAW

How long, oh Petrillo, will you abuse our patience!

The latest ukase of the head of the American Federation of Musicians is that American radio stations shall stop broadcasting musical programs originating in any foreign country except Canada—where the AFM has organized the musicians.

This order, addressed to radio stations and networks by James C. Petrillo as AFM president, does not have the financial importance to stations that some other demands have carried. Most broadcasts of foreign music are on a sustaining basis, that is, unsponsored.

Yet the prohibition of broadcasts of music originating in other countries is particularly offensive at this time, when it is so earnestly desired to establish closer relations with the nations of the world.

Mr. Petrillo speaks as one having authority. If his demands are disobeyed, he can and will order AFM members to refuse to play or make records for broadcasting.

Right now he is tightening the check rein. He demands that stations which use musical recordings employ a certain number of AFM members as stand-bys. They do not play, but draw pay. This denies to the stations the advantages of modern invention.

A union survey having shown that a considerable number of affiliates of the four networks do not employ musicians, Mr. Petrillo has advised the networks that something will have to be done about this.

The public is becoming increasingly determined that something will have to be done about the Petrillo regime.

Now before Congress are two bills. The Vandenberg bill, passed by the Senate, is confined to prohibiting interference with the broadcast of educational and cultural programs. The bill sponsored by Chairman CLARENCE LEA of the House Interstate Commerce Committee goes much further.

This bill would prohibit payment of "tribute" to the American Federation of Musicians for the broadcast of musical recordings, prevent requiring radio stations to hire more musicians than necessary, and make it unlawful to interfere with the broadcast of educational and cultural programs. The bill carries stiff penalties.

The comparison Mr. Petrillo makes with our tariffs and immigration restrictions is wholly false. Those restrictions are based on laws passed by Congress, and not on the orders of a labor leader.

This latest order should spur adoption of the Lea bill, or some other measure to curb Petrillo's arbitrary power.

To make your voice effective in this direction, write your Congressman, or fill in and send him the following coupon, which it would also be well to send to Senators JAMES M. MEAD and ROBERT F. WAGNER, House or Senate Office Building, Washington, D. C.

No Federal Aid for Schools, Says Virginia Governor

EXTENSION OF REMARKS
OF
HON GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. DONDERO. Mr. Speaker, the House having granted permission to extend my remarks in the RECORD, I include a news item of the inaugural address delivered by Governor Tuck, of Virginia, on yesterday.

He has voiced the opinion of many forward-looking citizens that Federal aid to schools means interference with and control of our public-school system:

FEDERAL AID TO STATES ASSAILED BY TUCK IN INAUGURAL ADDRESS

RICHMOND, VA., January 16.—Gov. William M. Tuck vigorously attacked Federal aid to States in his inaugural address today in telling Virginians they should be, and he believed they were, willing to finance higher standards in education, public health, agriculture, and other fields through State and local taxation.

Detailing the tremendous Federal debt and interest charges, and expenses, plus billions in veterans' benefits to come, the Governor said any money granted to the States must come out of the pockets of taxpayers who reside in those States.

CITES UNITED STATES HANDLING EXPENSES

Money paid by the taxpayer to the Federal Government and returned to the States, he added, is burdened with collection and handling charges by the Federal Government, with the operating costs of bureaus in Washington, and finally with the salaries and expenses of Federal agents sent into the States to regulate State agencies in their expenditure of what is left of the money received from the taxpayer.

"The amount left is probably about half," he said. "Since the money must be spent according to a national pattern prescribed by the Washington bureau, it cannot be utilized for such purposes as will best satisfy Virginia's needs. These needs necessarily vary in the several States according to varying conditions prevailing in them."

A grant, he said, may be made for a purpose Virginians do not want at all, but if it is rejected her taxpayers must pay their part of the cost just the same.

Governor Tuck said in his address that in appropriating war-inflated revenues to raise school standards through expenditures of a recurring nature, Virginia would eventually have to increase State and perhaps local taxes to continue the higher standards. The same would be true in other activities, he said, although he predicted that higher taxes would not be necessary for 2 years.

PREFER STATE FINANCING

"I am confident that such commitment meets with the people's hearty approval, and that they will gladly finance their own schools," he said. "I am also confident that they prefer these schools to be financed through State and local revenues rather than through the medium of Federal taxation with its accompanying interference."

Governor Tuck devoted the major part of his 6,000-word address to criticism of Federal grants to States which he asserted were destructive to State independence and local self-government, were costly to taxpayers and served as a means by which pressure groups in pivotal States in national elections seek to impose their will in States where they have little influence.

"I am convinced that the making of grants to the States by Congress should be vigorously opposed by all the States so long as the operations of the Federal Government necessitate incurring an annual deficit," he said.

A Plain Citizen of the U. S. A. Writes to His Congress

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following communication written by one of my valued constituents in California:

DEAR CONGRESS OF THE U. S. A.: The other evening I heard our President tell the people what the Congress has not done. As a good citizen of the U. S. A. I have been reading the CONGRESSIONAL RECORD quite regularly. I had been suspecting many of the things the President said, but I didn't know but that the "REC" might be giving me the wrong impression. For one thing I noticed that from time to time there was not a quorum present in one or the other House to do business. I was puzzled about that. I know if I were not at my job regularly I would be fired, and rightly so.

Then too, I have been trying to figure out what the Congress has been doing on Capitol Hill. So many laws are introduced but few of them are ever passed by Congress. Now our President has told us what the real trouble is. It is our committee system. I wish you Congressmen would publish a "committee record" similar to the CONGRESSIONAL RECORD so that we people could find out what Congressmen are on the committees and just who is sabotaging legislation in the committees.

Since you don't seem to be able to break up the deadlock, or the sabotage in the committees, could I make a suggestion to you? Congress has many rules. There are rules of debate, rules of order of business, etc. Well, why can't you adopt one more rule? Why not have a rule that if a committee fails to report a bill back to the floor of either House within a certain time, any Member of Congress can call that law up for discussion and have it debated in Congress or referred to a special committee. Since Congressmen don't want more committees created than are now in existence—they are too numerous already—this rule would have the effect of getting action on a bill.

I am only a plain citizen, Congress of the U. S. A., and I am busy making a living and striving to make good citizens of the youth of our community, and I haven't the time to check up on the work—or lack of work—you are doing. I just have to trust to your individual integrity and honesty—at least until election time—to do your job well.

I often see such headings in the CONGRESSIONAL RECORD as "Congress Faces the Problem of Inflation," "Congress Faces Problem of Housing." Now we common people face these problems, too. What we want you to do is not only face these problems, but to lick them for us.

I know that there will be much talk from now on about cooperation between you and the President. You will criticize the President for spanking you. But that gets you no place. We want you to stop bickering and do something about the problems confronting our country. If the President was wrong, then show us that he was wrong by producing some good laws to solve the problems of the U.S.A. In other words, "Put up or shut up."

I am not interested in whether it was the Democrats or the Republicans who laid down on the job. You are all Americans, like we common people are Americans. If each of you just remembered that you are Americans first and Democrats or Republicans second, then you would do your job as representatives of the people better.

I see by the December 28 issue of the CONGRESSIONAL RECORD that you have accomplished much. In fact almost three pages are filled with enrolled bills and resolutions signed. But upon closer scrutiny I find that these are all private bills, such as an act to relieve Joe Doakes, or an act to authorize investigation of means to increase the capacity of the Panama Canal. These are all fine. But why don't you pass a law to relieve the strike situation and the housing situation?

I hesitate to write you about these things because I know that you Congressmen are swamped with hundreds of petty requests from your constituents. The people expect too much of you. They want you to find out everything from the price of peaches in Paris in 1914 to the name of a good hotel in Washington. And how they fuss when you don't give them a "prompt and courteous" reply. I think that one of the reasons the daily meetings of Congress are poorly attended is because you people are overworked with petty details. It seems to me that Congress is in session too long. I suggest that the sessions of Congress be limited to 190 days, Saturdays and Sundays excluded. If you were forced to do more in a shorter time, there wouldn't be too much delay in legislation. If your Senators were thus limited, the people back home would have a chance to see their Representatives more and to express to them their wishes better. You fellows are so busy in Washington that we plain people haven't a chance to talk to you and to give you our opinions on legislative matters. We want to meet our Congressmen, and we want to talk to them and make our wishes known. That is democracy.

As a common American I don't believe in threatening to defeat you at the next election for your failures of the past. I know you can do good work, as demonstrated by the great accomplishments in matters of foreign affairs. I know that in this session of Congress you will forget politics, forget antagonisms, and cooperate to make our democratic country the best example in the world of a "Government of the people, by the people, and for the people."

Greatest Diplomatic Capitulation Since Munich

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Lothrop Stoddard, of the Washington Star:

The outcome of the Moscow Conference of foreign ministers confirms the fears I have expressed in previous broadcasts. It is, to my mind, an almost unmitigated disaster—the greatest diplomatic capitulation since Munich, and one which, I gravely fear, will ultimately produce similar consequences. The chief difference between the two is that the Moscow surrender did not have as cogent an excuse; at Munich, Chamberlain and Daladier were faced with superior force. Hitler had got the jump on them in armaments and was ready to use them. The current revelations at the Nuremberg war criminals trial show that Hitler was not bluffing, and that if his demands had been refused he would at once have precipitated a war for which Britain and France were alike woefully unprepared. It is thus arguable that Anglo-French diplomacy bowed to stern necessity in order to gain time.

Last week at Moscow the western powers were under no such imperious compulsion; because notwithstanding their extensive demobilization since the close of hostilities, they still have an over-all predominance of armed might, topped off by the atom bomb. In a show-down over vital issues, therefore, the western powers would have been able to make their views prevail; because the Soviet Union is not yet in a position to challenge that preponderance of power with any reasonable hope of success. An unflinching Anglo-American stand for what both deemed the necessary pattern of world reconstruction would thus have succeeded without recourse to arms, because there is nothing in this pattern which menaces the legitimate interests of a Russia seeking merely peace and security, and it is hard to imagine even the power-conscious rulers of the Soviet Union deliberately plunging their people into a war, needless from a defensive viewpoint, which would probably entail a worse fate than that of contemporary Germany and Japan.

At Moscow, therefore, Mr. Molotov's diplomatic right arm did not pack the punch that Hitler's did at Munich. This means that, in the basic sense, Mr. Molotov was bluffing. Yet the bluff did not entail grave risks, because the Foreign Commissar and his colleagues of the Politbureau had long ago sized up their diplomatic opponents and had rightfully deduced that the political leaders of America, especially, had neither the vision nor the will to stand fast, regardless of immediate consequences, for the principles wherein they purported to believe. From the very start of its wartime association with the Soviet Union, America's record has been

one of appeasement in the invidious sense of that word. Wartime exigencies might justify, or at least palliate, such a policy. But decisive victory over the Axis coupled with our sole possession of the atom bomb rendered our continued surrender on fundamental issues as needless as it was potentially disastrous.

Three months ago, at the London Conference of Foreign Ministers, it looked as though appeasement was over. Foreign Commissar Molotov there adopted an attitude which was deemed absolutely inacceptable by the western powers. The result was a break-down of negotiations, lucidly explained and eloquently defended by none other than the American representative, Secretary of State Byrnes, in his radio address to the American people on the evening of October 5. Regular listeners to these broadcasts will recall the deep thankfulness and gratitude that I voiced in my talk 2 days later. If words meant anything, it seemed certain that American diplomacy would thenceforth be guided by the slogan then coined by Mr. Byrnes himself: "Compromise does not mean surrender." Amplifying his stand, the Secretary described at length Mr. Molotov's reneging on the Potsdam and Yalta Agreements and insistence on the original Soviet thesis that the postwar world should be run by a three-way deal which would inevitably discredit the inchoate United Nations Organization and would, in its stead, establish a tripartite balance of power on a world-wide scale. This reactionary proposal excited Mr. Byrnes to righteous indignation. "The American delegation," he said emphatically, "took the position that, in an independent, democratic world, peace cannot be the exclusive concern of a few presently powerful states; that, unless we were to revert to a world of isolationism, none of the states which we wanted invited to the peace conference could be said to be not directly concerned with the peace. We urged that those states, both large and small, which had fought and suffered in the war must make the peace. This has been a people's war and it must be a people's peace."

When Commissar Molotov turned an emphatic thumbs down on any such proposal, Mr. Byrnes went on to comment: "It therefore became obvious that there could be no agreement unless the other delegations were prepared to yield their views and convictions to those of the Soviet delegation. This, none of the other delegations were prepared to do. The United States is willing to dictate terms of peace to an enemy, but is not willing to dictate terms of peace to its allies." And from the unqualified rupture of the conference that ensued, Mr. Byrnes drew the following trenchant conclusions: "The matter that caused the suspension of our work is no trivial or technical question. It presented an issue which had to be met. This is whether the peace shall be made by three or even five nations to the exclusion of other nations vitally concerned in the maintenance and enforcement of the peace which is being prepared. The issue goes even deeper. The Council of Foreign Ministers acts under the unanimity rule just as the Security Council of the United Nations must act in many important matters. * * * The veto power is a great power and should not be lightly exercised. We are willing to make many concessions, but the United States does not believe in agreement at any price. The power of veto in procedural matters should not be used by the United States or any other nation to coerce the judgment and conscience of fellow nations. Peace must be based upon mutual understanding and mutual respect. It cannot be secured by procedural maneuverings which obscure from the people the real and vital issues upon which the peace depends."

Thus spake Secretary Byrnes on October 5. Meanwhile, Mr. Molotov went back to Moscow, Marshal Stalin went vacationing on the Black Sea, and the Soviet Government staged a diplomatic sit-down strike, refusing to cooperate in any way with its western associates while making itself actively disagreeable by all sorts of disturbing unilateral actions. The war of nerves went on through October and well-nigh through November. Came Thanksgiving Day. That night Mr. Byrnes had what his press relations subordinate described as an inspiration. He would go to Moscow to talk things over with Foreign Commissar Molotov, in company with British Foreign Minister Bevin if the latter could be persuaded, but standing ready to go himself anyway.

According to the most reliable information, Mr. Bevin distinctly did not like the notion. That hard-headed British Laborite saw what such a diplomatic "journey to Canossa" would probably entail. But of course he had no real choice save to go along. So the tripartite Conference of Foreign Ministers took place in the Soviet capital, and Mr. Byrnes resoundingly reversed himself on the attitude and spirit he had adopted less than 3 months before.

Consider, if you please, a few of these reversals. The veto power has been so extended that it becomes virtually the basic factor in all international procedure. As for the contemplated peace conference, there just "ain't goin' ter be none"—merely separate arrangements by varying groups wherein Soviet Russia will be the one constant participant. As a gesture to our feelings, presumably, these peace deals will be submitted to the Assembly of the United Nations, but merely for discussion and recommendations which can be ignored by the framers, who will have the last word. This degradation of the Assembly to the status of rubber stamp will have a profoundly depressing effect upon its prestige and authority, which is just what Moscow intends, because it never liked the Assembly idea anyway. Incidentally, those treaties concern chiefly nations in eastern Europe, about which we took so high a moral attitude on the basis of the Yalta agreement. At Moscow we practically abandon our position there, but simultaneously permit Russia to do the very thing in Japan which it so violently objected to our trying to do in the Balkans—namely, to have a say in what goes on. Furthermore, the elaborate double-talk indulged in in the Japanese clause results in such obscurity of meaning that Moscow will have a glorious opportunity to raise interpretations which may deadlock things there as they are now stalemated in Germany. Last but not least, the atom bomb. Apparently we have not promised to give away the secret—not yet, at any rate. But that is not the really important point. The agonizingly vital issue confronting the world is the placing of atomic weapons at the very earliest moment under a truly effective system of control and inspection against evasion of that control. Alas for the fond hopes of the peace-loving majority of mankind. At Moscow it was decided that a proposed Atomic Commission of the UNO should either consist directly of the Security Council or be responsible to it, rather than to the Assembly. This means that the unanimity rule and veto power prevail, whereunder a single dissent could nullify or postpone indefinitely any action on atomic control. This, of course, means in practice that Soviet Russia can stall off anything it doesn't fancy until its own scientists or Communist fifth columnists abroad have given it the secret and it can stock up on bombs of its own.

What a happy prospect all this portends for a bright new world! Mr. Byrnes certainly started something with his Thanksgiving night "inspiration." Our Secretary of State has assumed a terrible responsibility. And yet we should not be too hard upon him, even if things go very wrong, because he typifies the political leadership this country has had for generations. Press dispatches from Moscow describe him as "jubilant" when he emerged from the last conference meeting and took his plane for home, and his chief reason for this happy mood is extremely revealing. He told waiting newsmen at the airport that "the important thing about the conference is that closer relations have been established." There speaks your typical American politician. Let's get together, boys, and talk things out. I'm sure we can arrange something. That's the idea every politician keeps in the back of his mind; and, in our domestic politics, where everyone is agreed on fundamentals, compromise is usually not only possible, but desirable. But in a world sundered by ideologies as deeply antithetical as democracy and totalitarianism yet shadowed by the common menace of the atom bomb, "compromise," as we Americans use the term in our political terminology, may be a frightful delusion presaging ultimate annihilation of the more idealistic or the more squeamish by those who think only in terms of ruthless force. If a man steeped in domestic politics, but with scant experience in world affairs, is first made Secretary of State and then sent to negotiate perhaps the most vital agreement of the postwar period, that is our fault and the fault of political practices that are a hang-over from our happy and diplomatically irresponsible past. Only—let us remember in time the classic warning: "Where there is no vision the people perish."

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 17, 1946

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution unanimously adopted by the Franklin County Board of Supervisors, my home county, in support of the great St. Lawrence seaway and power project:

Resolution 72

Whereas the welfare of the people of the State of New York is directly concerned in the successful completion of the St. Lawrence seaway and power project; and

Whereas the development of the St. Lawrence River will remove the last major obstacles to deep draft navigation throughout the Great Lakes system to the Atlantic Ocean and the port of the world; and

Whereas the same development will simultaneously make available 1,100,000 horsepower of low-cost hydroelectricity, under the self-liquidating State power project; and

Whereas the Legislature of the State of New York on March 15-16, 1944, by unanimous vote, adopted a resolution declaring that this State urgently requires the prompt development of the St. Lawrence to furnish low-cost power to millions of industrial, rural commercial, and domestic consumers: Therefore be it

Resolved, That we appeal for the immediate enactment of such legislation as may be necessary authorizing the St. Lawrence seaway and power development as a postwar project; and be it further

Resolved, That copies of this resolution be forwarded to our United States Senators and our Representatives in Congress.

Letter From J. B. Hutson, Acting Secretary of Agriculture, to Hon. Sam Rayburn, Speaker of the House

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I herewith insert a letter from Hon. J. B. Hutson, Acting Secretary of Agriculture, to the gentleman from Texas, Hon. SAM RAYBURN, Speaker of the House:

JANUARY 16, 1946.

Hon. SAM RAYBURN,
Speaker, House of Representatives.

DEAR MR. SPEAKER: At the present time Commodity Credit Corporation is carrying out subsidy operations pursuant to section 3 of the act of April 12, 1945 (59 Stat. 50), with respect to sugar of the 1945 and prior crop years, in order to maintain existing price ceilings on sugar and to make adequate supplies of sugar available in the American market for the essential civilian, military, and foreign commitments of the United States. The existing limitations on subsidy operations by Commodity Credit Corporation preclude any such operations with respect to 1946 crops, including, of course, sugar. The 1946 crop of sugarcane is now being harvested in Hawaii and Puerto Rico.

Because of the extremely acute situation with respect to world supplies of sugar, the Department of Agriculture on August 1, 1945, announced a price support program for growers of sugarcane and sugar beets of 1946 crop under which subsidies would be paid, contingent upon authorization by the Congress of subsidy operations by Commodity Credit Corporation with respect to 1946 crops. This announcement was deemed necessary to encourage the production of the required quantities of sugarcane and sugar beets. It is essential to carry out these programs in order to assure the maximum production of sugar in Hawaii and Puerto Rico.

The fulfillment of the commitments made by the Secretary of Agriculture subject to Congressional approval, with respect to subsidy payments on 1946 crops of sugarcane in Hawaii requires approximately $12,100,000 in subsidy payments. The fulfillment of such commitments with respect to the Puerto Rican crop will require approximately $13,300,000. The amounts presently authorized to be expended for subsidies in section 3 of the act of April 12, 1945, supra, are sufficient to permit the proposed payments with respect to the 1946 crop of sugarcane in Hawaii and Puerto Rico, and it will not be necessary to authorize the expenditure of additional amounts to meet the requirements of these programs if the authorization contained in section 3 is amended to include 1946 crops.

This Department cannot overestimate the gravity of the situation with respect to sugar supplies and the necessity for encouraging the maximum production, harvesting, and processing of sugarcane. A decision has been reached to permit an increase of one-half cent per pound in market prices of refined sugar at this time. This price increase substantially reduces the amount of funds required for subsidy payments on sugar beets and sugarcane. If legislation authorizing the payment of subsidies with respect to 1946 crop sugar is not adopted, the alternative would be a drastic revision of domestic ceiling prices which would seriously impair the existing stabilization program.

There is enclosed a draft of proposed language which would effect the recommended change in section 3 of the act of April 12, 1945 (59 Stat. 50). Also enclosed is a memorandum containing section 3 of the act of April 12, 1945, as it would read if the proposed language were enacted.

The Bureau of the Budget advises that it has no objection to this submission.

Sincerely yours,

J. B. HUTSON,
Acting Secretary.

South Dakota's Junior Chambers of Commerce Establish Record in Community Service Projects

REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. MUNDT. Mr. Speaker, this week, Members of Congress have from time to time during the openings days of the second session of the Seventy-ninth Congress taken the floor to insert in the CONGRESSIONAL RECORD factual reports of the great achievements accomplished by the junior chambers of commerce of their respective States. At this time, I would like to list a brief summary of what the South Dakota Jaycees accomplished during 1945 since they have established a great record of community service:

SOUTH DAKOTA JAYCEES CARRIED ON THE FOLLOWING PROJECTS IN THEIR STATE THE PAST YEAR

YOUTH PROGRAMS

Maintaining and operating of youth canteens, services to orphan children, and parties and assistance to crippled children.

AGRICULTURE

Close working relations with 4–H groups, sponsoring of calf scrambles, assisting in county fairs, improving city and country relationship, putting on programs for rural schools, assisting in rodent and weed control, holding farmers' night programs and promoting horse shows for the benefit of the public.

SALVAGE PROGRAMS

During the war all junior chambers organizations throughout the State participated in tin can collections or waste paper drives. This was an important factor in gaining victory over our enemies.

AVIATION

Jaycees all over the State are participating in CAP projects and helping to promote community airports for the future of their communities.

SERVICE TO VETERANS

Servicemen from South Dakota were sent monthly news bulletins, cigarettes, playing cards, Christmas packages, phonograph records, by the various organizations during the war. Returning veterans are given every assistance possible upon returning to their community to get them adjusted once again to civilian life.

HARVEST LABOR

In a great many communities, the Jaycees took the initiative in providing the extra labor required to harvest the bumper crops South Dakota produced during the war years. Jaycees not only worked in the harvest fields after business hours but they organized all community volunteer workers in order that the harvesting could be done systematically and thoroughly.

Mr. Speaker, the officers of the South Dakota organization who provided the leadership in carrying forward the above projects were as follows: National Director, John D. Beatty, Redfield; president, Bert Veenker, Sioux Falls; vice presidents, Clarence A. Nichols, Madison; Winfield McCain, Rapid City; Harold Gray, Watertown; secretary, Paul Holman, Sioux Falls; treasurer, Charles Bennett, Sioux Falls; past president, Clarence Griffin, Watertown. These able and alert young men deserve rich credit for their part in promoting the activities of the South Dakota Junior Chamber of Commerce and of the local junior chambers in their respective communities.

One of the commendable features about the work of the Jaycees of South Dakota is the fine manner in which they cooperate with the senior chambers of commerce and other organizations of their communities. There is a healthy rivalry among them all—but no jealousy, no bitterness, and all work together for the advancement of South Dakota and its many potentialities. On many occasions the activity and insistence of the Jaycees have served to spur larger and older organizations into action. On the occasion of the twenty-fifth birthday of this vigorous young organization, South Dakotans join with Americans everywhere in doffing their hats to an up and coming organization which already has a great record of achievement behind it.

At this point, Mr. Speaker, I conclude my remarks by inserting an editorial from the largest daily newspaper in South Dakota—the Daily Argus Leader of Sioux Falls—which pays a well merited and widely shared tribute to the Junior Chamber of Commerce of South Dakota with special emphasis, of course, on the work of its local Jaycees. The achievements of the Sioux Falls Jaycees are duplicated, however, in many other South Dakota communities.

JAYCEES PROVE WORTHY COMMUNITY BUILDERS

The United States Junior Chamber of Commerce has reached its twenty-fifth birthday, and on this occasion the Argus-Leader takes great pleasure in saluting Sioux Falls Jaycees for their influence and accomplishments in community betterment.

Junior chamber anniversary week, being observed this year from January 14 to 21, is an appropriate time to take stock of what our local organization has done within the past year to improve and develop the city and to improve and develop its individual members by training them for civic leadership.

Foremost among the activities of 1945, another glorious and fruitful year in Sioux Falls Jaycees history, were participation in the Red Cross drive, promotion of Americanism Week in the public schools, maintenance of blood banks at Sioux Valley and McKennan hospitals, rat eradication, fire prevention, support of supervised recreation, monthly birthday parties for crippled children at Sioux Valley hospital, an orphans' picnic, encouragement of good citizenship on Halloween by providing free movies with the cooperation of theater managers, donating of toys for orphans, sponsorship of the Little Sioux Baseball League which kept baseball alive in Sioux Falls during the war, collecting

coat hangers for the service club at the Sioux Army Air Field, regular mailing of the Mess Kit, monthly news bulletin, to approximately 3,000 Sioux Falls men in the armed forces in this country and abroad, and staging a calf scramble and providing an information booth for the Sioux Empire Fair.

Our Sioux Falls group carried out a phenomenally active and productive program through the arduous war years, when many members were never sure how much longer they would remain in Jaycees ranks. Now that Jaycees are returning from military service in large numbers, the local membership roster is being rapidly replenished, and even bigger things can be expected in the future.

The fact that the junior chamber has voted to increase its board of directors from 9 to 11 members indicates not only numerical growth but an obvious and promising intention to expand the organization's scope of endeavor.

The Fact-Finding Board and Settlement of Strikes

REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. HOFFMAN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. HOFFMAN. Mr. Speaker, the method that is being used by the present administration to obtain a settlement of the steel strike is similar to that which was used in Michigan in 1937 when the then Governor of the State, acting with the knowledge of the President of the United States, called the people who had the right to bargain collectively for labor and for employees into a conference and kept them there on one occasion for as long as 48 hours.

Now, a settlement obtained under circumstances like that—in effect, it amounts to coercion—does not give very much promise of being permanent. It is a forced, not a voluntary, settlement.

Another thing is the fact that when General Motors did not accept the recommendations of this fact-finding board, so-called—and there are no members on that board who ever made automobiles—then the National Labor Relations Board moved into action with a charge of unfair labor practices.

Another thing: This morning before the Committee on Labor there appeared in support of legislation advocated by the administration one John Gibson, who is an adviser to the Secretary of Labor. Now, John Gibson is a former president of the Michigan CIO, having held that office for some time and until recent months.

What sort of settlement do you expect to get out of a fact-finding board and out of an administration conciliation agency when it lifts right out of the CIO one of the parties to the dispute, one of its officials, and puts him in position of authority here in Washington, exerting the power of the administration to settle the dispute to which his union is a party?

Amending Servicemen's Readjustment Act of 1944

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. KELLEY of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I have submitted a bill to amend the Servicemen's Readjustment Act of 1944, as amended, by repealing section 800 (b). The retention of this section is beginning to work a great hardship upon many ex-servicemen who have obtained employment, thereby relinquishing their readjustment allowance for unemployment.

Many thousands of these men are in the employment of large corporations where there has been work stoppage. Under the provisions of this section they are disqualified to receive compensation for their unemployment because this section so specifies.

The particular injustice is created because in some States, such as Pennsylvania, the civilian employee can receive unemployment compensation from the State.

The Veterans' Administration has interpreted this section to mean that regardless of whether these men are interested in the labor dispute which causes stoppage, they are still disqualified, and for this reason I have introduced this bill to amend the act by repealing section 800 (b) in order to clarify the situation.

On December 19, 1945, the gentleman from Pennsylvania, Congressman GREEN, introduced similar legislation, but no action has been taken. I am much interested in this, along with the gentleman from Pennsylvania, Congressman GREEN, and hope that some remedy may soon be forthcoming.

What Should Be Our Policy in China?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I wish to include a radio speech given on the Town Meeting of the Air, December 27, 1945. I was glad to note that the Moscow Conference communiqué published the following day revealed that Russia and the United States had agreed to follow in China the same policy I urged in this talk and have been advocating for many years.

The speech follows:

The first reason why we must continue our long-standing policy of supporting the established Government of China is our national honor. We must make good on our promises. I am shocked that any American should actually propose that we withdraw from China before we have faithfully carried out commitments we assumed there, such as expelling the Japanese and restoring to China the territories, including Manchuria, which Japan seized from her. These commitments, as President Truman reminded us only 12 days ago, were made to the National Government of China, the government headed by Chiang Kai-shek.

As a responsible Member of the United States Government, I cannot even consider as a serious possibility any suggestion that this Nation betray its honor. If we go back on our solemn promises to an ally which fought so faithfully by our side, then are there any promises on which we won't go back if a large enough pressure group demands it? Is there any nation that could or ought to trust us again—not only in Asia but in Europe and Latin America as well? Is there any possible hope for peace if the world cannot depend on a nation's pledged word?

But even if our honor were not involved, our national interests require that we continue to support the Chinese Government. Having fought four long years to keep Japan from getting control of China, can we now afford to throw away that hard-brought victory by abandoning China to Communist control?

Most of the leaders around Chiang Kai-shek, from the Prime Minister, T. V. Soong, on down, were educated in our country. They want to make China as nearly like our country as possible. Not a one of the Communist leaders in China is a returned student from America. Most of them got their training under Russian Communists. Can anyone conceivably imagine that China under the Communists would be oriented primarily in our direction, either politically or economically?

Some Americans have supposed that the surrender of Japan meant the end of our responsibilities in Asia. As a matter of fact, whether we win the war there so it will stay won will be determined by what pattern ultimately dominates in the development of China.

Is it to be the racial pattern as Japan advocated—all the colored peoples against the whites?

Are the Chinese to be driven in disillusionment into the Communist pattern?

Or will they have a chance to develop a genuine democracy more nearly after the pattern we helped establish in the Philippines, which is what the overwhelming majority of the Chinese unquestionably wants? There is no more important question in the world—and the answer is still in our hands.

Why do you think our marines and our supplies are in China? For China's sake? Or for Chiang Kai-shek's sake? Most emphatically no. They are there for America's sake. They are there because of urgent necessity from the standpoint of our own future security. They are there not because we don't want our boys home, but because we do want them home—and able to stay home.

A serious civil war in China is against our interests, because that would create chaos

and a political vacuum in which some outside power would certainly intervene. The surest way to avoid such a disastrous civil war is for the United States to continue to support firmly our ally, the National Government of China—the same Government our other allies have promised to support. Russia, for example, has pledged both moral and material assistance to that government, so she certainly cannot and will not object to our assisting it too.

Without outside support the Communists cannot wage serious civil war. Their argument that we must withdraw support from Chiang in order to avoid civil war is wholly propaganda. Actually, for us to withdraw support from him would make civil war almost certain because it would give the Communists some hope of success.

Why do you suppose our American Communists are agitating all over the country and picketing the White House demanding that we withdraw from China if they did not know that would be of tremendous help to the Chinese Communists?

If some should claim that to support the Chinese Government is intervening in China's internal affairs, surely they know that it is not possible for any nation with such power as ours to escape having enormous influence on one side or the other in any major issue in the world, whatever we do or don't do. If our influence is not on one side, then automatically it is on the other. If we refuse to assist our Chinese ally, we thereby assist the rebellion which is trying to overthrow that ally.

I am a doctor. If I decide to operate in a case of appendicitis and the patient dies, it was my decision to operate which led to his death If I decide not to operate and the appendix ruptures and the patient dies, it was my decision not to operate which led to his death. Both are decisions.

If to continue support of Chiang is to intervene on his side, then to withdraw our support is to intervene on the Communist side.

Thus the only choice we have is, on which side are we to be? Are we to be by decision on the side of our own American interests? Or are we to be by default on the side that is avowedly determined to set up a social, political, and economic order which is the very antithesis of that in which we believe?

The recent restatement by President Truman of our China policy should enable General Marshall and all of us to cut through the fog of claims and counterclaims and get the facts as to who in China really wants unity and who does not.

If the Communists agree to become a political party without an autonomous army, and Chiang refuses to establish a democratic government with legal and equal status for all parties, then he is exposed, and ought to be

If, on the other hand, he is willing to establish such a government, and the Communists are unwilling to give up their separate army and administration and become a loyal opposition instead of an armed rebellion, then their pretenses are exposed, and ought to be.

I am confident of the outcome of this fair test, because I believe completely in the sincerity of Chiang's desire to achieve a unified democratic China without further warfare.

Unless or until there is clear evidence that the Chinese Government is not acting in good faith, every consideration of honor and of intelligent, legitimate self-interest requires that we continue unswerving support of that Government in finishing the war, while assisting every effort to achieve unity and democratic reform in a strong, independent, friendly China.

If there are risks in supporting Chiang Kai-shek, there are far greater risks in not supporting him.

Poland

EXTENSION OF REMARKS
OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1946

Mr. CLASON. Mr. Speaker, as the world watches anxiously, representatives of nations from every continent seek to establish the United Nations Organization on a firm foundation. If it is to merit ultimate approval and success, the rights of the smaller nations must be safeguarded as carefully as those of the great powers. Many difficult problems must ultimately be solved. Some of them concern the peoples and the lands of our heroic allies. None is of greater interest to Americans than the destiny of Poland concerning which I made the following remarks in a radio address over Station WSPR on Sunday, January 13, 1946, under the auspices of the Western Massachusetts branch of the Polish American Congress, Inc.:

Ladies and gentlemen, every resident of the Second Congressional District of the Commonwealth of Massachusetts has learned to respect highly their American neighbors who were born in Poland or who are of Polish descent. As children and young men and women they have been eager, industrious, and capable students. For me, personally, the best evidence is the fact that I have appointed two of them to our great Naval Academy at Annapolis during the past 9 years. Each young man won his appointment by securing the highest ratings in stiff scholastic competitive examinations open to all students in the district on equal terms. During this war one of these young men went down with his warship. All lives on board were lost.

On our athletic fields, our school, college, and professional football, baseball, and basketball teams not infrequently carry a roster of names that reads like a meeting of the United Nations Organization. The star player often bears a Polish name. Americans of today do not have to recall the names of Pulaski or Kosciusko to realize the important part played by men of Polish blood in winning wars for the United States. We rub elbows with such heroes daily as we pass along American streets throughout our land. We know how hard the men and women who remained at home worked on the farms and in the industrial plants in the Connecticut Valley, how energetically and how enthusiastically they strove to make every War bond drive a success. We were filled with admiration in 1939 at the determination of the Polish people to fight for their country against the Nazi invaders, at the heroic defense of Warsaw. We entered the war. Polish names dotted American honor rolls throughout the land. Gold stars were placed solemnly and sadly opposite many of them.

The hostilities in Europe came to an end. France had been liberated along with Belgium, Norway, and Denmark. Their peoples have been free to set up the kind of government each wished to have. They have not been coerced. In France we have watched the various political parties strive for leadership in a free election.

What of Poland? To most Americans it is a dark enigma. Most of us have been supporters of the principles announced in the Atlantic Charter. We wish them to be applied fairly and justly in the settlement of the problems of the smaller as well as the great nations among our allies. Many Americans find it difficult to understand why that one of our allies who first resisted the Nazis fully and bravely should not be restored to its former full independence within its prewar boundaries. We are told that its boundaries must be changed to secure a proper solution of long existing European problems of that section of Europe. We have been told that its people will be given the right to hold free elections, unhampered by influences from nations outside its borders. But when? It would be easier for Americans to understand Polish politics if there were only two major political parties in Poland as in the United States instead of several parties, no one of which, if uncontrolled by outside pressure, may gain a clear majority of a popular vote. We are told that through pressure, elements from outside Poland have been granted powerful positions in each party. How can an election under such conditions be free? Great estates have been divided among many Polish landowners of small farms. That appears to be a step favorable to these farmers. Yet we learn that if they raise certain crops, such as hemp and flax, all of their produce must be delivered over to Government agents at a fixed low price. It is not the American way of life, and requires considerable explanation in the future. Churches and schools have reopened. This is well, even though much remains to be done.

The foreign ministers, even the heads of the great nations, have met from time to time to discuss and to plan for the solution of world and national problems. Of late little has been heard about any consideration of the problems of Poland.

Poland has suffered much. I spent most of the month of June 1945 in Europe. I saw great devastated areas in France, Germany, and Italy. I was told that Poland had suffered far worse than any of these countries. This winter the people of Poland must rely largely on the medical, food, and other supplies furnished by UNRRA to prevent mass starving and freezing. Our Congress voted huge American appropriations for this worthy cause, not only to help the Polish people but the peoples of Greece, Italy, and all other stricken countries. I was in Belgium under former President Hoover on relief work during the winter of 1914–15. I saw at first hand what great service well-organized relief work can accomplish. I am sure the Polish people will make certain that the supplies are used to the best advantage.

Next summer representatives of the United States will join those of other great powers at conferences which will start writing the terms of treaties of peace. Some day in the not-too-distant future the problems of Poland must be solved. Unless they are solved in such a treaty in 1946, Poland's position will be critical. Americans of Polish descent who know most about these problems, about the past and the present of the Polish people, their aims, their needs, and their aspirations will do well to inform the American people in every way possible concerning them. For if our representatives, backed up by the public opinion of a well-informed American people, aroused to the importance to the United States and to the future peace of Europe and the world of a just solution of the Polish problems, take a firm stand at one of these conferences that Poland's future must be included in the particular document before them, they will secure results. If the decision is delayed beyond 1946, Poland may be a long, long time in securing true freedom.

This is a great challenge to the leaders of American diplomacy. All Americans who can aid them have a great opportunity to render

invaluable service to an outstanding cause. A just decision will satisfy the Polish people and remove a possible cause of another European war.

Why There Is Dissatisfaction Among GI's

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I am including a letter from a resident of the Twin Cities who is an outstanding and highly responsible citizen. He encloses an extract of a letter he has just received from his own son stationed at Le Havre describing conditions there and making one or two very constructive suggestions for improving them.

In common with every other Member of Congress I have had a good many letters similar to this and I have repeatedly taken them up privately with the War and Navy Departments, not desiring to drag them out in public, or to besmirch the good name of our military units abroad, or to cause additional anxiety to relatives at home. However, there comes a time when one cannot subordinate the national welfare to any other consideration. I feel under obligation to speak of this publicly because the condition described cannot be longer tolerated.

No one appreciates more than I the enormous difficulties which our high command faced with the end of the war and the necessity of suddenly reversing practically all of our military movements. However, the peak of demobilization has now passed. There can be no further excuse for failing to give more thought and attention to all situations like that described below. They are dangerous to every man and woman involved, to our national honor and standing, and to our effectiveness in gaining the sort of decent world for which the men have fought so valiantly.

The letters follow:

JANUARY 14, 1946.

The Honorable WALTER H. JUDD,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR DR. JUDD: Enclosed is an extract from a letter just received from my son who is at Le Havre. The letter was dated December 20. He and I both know that it is necessary for us to keep troops in Europe, and as it seems his duty to stay for a while we accept it as necessary. I am, however, gravely concerned about the conditions that he describes in this letter. The moral effects upon the boys themselves are certainly serious, but to me the far more serious thing is the effect that such preposterous stupidity in administration can have upon the attitude of other nations of the world toward the United States. After all, the United States troops are the ones that the common people of the world see, and not the silk-hat State Department. They are going to form their opinion of us and our abilities and efficiency from the way our men act. How in the world an Army that was smart enough to handle the stupendous problem of supply during the war could be so short-sighted as to permit the development of a situation such as is described here is beyond belief.

You are one of the few Representatives we have who have been forthright in coming out for what you believed was needed for world peace and stability. If the Army hasn't enough brains to properly handle a situation like this, let's put in some business executives, but in some way correct this situation before all the peoples of the world take us as a laughingstock, as apparently this same condition exists in many places where our troops are located.

For obvious reasons, I do not want my or my boy's name used in connection with this letter because of the effect it might have on him.

Respectfully yours.

Well, as long as this lasts it's good enough. Eight hours of work a day keeps one from too many depressing reflections on the redeployment situation in general. The whole plan here has, through the lack of interest or reflection on the part of any of the responsible officers, become hopelessly confused and muddled. Units wander all over France with no record anywhere of their whereabouts. The major commands issue contradictory orders which no one bothers to carry out or clarify; and when further snags arise, instead of working the whole thing out (as in the case of the black market in clothing here, where the trouble lies in the quartermaster depot, itself, and blame has been placed on units drawing from the depot only occasionally) they just invent more useless red tape, slowing down the processing of troops returning home, and curing nothing at all that anyone can see. The situation as a whole is so futile that one could be amused at its Gilbert-and-Sullivan extremes, if men were not being held up, morale sinking steadily among troops, resentment increasing among the French, and the whole working structure of the military installations disrupted. I know that these conditions exist not only here, but also, and in greater extremes, in Germany; and it's not hard to imagine the disastrous effect on American prestige, if you want, or at least effectiveness in the face of such asinine administration. The trouble, of course, lies not with the system but in the way the higher-ups have decided to make it work. Instead of placing low-point men in the port areas (here, Antwerp, Bremen, Marseilles) early in the spring, and making them run the place in an experienced manner, they have kept replacing port personnel each month with others just about to ship home. Men about to board ship can take no serious interest in learning new Army jobs or expediting the return of those behind them. Records are ruined, procedure boggled, and the results are showing on the December shipping totals, which are behind last month's, and not I understand for a lack of ships. Low-point men are given poor jobs for the most part, and since their noncoms and officers are waiting only for their boat, neither group gets a damn thing done. Our captain, for example, came in one day out of a week and a half, for half an hour; the rest of the time he is running nurses around town in his jeep and consuming an inordinate amount of Scotch. It's that way all over, and with irresponsibility on the part of the officer cadre (who have stuck to their posts about as well as I've always predicted) and the noncoms under them, black marketing of clothing and PX rations is zooming. The venereal rate is fantastic—it was 576 men per 1,000 per year in the xxxth when it pulled out—and the number of crimes of all sorts goes up all the time. There are women in all the officers' and most of our tents every night; God knows I enjoy liquor and all the rest as much as anyone else, but you can imagine the effect it has on daytime working efficiency.

Well, this turned out to be quite an editorial. I have no personal complaint at the moment, as for the first time since I've been in the Army I feel that in my own way I'm getting something constructive done; in the captain's absence I can act with his authority, and the three of us that came here from the xxxth have straightened out what was an incredible mess in pretty good shape. But the prospect of getting home in the future grows dimmer with all this mess, and until someone above the brigadier general who is letting it all increase shows some interest, there is no prospect of improvement.

United States Employment Service

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address:

Friends and neighbors in the Twelfth District, on Monday, the Members of Congress will reconvene to take up the business of the Seventy-ninth Congress. We will have our job cut out for us—with some of the most vital reconversion problems still unsolved and the confusion in the reconversion program growing every day.

Before it recessed for the holidays, Congress was guilty—not only through negligence which must be laid at the door of some, but certainly not all, Members, but guilty by a positive act of contributing to the confusion on the economic front.

I am referring to the decision to return the United States Employment Service to the States for operation. The bill to shift control of USES from the Federal to the State governments was attached as a rider to set aside $52,000,000,000 in unused war appropriations.

Because of this rider, President Truman has killed the entire legislation through a pocket veto. In announcing his decision, the President justified the veto on the grounds that the return of the USES to the States "would result in a disrupted and inefficient employment service at the very time when efficient operation is most vitally needed."

I heartily concur in this sentiment. Before the recess, I bitterly opposed the disruption of the USES. I believed that the operation of this important national program on a national level was essential to the postwar reconstruction economy. Events since the time of the House debate on the issue have strengthened this belief.

I would go much further than the administration which asks only that the employment service be retained until June of 1947. I can see no valid argument why the USES should not be made a permanent adjunct of our Federal Government.

Employment and unemployment have long since ceased to be local problems—with local solutions. Employment, following the pattern established by industry cuts across State lines, transcends community or regional spheres. The trade unions, so important a

factor in the national economy, have recognized the interstate character of employment problems. They, and other progressive forces, have realized the fallacy, the wasteful ineptness, of treating workers today as though they were still handymen in the village smithy.

It is very significant to me that the Federal Government has had to be called in every time employment became critical. It was called in during the First World War. Again, it had to step in when depression hit the country. And without Federal operation of the USES during World War II, it is extremely doubtful that the victory production records ever would have been made.

This dependence on the Federal Government in times of employment crises is to me, not only an argument that a Federal USES is required today, but that permanent Federal control is needed.

No one could validly argue that we are not now in an employment crisis. Statistics abound to demonstrate the critical state of our national labor market.

The number of calls made on the more than 1,500 local USES offices in the 48 States have increased 100 percent since VJ-day. Requests for service on job placements, job information, job counseling, and other USES services have increased from 4,900,000 in July of last year to 9,600,000 in November. Each month in that period, and thereafter, has been a steady increase of several hundred thousand in the number of persons requiring some kind of employment assistance.

Against the background of the war mobilization—the military as well as industrial mobilization—these figures are easy to understand.

More than 12,000,000 men and women entered the armed services during the war. They will be home soon—millions of them are already home—and looking for civilian jobs. Eight million war workers are in the process of changing jobs.

This is an employment crisis greater than any the Nation has ever faced. It requires a program of national action.

The Federal Government, and the Congress as the national lawmaking body, have a responsibility, at the very least, to take care of all job seekers whose employment problem arose from the national war emergency. To retreat from that responsibility by returning the USES to the States for piecemeal operation is nothing but capitulation to political opportunism.

For several weeks before Congress recessed in December Washington was the gathering place, the mecca of State officials clamoring for return of the USES to the States. Who can believe that this cavalcade was not driven more by jealous concern than by fervid interest in States' rights or by honest belief that the States could do a better job?

There is considerable misconception as to just what the responsibilities of the USES local offices are. Some advocates of their return to State control base their belief on the idea that State control is essential for the administration of State unemployment-compensation laws. Some local business interests would prefer to remove all Federal controls on present job-referral practices. The effect of this would be to deny unemployment benefits to a worker who refuses to take a job offered through the USES that is unsuitable when compared with his experience and income requirements. What the denial of benefits in cases like this amounts to is using the USES to force down the worker's standard of living by driving labor into cheap jobs.

There is at least a minimum guaranty against exploiting the temporarily unemployed in this way when the USES is federally operated. The local USES offices are then subject to nationally accepted placement standards. Local offices of the USES under the present Federal controls are not permitted to send a worker to jobs where the working conditions are legally substandard or where wages are less than the prevailing rate.

The wisdom of this kind of minimum check against forcing wage standards down is obvious in a period when the whole national economy is dependent on sustained purchasing power.

However, the functions of the USES are not confined to processing claimants for unemployment compensation. It has the responsibility to assist employers in recruiting qualified workers or improving personnel practices.

It has the responsibility to give guidance to young people leaving school, and to give special attention and help to handicapped workers.

USES has the further job of handling the special problems of minority workers who will be at a disadvantage now that wartime labor shortages are disappearing.

A well-integrated, effectiv program filling all these needs cannot be met by State operation. In order to do a complete employment service job for the whole community, the USES must function as a national organization with responsibility to the whole community. One of the most important reasons for retaining Federal control of the USES involves the welfare of millions of veterans. In the GI bill, the Congress promised returning service men and women efficient placement service and employment counseling, regardless of the veteran's place of residence. The Congress gave the USES this special responsibility, and in accordance with this congressional mandate, the USES has set up special programs to take care of the jobless veterans. Within the limits of a far-too-limited staff, it has done an excellent job.

It is clearly unrealistic to suppose that anything but a national set-up can take care of the needs of millions of war veterans. We have the responsibility to employ the most efficient means possible to assist ex-servicemen to get back into normal civilian pursuits.

More than 50 percent of the estimated 6,000,000 servicemen who have re-entered the labor market have turned to the USES for help of some kind or another. In Michigan alone, upwards of 150,000 veterans have registered. These registrations are constantly increasing—in greater percentage than the increased registrations of nonveterans.

The number of job placements for World War II veterans have grown from 87,000 in July to 128,000 in November of last year.

The task of fitting a veteran to a suitable job is a painstaking and delicate one. Many of the veterans are disillusioned about employment opportunities as soon as they put on their civvies. As a consequence, they do a lot of shopping around before they accept employment. Their shuffling around is not confined to their home locality. This understandable fussiness about jobs on the part of veterans is further complicated by the fact that very many of the veterans have little or no skills.

Obviously, a Federal system is necessary to adequately provide for the veterans' needs. The USES, as now operated under Federal control, is prepared to handle their needs. It has information about employment conditions in the important job centers, for instance, so that veterans could get advance advice about jobs while still at military hospitals or separation centers. Hundreds of thousands of veterans have used this information—information that it would be difficult, if not impossible for purely State agencies to gather.

One last point I would like to make about the folly of returning the USES to the States for operation. We have had a national system of financing State employment services for more than 10 years. From the very beginning of that system, the trend has been toward greater and greater financial support from the Federal Government. By 1941, 95 percent of State employment office costs were borne by the Federal Government. During the war, of course, the total cost of the USES was paid for out of War Manpower Commission appropriations.

In view of this, it is entirely misleading to speak of giving the employment service back to the States. The real question is not whether we should return the USES to the States for operation, but whether the federally financed employment service is to be operated as a national agency devoted to the welfare of the American people as a whole.

Saga of the People's Al

EXTENSION OF REMARKS
OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1946

Mrs. LUCE. Mr. Speaker, October 4, 1945, marked the occasion on which His Excellency the Most Reverend Francis J. Spellman, archbishop of New York, inaugurated, at a dinner, the building of the Alfred E. Smith Memorial Hospital.

Since that day many functions have been held for this splendid enterprise. Which reminds us Republicans that there are Democrats whose memory challenges the admiration, love, and affection of both parties and all Americans.

In the December 1932 issue of Vanity Fair I wrote a short and sentimental biography of that remarkable and beloved Democrat, Alfred Emanuel Smith. Rereading it after more than 13 years I see nowhere I would change or qualify the estimate it makes of the man himself. Today his spirit looms larger than ever, for in the end it was Al Smith who best loved and understood the common man.

SAGA OF THE PEOPLE'S AL—A STORY IN A SIMPLE MANNER OF AN EAST SIDE DEMOCRAT WHO WAS ONCE KNOWN TO MILLIONS AS THE HAPPY WARRIOR

(By Clare Boothe)

His mother was the daughter of an Irish immigrant, and his father was a truckman on the New York water front.

(O, sing us a song of democracy, a song of the city streets.)

"East side, west side, all around the town!
"The band plays ring-a-rosy, London Bridge is falling down!"

His grandparents came out of Ireland in a clipper ship, a clipper ship with 27 billowing sails, and it docked at Beekman Street. His mother was born on the corner of Dover and Water Streets, over the Dammermans' grocery store.

Apples in barrels, potatoes in barrels, and fresh vegetables in their bins. Flour in sacks, meal in sacks, and sawdust on the floor. The odors of spice, sweet cinnamon, and sugar, and the warm smell of ripe bananas and purple grapes.

Catherine Mulvehill was born over the Dammermans' grocery store.

His father was a boss trucker, and he stood 6 feet and over in his stocking feet. His father was as strong as his team together, and every day he drove to the docks, trucking from the ships that came in. He un-

loaded chests of tea from China; spices, cocoa, fruits from the West Indies; and coffee from Brazil. These were the things that the boss trucker loaded on his wagon, bending his great, sweaty back all day, all night, trucking by candlelight and in the dawn that crept into the slips on the water front: into Market Slip, James Slip, Peck Slip, Rutgers Slip, and Coenties Slip. He stored his truck at night in front of the darkened warehouses by the slips, and walked beside the horses, back to the stables. On Sundays he rested, and he was very tired.

Now he had a long memory and an Irish tongue for stories. He told his stories over a glass of good beer to the Sandy Hook pilots and the dock hands. They gathered to hear them in the corner saloon, and they laughed and paid for his beers.

Alfred Smith was a boss trucker, and at home his wife, Catherine, made hoop-skirts and umbrellas to sell, and they were very poor, but they loved each other and feared God, and they were happy.

Alfred and Catherine had a son, and this was Alfred Emanuel. He was born in 1873, the year that Ulysses S. Grant was President, and that was the year after Calvin Coolidge was born, and Herbert Hoover was born the next year.

When Alfred Emanuel was 10 years old he became an altar boy.

On cold winter mornings, even in the year of that great blizzard, he got up at 5 o'clock in the morning, and his mother gave him a cup of coffee and a roll, and at 6 o'clock he was at mass, swinging the censers of God before the altar of St. James' church.

Dominus vobiscum, et cum spiritu tuo.

He was a newsboy along the water front when he was 12 years old. His route was Beekman Street, Fulton Street and the foot of Peck Slip.

Daily Noose, Sun, Woild, Post, Globe, Telagra-am, Mai-ul and Expra-us!

All his childhood was spent in the shadow of the Brooklyn Bridge, for he lived on Dover Street by the anchorage tower of the great span. His mother often told him that many men were killed sinking that pier, and when he was 13 years old, his father died in its shadow.

"The Brooklyn Bridge on Sunday is known as Lover's Lane.
I stroll there with my sweetheart, oh, time and time again;
Oh, how I love to ramble, oh, yes, it is my pride.
Dressed in my best, each day of rest, with Danny by my side."

When the summers were hot he swam naked with the other boys in the East River. They dove in their white skins, dodging the crates and driftwood in the swift tide of the East River that brought the clipper ships like white birds, and the scows and barges like beetles, and the angry tugs, and lazy ferries into the harbor waters. He swung from the masts and bowsprits of the boats at the wharves, and the rigging of ocean wanderers was his gymnasium and his playground. But his fancy did not go outward with the ships for his heart was anchored to the water front and he found adventure enough on the sidewalks of New York.

Sometimes friendly sailors gave him their alien pets; once he owned an African parrot that swore lustily, and a sad-faced monkey, and an Indian goat. Or, he picked up stray dogs in the slums, and brought them home, and he loved these mongrels best.

Alfred Emanuel was a newsboy, and an altar boy from Dover Street, and he lived always in that part of town which was the cradle of the growing city.

Gala days were bicycling days, when the bells tinkled and the lights twinkled on the bicycles going to Coney Island. There was roller skating in the City Hall Park, and base ball in the back lots behind the blind warehouses, and there was sleighing and sliding in the winter, for in those times the snow was left on the streets until it melted away. Central Park was a long way off. Central Park was not for him.

And there were parades. On St. Patrick's Day the Mulligan Guards paraded, swinging up the Bowery.

"We shouldered gun, and marched and marched away,
From Baxter Street we marched to Avenue A."

And there were torchlight processions during the campaigns. He watched them from the top of a lamppost, or the fire escape of a tenement house, and he beat time to their step as they sang:

"Blaine! Blaine! James G. Blaine!
A con-tin-ent-al li-ar from the State of Maine!"

And he laughed when he heard them shout "Rum, Romanism, and rebellion!"

When school closed in the afternoons, he loitered around the station house of engine company No. 32.

Hook and ladder, hose and hatchet, smoke and cinders, brass and bells. Ladder and ax, and shining helmet, and the mad gallop of the white horses, manes flying, hoofs thundering to the alarm.

Peter Mulvehill was a fireman, and that was his uncle. Alfred Emanuel wanted to be a fireman when he grew up.

Alfred Emanuel became a fish-market clerk.

Bluefish, whitefish, mackerel, and cod, brought to the Fulton Market by the well-laden smacks that turned out of Buttermilk Channel.

He was the boy of all work in the Fulton Fish Market, and this work was hard. He got $12 a week, and his sister and mother got all the fish, and more, that they could eat at home.

The neighborhood knew him and loved him well. In the neighborhood there were dark-eyed Italians, and the Jews who brought Zion with them, and stolid Germans, but mostly there were poor Irish. The clerk of the district court was a grand fellow, and the alderman was a man of weight, and the neighborhood knew them and respected them, and Alfred Emanuel knew them all. Sitting on the stoops in the cool of the summer evening, watching the horse cars go by, and the children playing in the empty trucks, and in the gutters, and the lamplighter coming on his rounds; they it was:

Good evening to you, Mrs. Malone.
And how are you, Mr. Hennessy?
And hello, Al.
"Hello, Al!
"East side, west side, all around the town."

The Tammany clubs were jolly clubs; they gave food and sacks of coal to Mrs. Malone; they gave jobs and clothing to Mr. Hennessy; and gifts to all the children at Christmas time. In the summer they took the whole neighborhood, all that would go, on outings and picnics and chowders up the river. And Al always went along, because he loved them and they loved him. They ate clam fritters and drank ale and beer on the outings, and nobody got very drunk. And when they were back in the neighborhood they did not forget at the polls the men who had given them the coal and the jobs and the picnics.

Alfred Emanuel grew up with the Tiger; he was the Tiger's cub, and he never felt her claws.

There was drama in him and an urge to act. There was St. James Parish, and the parish had amateur theatricals, and when he was too old to be an altar boy he acted in them. He had a long memory and an Irish tongue for stories. He had a lusty voice, a merry eye, an easy way, and great good humor. And there was nobody in the neighborhood who could dance a better jig.

One time he played in Dion Boucicault's play, the Shaughraun, and he was Corry Kinchilla, the villain, and the hero was played by a young fellow called James J. Walker, and that play was well-cast and a great success. He wanted to be a real actor when he became a man.

When he was 22 years old he became a process server. He served summons for jury duty on all kinds of people—storekeepers, and bankers, and businessmen, and they abused him when he served them, but they remembered him long after, and recalled his Irish wit, and that they had really felt friendly to him at the time.

His sweetheart was the cousin of a policeman, and that was Katie Dunn. She lived in the Bronx. Many nights, going to where she lived from where he lived in the Fourth Ward, and back again, he went without sleep, so that he could pay her court. He wore a derby hat, and wide striped trousers, and always had a long cigar in his breast pocket when he went to call. And he saved his money to bring her flowers and boxes of candy.

At the turn of the century, in 1900, on the 6th of May, he married Katie Dunn, and they went to live on the water front.

Katie Dunn washed and cooked and ironed for him and she bore him five children, and loved him all the days of her life.

Now Tom Foley was the boss of the Fourth Ward. He was a young man when he came to New York, and at that time he was a blacksmith. He started a saloon on the corner of Oliver and Water Streets, and this was the year before Alfred Emanuel was born, and old Tom Foley lived in the Fourth Ward until he died. One day Tom sent for a man called Campbell who owned property and a grocery store on Vesey Street, and when the man came into the back room of his saloon, Tom said to him: "You better dig up Al, and ready him up. It looks as if this convention wants to nominate him."

That was in 1903, the year that Alfred Emanuel went to Albany as an assemblyman.

Tom Foley was a blacksmith and a saloonkeeper and a ward boss. But he knew Al, and he saw that Al had a heart in his breast and brains in his head.

Newsboy, altar boy, fish-market clerk, amateur actor, process server, assemblyman.

When Al went to the assembly, old Tom Foley said to him, "If you make a promise, keep it; and if you tell anything, tell the truth"; and that was something Al always tried to remember.

He took his first oath of office in the parlor of the assembly on a cold January morning. In the crowded years that followed Al took 17 oaths of office in that same room, and 4 of them were as Governor of the greatest State in the Union.

The first years in the assembly were hard years, and Al did not like it there, until he learned the facts, and understood the rules and procedure, and got into the swing of things. Soon there was nobody in the assembly who knew more than Al did about the business of legislation, and how the Empire State spent the people's money.

When he had been there 10 years, they made him speaker. He had mild blue eyes, and a gentle smile, but his voice roared like the bull of Bashan's, and the wit of his tongue cracked like a teamster's whip, and somehow, Al seemed to be a man who got things done.

William Allen White, the editor from Emporia, said of him in those days, "He kept his old friends with his heart, and made new friends with his head."

He was 12 years in the assembly, and in those 12 years, he helped to pass many good laws which are written in the books of the State where you can read them if you are curious. Now, many of them affected the workman and the widow and the orphan, and those who live in slums, for Al was himself born in the slums, and he knew that proverty has its own noblesse oblige.

Many people said that Al was a "regular" who always went along with Tammany, and

this was true in the beginning. But by and by Al made Tammany go along with him, so that he could still be "regular," and still get where he wanted to go.

Tammany, in the way it has, rewarded him for being "regular," and for his strength with the people. Tammany made him sheriff in 1916, and this job paid him well. Al could do a lot more for his family now, and he built a wing on his old house on Oliver Street, and he bought an automobile.

Then he left Albany for a little while, and this was when he became president of the board of aldermen in New York.

Now Al had begun to grow a little round stomach, and when he talked his face turned red as the apples in the Dammermans' grocery store, and the sweat dripped from his brow as it had once dripped from the boss truckman's back; but he had learned to wear tails and a white tie, and rich men as well as poor men liked to be seen talking to him. So, after a while, politicians up-State, and even outside of Tammany Hall began to talk of "Smith for Governor."

The first day that Al went to Albany, way back in 1904, he sent his mother a post-card of the Executive Mansion, and on the back he had written, "Someday I will live here."

When Al heard that he had been elected, he went to his mother, and he kneeled beside her, and she blessed him, and then later she showed him the post-card, and after that she showed it to all the neighbors.

Four times Alfred Emanuel Smith was Governor of New York State, and there were very few people who did not say that he was the best governor that the State had ever had.

Once, when Al was campaigning for his third term, Franklin Delano Roosevelt wrote him a letter, and it said: "Dear Al: * * * You have given to the State an honest, clean, and economical government. You represent the hope of what may be called 'the average citizen.'" Years went by and that average citizen was given a fine new name, he was called "the forgotten man."

Nineteen hundred and twenty-four was a big year in Al's life. That was the year the Democrats held their convention in the old Madison Square Garden. That was the year when Al first began to believe that he might one day be President, when the Democrats balloted 103 times in July heat and party confusion, amid limp bunting and still flags, in anger, in bitterness, and in mortal weariness, trying to break the deadlock between McAdoo and Smith.

"Alabama casts its 24 votes for Osc-c-arr W. Under-r-wood."

That was the first time that all the bands played East Side, West Side, All Around the Town, and Al, My Pal * * *.

Franklin Delano Roosevelt, on a new pair of crutches, came from the bed of a paralytic and stood on the platform to put this son of a boss-trucker and an Irish seamstress in nomination for the Presidency of the United States, and it was he, no other, who in that speech dubbed Al the Happy Warrior.

The years that followed were full years, and in them Al never forgot the White House, but he was never known to neglect his duty dreaming of it.

In 1928 the sons of Jefferson and Jackson nominated him for President. It was then that many things became clear to Al, and to the people. All the things that Al had been and still was he put before the people, and they considered them. It seems that they had forgotten many of these things—that Al was a good Catholic and that he had been an altar boy.

"Pax vobiscum * * * cum spiritu tuo."

All during this campaign the voters remembered that Al had drunk beer on the ward "chowders" up the river, and that he did not believe in prohibition, and that he had always thrown the weight of his influence in legislation against it. They remembered that he was a regular Tammany man, and that he was born down by the east-side docks, and had been a newsboy.

"Daily Noose, Sun, Woild, Tela-gra-am, and Expra-us!"

They remembered his brown derby, and the black cigar which he had always carried, even when he went to call on the former Katie Dunn in the Bronx, and that he had never read books, or learned to speak like a college man.

They remembered, and Al did not and would not let anyone forget these things. Al was not a man to forget what he was, or whence he had sprung. He was proud of it.

Now everywhere, in hotels and restaurants, on the sidewalks of a hundred cities, in farm houses, and factories, came over the "raddio," Al's strident voice, and great good humor, and the facts which he poured from the reaches of his long memory, and always when he came and went there was the echo of the song of democracy in the city streets.

"East Side, West Side, all around the town."

Then the people whispered among themselves, and they voted. Al lost the election.

And when he had lost the election, many people said that his defeat had embittered him and disillusioned him and that he was a changed man, no longer a man who believed in democracy, and that he had left the people in his heart.

They said this, again, when he left Oliver Street, down by the East River, where he had voted for 35 years and where his mother had been born, and went to live in a penthouse on Fifth Avenue. From there he could see the pleasant green patches that are Central Park. Central Park had not been for him when he was a boy.

Then Al helped to build the tallest building in the world, and from the top of its 102 floors, he could see spread out at his feet all of Manhattan, and dimly he could see Long Island, where the homes of the rich are, and he could see New Jersey, but he could not see as far as Washington.

So 4 years passed, and when the Democratic Convention came around again Al went to Chicago, and once more he dreamed that he might be President. "I am in this," he said, "for myself," and "The man who would not have an ambition for that office would have a dead heart," he said. But Franklin Delano Roosevelt had gotten there ahead of him, for Franklin D. Roosevelt was a good politician, too, and he put himself over on the fifth ballot. And although the galleries cheered, and Massachusetts stood firm, and the liberals wept, and the band played East Side, West Side, this time the campaign song was not for Alfred Emanuel Smith.

Al came back to New York after that. And for a long while he stayed in his tent. People began to say, "Smith is no longer 'regular,'" and "The Happy Warrior is finished now. He is bitter, and all the fight and fire are gone out of him."

Then Al became an editor. The man who had never read began to write and read. But this was not Al. Al could not long be like this. So one day he took off his coat and his vest and went to work for the ticket. And when he saw Franklin Delano Roosevelt—who had once, standing on new crutches, nominated him for President, who had taken the governor's chair which Al had gladly given to him, who had taken the nomination which Al had not wanted to give him at all—then Al took his black cigar from the side of his wide mouth, and reached out his red hand, and said in a loud and hearty voice, "Hello, Old Potato."

"Hello, Old Potato."

And the campaign was on.

When Al made his first speech there was an old bile and an ancient bitterness in him which again flowed out, and though that speech cleansed his heart and his spirit, it poisoned many who had not been his enemies before. But the people who loved him, and whom he had not forgotten, did not care, and they all voted for his friend Frank, because Al, who had himself almost been President, asked them to. * * *

Altar boy, newsboy, fish-market clerk, amateur actor, process server, assemblyman, sheriff, governor, Presidential candidate, Empire State builder, leader of his party.

This is the saga of a Tammany man, of the Happy Warrior, the wearer of the brown derby, of the people's Al.

But this is not the end: Alfred Emanuel Smith is a good politician and a strong man, and he has a heart in his breast and brains in his head, and there are still many things for a man who gets things done to do—East Side, West Side, and all around the town.

Last to Reconvert

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1946

Mr. HOFFMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Chicago Daily Tribune on January 3, 1946:

LAST TO RECONVERT

Government officials have taken the turn of the year as the occasion for congratulating themselves on the speed with which the country has reconverted to a peacetime basis. What do they mean, reconversion? The biggest economic distortion the war brought was not in what we had to eat nor in the way we lived. There were shortages of many things and we had to get along with inferior substitutes for others, but the really profound dislocation was in the expansion of Government expenditures and the inflation of the currency to finance the deficit. Accordingly, the success of the reconversion from war back to peace can be measured best by the progress made in cutting the payments by the treasury and the discontinuance of the inflation.

Actually the shrinking of the Government outgo has been nil. New ways are being found to spend money. New international obligations are being proposed to substitute for those which ended with peace. New doctrines are being stated for justifying a continuance of a vastly swollen Budget.

Willard Edwards, of our Washington staff, in an article in Sunday's Tribune, quoted figures supplied by Representative JONES, of Ohio, which should cause grave concern to every thoughtful American. He said that the Truman administration plans to spend at the rate of $66,000,000,000 in the coming fiscal year and gave the detailed figures derived from Treasury data and information supplied to the Appropriations Committee which add up to this amount. The Congressman said that the Army and Navy expect to get twelve and one-half billions besides two and one-half billions for compulsory military training. The regular Government department will cost eighteen and eight-tenths billions, Mr. JONES indicated. With continuing deficits, the cost of carrying the debt will be ten billions a year, he said. Among other items which run the total to sixty-six billions are a half billion each for increased Federal salaries, Federal highways, and new river-valley authorities. The Truman health program accounts for six hundred millions.

Peacetime reconversion would mean getting the budget back to the fifteen- or eighteen-billion-dollar level. To reach the goal spending must be slashed all along the line and new proposals for appropriations firmly rejected, even if that means the loss of some votes.

The reconversion can well start with the admirals and generals. Fourteen billions for the national defense is ridiculous. The cost of the national defense stayed below a billion dollars until 1938 and did not go over the billion and a half mark until 1940. These amounts we now know were inadequate. However, in the early postwar years we shall have a huge reserve of trained men, besides vast supplies of ships, munitions, tanks, aircraft, and installations which can quickly be brought into use. Research needs to be continued, and even stepped up. With care and intelligence $4,000,000,000 should pay for both the Army and Navy.

On the rest of the budget a major operation needs to be performed. The wartime agencies—OPA, the propaganda agencies, and all the rest—ought to be cut off without any delay. The expenditures undertaken to boost prices, like the Commodity Credit Corporation, are not only superfluous but a positive menace when the problem is to keep prices down. The programs for grants to the States, which were put into effect when the treasuries of the States were busted, ought to be ended at once now that the State treasuries are bulging with money and State credit is better than national credit.

When these steps have been taken we can be said to have made some progress toward reconversion. When the economies are put into effect the currency will be safe, for the inflation which now goes on every day will be ended.

The national budget need not be more than 15 or 18 billion dollars, but it cannot be reduced to that extent except by men of high purpose and great skill who are willing to ride roughshod over vested interests. Reconversion of the Government to peacetime proportions is the country's biggest problem in 1946.

Ceiling Price on Raw Cotton

EXTENSION OF REMARKS

OF

HON. ROBERT L. DOUGHTON

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1946

Mr. DOUGHTON of North Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the Honorable Chester Bowles, Administrator of the Office of Price Administration, and his reply thereto:

JANUARY 14, 1946.

Hon. CHESTER BOWLES,
Administrator, Office of Price Administration, Washington, D. C.

MY DEAR MR. BOWLES: I am calling your attention to a wire sent to you by Mr. M. G. Mann, general manager, North Carolina Cotton Growers Association. Mr. Mann has also sent a wire to the President regarding the ceiling price on raw cotton.

Nothing has occurred in the Southern States since I have been in Congress that has so stirred the cotton growers as the announcement that a ceiling price will be placed on their product. Representing a cotton growing district and being familiar with the situation, I am certain it would be an act of injustice to the cotton growers and cause the greatest resentment of anything that has occurred in the Southern States since the outbreak of the war.

Everything considered, I do not think that the price of cotton is at all high. The fact is that everything that goes into the production and sale of cotton has sky-rocketed, including labor, and some of the cotton is yet in the fields because the growers have been unable to secure pickers.

I hope you will withhold action in this matter until the facts can all be brought to your attention and those who will be so adversely affected by the order can be given a hearing.

With great respect, I am,
Very sincerely yours,

R. L. DOUGHTON.

JANUARY 16, 1946.

The Honorable R. L. DOUGHTON,
House of Representatives, Washington, D. C.

DEAR MR. DOUGHTON: Thank you for your letter about the question of ceiling prices on cotton.

As you know, the Emergency Price Control Act as amended provides that before growers' maximum prices are established for an agricultural commodity which is the product of annual or seasonal planting, notice of the proposed maximum prices must be given at least 15 days prior to the normal planting season.

I think you will agree that, as Price Administrator, I would be remiss in my duties if I foreclosed myself from any right to take whatever action seemed necessary with respect to such an agricultural commodity. It was for this reason, and this reason only, that I approved the issuance of the recent notice covering raw cotton during the crop year 1946. Without such a notice, it would have been legally impossible, regardless of circumstances, for us to establish any such maximum prices later in the year. This, and I want to emphasize the point, is only a technical procedure. It has no bearing on the actual question of whether there should or should not be ceiling prices on raw cotton. I sincerely hope that such a program will be unnecessary. However, I could not shut myself off from the opportunity to judge this situation on its merits in the future.

I want you to know that the announcement that we have made does not necessarily indicate a final decision by this office to fix ceiling prices as indicated in the notice, or at any other figures. If it becomes evident that the price of cotton is becoming stabilized because of improvement in supply or other reasons, of course, it may not be necessary for the proposed ceiling prices to be put into effect. I am very conscious also of the difficulties which might be encountered in the administration of cotton ceilings. I want to assure you that we are constantly watching the situation and that every relevant factor and circumstance will receive thorough consideration.

Recognizing your knowledge of cotton problems, I appreciate very much your expression of your views on this matter.

Sincerely,

CHESTER BOWLES,
Administrator.

Veterans' Housing

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, we all know that housing is one of the chief problems of the day in this country. The recent order placing a limit of $10,000 on new houses with a minimum rental value of $80 a month is not the solution to our needs. What veteran or working person can afford these prices? We are all aware of the fact that returning GI's and their families are running into difficulties in finding any kind of a place in which to live.

Under the $10,000 ceiling a person would have to earn from $375 to $500 a month in order to afford to build a house. Neither the GI nor the average family can afford this. Where are the three-fourths of the American families whose income after taxes is less than $3,000 a year going to live and where and when are they going to get new homes?

What the returning veterans and the average American family needs is a house that sells for $5,000 and rents at $40 or less. We do not want to keep alive a system whereby most of the new houses are built for the wealthy while the average family has to take just what is left. To continue such a system breeds discontent, poverty, slums, disease, and crime.

It is time, therefore, for public and private builders to get together and outline a plan for the public good whereby materials will be allocated for $5,000 homes, scarcities overcome, bottlenecks broken, and price ceilings established which will give the little people a break in their quest for security and a decent place in which to live.

Army and Navy Merger

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1946

Mr. PLOESER. Mr. Speaker, the question of Army and Navy merger—or unification of the services—is becoming more heated as the days go on. In the rush to do something, I have been fearful that there are some very great errors being made.

On January 11, 1946, I addressed a letter to the President of the United States on this subject. Copy of that letter follows:

JANUARY 11, 1946.

PRESIDENT OF THE UNITED STATES,
White House, Washington, D. C.

DEAR MR. PRESIDENT: As a member of the House Appropriations Committee concerned with the taxpayers' money insofar as the national defense is concerned, I am constrained to write to you about my misgivings over the present controversy and your recommendations in the matter of the proposed merging of the armed services under a single, new department head.

It is my purpose herein to submit to you my views and the reasons for my misgivings.

At the outset—although I have looked into the testimony both before the Woodrum committee and those currently before the Senate Military Affairs Committee—I come to the inescapable conclusion the present proponents of merger will not really achieve unification whereas the opponents of present merger proposals might have within their

grasp exactly what you are reaching for. This is not to say I favor the Navy plan.

To put it bluntly and tear away the masquerade, the issues rest in suspicions and fears within both services that one will be submerged to the elevation of the other. It is obvious that these fears are occasioned by the fact that the country is being offered a hodge-podge plan rather than a program for true streamlining and true implementation of national security.

While this truth has crept occasionally into the record, the burden of the record has had to do with a good deal of loose, unsupported talk about vast economies to be accomplished, the avoidance of duplication of manpower and facilities in procurement, hospitalization, and combat strength.

I am wholeheartedly in favor of the greatest streamlining possible, compatible with the special business of maintaining the national security. I am also in league with you who deem a closer integration of diplomatic intelligence with the military is essential to guaranteeing this security. So I have no quarrel with you or others who are earnestly seeking unification, not as a subterfuge but as a potent reality. I am for unification.

My questioning turn of mind, however, arises around your position that in order to achieve it we must tear down such approaches already realized in that direction for untried methods which go so far as to rearrange our basic concept of government.

A plan—the War Department plan—which talks unification in one breath and then in the other advocates a separate air force must be subject to careful examination before it is taken at face value. In short, that is, so to speak, unification through separation. A plan—the Navy Department plan—which sets up a council of national security and a joint chiefs of staff sounds, on the surface, like a defense to offset the threat which it believes is aimed at its existence. Yet this seems to come closer in arriving at the desired end than the Army plan, for it leaves the destiny of the separate air force up to the Army and to Congress, and yet I am not for the Navy plan.

My fixed opinion is that the Navy Department did not go far enough, obviously through fear of not being taken seriously. So it is my proposal that (if we are after a real unification) we start with an examination of what we have achieved in that direction. That start is in the Navy Department and its sister services, the Marine Corps, Coast Guard, and merchant marine.

Right now the needs in command are for those who are versed in joint land, sea, and air operations. Such command will be found within the Navy Department where there is no separate air force and none desired; where the "infantry" is the Marine Corps; where the Seabees are the construction unit; the surface ships the bombardment or artillery unit; where the merchant marine is the supply line; the submarine force a closely integrated unit of reconnaissance, communication, and attack; and the carriers a single striking unit for attack and defense, both by sea and air.

Furthermore, unless we wish during peacetime to transport a large army around the world and are permitted to occupy large areas of friendly countries, the principal contact for maintaining international military intelligence must, perforce, be the forces of sea-air power, in collaboration with the Department of State and the War Department.

The Navy and marines represent an integrated organization using common supply officers, doctors, chaplains, service of supply. Economically, it represents a saving to the taxpayers to have the marines as the policing and striking power. They are in the forward areas, they are combat troops, they will be the first to engage the enemy.

Here is no paper organization possibly doomed to failure in actual existence due to personal bias and innumerable human factors which cannot be achieved by legislative fiat. In urging a plan whereby the sea-air-marine forces become a central unit of any unified command, I desire to point out that the only element which the United States Army possesses that is not now operational in the United States Navy is that of high-altitude, long-range bombers. Obviously, this is why the officers of this command want a separate Army Air Force unfettered by a ground juggernaut which thinks in terms solely of land operations. The bill recently introduced in the House by the chairman of the Military Affairs Committee, Mr. MAY, and the chairman of the Naval Affairs Committee, Mr. VINSON, creating a separate Army Air Force gives Army air its rightful position in the national security set-up.

The spearheads of victory in the past Global War were air, sea-air, and sea with air. This will be so in any future conflict, although it again, in all probability, will remain for the land forces to consolidate the spearhead operations. This would seem to be the position of the advocates of universal military training, namely, a trained land force in readiness rather than in continuous being.

To be sure, it required a vast army to bring ultimate victory in Europe but before this army could come to grips with the enemy it required a vast naval and air arm both to prepare its path and to transport it. The Pacific theater of operations, of course, provided the perfect example of the impact of sea power, sea-air power, and high-altitude bombing.

It provided also the classic example of the effectiveness of the Navy's integrated system which brought General Douglas MacArthur and his army step-by-step all the way from Australia to Tokyo Bay. In this connection it must be borne in mind that it was Navy air which supported every major landing and then it was the marines in amphibious craft or a marine operation by army who established the beachheads.

Had the Marine Corps been larger it might have been possible for the Navy and Marine Corps, and their Coast Guard and Seabee units, to have wrested the victory in the Pacific without the necessity of transporting millions of men all the way from Europe to the Pacific. This brings up for consideration what should be the size of the Marine Corps under the system which I propose. My estimate would be 1,000,000 men and officers trained in all phases of amphibious warfare.

From the first occupational landing in the Dominican Republic in 1801 up to the termination of World War II, the United States marines had made approximately 300 landings of all characters including assault, diversionary support, and occupational. In other words, here is not only the combat spearhead of our armed forces but also a unit of great and trained versatility.

To reiterate, in making a start toward unification of command, let us start where there is already the highest degree of integration between land, sea, and air. This lies in the Naval Establishment. Here is unity in fact, not in theory. Moreover, under the plan I propose the present balance of military power would be retained by preservation of the two Cabinet posts involved and the Joint Chiefs of Staff.

Finally, it should be axiomatic that whatever plan will accomplish the desired ends with the least upheaval of the existing organization is the one to be adopted. I can see nothing but upheaval, confusion, and waste accruing from the Army monopoly program put forward by the Army under the guise of unification.

Respectfully yours,

WALTER C. PLOESER.

Can This Be True?

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. HOFFMAN. Mr. Speaker, from a reputable correspondent comes the following newspaper article:

VETS OUTRANKED BY NEWCOMERS

(By Lowell M. Limpus)

NEW YORK.—Too many newly arrived "brass hats" having a good time for themselves and neglecting their men—that's apparently one of the principal reasons for what is getting dangerously close to open mutiny among our forces in the Philippines.

And the situation has been growing steadily worse ever since General of the Army Douglas MacArthur went to Japan.

Swarms of high-ranking staff officers rushed to the Far East—as soon as the shooting ended. They've snatched all the good hotel rooms. They have private baths and excellent club rooms.

They take over every decent building as soon as it is repaired.

There's one nice waiting room in the Guam air terminal "for generals only."

A corner of the Dai-Iti Hotel dining room in Tokyo was roped off for "lieutenant colonels and above," and angry combat captains lugged their baggage out the main entrance to make room for more Washington colonels.

These things were typical—most of all in the Philippines. And they soon showed their effect on morale.

The men became angry and disgusted—and they wanted to get home and get away from it all. But mighty few people took the trouble to explain the details of the transportation shortage until they began to boil over.

Then discipline went bad—especially around Manila.

Some of the officers—mostly regulars—fought a valiant, if losing, battle to preserve discipline and morale, and these officers included a number of colonels and generals.

These officers undoubtedly are horrified at the idea of enlisted men being permitted to hold mass meetings and boo their commanders, but they may feel scant sympathy for the officers who permitted such a condition to grow until it found such expression.

Very few of these comfort-seeking gentry wear battle stars, or combat ribbons. But they pull their rank right and left on the boys who did the actual fighting.

They snatched souvenirs greedily—and therein lies one cause of a lot of friction that hasn't been discussed publicly. Many a staff delegation swooped down on the combat units and confiscated heaps of Samurai swords and daggers from the men who captured them.

Then they took them back and distributed them according to rank among the be-starred and be-eagled tourists from Washington.

The staff officers in the well-pressed uniforms even ranked liberated prisoners out of available comforts.

I saw whole truckloads of those gaunt, hollow-eyed prisoners—colonels and lieutenant colonels themselves—driven away from the Admiral Apartments in Manila, to which they were first taken, and dumped in crowded tents in a muddy replacement center, 20 miles out in the suburbs amid signs reading: "Be careful. This is malaria country."

Enlisted men burned up as they saw these things, and so did a lot of officers.

Regular officers burned because, as they frequently said, too many of their superiors were betraying one of the oldest traditions of the service—that an officer should look after the comfort of his men before attending to his own.

The practice increased steadily throughout the area after the war ended.

There was coffee and doughnuts "for officers only" at a stand outside the big post exchange, just above Manila's city hall—and a sign forbidding those officers to give any to enlisted men.

Japan's spiffiest summer resort suddenly went "off limits" for everybody below colonel.

The Response to the President's Plea for Congressional Action

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. VORYS of Ohio. Mr. Speaker, 2 weeks ago last night the President in a radio speech urged the American people to contact their Congressmen in support of his program. Since then I have received 29 letters in favor of his program and 31 against part or all of it. I represent over 400,000 people and 200,000 voters. Thus in 2 weeks the written response of the public to the President's plea for action in my district was three-twentieths of 1 percent. I had two phone calls at home about the President's program, one for and one against. I saw a great many people at various gatherings, large and small, at home after the speech. None of these gatherings were partisan or political in character; no one at any of these gatherings spoke to me in favor of the President's program; many people spoke to me against it in varying degrees. The President's plea aroused hardly any action at all in my district, and hardly any interest. I think the reasons are obvious; his speech was a rehash of his message to Congress after VJ-day, and that message was a rehash of New Deal proposals that were old before Mr. Truman became President. The public knew the general views of their Congressmen on all of this. The public also knew that the passage, or the defeat, of any or all of these measures would not solve the biggest problems that face the country now. I listened to the radio speech when it was given, and gave an interview on it immediately afterward. It struck me at the time as the plea of an official trying to duck responsibility while at the same time seeking more power. I have reread the speech after going over all of the letters and comments I have received, and my reaction is still the same.

In scolding Congress for inaction, the President was not talking to me but to the party of which he is the leader, which has complete control of the organization of Congress and all of its committees and which has the power and responsibility of determining the legislative program. I belong to the minority party. I can vote when bills come to the floor, but there is no way I can bring a bill to the floor. I agree with the President that his party has been dilatory in planning the business of Congress since VJ-day. Congress has wasted weeks at a time because we have had no legislative program on the floor. It is significant of the complete breakdown of his party and its leadership that after his stirring plea for action we have had no action at all in Congress during this first week of the new session, and the President himself has postponed his constitutional message to Congress on the state of the Union.

In his radio talk the President said that Congress "has done its full share toward carrying out its responsibility in foreign affairs." As a member of the Foreign Affairs Committee, I am gratified at this praise for the work of our committee. In our foreign affairs, politics should end at the water's edge, and we should have, not a New Deal policy, nor a Republican policy, but an American foreign policy. I regret that we do not yet have an American foreign policy; I regret that we have so much secretive Executive improvising; but the President's remarks show that Congress has been doing its part when it was given a chance, in developing a nonpartisan American foreign policy.

The President in his radio talk recommended 12 specific subjects for legislation. People have written me about these, for and against. I am ready to vote on these proposals now. My vote would of course depend upon the wording of the particular bill and the amendments that are incorporated in it. Many times a catchy title is used on a bad bill, any many times important and far-reaching legislation is included in a bill with a label which does not describe it at all. In my final vote on these 12 proposals I shall be guided by the following principles:

First. Labor-management laws: Fact-finding procedures alone will not settle anything; a compulsory 30-day cooling-off period without rules maintaining the status quo is merely a 30-day warming-up period in a labor dispute; the ground rules for labor-management disputes should give equal rights and require equal responsibilities from the parties; labor unions are now big business and their actions should be regulated by law in the public interest; no law should force a man to work, whether he is a laborer or a businessman running a plant.

Second. OPA: Price control and rationing must be continued while essential materials are short, but price ceilings should include cost of production and a reasonable profit for each item produced. The President agrees that production is the greatest weapon against inflation, but he does not run OPA so as to secure production. No free man will willingly produce goods at a loss for very long.

Third. "Full employment": These words have been bandied about until they have lost any real significance. Everyone wants full employment in this country; no one has devised a bill that will guarantee it. The Government cannot guarantee full employment for everyone without forcing workers to take the jobs assigned. No one wants this. The only place I ever saw where a government was guaranteeing full employment was a Nazi concentration camp. Neither the Senate nor the House versions will guarantee employment for everyone.

Fourth. Federal unemployment insurance: The proposals made to date will go far toward insuring more unemployment in this country, when what we need is plans to insure more employment.

Fifth. Discrimination in employment: We need a proper law to prevent this in many parts of the country. Congress has the duty to regulate fair employment practices in interstate commerce.

Sixth. Minimum wages: The Federal laws on this should carry the minimums required for a decent postwar standard of living, not the present minimums based upon New Deal depression standards.

Seventh. Comprehensive scientific research, not under political or military control, should be fostered by the Federal Government.

Eighth. Peacetime conscription should not be adopted until we have at least asked other countries to agree with us to abandon it.

Ninth. Socialized medical treatment under Federal regulations should not be adopted in this country.

Tenth. No new salary scale for Federal employees should be considered until the present swollen bureaucracy has been reduced; I have not noticed any alarming exodus of Federal employees to private employment.

Eleventh. The Presidential succession should be provided by a new law, in order to avoid any of the alarming possibilities we have faced in the past year.

Twelfth. River valley development: Such projects as the St. Lawrence River Valley improvement should be financed by the sections which will benefit, not by those in other sections who will be directly injured by such developments.

The same people who wrote me on the President's message discussed a number of vital problems he did not mention, such as the Federal budget, the atomic bomb, the return of the USES to the States, the British loan, and demobilization. I hope the President will give us his views on these subjects in his message to Congress.

Many of my correspondents have written me about congressional salaries. I believe that the next Congress should be a $15,000 Congress and we should provide for this by law; I do not believe that this is a $15,000 Congress, and we are not justified in paying this Congress on that basis. We should up-grade the next Congress and then let the people pick the Congressmen they wish to employ at the new rate.

It is, of course, impossible in a single radio talk, or a speech before Congress, for a President or a Congressman to cover all of the perplexing problems which face our country. A single speech, however, may reveal a trend of thinking. The President's radio talk showed that he was seeking more executive power but was evading responsibility on many important questions and was ignoring others. In this Congress my position will be

in general to limit executive powers; to give individuals as much freedom as possible by limiting the powers of government over them; to protect the American way of solvent government and free enterprise against the attacks made on it at home and abroad.

A DAR Scholarship Rejected

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mrs. LUCE. Mr. Speaker, on January 12, 1946, the following story appeared under an AP date line in the Hartford Courant:

WATERBURY SENIOR CLASS DECLINES AWARD OF DAR

WATERBURY, January 11.—Seniors of Crosby High School today voted, 150 to 80, to reject the annual Good Citizenship Pilgrimage Award of the Daughters of the American Revolution.

Sixteen-year-old Carol Wall, who offered the motion, explained tonight that "we just didn't think it was feasible to name a candidate for a good citizenship award sponsored by an organization which refused Negro musicians, Marion Anderson and Hazel Scott, permission to use Constitution Hall for concerts."

A few days later the following editorial appeared in the New York Times:

A SCHOLARSHIP REJECTED

Seniors of the Crosby High School at Waterbury, Conn., have voted to reject the Annual Good Citizenship Pilgrimage Award of the Daughters of the American Revolution. The award is an interesting and useful one, consisting of a travel scholarship offered to a high-school representative from each State for a trip to historic American shrines. The reason given by a spokesman of the Waterbury students for their rejection of the scholarship is that they "just didn't think it was feasible to name a candidate for a good citizenship award sponsored by an organization that refused Negro musicians permission to use Constitution Hall for concerts."

The point is honorably taken. Any tour of American shrines must lead the traveler to the homes or the working places of a number of historic figures, men and women, who labored with deep conviction and unflagging effort to eliminate precisely that kind of discrimination which has been practiced in Constitution Hall. The ladies of the DAR are responsible for many good works. In this case, catering to an unworthy and unpatriotic prejudice, they have made a mistake which will haunt them until it has been corrected.

In the meanwhile, I had written 16-year-old Carol Wall and her senior class the following letter, which I am sure reflects the opinions of many mothers and fathers in our State and of many DAR members in our Connecticut chapters:

JANUARY 17, 1946.

Miss CAROL WALL,
Crosby High School, Waterbury, Conn.

MY DEAR CAROL: I read in the Hartford Courant of January 11 that you offered a motion in behalf of the Crosby High School seniors to reject the annual Good Citizenship Pilgrimage Award of the Daughters of the American Revolution because they had refused Negro musicians permission to use Constitution Hall for concerts and that your motion carried by a vote of 150 to 80.

I am writing to you and to the seniors who voted with you to tell you all how proud I was, when I read that, to be a Representative from your State.

These are hours, all over the world, when the power of darkness is great—the darkness of hate. And this flower of evil blooms nowhere so luxuriantly as in the soil of racial tension. Verbally we all condemn racial hatred. Actually too few of us do anything about it. An act of positive affirmation of love and brotherhood in racial matters is sufficiently rare that it shines like a bright light in a naughty world. It is all the more beautiful—and astonishing—when such an act is done by mere boys and girls in high school, for we adults are often—too often—told these days that the younger generation takes no interest in the profound questions which lie at the root of the world's unhappiness, that they care for nothing but "good times," movies, and "jive." By your brave action you have certainly disproved that proposition. If there be but 20 high schools in America where the pupils feel as you do, I shall never again despair for the future of our country.

It seems to me that by condemning the action of the Washington board of the DAR in discriminating against artists on a strictly color line, you have twice earned a good-citizenship award. But this second time you have earned it from 15,000,000 colored people, and many more millions of white people. And, believe me, you have earned it, too, from many a truly patriotic Daughter of the American Revolution who feels just as you do, but cannot make herself vocal, or prevail upon the reactionary leadership of the Washington board. As you know, we in Connecticut have many liberal DAR chapters—the Fairfield, Bridgeport, and Stamford chapters have all protested, just as you have.

Fundamentally why do they protest: For the same reason that you do. First, because it is ungodly to abuse, look down, condemn, or discriminate against any human being only because of the color of his skin. "Love thy neighbor as thyself" is the second commandment handed to Moses. Indeed, the Golden Rule is the first rule of 10 of the 11 great religions of the world. And for those of us who are true Christians, it is painful indeed to imagine what our dear Lord would say to many of our most respectable citizens in the U. S. A. who dare call themselves Christians today, if He were to come again. He would be very angry, I think, at the way they treat the Negroes, the most dispossessed, ill-treated, and abused of our population. He might say in condemning them, "Forasmuch as you have done it unto the least of these, my brethren, you have done it unto Me."

Yes, many older people—far too many—in America today forget that what made America the greatest and strongest and happiest of nations, what Abraham Lincoln called the last best hope of mankind, was that our whole political "ideology" was based on this particularly Christian precept of all men being created equal in the eyes of God and, therefore, entitled on earth to equality of opportunity to develop to the best of their capacities.

But you have remembered, Carol. You have not forgotten. You have behaved and thought as I would have been proud to have my own daughter do. So to you and the 150 who have stood by the best and truest in our Nation, greetings. And greetings, too, to the parents and teachers, and the community of Waterbury which built such character in you. Tomorrow, America belongs to you.

Cordially yours,

CLARE BOOTHE LUCE.

Sees Menace in Our State Department

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

SEES MENACE IN OUR STATE DEPARTMENT—CAN A GROUP OF OBSCURE PROFESSIONAL DIPLOMATS CONTROL THE NATION?

(By Upton Close)

Our Republic is faced with a new and terrible menace, creeping silently upon our people and our atomic-bomb fodder and our wealth, and no one is putting a stop to it thus far. It is a menace of a sort which has never before threatened us of this Republic of the United States of America, and because our Congressmen and people have never known such a thing before and are so unused to it, they scarcely comprehend that it exists, or, comprehending, know what to do about it.

It is the menace of control of this Nation—throwing of its wealth and manpower in any direction at all, controlling the value of its money, determining its foreign obligations and involvements and future wars—by a small, undistinguished, obscure, almost hidden group of professional diplomats in our State Department.

Under the guise of putting civil authority and state policy above military rule, this little, hidden group took control of United States men and wealth and interests and policies away from Eisenhower and the United States Army in Europe. Now, under the slogan that "Generals are made to obey orders" this brazen, hidden group moves to take control of United States soldiers and sailors of occupation and of United States policies and wealth and destiny in Asia away from MacArthur and the United States Army in Asia.

The citizens of the United States agree that civil rule and authority must stand over military rule. The Constitution says so. But it does not say that a privately intercommunicating, small, hidden, obscure, diplomatic clique of clerks and diplomats in our State Department, running away with things because a baffled and amiable man is in the White House, and an inexperienced and lost man is in the chair of Secretary of State, shall take charge and order about our greatest and wisest generals.

BYRNES MELTS A PROBLEM

The extent to which the Secretary of State is lost within his own Department and the complete lack of discipline and direction there has been admitted in two recent deplorable incidents. First, when General Hurley returned and resigned in anger at the needling he was getting from a State Department clique, supported by a few radicals in Congress, Secretary of State Byrnes admitted publicly that he did not know what it was all about. He had to either fire his State Department culprits or back them up. So in a half-hearted way he backed them up without, however, actually clearing them of the charges made against them or reprimanding Under Secretaries and clerks for acting in so impudent and totally untraditional a manner toward an Ambassador and special representative of the President himself.

The second case appears to be even more flagrant, but only because it is more plain and simple for the public to understand. Actually, similar things happened over and over again in the case of Hurley. But this second and flagrant case illustrates so clearly

the Marxist tactics now used by little fellows in the State Department to put tacks under big men whom they want out of their way!

"GET MACARTHUR"

The all-consuming ambition of these little fellows backed by all the Marxists in America and in the world today is: "Get MacArthur!" So a little guy named Blake hired from the taxpayer's money for State Department Public Relations—a hangover of the discredited OWI—gives out that General MacArthur had been conferred with about the limitation of his authority in Japan. The intent was to put the general in the wrong whether he let the lie pass or whether he challenged it, the hope being that if he did challenge it the general would get mad and blow up, as Hurley had done.

But when General MacArthur kept his dignity and temper, and likewise his job, and the little publicist in the State Department was revealed for the fact-twister that he was (and that the inner group bossing him wanted him to be), Secretary of State James Byrnes again ducked from under the responsibilities of a man over men and said in effect that the general had spoken the truth, that he had not been consulted—then Byrnes backed up the clique which had lied quoting their very language: "Why should he be consulted, anyway?"

Now, as an ordinary American citizen who never had anything to do with diplomacy, you can understand the unlimited capacity for wickedness, loss of prestige, and damage that can come out of a foreign office being run like this.

What we have now is a weakling at the top with the most unbelievable clique-bureaucracy running him, or running around him. This department, originally the mildest in our Federal Government, now becomes the strongest and most arrogant, actually swinging the Nation (a tail swinging the dog), operating its own propaganda services independent of any editing, forming its own national and international spy services, pledging us to unlimited expenses abroad, arranging our future alliances and wars, and daring now to go the final limit of reaching out to control our so-be-unified military services under the formula: "Generals exist to take orders."

This is a more impudent and arrogant development of bureaucracy than ever took place in Czarist Russia.

I wonder if Congressmen realize that Congress must take a hand? Ask your Congressman.

If not, one of our great political parties must take a hand. General MacArthur, in spite of being a general—for which the American people gladly forgive him—may be much more on the beam of American statesmanship as we, the people of America want it, than the hidden, brazen, obscure clique of Acheson and Lattimore in the ugly building off the end of the White House offices in Washington.

Protest of Exportation of Lumber

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. McDONOUGH. Mr. Speaker, I am protesting the exportation of lumber from the United States to foreign countries and have demanded that the State Department investigate and curtail this exportation in view of the shortage of lumber in this country for the building of civilian homes for returning servicemen and their families.

This is a ridiculous situation which the State Department should immediately investigate and curtail. The inadequate housing facilities in the Los Angeles area and, in fact, in general on the Pacific coast, is alarming and serious largely due to the shortage of lumber. A thorough investigation and a curtailment of the exportation of lumber from this country in the face of the serious lack of housing is essential at this time.

Solution of the housing shortage is one of the problems of first importance among those facing the Nation during this critical reconversion period, and every effort must be exerted to provide adequate housing for the returning veterans and their families. New houses must be built, and all materials essential to construction of homes should be made available for use in the United States now.

Surplus Property

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. HOFFMAN. Mr. Speaker, when the committee was considering amendments to the surplus-property bill, the Surplus Property Administrator admitted that one group advocated the destruction of surplus property on the theory that it should not be permitted to come in competition with goods to be manufactured here at home. Another group thought it should be sold and disposed of before new goods could come on the market. I agreed with the latter theory, but apparently valuable material is still being destroyed.

I quote from a letter from overseas:

If you folks could only see what is being dumped into the ocean here. Brand new Ford engines and Packard motors not even uncrated as yet. Motors that haven't been even so much as touched yet. They are dumping all kinds of things such as boxes of rifles, bayonets (I picked up one), ammunition, radio equipment of all kinds, and a lot of other technical equipment.

I'm O. K. and enjoying this trip so don't worry about me, just keep on writing. I don't know when all of it will catch up with me but it will. I'm down to a $1.06 so I will have to borrow a couple of bucks from the chief. I need a dollar for a haircut and I have to get some more air-mail stamps. We haven't received any checks from Frisco, so that is the reason that all of us are nearly broke. We haven't been paid in nearly 2 months. It's one way to save some money, though. Have you been receiving my monthly bond or not? I believe that is all the news for now.

Permit me also to quote from a letter received from the mother of an overseas serviceman:

Another thing I want to mention is the inquiry about Army waste that is going on. Those Senators are wasting their time and the public's money by going to investigate now. The reason I say so is that I have a son in Hawaii and he kept writing of dumping truckloads of stuff over the cliff. Once he said they were condemning so many trucks that he wasn't sure whether it was best to unload his load, or just drive the whole thing over. After censorship was removed, I asked him if it was the debris from Pearl Harbor that they were working on, and he said they were destroying Army trucks that $50 worth of repair would make worth $500 anywhere, and the day he wrote they were cutting up Army jeeps, amphibious, that had never even been uncrated. Later he wrote that there had been a reporter there who had written up their activities and that it caused enough of a stink—I am quoting his words—so that they had stopped destroying them and were selling to civilians instead. So you see the investigators will not be able to find anything wrong now, and naturally will think that there never was any waste.

The Heat Will Backfire

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Hon. Carl Hanton, editor of the Fort Myers News-Press, Fort Myers, Fla., of Saturday, January 5, 1946:

THE HEAT WILL BACKFIRE

In calling upon the American people to put the heat on Congress, President Truman is asking for something that won't do his program any good. The great mass of unorganized and inarticulate citizens, to whom he appeals, are by no means in favor of the bills he wants passed. In fact they are against several of them and in applying the heat he is in danger of inciting an explosive backfire.

Prominent in this class is the rocking-chair money measure (pay for not working) which the President calls unemployment compensation. After he had asked for immediate passage of that bill Mr. Truman accused Congress of damaging delay in failing to act. There has been no damage. No one is suffering because of failure to draw $25 a week for not working, as he recommends. Jobs paying more than that are going begging all over the country.

Another bill which the President is wrong in thinking an overwhelming mass of our citizens favor is the so-called Fair Employment Practice Commission (FEPC) proposal. Under this measure Federal authority would force employers to hire Negroes, Jews, or other racial and religious groups in the proportion which they bear to the population of a given community. Thus in Fort Myers, if the population were one-fourth colored, one out of four employees in every store and office would have to be a Negro if the FEPC Government agency decided there were that many qualified applicants. And up in New York's Harlem a Negro dance hall would have to engage a proportionate number of white girls as hostesses in order to be legal.

The President also thinks that the public is in favor of his full employment bill to the extent of providing Government work for everybody who can't get jobs at the 30 percent pay increase the CIO is seeking. The American people want full production with steady work at good pay, but as far as the Government taking over strikers at the wages they demand, the answer is "no."

The President is right in saying the people want something done to end strikes but he admits that the fact-finding bill which he is sponsoring won't do that. He assures labor that it won't stop strikes and he agrees that employers can't be compelled to produce at wages they think will ruin them. It won't

do any harm to know the facts but Mr. Truman admits that the Government already has them—through the CPA, the War Production Board, the Income Tax Bureau, Department of Commerce reports, and from a multitude of other forms which business firms have been required to furnish.

When the heat goes on, what will the people of this district tell Congressman ROGERS and what will the people of Florida tell Senators PEPPER and ANDREWS? They will say they want strikes ended by providing for the open shop which is what they voted for overwhelmingly when the question was put up to them in an election referendum. As to the FEPC, which the President complains has been blocked in committee by "a small handful of Congressmen," they will say that's the place to keep it and that if it ever gets out they will expect Senators PEPPER and ANDREWS to join Senator BILBO and other southern Members in filibustering it to death.

The rocking chair money bill, says Mr. Truman, is "locked up in the Ways and Means Committee and will remain locked up unless the people of United States insist that it be reported out." If Florida Senators and Congressmen ask their constituents what to do about that the answer will be that $25 a week is too much at any time for doing nothing, and that anything a week in unemployment compensation is too much with jobs as plentiful as they are now.

Congressmen elsewhere in the country have been hearing about the same thing from the "unorganized and inarticulate mass of the people." The country undoubtedly agrees with President Truman's objectives of full production, full employment at good wages, and no strikes. But they don't by any means agree with the methods he advocates to achieve these results. Congress has the popular side of that and if the heat goes on it will be to steam up opposition to the President's program.

Jurisdictional Difficulties

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. ANDERSON of California. Mr. Speaker, another jurisdictional labor dispute seriously threatens the food producing and processing industries in California. Perishable crops will not wait while labor organizations settle their differences. I have appealed to the Secretary of Labor and to the National Labor Relations Board to bring about a prompt settlement of the dispute referred to in the following communication. I commend this letter to the attention of my colleagues as it emphasizes the need for taking prompt action to prevent jurisdictional strikes, sympathy strikes, and secondary boycotts.

OAKLAND, CALIF., *January 5, 1946.*

To All Agricultural Interests of Central and Northern California:

A situation of gravest importance to your future economic welfare has arisen in California, which, if not promptly solved, will surely tend to result in the loss of the bulk of your 1946 fruit and vegetable crops.

Your help is urgently needed in aiding to solve it.

The trouble stems from a jurisdictional labor dispute between CIO Food, Tobacco, Agricultural, and Allied Workers Union of America and the A. F. of L. Cannery Workers' Union, which is affiliated with the International Teamsters, who control trucking and hauling.

In the past 60 days this jurisdictional warfare has resulted in "quickie" strikes and picket lines at six food-processing plants. Similar work stoppages are expected to occur in the near future throughout the canning areas of the whole State, and all indications point to universal job action when spring canning gets under way.

There is no issue of wages, hours, or working conditions involved. The issue is simply which of the above unions shall have jurisdiction over the men and women working in canneries.

The time is fast approaching when growers will seek contracts for their crops from the canners. But so serious is the situation at the moment that every canner is at a loss to know just what quantity of these crops he will be able to process in 1946.

Recognizing this situation, C. P. & G. already has addressed an urgent appeal to the California delegation in Congress seeking its support in demanding of the appropriate governmental agencies in Washington, D. C., that they take action now to settle the controversy rather than wait until the height of the canning season, when job action on a State-wide basis would halt canning and result in the loss of tremendous quantities of fruits and vegetables.

The history of the jurisdictional dispute is briefly:

1. Most canneries are operating under an agreement with the A. F. of L. Cannery Workers' Union, affiliated with the AFL Teamsters' Union. The expiration date of this working contract being March 1, 1946.

2. Last October the NLRB ordered an election among cannery employees to determine which union (CIO or AFL) they wished to represent them on and after March 1, 1946.

3. The CIO polled the largest number of votes but has not yet been certified as having secured a majority of the votes cast.

4. The CIO, believing it has a clear mandate to organize cannery workers without waiting until March, is trying to do so and is encouraging workers to resign from the A. F. of L. Union.

5. The A. F. of L., holding the contract until March 1946, is insisting that these workers operating under it, pay A. F. of L. dues and generally abide by the terms of it. The A. F. of L. is also challenging the legality of the entire election, including any certification of the CIO under it.

6. The canners, ordered by the NLRB to abide by the terms of the aforesaid contract until its expiration date, are caught between the conflicting factions. If they accede to the demands of the AFL and fire any worker on demand of the A. F. of L., they are immediately charged with unfair labor practices by the CIO and continuing pay is demanded for each discharged worker. If they refuse to fire the employee, work stoppages result or, as in two cases, plants are picketed by the Teamsters' Union and hauling in and out ceases.

Because it is clear to us that the instances mentioned above are merely the skirmishes which precede open warfare, we have asked the California delegation, whose names, districts, and addresses appear on the opposite side of this page, to intercede with Paul M. Herzog, Chairman of the NLRB, and Edgar L. Warren, Director of the United States Conciliation Service and urge them to act now in bringing the warring factions together with a view to ending this inter-union warfare.

In support of this action we are urging you, who are so vitally concerned in having peace and harmony restored in the canning industry, to write or wire both Senators and the Congressmen in your district, or any Congressman you may know in the delegation, and impress upon them the seriousness of the situation from your point of view and urge their immediate intercession.

Yours sincerely,

CALIFORNIA PROCESSORS AND GROWERS, INC.
By J. W. BRISTOW, *Secretary-Treasurer.*

A Congressman's Mail

EXTENSION OF REMARKS
OF
HON. MARION T. BENNETT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, January 18, 1946

Mr. BENNETT of Missouri. Mr. Speaker, my office daily receives on the average a large amount of correspondence from the district of 11 counties and 288,840 people I represent. Just yesterday my office sent out 116 personal replies and 83 form replies to communications from my district. Since the President in his recent fireside chat asked people to write their Congressmen expressing their views on his legislative proposals, the additional mail received as a result of that appeal has been negligible. In point I extend as a part of my remarks the following editorial from the Springfield (Mo.) Leader and Press of January 15, 1946:

A CONGRESSMAN'S MAIL

During the full week after which President Truman made a radio appeal to the people to put pressure on their Congressmen, our own Congressman MARION BENNETT received only 29 letters prompted by the President's request.

Which, in his regular report to his constituents, he opines, "isn't much of a response" coming from "125,800 citizens who voted in the race for Congress in the Sixth District in 1944."

There could be several reasons why a man wouldn't write to his Congressman when the President asked him to. He might not agree with the President, or might just not like him. It might be sheer indifference. He might simply feel that it wouldn't do a bit of good.

And then he might feel that his Congressman was doing all right without any advice from him, and trust him to keep up with things and act accordingly on his own best judgment.

It is our guess that this last reason accounts for a good many Ozarkians not bothering to write their Congressman, both in our own and our neighboring districts. They have confidence in them to do the right thing anyway.

Mr. BENNETT interestingly reports that even of the 29 who did write him at the President's request, a majority—17—were against the President's program and the others were for it only with qualifications.

And he makes this further report on that week's mail:

Bulk of comment centered on the fact-finding proposal for labor disputes. It was favored by 12 writers; 17 objected to it and suggested stronger alternatives. Some writers in both categories expressed fear that fact finding by political appointees could be used as a blackjack on management and suggested labor's books should be opened, too. Others asked how it could stop strikes and if there was not socialistic danger in Government trying to fix wages in peacetime. A few pointed out the President still has all his war powers to stop strikes by Government taking over plants or unions

and suggested that if he was not going to use such broad powers Congress should take them away from him; 24 letters expressed hope the labor crisis would quickly be resolved in such a way as to stimulate home construction, clothing, auto, and household appliance manufacture.

Listed in order of frequency commented upon unfavorably were the following presidential proposals, some of them not mentioned in his fireside chat: Loans to Great Britain and Russia, $25 unemployment compensation weekly for 26 weeks annually, peacetime military conscription, continuation of wartime controls, a permanent Fair Employment Practices Committee with power to fine or send to jail any employer who refuses to hire a job applicant on basis of race, creed, or color, full employment bill promising Government jobs to all unable to work elsewhere—new WPA, Missouri Valley Authority, and increased immigration of refugees.

Most letters were thoughtful and helpful. Only one was of the "Dear Sir, you cur, yours in haste and anger," variety. It simply said, "You and Congress stink."

Mr. BENNETT adds, "Letters from those with informed opinions are still welcome."

This Strike Period Is a Good Time for Congress To Keep Cool

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1946

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Baltimore Sun, Baltimore, Md., on Monday, January 14, 1946:

THIS STRIKE PERIOD IS A GOOD TIME FOR CONGRESS TO KEEP COOL

A good many Americans will be on strike when the Congress reconvenes. The strike of a good many more Americans will be imminent. This situation is likely to try the tempers and the judgments of the returning legislators. It will be well for the country if the legislators keep their heads and avoid repressive and inflammatory legislation.

The first step toward keeping one's head in or out of Congress is a broad understanding of the issues. In the broad the issues posed by the strike situation are not complex. Thus in the Wagner Act we have taken a whole range of employee conduct out from under managerial control. Unquestionably this was a good thing, though the law has been abused. But further, and without direct legislative interference with management we have widened the workman's powers as against management and the community in general. This we have done by exempting workmen from a whole series of laws to which the rest of us are subject.

The result has been that union bargaining power has equalled or surpassed that of management. That the collision of equal powers results in deadlock is an elementary proposition in social physics. Nobody prospers when industry is deadlocked. The Congress must study ways and means for making deadlocks less likely.

There are two ways of doing this. Having given the unions special privilege, the country can now maintain the special privilege but pyramid on top of it new special and discriminatory laws limiting the special privilege. Or it can simply undo the special privilege itself and return workmen to the simple equality before the law, which is all any of the rest of us desire.

If Congress tries to deal with union privilege by retaining it but then trying to limit it by new special laws, it will run into one formidable obstacle. For it will find that you can't discipline a union as such because a union is not a firm and stable entity. To demand by law, for instance, that a union hold its workers to the terms of a contract it fatuous. For as the Ford unit of the CIO-UAW has just confessed, the union cannot control its workers that well.

If new special laws penalizing unions as such won't work because the unions don't afford a firm and stable target on which such laws can be brought to bear, then the alternative method of control must be examined. In this method of control Congress would not look to the unions to control their people; it would look to those people themselves as individuals, in the historic spirit of the Anglo-American law that all individuals have equal rights but no more than equal rights before the law.

If Congress takes this view of the matter it will bring organized workmen back under the antitrust laws. It will bring them back under the antiracketeering laws. It will do what it can—which, under our constitutional system, isn't much—in exhorting local police everywhere to bring organized workmen back under the local laws against blockade of the public ways, against terrorism and its threat, against mayhem, mob rule in general and in all its infinite manifestations.

The beauty of such a program is that it would have no novelties. It would rest on the simple and self-evident truth that a mob is a mob, even though the members wear union buttons; that assault is assault, even if the weapon used is a baseball bat on which a union placard has been tacked; that a restraint of trade is a restraint of trade, even if a union leader has commanded it.

For if you look through the wave of strikes to their realities—if, so to speak, you pierce the veil of unionism which masks and obscures the factual situation, you will see that over and above the legitimate right of free men to strike what the country faces is a kind of blockading insurrection by a very small but strategically placed minority of its people. The ways of dealing with that kind of situation are as old as our form of government. And even thoughtful union people would probably agree that it was better to apply old and tried remedies for ancient abuses than to pile new and special discriminations against unions on top of unwise discriminations in their favor.

The Road Ahead

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mrs. DOUGLAS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at Columbia University on January 14, 1946:

Over in London, battered and scarred from what must be the last war if mankind is to survive, representatives of the peoples of the world are sitting in conference, dedicated to the principle that in the future arguments between nations are to be solved, not by throwing atomic bombs at each other, but around a council table.

At this conference, for the first time in history, the conferees represent the people of the participating countries—not just governments.

They are acting under a charter which opens with the words:

"We, the people of the United Nations. * * *"

These words were modeled upon the opening words of the Constitution of the United States.

At that conference in London the United States faces a challenge. For upon the principle of our Constitution is based what must be the first practical, working international organization for permanent peace and order in the world. The challenge the United States must accept is to furnish positive, generous, courageous leadership.

Our responsibility to furnish that kind of leadership is infinitely increased because here in our country was first developed the devilish weapon with which man is empowered to destroy himself utterly.

The scientists give us 5 short years in which to save ourselves and the world—5 short years at the end of which, no matter how carefully we guard the secret, no matter how noble our motives, other nations will have developed their own atomic bombs, if by going on making them behind a wall of secrecy ourselves we encourage them to, and the race of death will be on.

We built the first atomic bomb in the scientific race of all time, which was to decide whether the peoples of the world should be free. Now the necessity is to end wars—forever.

Five short years—we have left ourselves very, very little time. Each day, each hour eats away that precious time—so little time allotted for doing the job, of furnishing the leadership that must make of the United Nations Organization a living, working reality.

Five years in which we must build out of the present infant United Nations Organization, a world government capable of outlawing wars and the causes of wars. Five years in a world in which, from the dawn of Christianity from which our own democracy stemmed, it took nearly 2,000 years for our democracy to develop. Five years in which to project ourselves 1,000 years in maturity, in understanding, in social development.

We have special responsibility to meet the challenge for leadership in this hour, for the dream of world cooperation to stop wars was born with Woodrow Wilson and matured in the heart and mind of Franklin Roosevelt.

To meet that challenge we must be generous. It will take generosity. It will take greatness—greatness from all of us.

What is greatness? What is it made of? I can only say what I think it is, the simple rule that we were taught in childhood—the Golden Rule. Now has come the time in the history of mankind when we must obey that rule or perish.

I am not talking about philosophy. I am not talking about some abstract theory that "x" equals "m". I am talking about practicing justice. I am talking about acting fairly, each one of us, in our daily lives. Not when it suits us, not when it just happens to be convenient, not when it costs us nothing, but every day—every day in the year—whether it is easy or hard.

Living the Golden Rule means that everything we do, everything we say, everything we think, everything we desire affects other persons' lives because in the kind of world we live in they usually have a share in it somewhere. It means sitting in daily judgment upon ourselves, upon our own acts. It means following a course because it is right.

It is as simple as that. But it will take everything we have—as individuals, as a nation—to live it. Man hasn't been able to, so far, down through the ages. But he's got to do it now. It's the only way.

It demands self-discipline in the interest of others, self-discipline that prevents you from running beserk, the prey of your own desires. Down through history a few individuals have lived it. It is the quality we cherished in them, the quality we remember.

Now we must practice it, not only rarely as individuals, but we must all practice it collectively as a nation.

It's not just a question of morals now. It's a question of survival.

We must live not only in our own communities, but in a world community with seeing eyes and living hearts, sensitive to the yearnings and the dreams that help men to grow, sensitive to the needs that must be fulfilled if men are to be kept healthy.

This is the stuff of which greatness is made—in a man or in a people.

It is this quality that is talked about long after men are gone. It is this quality that men write poems and sing about. It is this quality that people respond to. It is this quality that builds faith and hope, that inspires trust, that makes men feel that their future is sometimes safer in another's hands than in their own.

And this is true, not only of men, but of nations.

Twelve months ago we had in this country—the whole world had—a leader who had that greatness. It was he who showed us the way. It was he who laid the foundations for the friendships we must now husband. It was he who designed the machinery which we now have to build upon.

Yes; we now have the machinery set up through which the peoples of the world can work together. We now have world-wide endorsement of the principle of working together. But that won't hold us together. Only a deep and true understanding of the rights of all, regardless of color or religion or nationality, will do that.

We are greatly fortunate in this hour that it was given to Franklin Roosevelt to understand that the continuing, long time preservation of our rights depends upon the preservation of the rights of others.

You can't go out into the community and preach one kind of living and practice something else at home. Sooner or later you will be found out. In world affairs it is no different. You can't preach peace and fair dealing to other nations while everybody tries to cut everybody else's throat at home.

That was the wisdom, the greatness of Franklin Roosevelt. And because of it, he left us a priceless heritage—the trust and confidence of the peoples of the earth. Let us pray that we do not fritter that heritage away, that we use it wisely.

Franklin Roosevelt led us to practice at home what he preached abroad. Not only did he talk about raising the living standards of two-thirds of the people of the world who are undernourished, but he fought continuously to focus attention upon and to raise the living standards of the one-third of our people, poorly fed, poorly clothed, poorly housed.

He not only talked about an international agricultural food committee that would help to bring scientific advances in agricultural production to backward peoples of the world, but he built and developed farm security and rural electrification programs to bring those scientific advantages to our own farmers.

People believed this man when he talked of bringing order into international finance and banking, because he had already done it at home by outlawing the reckless manipulation of little people's money on the stock exchange, by regulating the banks and insuring the savings of small depositors.

He was listened to when he talked about an international organization to aid education the world over, for he had fought for Federal aid to education here at home.

Equality of opportunity for all peoples meant something when Franklin Roosevelt talked about it, for he established, when he first became President, the principle of equality of opportunity for all, regardless of color or race or religion, and carried it out in the WPA, NYA, Farm Security Administration, selective-service laws, and the establishment of the FEPC. And with the Navy that he loved so much, he battled the issue out, insisting that Negroes be given the right to serve as fighting men as well as servants.

The little peoples of the world were willing to accept his invitation to find a road they could travel together. They trusted him to design the plan for their future security, for had he not fought the wage-hour fight, the battle that was waged and won so that those who were defenseless and powerless unorganized workers could have some protection?

He didn't have to tell the little people of the outside world, whether it was in China or South America, Europe or Africa, that he was their true friend, for the TVA was built on the basic conception that water in the great rivers belongs to all the people, and that all the people should share in the power that can be generated by it.

Freedom of speech, freedom of religion, freedom from want, freedom from fear—these were ringing words to the world, because they were spoken by a man who understood their meaning—and everybody knew it. For had he not waged a lifelong battle against want and economic fear?

It was he who conceived the social-security plan in all its magnificence. It was he who sought to lift the burden of fear from the unemployed, the widowed, the sick, the aged. It was he who understood and made us see that in the complicated, mechanized age in which we live, we cannot go blithely on our way, unmindful, when men and women are out of jobs; that the widowed and the orphaned should be given something more than society's charity; that when a person is sick or injured he should not and cannot be abandoned; that when a man gets too old to work he cannot be thrown aside like an old coat for which you have no more use.

With the social-security program, Franklin Roosevelt took us out of the jungle. It was he who believed that housing must become a Federal concern when millions of our people were found to be wretchedly housed or not housed at all, because he knew what intolerable living conditions mean, not only in family terms, but ultimately in terms of the community and the world.

Such a man could talk about the health of the world community because he had gotten down to the grass roots of the health of his own country.

We no longer have Franklin Roosevelt with us, but as we take our place at that conference table, the most powerful nation in the world, with all the responsibility that that places upon us, we have the record which we will need to draw upon, that record we made under his leadership.

Let us examine ourselves as we embark on this new adventure.

In a very short time—25 years—we have become a world power. To carry the responsibility that goes with that power we shall have to mature. We shall have to grow up.

In the 5 years that are given us to work out our salvation we have three alternatives. We might, of course, go out and kill off everybody else, suddenly, without warning. But we won't do that. We're not that kind of people.

Or we might just go along indifferent to the worries and problems of the rest of the world, hopeful that no one will take it into their head to wipe us out suddenly in the night. We cannot afford to do this. We are too vulnerable and would be the first target of any aggressor nation if we have been so foolish as to allow an aggressor nation to develop.

Our third alternative is to assume the responsibilities of leadership that our position of power and wealth has placed upon us and supply leadership in the building of a world community.

First of all, we no longer can afford the luxury of going on thoughtless, groundless, periodical emotional sprees against any member of the United Nations Organization. We must remember that we have to live with these nations around the council table in close daily contact. We have to work and build together. Finally, we really don't know one another very well, and until we do, until there is the kind of confidence between the nations of the world as there is between our United States of America, we must be especially watchful that our criticisms are at all times based on fact. That our criticism is constructive, not destructive—friendly, not hateful.

It is our privilege to disapprove of things our friends do, of course, but in this atomic age in which we live it is our duty to search for the causes of these actions, not just to criticize, and always to examine our own position to see if we are in any way responsible for these causes. And if we are, to correct our own position. If we are not at fault, to go to the root of the trouble and present a dynamic, positive, equitable solution.

Part of growing up is to be realistic. Great Britain, Russia, and the United States must stay closely and harmoniously united if the world organization is to work—if we are to benefit from these 5 years of grace.

Growing up, then, certainly means that we explore every possible avenue to better relations between ourselves and these two sister nations as fundamental to the working out of all other relations in the world.

To begin with, I think it is far from mature to think that the British and the Russians, after what they have been through, are any less desirous of peace than we are. And I think it is also far from mature to think that we are more in love with the idea of survival than anybody else in the world.

I also think it is far from mature to think that we are the only people in the world who like three meals a day and a decent house to live in. So we start with common objectives—the three pivotal nations and all the other nations in the world—survival and a good life.

Let's take the British first. The war has left Britain deep in debt with her world trade ruined, her physical plant badly battered, her manpower depleted, her people exhausted. Why in the name of common sense shouldn't Great Britain be worried about trade and commerce—eyeing even a little enviously our undamaged industrial plants, our pool of skilled labor, our expanded facilities for world trade? We should remember these things when Great Britain hangs onto her imperialistic pattern which seems to us outmoded and a block to the United Nations plan. It is a block, but the way to get rid of it is to help her find a new pattern. That's part of our responsibility—part of the job we have got to shoulder if permanent peace is to be realized in the world. Let's face it.

We ought to remember these things and that the British are still strictly rationed on food and clothing when they appear, in our eyes, to be a little edgy and querulous about accepting a loan from us which they say will tie them economically to our apron strings for generations to come.

I hope the British loan goes through Congress without the usual insults being hurled at Great Britain. I don't think they are in any condition to take them. When you are cold and rationed and tired after years of bombing with all the accompanying terror and nervous tension, when there is only one direction to which you can turn for help and yet if you have to accept that help with a feeling of humiliation, it doesn't make for good relations.

I am sorry that the terms demand an interest rate. I think it would have been healthier for everyone concerned if it had been worked out on some kind of lend-lease basis.

If we keep our goals in mind, we will keep on our course. Our aim is to make of ourselves a world citizen and as far as we are

able, to help transform the other nations of the world into world citizens.

The future is interdependent.

Until we decide what our long-range tariff policy will be, the English will be unable to know how much they can sell us. Until we decide how big our merchant marine will be, the British will be unable to judge how large hers will be. Until it is determined whether or not London will continue to be the insurance center of the world, until the United States makes up its mind upon the policy of postwar international trade, the British can make no plans. They are in the dark.

So long as we continue to keep them in the dark, we can be sure Britain will not make any revision in her imperial and colonial policies.

Slowness of decision on our part hampers not only the British in the formulation of policy, but it hampers all other nations as well.

Speaking of trade, we might examine the tied-loan policy of our Export-Import Bank. I quote:

"As a general rule, the bank extends credit only to finance purchase of materials and equipment produced or manufactured in the United States and the technical services of American firms and individuals as distinguished from outlays for materials and labor in the borrowing country or purchases in third countries."

Wouldn't that statement tend to make the British worry about their export trade, without which they cannot exist?

Remember, they can't buy unless they can sell. Since we are the only people who have money and since we are therefore the only people who can make loans, such a "tied loan" policy limits markets for the English.

If we make a loan, say, to Denmark, she is compelled to spend that money in this country, whether it be for materials, equipment, or technical services.

Suppose it is cheaper and better for her to buy part of the material from England. What would happen if she were able to do so? The Danes would convert part of the money into pounds sterling, and buy what they needed in England. The English, then in possession of badly needed dollars, would turn around and buy from the United States the material she needed. Our dollars would come back to us via England.

This is the kind of healthy trade we worked for all through the thirties. To set up such a "tied loan" policy now is short-sighted and a complete reversal of our whole foreign policy. It ought to be changed.

It's penny-wise and pound-foolish, to say the least. This action on our part, seemingly to protect ourselves and our dollars, simply hasn't been thought through in all its ramifications.

There is a shortage of dollars in the world. We don't need to worry about anybody hoarding them. If they pass them on to another nation, that other nation will eventually use them buying goods from us. Remember, we are the only big industrial nation in all the world with undamaged factories and plants. It shouldn't take very much common sense to realize that if people are going to buy, they've got to sell. Especially is this true of the devastated nations. In order to sell, devastated countries have to make tremendous sacrifices.

England is going without essentials now so that she will have something to sell in order to buy food and the necessary raw materials to set her economy again in order.

If we are going to set up unilateral trade policies that exclude England or any other country, they must in self-defense set up unilateral trade policies themselves—and we are headed straight for one of the troubles that helped to start this last World War. We shall be doing practically the same thing we did back in the twenties when we started the tariff race that contributed to World War II.

In our foreign policy what we want is reconstruction of foreign trade on a multilateral basis. No country should be compelled to buy from another goods which she can obtain better and cheaper elsewhere. No country, big or small, should be discriminated against by the commercial policies of another country. In this way international trade will become the source of increasing prosperity and rising standards of living.

Getting along around the council table must depend in part upon becoming economically integrated and interdependent. Economic unity of the globe will strengthen our chance of durable peace. Our foreign economic policy isn't something which concerns the exporter and the importer alone. It concerns the man in the street in every nation on the globe.

What are some of the other sore spots in the British situation? Well, let's take the Middle East. For one thing, I think England is dead wrong in her attitude about Palestine.

Dr. Walter Loudermilk and Robert Nathan, both eminently qualified, made careful and considered studies of this part of the world. We ought to offer a positive program based upon their findings.

Dr. Loudermilk's proposal of a trans-Jordan Valley authority on the TVA model could be sponsored by the United Nations and might contribute to a solution of the Palestine problem which plagues the world.

England is turning over to the United Nations the mandated areas she received after the last war with the exception of Palestine.

Why shouldn't Palestine, along with the Mediterranean bases, also be a trusteeship to the United Nations? The troublesome oil of the Middle East could also be handled through the United Nations for the benefit of all.

Above all, we should remember the thing that keeps England from being the great world citizen she is capable of being is economics. That is the problem which we must help England solve, not only for the sake of the English but in order that we may build a durable peace.

The Russian concern, on the other hand, is not primarily economics but survival. The Russians are trying to do exactly what we did more than a hundred years ago with the Monroe Doctrine which we brought up to date with our policy of hemispheric unity. Incidentally, at the time the Monroe Doctrine was first enunciated we pointedly told Russia, as well as the western European nations, to keep out of this hemisphere.

Russia wants her sphere of influence, too. She wants to make certain that her neighbors are friendly. She wants to assure herself that she won't be attacked a third time through Poland or the Balkans. She isn't quite sure that again an anti-Soviet bloc won't be built up against her; therefore, she is going to try to take care of herself as best she can.

In this atomic age, this kind of security sounds old fashioned, but we haven't abandoned it ourselves. We are even today talking about holding on to Pacific and Atlantic bases.

The only way to cure this kind of thinking is to make sure that there aren't going to be sudden attacks against any nation—that there isn't going to be another war.

This assurance must be given Russia before she will become the great world citizen she is capable of being. That's one of the vital problems to be worked out around the council table.

A beginning was made at the recent meeting in Moscow. We accepted Russia and Great Britain as partners in controlling Japan. That showed good faith—a recognition of mutual interests. Russia agreed to certain requests we were making the Balkans as a result.

Whereupon a great hue and cry went up over here that we were appeasing Russia. When will we learn that negotiation is not appeasement? There is no sense sitting around a council table unless you find some common meeting ground. To find that common meeting ground, everybody has to give a little bit.

But why, as a matter of fact, should the Russians feel any sense of security at all right now in her relations with us? While continuing day in and day out to insult her every chance we get in the press, in speeches, even on the floor of the Congress, we go right on building atomic bombs as fast as we can, announcing at the same time that we aren't letting her in on the secret. Of course, it's idiocy to talk about the secret. There isn't any secret. Russia knows that. She has scientists, too.

But it's our attitude that must be deeply disturbing to Russia. How could anyone be surprised if the Russians, in the face of this attitude, went off in a huff, locked themselves up inside their own borders, and started making an atomic bomb of their own and said to heck with the rest of the world?

We did something of the sort after World War I—and with far less provocation.

We have got to stop making atomic bombs at once if our plans for international control of atomic energy are to have any real meaning.

Russia has indicated over and over again that she would be relieved if she could stop worrying about danger of attack from without and get on with the building up of her country for the good life. Since the admission of the Russians into the League of Nations, right straight through, Russia has been willing and eager to cooperate in the building of world security.

Should Russia ask us for a loan, which is probable, we undoubtedly will make the loan after a lot of talk about it. The trouble with us is that we do these things so grudgingly that we lose much of the good will that is so indispensable to the building of a united world.

And that is what we are after—a united world. Because all our wealth, all our factories, all our power, all our dreams are nothing unless we help tie the people of the world together—tie them together with strong bonds of real friendship and understanding.

That is the job that has been given mankind to do. It must be done in a few short years. Each people must make its contribution—the contribution it is capable of to the utmost of its ability with all of its strength and its imagination—with its heart.

We the peoples of the United States have been given much. We have been blessed. We have been spared twice when the world was set on fire. We have already created a united pattern—one United States—which must serve now as a world pattern. As free people we have lived united—voluntarily. We have now the great privilege of leading the greatest undertaking that has ever been given mankind.

"There is a mysterious cycle in human events. To some generations much is given. Of other generations much is expected. This generation of Americans has a rendezvous with destiny."

Franklin Roosevelt spoke those words nearly 10 years ago. They are as true now as they were when he uttered them. There is more that is asked of us. We have not yet fulfilled our destiny. That must be the building of an abiding peace. We must arm ourselves with his last words, his farewell to us:

"The only limit to our realization of tomorrow will be our doubts of today. Let us move forward with strong and active faith."

Steel Strike

REMARKS

OF

HON. EDWARD A. KELLY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. KELLY of Illinois. Mr. Speaker, today this Nation faces the greatest shutdown in the history of the steel industry. Hundreds of thousands of workers will be off of their jobs. These people, added to those already on strike, make a sad commentary upon the history of our country.

Rejection by the United States Steel Corp. of the wage settlement proposed by the President, and accepted by the steel workers, places the responsibility squarely upon the shoulders of those in the steel industry who propose to fight against any wage increase at all.

Mr. Fairless, president of the United States Steel Corp., according to reports I have read in the newspapers, personally was striving faithfully to effect a settlement, but, from all appearances, he has been overridden by those in the industry he represents.

I remember very well when a similar instance occurred after the First World War in 1919. The steelworkers of this Nation struck for better working conditions. When it seemed evident that no agreement could be reached between labor and the industrial heads of the steel corporations, Woodrow Wilson, then President of the United States, called upon both groups to come to Washington—to sit in conference, in order that some kind of agreement be ascertained and to settle the differences that then arose between the heads of the steel corporations and the steelworkers.

I remember very well the reply that the late Elbert H. Gary, president of the United States Steel Corp., made to the President—that he would not sit at the same table with the steelworkers' representatives.

Wilson's reply to him was: "You will, if I have to send the armed forces out to get you and make you sit with those of us who are seeking to avert the coming strike."

The result was that Mr. Gary sat in this conference and President Wilson appointed Bernard Baruch as an arbitrator to try and peacefully settle the differences that prevailed then. While it did not immediately settle that dispute, nevertheless, the strike lasted but a short time and an agreement was reached.

The President of the United States can do the same thing today, not only with the steel corporations, but all other corporations and workers of industry that are now on strike.

And by bringing these representative groups together, he can effect a compromise of the differences between them—and settle these strikes.

Today, after the ending, a few short months ago, of the most terrible war civilization has ever encountered, it seems as though some people in the United States place themselves above the Government.

The President of the United States has asked for cooperation of all the people in the hard task ahead, and in his proposal has asked the steel workers to compromise from their demand of a 30-cents-per-hour increase to the acceptance of 18½ cents per hour, which was agreeable to the steel workers.

The steel corporations have agreed to a 15-cents-per-hour increase. The difference of only 3½ cents per hour stands between prosperity and chaos in this Nation.

We are all familiar with the tremendous profits made by industry during the war. We are all familiar, too, with the added increase of living conditions, which have risen in spite of price control, and which make it mighty hard for a man earning his living by the sweat of his brow to make all ends meet in bringing up his family in the American way of life.

I am familiar, also, with the fact that, in many small corporations, their overhead expenses have increased.

That is why I believe that the President should call these people together, or designate someone to represent him—someone who has a broad knowledge of the situation which now exists.

If one industrial leader in this Nation can agree upon a compromise with labor—and I refer to Henry J. Kaiser—they all can.

I realize that the steel corporations, or any party, has a right to a dispute and to reject a settlement, even though it be by the intervention of the President, and this right must be respected, or we would be subject to government by decree.

The President, in his proposal to the United States Steel Corp. to effect a settlement, did not overstate when he said that "a strike in the steel industry will be felt in practically every major industry in the United States."

It will paralyze this country and the effect will be felt throughout the entire world. It will rekindle the Nazi spirit again in those who sought to rule by destruction.

It will set the people of America back to the depression days of 1929–34 when this Nation shrank to a $33,000,000,000 nation in wages, and will add to the old familiar bread lines that prevailed during those sad days.

The United States Steel Corp. can avert this condition by agreeing to the proposal of the President of the United States and by so doing will prosper, by the demand that is now waiting by the users of steel, not only in this country but the entire world.

Mr. Richberg Talks Back

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of January 16, 1946:

MR. RICHBERG TALKS BACK

Donald R. Richberg is, ordinarily, a mild-mannered man. As a lawyer for the unions, as a coauthor of the Railway Labor Act, and as a Government official in early New Deal years, he has abundantly proved his liberalism and his friendship for those who toil.

The Railway Labor Act—a labor-supported measure—has helped to prevent serious strikes on the Nation's railroads for almost 20 years. Because of its success Mr. Richberg suggested, some time ago, that its principles be applied to all important industries. His suggestion took form in the Hatch-Ball-Burton bill, now before Congress.

The bill's introduction brought from officers of national labor organizations an amazing outburst of protest and abuse. Yesterday, speaking in New York, Mr. Richberg cast mild manners aside and talked back to the labor leaders. He said many things that are true and that, coming from him, carry great weight.

He did not spare criticism of management's faults. But, he pointed out, the balance of power has swung until now—

"Labor leaders are generally suffering from the delusions of rapidly swollen authority gained by political influence, by a special immunity from legal restraints, and by the command of organized force and violence which a sympathetic public permitted them to acquire and exercise in the days when unorganized, helpless wage earners were the common victims of injustice."

These labor leaders' greatest weakness, he went on, "is their hostility to impartial government. They feel that they are still entitled to an unfair deal * * *.

"With short-sighted selfishness, they are trying to create an economic system in which all wage earners would be compelled to join unions and to accept the fixation of wages and jobs under the monopoly control of labor politicians. Their success would end a free, competitive economy and produce some form of state socialism as the inevitable outgrowth of the labor dictatorship which they are seeking to establish."

If labor-management warfare continues to spread, he warned, everyone eventually will be compelled to take sides under class-conscious leaders of either labor or management who are strong enough to swing national power. And this would mean government by one class or the other which, in either case, "would be destructive of political and economic freedom."

Today's urgent need, Mr. Richberg asserted, is to maintain the balances of economic power that are essential "to preserve democracy and free enterprise. Any power that grows into an ability to dictate to the rest of the people must be cut down * * * before it grows too great to be destroyed without a civil war * * *.

"What is needed to stop this legalized flood of rising force and violence * * * is not a law to forbid strikes, but a law to make strikes unnecessary * * * a law establishing processes of justice for the settlement of economic conflicts; a law that sternly requires all those engaged in labor disputes to exhaust all peaceful ways and means of settling them before undertaking to make war on each other."

Mr. Richberg is correct, we think, in saying that labor leaders who automatically denounce all suggestions of such a law do not represent the opinion of most union members. We agree with him that "the American people in overwhelming numbers—including a large majority of labor unionists, as shown by every secret poll taken among them—want the Congress to pass a law that will end, or at least minimize, industrial warfare."

Three Men Who Vote "No"

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bryan (Ohio) Press of January 17, 1946:

THREE MEN WHO VOTE "NO"

An old farmer, we believe in Putnam County, has suggested that a granite shaft be erected where the congressional districts of Congressmen ROBERT F. JONES, of Lima, FREDERICK C. SMITH, of Marion, and CLIFF CLEVENGER join on the Putnam, Allen, and Hancock County line and that on the tri-cornered stone be inscribed suitable words honoring "three men who have voted against spending more money than any three Congressmen the United States has ever had."

The grand total of spending against which these three have consistently voted runs far into billions. It is to their everlasting credit that they had the courage to stand up and vote against these appropriations, many of which were pure pork barrel. Like Fabius, they believe that to be turned from their course by men's opinion by blame and by misrepresentation shows a man unfit to hold an office.

Probably no three men have ever voted for more lost causes either, because it should not be forgotten that the Executive administration, the House, and the Senate are completely controlled by the Democratic Party, and have been for the past 12 years. Because the majority of Congressmen from Ohio happen to be Republicans, people are likely to be misled by castigations of Congress into thinking the Republicans are to blame for the mess the Nation is in and into which it is sinking deeper by the day. Not so. The Democrats would like to get rid of the blame, but it belongs strictly to them, as anyone can see by looking at the majority of Democrats in the House, the Senate, and the White House.

Government Keep Out

EXTENSION OF REMARKS
OF
HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Grand Rapids Herald of January 19, 1946:

GOVERNMENT KEEP OUT

Let management and labor settle their own disputes without the interference of Government. Let Government keep entirely out of labor disputes.

These are the recommendations of William H. Davis, former Chairman of the War Labor Board and former Director of the Office of Economic Stabilization.

Mr. Davis was speaking to the Senate Labor and Education Committee. Because of his experience, his word should carry some weight.

Mr. Davis told the committee that if management and labor settle their disputes between themselves and without Government or other interference, their bargains will last much longer and be more strictly adhered to.

Moreover, he declared that the intervention of Government in labor disputes destroys the essence of collective bargaining and that if Government is to assume responsibility for fixing wages and working conditions, we eventually shall lose our freedom.

In the course of his remarks Mr. DAVIS urged the Congress to have nothing to do with the President's fact-finding bill, with the Ball-Hatch bill, or any other similar proposed legislation which would shift to Government the responsibility for settling labor disputes.

He urged that in all such matters we get back to first principles and permit the factors which compose industry to settle between themselves their own difficulties and disagreements.

It seems to us that Mr. DAVIS is on sound ground in his position. Through the operations of the Wagner Act we placed all the advantage in the hands of labor, leaving management and the investing public on the outside looking in.

By legislation we have fixed minimum wages and hours of labor. Under the Smith-Connally Act, now repealed, we undertook to finance elections in plants and thereby encouraged strikes because the interested parties were able to shift the cost of strike elections to the Government.

If management and labor were let alone to settle their difficulties, each would have a higher respect for the other and because they had reached agreement between themselves, each would have greater respect for these agreements.

One of our greatest difficulties at the present time, not only in matters concerning labor but in many others, has been that Government has taken over the responsibilities which should remain with the people and the people are both management and labor and everything else in this country.

Redeployment and Replacements in Military Government

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bavarian, published in Augsburg, Germany:

REDEPLOYMENT AND REPLACEMENTS IN MILITARY GOVERNMENT

After a slow start, the Third Military Government Regiment, which blankets Bavaria, is practically caught up with the Army redeployment in the ETO. This past week all "available" enlisted men down to 60 points and all "available" officers down to 75 joined the Eightieth Division for shipment to the States in the very near future.

In a last-minute decision the number of officers available for shipment with 75 points or better was sharply cut by a ruling that those newly promoted and those assigned to detachments according to the new revised T/O of November 15 and December 15 are, at least for a short time, essential. This ruling directly affected a good number of officers who have served from 3 to 5 years in the Army already. Most of them would agree that the redeployment program has pretty well undermined the original supply of military government personnel.

But what they are all asking is "Where are the trained replacements?" The Government, working with the Army, spent a huge amount of time and money training a body of men to do military government work in Germany. The Second and Third Military Government Regiments were specifically groomed for that job. Now the fact is this: when enlisted men with 60 points and officers with 75 points go home, omitting volunteers, scarcely 10 percent of the military government personnel trained to govern in the western and eastern military districts remains.

We are not inviting an "essential" declaration on ourselves. Somebody, way up the line, forgot about replacements. The war is no excuse; the war in Europe has been over practically 7 months. When an Army regiment, which has been trained for from 1 to 2 years in military government work receives, in October, over 800 men from an Infantry combat division whose most important qualification for military government work was the fact that they had "low points," and about December 1 an additional 500 men new from the States who have only had basic training, then someone forgot or neglected the original plan for military government in Germany. The men we have received are good men; many of them, having been through combat, are quick to catch on and adapt themselves to their new jobs. But the regrettable part of the whole plan is that, as far as qualifications for military government work go specifically, the men from Infantry combat might have very conceivably gone to any of the other occupation units. And one of the first questions the 500 new men from the States were asking was, "What is military government?"

When 500 men, a great majority just out of high school, arrive as replacements in an organization which is in the midst of carrying out the most important phase of the Allied occupation of Germany, and then have to ask upon arriving, "What is military government?" then we think someone forgot. And when Infantry occupation units and military government units go together to the same replacement depots and pick up their assigned quantities of men from the same pool with the same training we think someone forgot * * * forgot that if you want a man to be an MP you train him as an MP; if you want him to be Infantry you train him as Infantry; and if you want him to work with the Army in governmental affairs and controls at least you tell him what they mean in regard to the Army and Germany so that he does not arrive asking, "What is military government?"

Trained replacements, we are told, are on the way. The State Department, we are told, is preparing to assume active control early this coming year. Meanwhile, a large number of detachments have almost a complete turn-over in personnel, and few of the original officers and men who laid down the law to the burgomeister and stadt and kreis officials are around to see that they toe the line. From the standpoint of a fair redeployment system, discharging men who have served in the armed forces upon points and length of service, the turn-over is commendable. But what the military government men who remain expect is that a country and State Department that is committed to the United Nations Organization and a long-range occupation and reeducation of Germany, and an Army that is committed to implement that policy with qualified trained personnel in the field of military government would have, at least, met the turnover with more foresight. At least, the men who have to step into military government work on a control level should not have to do so asking, "What is military government?"

We have now, in the Third MGR, a fine new group of young fellows. It is partially to the saving grace of American ingenuity and flexibility that practically all MG detachments will apparently operate as usual. In America, however, we do not take men just out of high school and put many of

them in important governmental positions on a control level. We have in Germany. Nor do we put a man into work of a State Department and foreign ambassador nature because he was a model farmer, a good electrician, or an expert rifleman. But that has been comparable to the selection of 1,300 MG replacements in Bavaria alone during the last 2 months. We think someone forgot.

And now the plea rises on all sides, "Hold military government personnel"; "Keep the controls from breaking down"; "Military government personnel must be declared essential." Why? Because someone forgot, some people way up whose business was not to forget. We can see the logic of the pleas, but they ought to be completed like this: "Hold military government personnel until the people someone forgot to train or select are ready to take over."

Meanwhile military government, working in the sphere of governmental policy and controls, yet being Army, is caught in the incongruous situation of redeploying enlisted men over 35 years of age and replacing them with hundreds just out of high school. In the States we have minimum age limits for our Presidents, Representatives, Senators, and governors because it is our common opinion that government is the proper realm of experienced men. In Germany we were caught in the ridiculous position of sending men home from military government for the sole reason that they were 35 years of age or more.

That is over the dam now. Meanwhile, there errors are named now that they may not be repeated. Those of us who have, in numerous cases, served longer in the armed services and often in equal or greater danger and difficulty than thousands of new civilians now in the States do not want them repeated. Meanwhile, we trust that both the State Department and the Army will rush the job of comprehensive training for suitable replacements. We have been on the job here long enough to know that the occupation is serious business and necessarily long-range. Some people, who should have remembered, evidently forgot. We do not intend to let them forget again.

Strikes: Causes, Effects, Remedies

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. HOFFMAN. Mr. Speaker, a book might be written on each of the above topics. The following is just a hint, given with the hope it will be followed by serious thought.

STRIKES—CAUSES

First. The laudable desire inherent in all of us to better our condition so that each, and our loved ones, may have more of all the desirable things of life. Some believe a strike is one method of attaining that objective.

Second. The failure on the part of those who it is thought are able to make concessions to realize the need of concessions; the lack of accurate information on the part of those making demands as to whether they can or cannot, in whole or in part, be granted by those from whom they are sought.

Third. A feeling of class consciousness, deliberately instigated and encouraged by the last administration and by intemperate words and acts on both sides, which has led to a desire to win a pending argument, rather than a willingness to accept the facts, be reasonable and charitable, determine a long-range, overall, beneficial policy for all.

Fourth. As causing the present situation, the administration's statement that future profits justified a 20-percent increase in wages without a price increase.

Fifth. The drive on the part of a few vociferous, unscrupulous labor leaders and the Communists to insist upon a part in management, for the purpose of diverting profits from improvements, replacements, extensions, research, and dividends to stockholders, and a division of those profits among the employees. You can do your own reasoning, form your own conclusions, as to where that policy would lead us.

STRIKES—EFFECTS

The loss of millions of dollars to employees who will not during strikes receive pay checks. The loss of millions in reduced sales by local merchants and inability to purchase hundreds of items for which eager buyers are waiting, but the production of which has been slowed down or has ceased.

A scarcity of hundreds of items which ready purchasers wish to buy and which will cause a black market, higher prices, increased inflation.

STRIKES—REMEDIES

Many and varied have been suggested. A few simple ones, would, in my judgment, do the job.

First. A willingness on the part of management to sit down with the rank and file—as distinguished from some labor leaders and officials whose jobs depend upon the continuation of labor disputes—and discuss with the workers the facts with reference to the business.

Many employers know nothing of the needs—the home life of the workers. Many a worker has no conception of the problems confronting management—of the necessity for using a part of the earnings for dividends to stockholders, research, maintenance, expansion.

Second. Amendments to the National Labor Relations Act—which even its supporters concede was never designed to deal out equality of opportunity or responsibility as between employees and employers—which will give to all an equal opportunity to obtain justice under law.

Third. Legislation, and the enforcement of it, which will ban the use of brute force, violence, and rioting as weapons to be used in obtaining settlement of a labor dispute.

Fourth. A recognition of the fact that the rights of the public are paramount and must be preserved, regardless of the effect upon employee or employer. That is just a restatement of the principle that, when the exercise of a right or the liberty of the individual becomes detrimental to the public as a whole, the indivdual must yield. This last has particular reference to the situation where the furnishing of light, heat, water, power, food, communications, and transportation to the public rests in the hands of a public-service corporation and its employees.

The foregoing is sketchy but indicates some things to which we may all give serious thought; then act, each according to his ability and opportunity.

Strike Cycle Again Here

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial from the Carroll County Independent, Center Ossipee, N. H., of January 18, 1946, entitled "Strike Cycle Again Here":

STRIKE CYCLE AGAIN HERE

Now it would seem that the strike cycle of 1919 will be repeated in 1946. It will be recalled that 1919, the first postwar year of World War I, saw the greatest number of strikes the country had known up to that time. At that time the workers had adequate savings to enable them to stay on strike. Confronted with rising prices, they went out for higher wages. The year 1919 saw rising prices, minor inflation, industrial unrest, strikes, and discontent.

Now it would seem that cycle is being repeated for the postwar year of 1946. Labor is confident of its organizations, has money in pocket, political power, and know how. It is confident that it can make management bow to its demands.

Management, knowing that there is plenty of business ahead for the next 3 or 4 years, feels that it can afford to sit things out for a few months. For it knows that it will get the business anyway. The public has waited for 4 years for durable goods. It can wait a few months longer.

While both labor and management undergo loss, inconvenience, privation during a strike, in the final analysis it is the public that really suffers and it is the public that foots the bill.

Coal, steel, and automobile workers all get raises in pay. The price of tractors is raised $50. That comes out of the pocket of a farmer in North Carolina or New Hampshire or North Dakota.

Automobile workers go on strike and a school bus stops running because a broken part cannot be replaced.

Telephone and telegraph workers strike and interstate business slows down and stagnates.

Electric workers strike in New Jersey and a mill in Chicago shuts down because replacement parts cannot be secured for machinery.

Today our life in the United States is so complicated and each group of persons, or each industry, is so dependent upon other groups or industries for orderly operation and existence, that the effect of any work stoppage can seriously tie up orderly life and cause real hardship and suffering.

Many people are beginning to wonder if firm Federal control must not be laid over both labor and management to prevent work stoppages. Obviously this is giving of more power to Washington. This is surrender of personal rights. This is increased centralization of authority.

But it is now certainly debatable if any group of workers, or any management group, have a right to bring hardship to the Nation simply to secure added profit to themselves.

The Gravediggers of America

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. NEELY. Mr. Speaker, in pursuance of permission duly granted, I extend my remarks in the RECORD for the purpose of inserting an article by Max Lerner entitled "The Gravediggers of America," which appears in today's issue of PM. It is as follows:

THE GRAVEDIGGERS OF AMERICA

With industrial conflict in America growing tenser day by day, the whole duty of the American who cares for his Nation and his people is to ask some plain questions and give some plain answers.

Who is responsible for the stoppage of work that began at midnight last night in the steel industry, which is the heart of America's whole economy? For those who read as they run the natural answer might seem to be that it is, of course, the steel workers; for isn't this a walk-out of three-quarters of a million men who are striking for their higher wage demands? But even a casual effort to dig beneath the surface will show how superficial and wrong such a quick answer it.

For the open-minded the facts about the present steel-stoppage are plain. The steel workers started with a demand for a 25-cents-an-hour increase. The steel corporations countered with a 10-cent-an-hour offer. In the negotiations at the White House between Philip Murray for the union and Benjamin Fairless for the industry, Murray went down to 20, Fairless went up to 15. President Truman offered a compromise plan for an 18½-cent increase. Murray accepted. Fairless stuck fast at 15, and has refused to budge since.

Seen in wage terms, therefore, the walk-out of the steel workers has, in reality, been forced upon them by the refusal of the industry to accept the moderate compromise of the President. What separates the corporations from this moderate compromise is only 3½ cents an hour. For 3½ cents, it would seem, the steel industrialists have seen fit to throw an entire economy into paralysis. I say "an entire economy" because steel is the key industry of the country, on which every other industry depends. The framework of our whole industrial structure is a steel framework.

FORCING A SHOWDOWN

But it would be naive to think that this strike has been forced on the steel workers by considerations of 3½ cents. The steel industry involves many billions of dollars, and there are even more billions in the other industries that are interlocked with it. This isn't a niggardly 3½-cent proposition. Nor is it simply a matter of the stubbornness of Benjamin Fairless and the United States Steel Corp.

It is as clear as a bell that behind Fairless are other men even more powerful and determined then he is. It is transparent that their decision was based not on 3½ cents, but on considerations of power. They are forcing a show-down. Their show-down is not only with labor in the steel industry. It is with labor throughout the American economy. And in the end it is a show-down with the American Government and the American people.

Let us take a hard look at this. First of all, what are they aiming at in the steel industry? They want to return to the good old days, the days before the New Deal, the days before the steel workers' union was organized.

I have been digging back a bit into the history of the labor struggles in the steel industry—into the congressional investigation of the industry in 1911, into the report of the Interchurch World Movement on the great steel strike of 1919, into the misery and repression in the industry for more than a decade after that strike was broken, into the bitterness of the Little Steel strike of 1937. The story of steel labor is the story of the investment of sweat and blood in an effort to win a collective-bargaining position. After the 1919 strike was broken, steel wages for a 10-hour day for unskilled labor fell in 3 years from $5 a day to $3 a day. Those were the good old days. Before the CIO came into the steel picture in 1936, there never was a successful and unified movement of skilled and unskilled steel workers alike. Those were the good old days.

The steel workers are today the key CIO union. Under Myron Taylor's leadership the United States Steel Corp., the biggest in the industry, finally made a crucial decision: To place labor peace ahead of labor conflict and industrial order ahead of industrial anarchy. As a result, steel has been for almost a decade the model example of orderly collective bargaining. But now the pattern has been broken.

What happened to break it? Not, I have said, the 3½ cents. Until the last White House meeting, Fairless, who had for years been following the Myron Taylor tradition, looked as if he would go through with a compromise. Yet when he came back to the last meeting he stuck fast. What happened in the interval? To glimpse the answer one must remember that Fairless is now not the deciding voice in the industry. He is the spokesman, the front man. As Ralph Ingersoll pointed out in these columns the other day, ownership in the United States Steel Corp. is so dispersed that no owner can speak for it. It has management control. The real general staff of the industry as a whole is the Iron and Steel Institute, a trade association that has behind it the seamy history of Carnegie and Frick, of Gary, Grace, and Girdler. The dominant personality in the institute is today Eugene Grace, head of Bethlehem Steel. Grace is the symbol of the men who want the good old days back in steel. It isn't that he and his kind are niggardly about 3½ cents. It is rather that they want to weaken the unions and break the position they have achieved.

CORPORATIONS REJECT COMPROMISE

And not only in the steel industry. Here we come to the nub of the whole industrial conflict today. Here is where the steel situation ties up with the General Motors situation and with the electrical industry and meat-packing and the rest of the labor-industry picture. In every one of these cases labor has taken the initiative in order to consolidate its gains and prevent the wage-slashing and union-smashing that were the rule at the end of the First World War. In every one of these cases it has repeatedly shown its willingness to settle at a reasonable compromise. In every one—notably in General Motors and now in steel—the corporations have rejected the compromise, spurned the fact-finding, and are hell-bent for a show-down power fight.

I don't see how, in the light of the facts, we can escape the conclusion that the steel show-down is round two in a fight of which the General Motors show-down has been round one. One thinks of the attitude of Grace and of Fairless, of the duPont family that has the big controls in General Motors, and of C. E. Wilson, who is their GM spokesman. A small group of powerful men in our Nation have decided that if the steel companies were to accept the Truman compromise it would leave the General Motors bitter-enders in the unendurable position of holding out in one sector of industry against a solution which another sector had accepted. This is the united front of industrial action. It is a class-consciousness at the top of the owning and managing class so bitter that it is willing to sabotage the key industries of the Nation. It is the Marxian theory of class revolution turned topsy-turvy, the pyramid standing on its head.

That there are some cracks in the united corporate front is shown by the case of Henry Kaiser, who has shown his industrial statesmanship in steel as in autos by signing his contracts with the two unions. But thus far one cannot argue too much from Kaiser. He is a maverick who has had to fight the bitter-end mentality of reaction among his fellows as he has had to fight the bankers.

Yet these are the men who have the brazenness to talk piously of the need for work and production; these men who for the ends of their own power are interrupting the work processes throughout the economy; who, to smash the unions, are paralyzing the production of the Nation; who, to recapture the inequality of economic power that existed before the New Deal, are willing to bring the key industries of the country to a standstill; who, to undo the history of the past 13 years, are willing to risk the existence of the economy and the democratic Nation.

What better name can we find for them than the gravediggers of America?

MAX LERNER.

Alleged Destruction of Food and Supplies

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. COCHRAN. Mr. Speaker, when I read in the papers an article which alleged that food and other supplies were being destroyed in the New Guinea-Australia area I immediately took the matter up with the Army Service Forces and also with Hon. W. Stuart Symington, the Administrator of Surplus Property. I told them that this charge should not go unanswered, and if it was true the people of the country were entitled to an explanation.

This morning there came to my desk a letter from Mr. Symington, and under the permission granted me I include it as part of my remarks. It follows:

SURPLUS PROPERTY ADMINISTRATION,
Washington, D. C., January 19, 1946.

Hon. JOHN J. COCHRAN,
House of Representatives,
Washington, D. C.

DEAR MR. COCHRAN: We regret the delay in replying to your communication of November 30, 1945, enclosing a United Press news item of November 26, 1945, bearing a New York by-line, concerning alleged destruction of food and supplies in the Finschaffen area of New Guinea by United States Army personnel

Inquiry was made of the Interim Foreign Economic and Liquidation Service for information concerning this matter. They advised that upon reading of the report of destruction in the paper December 6, 1945, they immediately requested their representative in Australia to investigate and report thereon. His reply reads, in part, as follows:

"United States Army officially denied wanton destruction. We believe allegations untrue and harsh criticism of Army not justified. Johnson and Sustare (assistants to

our representative) have seen situation at Finschaffen and similar points and effort made to meet situation. They report that supplies run gamut of everything armed forces might need and include used and unused as well as packed and unpacked property. Much used equipment beyond repair and much unpacked property beyond recovery. Despite tropic proofing and other measures all property is subject to deterioration including packed goods and capital equipment. Troop withdrawals heavy and native population very small. Local use will hardly dent present stocks.

"Material offered to Dutch and Australian Governments. Dutch purchases were substantial but in case of capital goods were confined to items which could be used on air fields and other installations in New Guinea. Australian purchases to date have not been large.

"Australia advised they could have reverse lend-lease food and other property returned or could negotiate for its sale to the Dutch. Various Australian and United States representatives both military and civilian have determined there can be little, if any, financial gain from further attempts to recoup. Any plan would involve hiring of personnel to repair, repack, guard, and reship.

"Consideration given to plans whereby food and certain other property which is in good condition could be carried to parts of the world where it could be used advantageously. Draw-back is lack of shipping space and manpower and continuous deterioratio. ."

"Our attention was also called to the fact that the Australian Purchasing Committee in New Guinea denied that large stocks of American supplies, including food, were being destroyed. This committee cabled the War Department that they regretted "that through an irresponsible and unjustifiable piece of journalistic reporting statements of destruction of United States stores and equipment at Finshaven had been published in New Guinea and Australia." Their cable stated that it was the unanimous opinion of all members of the Government party that the allegations of destruction were unfounded and were made without justification or any attempt at verification. They concluded by stating that they agreed that the interests of the United States were being effectively safeguarded in the face of considerable difficulties."

We appreciate your courtesy in calling this matter to our attention.

Sincerely yours,

W. STUART SYMINGTON,
Administrator.

Lee—A Pattern

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the News and Observer, Raleigh, N. C., of January 20, 1946:

LEE—A PATTERN

Yesterday was the birthday of Gen. Robert E. Lee. It is a State holiday, but in the stress and strain of national and international problems few paused to observe it. There is too much hate in the world today. The study of Lee's life and attitude would help eradicate it. In defeat of his armies, when hate in the North brought injury to the South he loved, and hate in the South cankered many minds, Robert E. Lee rose superior to that hurtful passion.

Lee loved his State so passionately he preferred to suffer with its people than to hold the highest position in the Army of the Union which his forebears had done so much to establish. When the fortunes of war went against the South he sheathed his sword "with malice toward none" and gave allegiance to the reunited country. More than that—he lived the Golden Rule and taught the youth of the South to eradicate hate and rebuild upon the foundations of the virtues he incarnated.

In an address on Lee's birthday in 1912 Governor Aycock truly said:

"Within a week I have read a book professing to be an appreciation of General Lee which says that he failed. I cannot believe that any man has failed, or the principles for which he contended have ever failed, when he has left to the world a life so rich and full, clean and serene, as to make every man who studies it desirous of doing something and being better himself."

In a world long rent by hate and oppression and war the example of Lee shines for guidance. He is the ideal pattern for all men not only in his beloved South but in all the world seeking brotherhood and peace.

Today all men should adopt this creed expressed by Lee:

"Duty, then, is the sublimest word in our language. Do your duty in all things. You cannot do more. You should never wish to do less."

Letter of E. M. Biggers of Houston, Tex.

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to all Senators and Congressmen:

HOUSTON, TEX., *January 10, 1946.*

To Every Senator and Congressman:

Justification for this appeal is that I have three little grandchildren coming up. It would be easier to say, as many others do: "Oh! what's the use."

This was held back until you returned to Washington and pressure the President asked be heaped upon you had fully fermented.

The President complained of pressure groups but said nothing of the worst sort which he has allowed to so completely surround him. A little cooperation with Congress, for a change, might work.

Many of us have prayed for the day Congress would take back the duties it surrendered to the Executive 12 years ago. Our present disturbed condition is chargeable to that surrender.

Being alarmed, I am presenting my views:

1. The greatest service Congress can render to the Nation, to its workers, and to industry is to correct the Wagner Act.

The Roosevelt New Deal Party passed the laws compelling industry to make so many deductions from the worker's pay check: Union dues, social security tax, withholding tax, unemployment tax—even bond deductions—all of which shrink his take-home pay.

Every worker bitterly resents having anything taken out of his pay check. Foreseeing the dynamite in this program the sponsors cunningly shifted the collecting job onto industry. These deductions are today largely responsible for the ill feeling toward the boss. The worker is not complaining about his salary. His No. 1 gripe is "take-home pay."

As a boy on a west Texas ranch, one of my jobs was to pull cattle out of bog holes. After yanking an old cow to solid ground I would place a tub of water and a pile of feed at her head, for which she seemed grateful. Next day I returned and if the water and feed were gone I knew she had gained sufficient strength so that an artful twist of her tail would make her get up. A bit wobbly she would shake her head and cast her eyes my way. Being the first thing she saw I was blamed for all her troubles. I was no longer a benefactor but an enemy. It was either beat it to my horse or get hooked.

The worker does not see the hidden hand that compels his employer to make the deductions. He does not see that industry has struggled to keep our Nation and our workers on the highest level in all the world. He sees the total of his pay check—then his take-home pay—and the boss is blamed for the shortage.

Repeal that unfair law. Give the worker his full pay check. Give him the privilege of paying his own obligations. He will feel like an American again. It may even cause some of them to think.

When a worker pays his deductions directly to the Government he will have the grim realization that he has been subsidizing his own serfdom. In no other way can it be brought home to him that he owes and must pay his share of the great public debt—a debt which hasn't yet bothered him one bit.

He might even become doubtful of the wisdom, the motives, and the sincerity of those who have used him for their own political purposes.

After listening to the President's broadcast it seems even more deductions are planned. If his pressure groups have their way we shall have hospital fees, medical fees, higher social security taxes, higher unemployment benefit taxes—then just a step to food, clothing, and shelter stamps—Soviet style.

2. I would like for you to say to England: "Quit sending your Laskis over here to criticize and find fault with our America (Madison Square Garden, September 24, 1945); the same Laski who advised England to join up with Russia against America" (Associated Press, January 13, 1946).

England and Russia both owe their survival to America. Criticism of us by their high officials is both ill-timed and a bad omen. Determine the loan-lose on its merits. Bought good will usually proves fickle.

3. I would like to see the United States Employment Service closed. It is a vicious bureau. Job seekers should not be dependent upon a political agency for bread and butter—is any employment agency really needed?

At a time when we so badly need full production millions are refusing to work—a little protection for those wanting to work would be better.

In closing may I express the fervent hope that if Mr. Wallace's predicted revolution arrives our Congress will stand firm in preserving the Constitution and thus save America from the tragic misery, want, and starvation that has engulfed all the ism-nations of Europe.

Yours truly,

E. M. BIGGERS.

The Strike Situation

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. WOODRUFF. Mr. Speaker, I have today received a letter from one of my constituents living in my home city. I believe he speaks the mind of a large majority of those who today are out of work because of the strikes taking place throughout this country. I, therefore, Mr. Speaker, under leave to extend my remarks in the RECORD, include therein the letter referred to. For obvious reasons I am deleting the name of the writer.

It follows:

BAY CITY, MICH., *January 17, 1946.*
Congressman ROY WOODRUFF.

DEAR SIR: As my Representative in Congress for my district, I am writing you this letter to let you know my opinion of the strike situation, in which I am forced not to be able to work in a General Motors plant, which I have worked in for the last 19 years under satisfactory working conditions to me.

My outlook on the whole situation is that there always will have to be a workingman, and we all cannot share alike and divide the profits as there wouldn't be anyone that would want to work. Another experience that I have seen a lot of during the war, when we all had lots of work and large pays coming in, was a certain number of employees that would only work part time when they were receiving some of these large pay checks. In other words, the more income for some of them the more absenteeism for them.

I now haven't any automobile, as my old one is worn out and had to get rid of it. I went down to put my order in for a new one and there were 154 orders ahead of me and no promise date on account of strikes. M washing machine is beyond repairs and my wife is using her sister's machine at present. I went down and put my order in for a new one and got a receipt to the effect that I get the three hundred and seventh one, with no promise date on account of strikes, as they told me in the store. Now, I believe in fair play, and since the war has been over I can't see anything fair to the citizens of this country, the way things have been going. I want to work and be happy as I have in the past, and be able to buy the necessities of life as I have in the past.

Respectfully yours.

Immigration

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. ELLIS. Mr. Speaker, I submit for the consideration of my colleagues an interesting and timely editorial from the Huntington Advertiser of December 28, 1945, published in Huntington, W. Va., and edited by Mr. Clyde A. Wellman. It is an indication that the thinking people of this country are greatly concerned about immigration.

IMMIGRATION

A State Department official just back from a mission abroad that carried him into several southern European countries is quoted as saying that "practically everyone in Europe would like to come to the United States."

We don't question the accuracy of the gentleman's observation. Why wouldn't people in Europe be happy to leave all the squalor, destitution, and suffering that have followed in the wake of a destructive war and establish new homes in America?

We have our problems, too. We are not getting along with our reconversion as well as we had hoped and should. We have a lot of unemployment. We have too many strikes, and industrial strife, instead of abating, promises to grow worse. But despite all these difficulties, nobody is hungry and nobody is cold; and everybody is privileged to enjoy all the good standards of living that obtained before the war. Indeed, America is a veritable paradise compared to the environment in which millions of wretched Europeans, with their cities and industries in ruin, live today. No wonder they would like to come to America.

The State Department official's report on their yearning is a forewarning of a serious problem which we must face in the years ahead. What are we to do about immigration? During the war immigration gave us no worry. The people who probably wanted to come to America were over there and had to stay as long as the fighting continued. When normal conditions return, however, the urge will be great throughout most of the war-ravaged countries of the Old World to start life anew in the American promised land.

When that time comes we should not be swayed by our sympathies. We don't want and don't need any new population through immigration. Besides, foreigners coming to us for the next few years will be destitute and, obviously, would complicate our economic and social problems. They would add to our unemployment numbers when, in the economic cycles, we shift from good times to bad times.

We shouldn't close the door to all immigration, but we need to maintain at all times a firm and realistic control on the inflow. We should lower our quotas rather than raise them, and do a thorough job of culling for high quality immigrants.

Adventure in Failure

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of January 19, 1946:

ADVENTURE IN FAILURE

One of the most revealing documents on the diplomatic negotiations which led to war with Japan, ushered in by the attack on Pearl Harbor, has been written by E. Stanley Jones, a widely known missionary of long experience in Asia. Dr. Jones tells the story of his activities as an unofficial mediator between the Japanese representatives in Washington and the White House in the fall of 1941.

Dr. Jones' account, published in the December issue of the magazine Asia and the Americas, contradicts the Roosevelt administration thesis, advanced during the Pearl Harbor investigation by former Secretary of State Cordell Hull and others, that there was never any hope of keeping the peace. Mr. Hull asserted that Japan was "hell-bent" on war, that "nothing would stop them unless we lay down like cowards," and that the Japanese emissaries, Admiral Nomura and Saburo Kurusu, acted in complete bad faith in all their dealings with him.

Dr. Jones says in reply, "The idea that all the Japanese officials and people were united in their approval of aggression against China and their plans for further conquests in the Orient, even to the point of war with the United States, is commonly held. It has been carefully nurtured by propaganda. The American citizen is supposed to believe that a united Japan undertook world conquest, with no inhibitions and no internal opposition. But the idea is disastrously false.

"Bear in mind that the most intense struggle was taking place between the militarists and the peace party in Japan. Had we been wiser we would have outplanned the militarists. If we had lent aid and encouragement to the peace party in their efforts to prevent war we could have made Japan an ally instead of an enemy."

Dr. Jones credits Nomura, Kurusu, and Prince Konoye, the premier, who recently committed suicide, with sincerity in trying to preserve the peace. He indicates that they worked more wholeheartedly to frustrate the war party in their own country than did our own leaders. He blames the war party for the final break, but he reminds us, "There was another Japan that did not want this war any more than many of us. People burst into tears on the streets of Tokyo, we are told, when news of the war came through."

As to the American attitude, Dr. Jones says, "I was not sure whether the highest officials in the executive branch of our Government really wanted peace. From the time of the Atlantic conference between President Roosevelt and Prime Minister Churchill in August 1941, the official attitude toward Japan had stiffened, bordering on belligerency. Senator CLAUDE PEPPER, of Florida, often a spokesman for the President, declared in a speech at Boston that if the Japanese crossed a certain line in the Pacific we would start shooting. Soon afterward severest economic sanctions were applied."

Dr. Jones found that Dr. Hu Shih, the Chinese Ambassador, wanted us to get into war with Japan. Great Britain, says Dr. Jones, was obviously trying to get us into the European war, as Mr. Churchill later openly said, and was not adverse to getting us in by the back door of a Pacific war.

"When I urged Lord Halifax to mediate between us and Japan and help avert a war in the Pacific," Dr. Jones recounts, "he replied, 'You will find my views in the enclosed speech I have made.' The whole tenor of the speech was—America must fight."

The real issue of the war, Dr. Jones contends, was empire. "It was driven home to me with keen emphasis how great aggressors the men of the white race have been," he states. "In the free-booting days, when grabbing was good, white men took all the available territory in the Pacific area before Japan woke up. * * * The Japanese suspected the United States of being willing to fight in order to preserve the white empires of the Pacific. That was correct, as time so amply proved. We did not go to the defense of China when she was attacked by Japan. In fact, we continued to send Japan our scrap

iron and oil. But the moment Japan threatened Indochina—a French possession—we were aroused. That touched a sensitive nerve—the prerogatives of the white nations' colonial possessions in the East."

Instead of negotiating to provide Japanese supporters of peace with a face-saving method of abandoning the program of conquest, Hull handed Nomura and Kurusu a memorandum, which, says Dr. Jones "could have no other interpretation than that of an ultimatum." Even in the face of the demands that Japan abandon the Axis, get out of China and Indochina, and acquiesce in equality of trade in the Far East, Dr. Jones says that the Japanese ambassadors did not abandon hope that we would still grant them a graceful means of surrendering all that the war party had gained.

Two days after the Hull ultimatum Counselor Terasaki, of the Embassy, in a note transmitted to Mr. Roosevelt by Dr. Jones, pleaded: "Don't compel us to do things, but make it possible for us to do them. If you treat us in this way we will reciprocate doubly. If you stretch out one hand we will stretch out two. And we cannot only be friends, we can be allies." There was no response, nor any relaxation of the pressure. As Dr. Jones says, "Our ultimatum * * * put Japan in a box. She had to knuckle under or else fight us."

In one of their last conversations Nomura told Dr. Jones that "it would be absurd for us to go to war over two air bases in North China." From a member of the Senate Foreign Relations Committee Dr. Jones got confirmation of the fact that Japan had reduced its request to this face-saving minimum—the retention of two air bases—as the price for acquiescing to the demands presented by Hull. He would not give even this much to avoid war.

In listing the causes of the war Dr. Jones says a principal cause was "the pressure of a war party that surrounded the President. A Supreme Court justice said to us during the negotiations, 'We have a war party as well as Japan. They are surrounding the President and making it more and more impossible to see him.'"

The Pearl Harbor Committee should call Dr. Jones as a witness. The country is entitled to know who the men were who sabotaged peace.

Robert E. Lee

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following address delivered by me at a special ceremony in Statuary Hall, the Capitol, in honor of Robert E. Lee on January 19, 1946, which was sponsored by the Washington chapter of the United Daughters of the Confederacy and presided over by Mrs. J. W. Johnson, president:

ROBERT E. LEE

EVEN IF WE PERISHED IN THE ENDEAVOR

As sons and daughters of the Confederacy, we are proud to proclaim our love and esteem for the man in whose honored memory we have gathered here today. Why? Who was Robert E. Lee, and what was it concerning the character and attainments of this modest soldier and statesman that secured an enduring regard among all men for his greatness and nobility?

REASONS FOR LEE'S GREATNESS

In an effort to fully emphasize what were, as well as what were not, the causes and conditions of Lee's high place among the great men of history, John W. Daniel, the renowned Virginia orator of a generation ago, concluded one his eulogies as follows:

"Did he wield patronage and power? No. He could not have appointed a friend to the smallest office. He could bestow no emoluments upon any of his followers. But an intimation of his wish amongst his own people carried an influence which the command of the autocrat can never possess, and his approval of conduct or character was deemed an honor, and was an honor, which outlived the stars and crosses and titles conferred by kings.

"Did he save his country from conquest? No. He saw his every foreboding of evil verified. His cause was lost, and the land for which he fought lives not amongst the nations.

"Did he gain wealth? No. He neither sought nor despised it. But he refuted the shallow worldling's maxim that 'every man has his price' and proved that true manhood has none, however great.

"Did he possess rank? Not so. Far from it. He was not even a citizen. The country which gave the right of suffrage to the alien ere he could read or understand its laws, denied to him the privilege of a ballot. He died a paroled prisoner of war, in the calm of peace, 5 years after war had ended."

So here is Lee: A man who possessed neither patronage nor power, who was unable to save his country from conquest, who failed to gain wealth, who died without rank or even citizenship—and still a man who stands foremost in the Nation's Hall of Fame. That Lee ranks foremost among history's honored great is reassuring proof of the fact that in the final analysis the human race possesses a proper sense of values and adjudges character more important than fortune. Robert E. Lee stands on high in the realm of national veneration because he gained more in the love and affection of his countrymen by being their humble servant than he lost by refusing to be their lordly master. His unswerving devotion to the duty that called him and unselfishness and sacrifice in its performance undoubtedly cost him the worldly fruits that his genius would have brought him if applied for personal gain.

THE COURSE CHOSEN BY LEE

But Lee chose a course that few men endowed with genius have been known to choose, and it was his choice of such a course which justifies differentiation in comparing his greatness to that of other men. It was that difference between Lee and others of this select company that inspired the biographer, Benjamin H. Hill, to declare:

"He was Caesar without his ambition, Frederick without his tyranny, Napoleon without his selfishness, and Washington without his reward."

By distinguishing himself in one particular set of circumstances a man may easily become well known and frequently what we call famous but it is only when a man distinguishes himself in every set of circumstances, as did Lee, does he win acclaim for the nobility of his character. As one writer has said, "The world is suspicious of vaunted heroes. They are so easily manufactured. So many feet are cut and trimmed to fit Cinderella's slippers that we hesitate long before we hail the princess."

We hail Robert E. Lee on this occasion because he measures up to our fullest conception of a noble person. We hail him not only as the hero of the Southern Confederacy, but also as the standard bearer of the highest principles and ideals of our Republic. It is especially fitting that we so hail him at this time because our continued progress and existence as a free and independent nation owned and operated by the free and independent citizenry of the United States is about to be tested in the crucible of postwar readjustment.

Writing to his son in January 1861, Lee said: "As an American citizen, I take great pride in my country, her prosperity, and institutions." Later, in the years following the war, he counseled patience and forbearance among his people of the fallen Confederacy and called upon them to work for the future good of the Nation.

SET AN EXAMPLE FOR THE REPUBLIC

In showing the proper respect for duly constituted authority and in conducting himself as an honest and sincere patriot of the land in which he lived, Lee set a high example that the people of the Southland have sought faithfully to follow. The record is very clear on this point. In three major wars which our country has fought since 1865 to preserve its national integrity and independence—the Spanish-American War, World War I, and World War II—the largest number of volunteers per capita serving in each of the three fighting forces required has come from the South.

And who can deny that right now—in the midst of the most serious industrial strife and economic upheaval this Nation has ever seen—the South, more than any other section of the country, stands as a mighty bulwark and anchor to our tossing ship of state. In this crisis I believe the South will lead the way toward a satisfactory solution of the basic problems which confront us.

This much I say without any fear of contradiction: The people of the South know and understand the need for keeping our country militarily strong. They will fight for the maintenance of an armed force equal in size and quality to the position we occupy among the nations of the world.

If pursuing such a policy, in order to insure our continued existence as a free and independent Nation, requires some sacrifice and inconvenience, I am sure that the grandsons, great-grandsons, and great-great-grandsons or granddaughters, great-granddaughters, and great-great-granddaughters of our Southern Confederacy will not complain or whimper because to them, like their forebears, liberty is always worth the price of personal sacrifice and inconvenience.

THE FULFILLMENT OF LEE'S HIGH HOPES

The courageous and sacrificial devotion to duty shown by our young men and women in the war just won establishes in my mind the solid and unshakable conviction that were Robert E. Lee alive today to behold their brave deeds he would be manifestly proud. Yes; we have just achieved victory in a war which was fought to preserve the independence of our Republic and, further, if the reasons may be given in Lee's own matchless words, because "we had sacred principles to maintain and rights to defend, for which we were duty bound to do our best, even if we perished in the endeavor."

Thus, we are able to meet beneath the statue of Lee today firm in the belief that this memorial to him stands now in the Capitol of a Nation which has fulfilled his high hopes and expectations. Let it be our prayer that as our lives run their courses and, knowingly or unknowingly, we come here for the last time to pay our respects, individually or collectively, to this immortal character that we may appear before him secure in the knowledge that the country which honors him has remained true to the high ideals and purposes he set for it. And finally, let it be our further prayer that this Nation, perhaps the most powerful and influential nation in the world today, our Republic, the United States of America, will ever remain true to the high ideals and purposes Robert E. Lee set for it.

Lack of Democracy in the Armed Forces

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. BIEMILLER. Mr. Speaker, one of the sore spots in our country today is the resentment of the enlisted man against the special privileges granted officers. This feeling has been intensified since the cessation of hostilities. I think most of the complaints are justified.

One definite action which the House could take promptly would be the passage of H. R. 4051, which would give terminal leave pay to enlisted men on the same basis that it is now received by officers.

To bring this entire question of discrimination clearly before the House, I am inserting an editorial from the Milwaukee Journal and an article from the Stars and Stripes, middle Pacific edition, which comment fully on the present undemocratic practices of our armed forces and offer certain suggestions to clear up present practices:

[From the Milwaukee Journal of January 19, 1946]

THE ARISTOCRATS IN UNIFORM

No one has to listen very hard or long these days to get an earful about the lack of democracy in the American armed forces. And the most vehement, persistent, and universal complaint heard from the veterans, and seen in the columns of the service newspapers, is against the officer caste system. The Stars and Stripes article on this page is typical of this opinion.

It is not alone the sharp distinction in matters of pay, authority, uniform, and privileges between enlisted men and commissioned officers that leads to this bitter criticism; more especially it is the flagrant abuse of prerogatives and position by some self-important officers, to which the system lends itself. No civilian without military service can fully comprehend the extremes to which the discrimination between officers and men can be carried, or how offensive it can become to men steeped in democratic traditions.

There can be no reasonable contention, of course, that an effective military organization can be wholly democratic in the ordinary civilian sense. Military effectiveness must be based on instant and unquestioning obedience to orders. There must be respect for authority, even where there may be no real respect for the individual exercising that authority.

But none of these necessities can justify the officer caste system which has its roots in the sharp class distinction of the Old World. Brave American officers by the tens of thousands who slept in the same foxholes, ate the same food, shared the same dangers and deprivations, and flew the same missions with noncoms and privates, earned the undying respect of the men they served with and yet sacrificed not one iota of their authority or prestige.

It would seem difficult, then, to uphold the military necessity for dividing our armed forces into two castes who shall wear different fabrics, sit in different sections of a theater, eat and drink apart, and generally keep aloof from each other except in line of duty. There seems every reason why the officer caste system ought to be drastically modified, if not abolished.

The moderate suggestion that the Army and Navy move in this direction by eradicating, as rapidly as at all feasible, the offensive distinctions between officers, as a class, and enlisted men, is most timely. For some time at least, the armed services will need standing forces far in excess of anything that America has known in peacetime. There is every indication that manpower in these standing forces will soon have to be maintained by voluntary enlistments, quite apart from any compulsory training devoted entirely to maintaining a civilian reserve for unseen emergencies. To induce a sufficient number of young Americans to enlist, military service must be made as attractive and democratic as can be.

[From the Stars and Stripes, middle Pacific edition]

OUR UNDEMOCRATIC FIGHTING FORCES—ENLISTED MEN IN LETTERS TO ARMY NEWSPAPER "GRIPE" AGAINST CASTE SYSTEM WHICH ALLOWS SPECIAL PRIVILEGES TO OFFICERS

The consensus of GI, swabbie, and gyrene is that the armed forces of democratic America are undemocratic; that the Army and Navy treat enlisted men as second-class citizens; that EM are subjected to humiliation and frustration from the very sources from which they have a right to expect support, encouragement and inspiration.

As a result, EM are returning from World War II hating and detesting military life. Very few who have served in the Army or Navy or who know what is in the minds and hearts of enlisted servicemen can doubt this.

For the future of our national security as well as the morale and efficiency of the Army and Navy, it is important to know why this feeling is so widely prevalent. It is even more important to do something about it.

Most EM complaints are concerned exclusively with officer privileges and behavior during off-duty hours and not in line of duty. A review of the letters to the editor column of the Stars and Stripes shows the following to be the officer privileges that gripe the men most:

1. A more plentiful and cheaper supply of liquor, especially in forward areas.

2. More adequate and attractive recreational facilities, such as clubs, beaches, and best seats in theaters.

3. Regulations which prohibit EM but permit officers to date nurses and Red Cross girls.

4. Permanent all-hour passes granted all officers but to few EM.

5. Near monopoly by officers of Government vehicles available for recreational purposes.

Far more significant than any single gripe, or all of them put together, is the resulting widespread bitterness, resentment, frustration, inferiority, and hopelessness so many EM feel. The whole thing adds up to a deplorably unhealthy state of mind. It is dramatically typified by that most rankling of all signs, "Officers' country," found on Navy ships and installations, and its Army counterpart, "Off limits to EM."

The solution to the "off-duty privileges" problem shouldn't be difficult to work out. All that is necessary is to treat officers and EM alike after working hours. This would be democratic and in accord with civilian practices.

But the mass bitterness of World War II's 10,000,000 enlisted men lies deeper. To root out all that is bad in the caste system demands a reexamination of the whole setup.

The Stars and Stripes has listened to thousands of its readers and thought about the problem at great length, and has come to the conclusion the fault lies in the division within the services connoted by the words "enlisted" and "commissioned."

Why should this division exist? Why shouldn't there be a steady progression from private to corporal to the various levels of sergeant to lieutenant to captain to field grade officers, and so on, to a five-star general? And similarly from a seaman to an admiral of the fleet?

Pay, responsibility, authority, and prestige would be graded upward just as they are now. But the other aspects of Army and Navy life—the ones which cause the gripes and bitterness, which make it virtually impossible for a master sergeant or a chief petty officer to deal with a second lieutenant or ensign on a basis of mutual respect and friendliness—should be leveled out and applied to all personnel alike.

This, of course, means much more than equalizing off-duty recreational privileges. Specifically, it means equal treatment for all personnel in regard to such matters as:

1. Clothing issue, except for insignia.

2. Rations and messing facilities. These two points mean that all personnel would receive free clothing issue and rations, equal in both quality and quantity.

3. Leaves, furloughs, discharge benefits, dependency allotments, and such things.

4. Military justice. At present, only officers sit in judgment instead of qualified men drawn from all ranks. This results in a double standard, with more severe punishment for EM facing the same charges.

5. Awards. During past years, officers have received a disproportionately large number of awards as compared to EM.

6. Promotions and demotions. EM have been "busted" frequently; officers rarely.

All this, we realize, entails a sharp break with tradition. But a caste system inherited from Frederick the Great of Prussia and the eighteenth century British Navy is hardly appropriate to the United States.

The aristocracy-peasantry relationship characteristic of our armed forces has a counterpart nowhere else in American life. It is notably at odds with American ideals of equality and democracy.

The Unknown Soldier of World War II Has His Say

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a copy of a brief sermon entitled "The Unknown Soldier of World War II Has His Say," delivered Armistice Day, November 11, 1945, in the Covenant-First Presbyterian Church, Washington, D. C., by its then minister, Albert Joseph McCartney, D. D., now director of the Chicago Sunday Evening Club:

Late one afternoon I made my annual pilgrimage to Arlington to keep my usual rendezvous with my friend of now many years standing—the Unknown Soldier of World War I. Musing there with the vagrant autumn winds sighing through the naked branches of the surrounding trees and watching the sentry pacing his rounds, silhouetted against the beautiful Potomac creeping slowly along in the distance, like the river of a man's life, and beyond it the Capital City gray and partly obscured by the heavy autumn overcast, the Unknown Soldier, true to his tryst, emerged from his

marble home and, stepping across the intervening pavement, took his seat beside me against one of the pillars of the amphitheater. As we conversed together I was telling him about World War II and discussing the problems confronting the Allied Nations in their effort at a constructive peace. Suddenly we were interrupted by the voice of a soldier whose presence had been obscured by our position, seated as we were against one of the pillars.

"Pardon me, sirs," he interrupted, "but I couldn't help overhearing your conversation. I happen to be an unknown soldier of the recent war, and I'm keenly interested in knowing how things are going and if the prospects for a world order are any better than they were after the last one."

"Sit down," I said, "and join us, won't you, please? And tell us something about yourself. This is our mutual comrade of World War I. What part of the country did you enlist from? And where did you see action?"

"Well," he drawled in unmistakable Virginia accent, "I haven't much to tell about myself. I was just a tail gunner in a bomber. I had 100 hours to my credit as a pilot in training, but got washed out at the last. We had a wonderful crew, for fortunately we had been kept together from our last training station. We learned to realize how each man's safety in that crew depended absolutely upon his concern for the safety of every other one in the crew. Our missions were around the Mediterranean, and off southern France. We went down on D-day and the whole crew was lost. Some of us were washed ashore; and that's how I come to be here."

He seemed exceptionally keen and mature, and betrayed amazing understanding of what the war was all about, for he explained to me that after graduating he had spent 2 years in postgraduate work in Europe. I then told him about the progress of the war from D-Day on, the final capitulation of Germany, and the later surrender of Japan, without an invasion. He was more interested, however, in what I had to tell him about the various peace conferences, and the plan for the new world order. He wanted to know a great deal about the men who were sitting in on those conferences.

"My big regret," said he, "is that we who have not returned will have no say in the making of the peace; and I do wish that some way could be found by which our feelings and judgments and point of view might somehow get across to the people who are in the peace making." He spoke with great emotion and earnestness. "Personally I have some very strong feelings about what ought to be done. I think many of our comrades whose lives have been fortunately spared ought to have more of a say than from what you tell me they seem to be having. Not many of those fellows who were so eagerly provided a seat in a fox hole, or the cockpit of a plane, have been allowed to sit in the gilded chairs at the peace conference. Surely, if we can be trusted and directed to brain a Nazi private with the butt of a Garand, or do some pin-point bombing around a great cathedral, we ought to be capable of knocking a few heads together with the putt of our logic—our moral logic. Some of us went over to fight for something we considered worth while, and because of our wide education we knew what we were fighting for. But we began to get a bit screwy when we found ourselves doing nothing but destroying. And now that the sands of war were running out, with little prospect of having anything to say about the constructive side of things, we feel shut out. We not only have fought, but we have thought, and we have felt, and now that our usefulness as destroyers is over, and our job of knocking things to pieces is done—we feel frustrated as we watch older men with portfolios grabbing all the seats at the table—men who have not actually sensed what war really means. It is we who have crouched with crawing stomachs in fox holes or cringed before plexiglass, as we watched the flack coming up at us, who can fully know what peace is. We feel an overwhelming sense of frustration, of being cut off, of never having a hand in what is to be done and decided."

At that I interrupted him to say that I appreciated his point of view, and that to a certain extent he was right; but in the last analysis he and his comrades must trust the older men who will do the peacemaking, and who will have the future in their hands, with their fountain pens.

"I do not mean, of course," he said, "that the peace table should be crowded by boys in their early twenties; but there should be some provision for younger men, thinking young men, who have felt the danger side of war, and the great good society such as we have felt in the comradeship of a squadron." At this point he began to speak as though he himself were one of the demobilized returning soldiers. "Certainly our voice ought to be heard in the peace recommendations and strategies. It's our generation of young men who have been decimated, and many of us went into this business voluntarily, with the vague idea that we would have a voice in what happened afterwards. I know that none of my comrades will have a chance to pound the table at some Versailles or San Francisco Conference; but I certainly would like to have the satisfaction of knowing that our purposes and ideals, and if I may say it humbly, our sacrifices, will not altogether be lost sight of in the snarling and quarreling confusion of the older peacemakers. We could tell them so much, for we who have come through this hell have learned so much more about what peace means, and many times have listed in our minds the elemental things that make for peace, as we have made a bomb run through the flack. But now we are voiceless * * *."

"Well," he continued, after a silence, "we've done our bit, and we're through. It is up to you who survive us to remember us and what we wanted to accomplish. For God's sake, don't let us down at the peace conference; but pause with pen in hand, and take my comrades the world over into account before you put your names to any peace document. Remember us. That is all we can ask of you now.

"We belong to a great comradeship on the other side, and we would like to rest in the confidence that it is not broken on this side, and that we have kept the faith."

There was a long silence, and the three of us instinctively arose and without a word saluted, and the two Unknown Soldiers, arm in arm, vanished down the steps in the gathering dusk, and disappeared into the marble home from whence they had so recently emerged, leaving me to gaze thoughtfully upon the inscription, "Here rests in honored glory an American soldier known but to God."

(NOTE.—The substance and wording of the "Unknown Soldier" conversation is taken almost verbatim from a letter written by Lt. Benjamin McCartney 6 days before he took off on his last mission and addressed to his copilot, who was then in this country. The letter was found a year after his death somewhere in Germany as the squadron had left the base in Corsica and moved to Germany and was forwarded to his home.)

The Red Dean

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 15, 1946

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Detroit Times of January 13, 1946:

THE RED DEAN

The Very Reverend Hewlett Johnson, Britain's Dean of Canterbury—often and appropriately called the "Red dean" of Britain because of his communistic views—has given the American people something new to consider in connection with the impending British loan.

Speaking at a Communist rally in London, he said that in everything except religion the United States is 100 years behind the rest of the world—and that in religion it is 150 years behind.

This seems to come with poor grace and in bad taste from one of the most highly placed spiritual advisers of a nation so recently saved—not merely once, but twice—from disintegration and destruction in war by timely and decisive American intervention.

However, let us take the "Red dean" at his word.

If America is so far behind the rest of the world in culture and education and all the mental and spiritual refinements and especially in religion, surely America should do something about it.

We should devote all of our energies and resources to the alleviation of this sad condition.

Of course, if we do this, we will no longer be able to divert our resources into loans or gifts for the benefit of other nations as we have so often done in the past and as we are now contemplating doing for the benefit of Britain.

In fact, the very first segment of our resources we should devote to our own rehabilitation should be the $4,400,000,000 we have been considering loaning to Britain.

If we are 100 years behind Britain in all things but religion and 150 years behind her in that—as Britain's Red dean frankly thinks and bluntly says—surely our need of the money is greater than the need of Britain.

By all means, therefore, let us keep it—since we are advised by so eminent an authority that we have so great a need for it.

And if we must spend the money, let us spend it for the enlightment of our people and to lift from them the veil of darkness which denies to them the higher and finer conditions of life to which those so far ahead of us have attained.

Let us no longer disperse and dissipate our resources—of which we are so unaccountably in such abundant possession—in profligacy abroad, at least until we have bettered our condition in sufficient degree that Britain can accept our largess as from an equal.

The Road to Hope

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. MICHENER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address of Hon. JOSEPH W. MARTIN, Jr., Republican leader of the House of Representatives, over the affiliated stations of the National Broadcasting Co. on Friday evening, January 18, 1946:

Nobody needs to tell you that the administration of our national affairs is lost in confusion. We all know America has been divided into factions

That is one condition the White House cannot blame on the American people.

It is the fault of administration leadership.

It is a failure of the men in responsible positions. It is the failure of a party—of an administration—an administration built up on the idea you can get people to work together under policies which set them against each other.

You are worrying about your responsibilities—and your future, in face of all this terrible uncertainty and confusion. Everyone is worried—employers, factory workers, religious teachers, farmers, housewives, veterans. Even little children are worried. Amid talk of violence, and war, and dissension, even they have been brought under the influence of a monstrous fear that has gripped this whole Nation.

Fear and concern cover the country.

That's a strange national reaction for the descendants of pioneers whose courage was the foundation of this country, for a people who, at the end of this war, were at the pinnacle of world-wide influence and whose prospects for the future were a shining example to all humanity. That's a very strange reaction for a people who in three short years out-produced and out-fought the Germans who had prepared for 12 years, the Italians who had prepared for 20 years, and the Japanese who had prepared for 40 years.

How can such a preposterous situation come about?

It comes from the failure of administration leadership—of leaders who cannot get us going, because they do not agree on where to go.

You and I know that unless those in political control of this Nation can get together on some common ground, then the whole fabric of society will tear apart.

That is exactly why the Republican membership of the House and the Senate went to work last fall to develop a set of principles on which we could all agree, without trying to write in specific details, which naturally follow the determination of principles.

Now principles are mighty important things. You can't have leadership without them. You cannot have constructive action without them. If your principles are wrong your actions will be wrong. If you have no principles at all—the result can be only the kind of confusion we now see all about us.

We Republicans in the House and Senate, said, "Let us try to apply common sense to these problems. Let us recognize there are farmers in America and they have a right to get along. There are working men and women in America and they have a right to get along. There are white-collar workers in America and they have a right to get along. Let us recognize there is such a thing as management—and a highly skilled calling it is—and managers have a right to live. Let us admit there's such a thing as the general public and the general public has a right to be served. Let us admit the United States is a part of the world and has to get along in it somehow. And finally, let us come right out and recognize that there are some things that are right, some things that are wrong, and there is such a force as moral principle."

We Republicans agreed on a set of principles which apply to all the important questions facing this generation of Americans. We know where we stand.

Now we have a basis on which to build constructive action for the future. That is the road to hope. Election of a Republican majority in the House of Representatives and in the Senate in 1946 will mean that after some 14 years you can expect a Congress capable of reaching common-sense agreements on the solution of national problems—a Congress capable of legislating in behalf of all the people in the United States—the guaranty that each individual American citizen, whether he is a farmer, a factory worker, a stockholder, a manager, or a white-collar worker, will get a fair break under the law. After 14 years you will no longer see the spectacle of a Democratic President lambasting a Democratic Senate and a Democratic House for failing to jump through legislative hoops at his command.

Now, here are some of the things we believe in:

We support the United Nations Organization for international peace. We look with particular hope to the General Assembly as the town meeting of the world wherein the organized conscience of mankind shall find effective expression in behalf of peace with justice.

We support the indispensable inter-American system as a regional part of the international organization.

We will engage in essential international relief as a humanitarian obligation and to prevent chaos through misery. We demand sound management and protection against exploitation in this connection. We will assist other nations to rehabilitate themselves under arrangements consistent with intelligent American self-interest and over-all limitations that shall not jeopardize our own economic recovery and stability.

We believe in fulfilling to the greatest possible degree our war pledges to small nations that they shall have the right to choose the form of government under which they will live and that sovereign rights and self-government shall be restored to those who have been forcibly deprived of them. We condemn any desertion of these principles.

We advocate ultimate international agreements to stabilize military establishments. We demand open diplomacy, at home and abroad, and free communication throughout the world.

We consider that the maintenance of a strong, solvent, free America is the basis of our greatest contribution to world order.

Those are our principles in dealing with foreign affairs. Now you will realize why Republicans in the House and in the Senate feel very concerned about the actions of the State Department and Secretary Byrnes. We are opposed to any betrayal of the small nations of the world in the making of the peace. We believe, and I repeat, in fulfilling our war pledges to the small nations that they shall have the right to choose the form of government under which they will live. There is language that is clear to the Poles. Clear to the Yugoslavs. Clear to all the other peoples of the world who now suffer oppression.

We reject great-power domination of the world. We hold that world peace does not require us to endorse alien doctrines or to abandon efforts to seek justice for the weaker peoples of the world. When we saw that the Secretary of State had disregarded the guaranties we gave small peoples in the Atlantic Charter, we were gravely concerned. We gave our word, our men, our money, because those peoples were promised freedom. Our action built up for America a huge reservoir of good will all over the world, greater than any nation has ever enjoyed in history. It was the kind of good will on which you could establish real understanding and cooperation between nations. It was the kind of good will that would mean success of our efforts to outlaw war. We feel that if we are going to avoid war, the nations of the world must subscribe to a higher rule of law above and beyond the selfish desire of any ruthless nation to plunder the wealth and to enslave the people of another.

But how are you going to establish such a higher principle unless you observe the first fundamental rule of good faith. Who likes a man or a nation which will disregard the spirit and the letter of a contract—in this case a blood contract. We must restore confidence between all peoples of the world. Global peace will never be achieved by compulsion. It must be gained through confidence and fair dealing.

We still must maintain our defense. We stand for a well-trained and fully equipped Army, Navy, and Air Force adequate to meet any emergency under future conditions of warfare. It must be supported by the most scientific research, a strong industrial system, and adequate reserves of trained men with the best weapons and equipment.

We want a strong scientific army. We want the best kind of national defense. This requires a strong industrial system and a unified people. Before we can have either a strong national defense or a sound foreign policy we must begin to clear up our problems at home.

The common-sense approach is to recognize facts for what they are, and face problems together in a spirit of cooperation. When we cooperate we can work out solutions beneficial to all. We must stop playing one group off against another to the detriment of all.

We all know government alone cannot feed the people, nor employ them, nor make the profits from which new enterprises and new jobs are born. Governments are set up by the people. The people are not the pawns of government. In other words, the Government cannot create any wealth, and it, therefore, cannot feed you. It has to take something away from you first and then give some of it back to you in another form. But government can help its people to prosperity by lightening the burdens of debt and taxes, laying down the rules of fair play, and protecting those whose own strength and resources are not sufficient to protect themselves.

We believe equality of opportunity should be available to all, regardless of race, creed, or beginnings. Every individual should be afforded an opportunity to prosper according to his talents, his abilities, and his diligence, subject only to a like right for his neighbor.

We condemn the political tactics which have resulted in class consciousness and strife. We oppose those who would destroy us through the continuation of such strife and struggle.

We reaffirm our belief in the right of labor to organize and bargain collectively with employers as one of the cornerstones of competitive enterprise.

For that purpose we believe that governmental decision must not be substituted for free agreement, but governmental machinery to promote peaceful settlement of disputes should be improved.

Free collective bargaining and contracts resulting therefrom must not be nullified or destroyed by resort on either side to willful violence or unlawful destruction of property.

Boiled down, the essence of our whole scheme of life in America is a three-way partnership between money, management, and labor. You need money to start and to operate a business. You need management to make it function and to sell its products. You need labor to produce the goods.

There is another system. You don't use money to start a business under that system. You use Government power. The Government says, "Set up these machines here and go to work producing. You will be paid what we think you ought to have. You stick at your job, whether you like it or not. You stay right there. There will be no labor union, either, because the Government wants to hear no complaints."

Money is not needed to start a business that way. All you need is forced labor.

Well, we do not believe in that. No American does.

We believe in the competitive system. Under the competitive system people can look to profit, improvement, and advancement. That is why they can put their hearts into their jobs. That is why they are attracted to work. Money, too, has to be attracted to work. Management has to be attracted to work. In addition they all have to work together. That is why, Republicans are opposed to Government extravagance and high taxes and interference by Government for political reasons with the plans

and the conditions under which the cooperation of money, management, and labor is possible. Responsibility and integrity, sanctity of word and contract, mutual tolerance and honest effort by each side to understand the rights and needs of the other, and by both to consider the rights of the whole people—these are the essentials of industrial peace, production and prosperity. That is why we're against the baiting of labor, the undermining of management, or the demoralization of money.

By the same token we are against any abuse of power by money, management, or labor.

We want more people to have more money. We want that money to buy more of the good things of life. We want to give you an expanding economy, an expanding hope, a strong nation, a united nation.

The restoration of this Nation of ours to health and vigor in an era of good will must be based on recognition of the common welfare. The interests of all men and all women and all children are bound up in and cannot be separated from the restoration of truth, honesty, courage, and principle, not only in the conduct of our Government but in the conduct of all our national, international, and even personal relationships. We must discard that kind of thinking which can tear a whole nation apart in class or racial rivalries and hatreds; the kind of thinking which makes deceit and evasion a policy of government; we must avoid the immoral and irreligious standard of expediency, which betrays the best instincts of America. This Nation has grown great because its people have been great. Our national character has been great because our personal philosophy of government was great. Our Nation has achieved because our people achieve.

The conscience of the people must be reinstated as the conscience of the Government. We must raise again as our ideals those principles which supported the Declaration of Independence, and out of which our Constitution had its birth.

You and I know that the only way a nation can make a shining mark in history is to be true to its own greatness. The leadership of the United States must be as great as the people of the United States, and you, my friends, are the only ones who can make it so. Good night.

First in War

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sunday Tribune of January 20, 1946:

FIRST IN WAR

Within the last week there have been two impressive tributes to the patriotism of Chicago, of Illinois, and of the Middle West. The war finance committee has announced that Illinois was first among large quota States in the sale of E bonds during the Victory Loan drive. Sales totaling $163,687,000 were 112 percent of quota. Another Middle Western State, Michigan, was third in the national ranking.

Col. John Slezak, on the eve of his retirement as chief of the Chicago ordnance district, comprising eight States of the Middle West, called attention to an even more gratifying performance by this area. In the direct supply of war material the Chicago ordnance district produced during the war more than $5,300,000,000 of ordnance—more than 20 percent of all that was produced in the Nation. Of this, northern Illinois and Indiana alone produced $3,400,000,000 worth.

Among the ordance items which flowed to American armies at the front from the Chicago district were 19,178 tanks and gun motor carriages, 237,529 trucks, 227,151,000 shells up to 90 mm., 23,408,000 shells of 105 mm. and larger, 23,216,000 bombs, 64,865 gun tubes, 26,268 gun carriages and mounts, 638,000 .30 caliber carbines, and 2,166,236,000 machine gun bullet cores. Output of these dimensions would provide munitions for great armies. Chicago district production was a heavy factor in bringing the victory.

Colonel Slezak called this accomplishment a production miracle and credited it directly to the patriotic spirit of the Middle West. "The record," he said, "is the more amazing when we consider that before the war started the Middle West knew little about making war equipment." That is true. There had never been interest in this sector in the profits to be had from munitions. Munitions and wars are inseparable and the Middle West knew that war meant death, debt, and incalculable disruption in the Nation and the world. Transitory profits exacted at such a terrific offset did not appeal to our industrialists and workers—especially when the gains were to be derived from wars that were not America's concern.

Because of this dedication of middle westerners to America's welfare, and to America's alone, the Central States were a favorite butt in the prewar and early war days. A propaganda campaign, organized and inspired by eastern interventionists and the New Deal administration, sneered at what was called isolationism, but which, then as now, was dedication to country without reference to the imperialist interests of Britain and Russia.

But when the country landed in the jam which the war party had so persistently and cunningly sought, it was the Middle West which responded wholeheartedly. This section supplied fighting men without peers. It produced war materials in vast quantities. Again and again Illinois met its war-bond quotas and led the States in purchases.

The chaos of the world today; the bankruptcy of American foreign policy; domestic strife; the discontent of the soldiers held against their will on overseas duty; the renaissance of Communist disruption; the mortgage on the future in the form of an enormous debt; and the aimless drifting of the country—these are the poor reward of middle western patriotism, which contributed so greatly to victory in a war that middle westerners didn't want.

Matthew Fontaine Maury, Pioneer in the Science of Navigation

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. BRYSON. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an address delivered by me on January 20, 1946, before the Arlington (Va.) Chapter of the United Daughters of the Confederacy at a special ceremony in honor of heroes of the Southern Confederacy, presided over by Mrs. Elizabeth C. Fred:

MATTHEW FONTAINE MAURY, PIONEER IN THE SCIENCE OF NAVIGATION

In the War Between the States the fighting forces of the South were in almost every engagement greatly outnumbered by the armies of the Northern States. In the matter of resources, the same lack of parity existed; the South was greatly outweighed by the North in industrial capacity to wage war.

That our Southern Confederacy accomplished so much with so little may be attributed to two things:

First, the incomparable courage and sacrificial devotion to duty of the men fighting for the cause of the Confederacy.

Second, the wealth of talent provided by Southern-born leaders in almost every field of endeavor who returned to take up the defense of their native soil.

Matthew Fontaine Maury was one of those leaders.

AUTHORITY ON NAVIGATION

At the early age of 30, Maury established himself as an authority of international fame on the subject of navigation by publishing a great scientific and technical manual which appeared under the title of "A New Theoretical and Practical Treatise on Navigation." His later published works included: "Wind and Current Charts of the North Atlanti- " "The Physical Geography of the Seas," and "Explanation and Sailing Directions to Accompany the Wind and Current Charts," in addition to many others too numerous to mention here.

We may perceive from the titles of his books that in his writings he undertook to advance the art and science of navigation by providing a more logical basis for its operations. In his research into such subjects as wind currents, Maury helped point the future of navigation away from dependence on guesswork. The influence which Maury exerted in this connection is reflected in the present-day high state of perfection existing in the art of navigation, not only on the seas but in the newer stage of navigation, the air, where pilots rely on the indications of carefully prepared data of the type originated by Maury and not the smallest degree of guesswork.

A great number of Maury's books were adopted as standard texts by naval institutions throughout the world, including our own United States Naval Academy at Annapolis. And incidentally, if you were to visit the Naval Academy today, you would note that one of the most impressive structures there bears the name, "Maury Hall." Also you would most certainly learn that midshipmen of the Academy know a great deal about Matthew Fontaine Maury. One of the Academy's most sought after honors is the Maury prize, awarded annually.

The man we have been talking about was born only a short way down the road from here, at Fredericksburg. In spite of all his distinguished attainments, I do not believe that Maury would object to our thinking of him as home folks, and I propose to do so in my concluding remarks.

RECOMMENDED STEADINESS OF PURPOSE

From Maury's writings I have found a message which he left for his home folks, a message which, upon this occasion to honor his memory, I recommend to you as strongly as his scientific writings are recommended to navigators everywhere. In this home-folks message to a cousin Maury said:

"I don't think that so much depends upon intellect as is generally supposed, but industry and steadiness of purpose—they are the things."

In a day when opponents of the tried and true American way of life seem to be organizing in an all-out effort to substitute for the principles of free enterprise, which rewards a man for effort, initiative, and merit, the promises of a deadly concept which holds

that the Government should give a man his sustenance whether he works for and earns it or not—in this day of challenge to the principles which made our country preeminently the most prosperous in the world, it is well to remember, as Maury said, "industry and steadiness of purpose, they are the things."

Slaughter Speaks Plainly

EXTENSION OF REMARKS
OF
HON. C. JASPER BELL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. BELL. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial from the Independence Examiner, Independence, Mo., Friday, January 18, 1946:

SLAUGHTER SPEAKS PLAINLY

Representative ROGER C. SLAUGHTER does not use common political language in dealing with problems that he believes are vital. He chops right at the heart of the tree and lets the chips fall where they may.

In his address to Congress yesterday he displayed a keen understanding of the public at this time. He knows what the people of his home community and of the Nation are thinking about in connection with the strike situation. He knows that they are concerned regarding their own rights and are greatly worried about the future under existing unilateral labor laws and policies.

His remarks should not be considered as an attack upon the administration. He rather conferred a favor on national leaders by helping to bring out in the open the two major problems now facing the country and by showing how they are so intertwined that care and judgment must be used in solving each of them lest the solution of one may prevent the solution of the other. Now when we are in the throes of strikes, tired and disgusted, we may hasten to bring about relief from the troubles between labor and management without giving due consideration to inflationary possibilities. If to further increase wages an increase in prices be granted, the dam against inflation will be further weakened and it will soon become so weak that it will entirely crumble away. When that happens the wage earners will be much worse off than if their earnings remained at the present standard.

SLAUGHTER has made many laborites boiling mad, and his tactics have been questioned by some of the administration leaders, but he has helped to make the issues clear, and his courage is generally admired.

Governor Dewey Making Provisions in New York State To Protect People of That State When Certain Federal Controls Are Removed

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. PATMAN. Mr. Speaker, I want to call the attention of the House to a very significant letter which Republican standard bearer, Thomas E. Dewey, wrote on December 22 to the Honorable Benjamin F. Feinberg, president pro tempore of the New York State Senate, and to the Honorable Oswald D. Heck, speaker of the New York State Assembly. The letter is as follows:

More than 1,000,000 veterans are coming back from military service to resume normal peacetime living in our State. Hundreds of thousands of war workers are likewise returning to their home towns after 4 years of service in war plants throughout the State and Nation.

As you know, the State administration, through its various departments, is doing everything in its power to provide emergency shelter for returning veterans and their families. The State administration is also cutting the red tape of government to insure the rapid conversion of existing buildings to adequate living quarters on former military installations for nearly 10,000 persons. We will continue to devote much of our effort in an attempt to meet this critical housing shortage.

But the citizens of our State may soon be faced with another problem—one which could easily affect every individual throughout the State who lives in or desires to live in a rented house or apartment.

During the war the Federal Government, carrying out its emergency wartime powers and acting through the OPA, put into effect a Nation-wide policy of rent control on dwelling units. This policy protects the tenant from excessive rent and greatly curtailed the threat of eviction.

These Federal controls, however, are only of a temporary nature and might be removed some time next year. It is imperative, therefore, that the State of New York take action in the coming session of the legislature to protect the tenants of our State against inflationary increases in rent. The problem is not limited solely to the State—it is Nation-wide—but I believe that New York must take action now to protect its citizens.

We dare not risk widespread dispossessions in our State. We must not remain blind to the possibility that if we do not act we could be faced with serious economic dislocations which could amount to nothing short of disaster.

I am writing you to ask that you join with Senator Feinberg in appointing at the earliest possible moment an informal committee from the legislature to study this entire problem of controlling our dwelling rentals so that action can be taken on it in the coming legislative session. Commissioner Stichman, of the division of housing, and my counsel, Mr. Birtell, will be available to the committee for a consultation, and I shall be happy to discuss the proposed program with them as soon as they are ready.

The entire problem of limiting rentals and the manner in which they should be limited is one which will require the greatest wisdom. In addition, it must be determined whether in the event the OPA is terminated this function should be taken over by a State administrative agency or whether it should be performed by the courts under careful rules, as has been done with commercial property. The whole field of new building remains one for careful consideration, and the question whether it should be included in rent control is one as to which the committee, I am sure, will wish to take expert testimony. I know that you will agree that it is our duty during this critical housing shortage to assure the right of any tenant paying a reasonable rental to occupy his premises without fear of eviction or threat of payment of extortionate rental.

Sincerely yours,

THOMAS E. DEWEY.

I want to read again two paragraphs from this letter:

During the war the Federal Government, carrying out its emergency wartime powers and acting through the OPA, put into effect a Nation-wide policy of rent control on dwelling units. This policy protects the tenant from excessive rent and greatly curtailed the threat of eviction.

These Federal controls, however, are only of a temporary nature and might be removed sometime next year. It is imperative, therefore, that the State of New York take action in the coming session of the legislature to protect the tenants of our State against inflationary increases in rent. The problem is not limited solely to the State—it is Nation-wide—but I believe that New York must take action now to protect its citizens.

I suspect, Mr. Speaker, that this may be an attempt by New York real-estate people to supplant effective OPA controls with weak State controls, but I submit there never was a clearer recognition of the continuing need for rent controls than that contained in this letter. Obviously, any Republican Member of the House who opposes continuation of rent control will go against a clear recognition of the need for it on the part of their party's standard bearer.

Congress is going to have to vote on the issue soon. I trust the Republican Members will follow Mr. Dewey in supporting continued rent control so long as the housing shortage remains acute.

Reports From European Labor—I

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks in further documentation of the desperate conditions now prevailing in the liberated areas of our allies in Europe, I want to call attention to the following excerpts from reports of the secretary-general, and of the Netherlands governmental delegate to the International Labor Conference, twenty-seventh session, held at Paris, France, October 15–November 5, 1945.

These factual and statistical statements are of value to Americans in and out of government for arriving at a true conception of Europe today:

EXCERPTS FROM PROVISIONAL RECORD, TWENTY-SEVENTH SESSION, INTERNATIONAL LABOR CONFERENCE, PARIS, OCTOBER 15–NOVEMBER 5, 1945

THE DIRECTOR'S REPORT: DISCUSSION

The SECRETARY GENERAL. It would not be proper for me to make any suggestion to the delegates as to what they should say in discussing the report which I have laid before you. I think, however, I might be permitted, as secretary-general of this Conference, to make a suggestion of a general character which, if it is followed, I believe would enable this Conference to render a service to the world at this time. In San Francisco some short weeks ago the United Nations laid the foundation of a world system designed to to secure to the world enduring peace and the possibility of building a civilization in

which there shall be economic security and a rising standard of living for all.

Since that time we have entered upon what the journalists call the atomic age, and Mr. Attlee, speaking in London only a few days ago, said that the choice before man is to have one world or none. The oneness of that world will not be created by any texts or any agreements. It can only grow out of sympathy and understanding between the peace-loving nations of the world. But that sympathy and understanding will be ineffective if it is not based upon knowledge.

We who have come across the sea have suffered some minor discomforts in Paris. We have been shocked to discover how grave have been the ravages of war on this continent. We have, I think, been filled with admiration at the cheerfulness, the courage, and the endurance of the people of Paris. But our experience must necessarily be very limited.

My suggestion, therefore, is this: We have in this Conference the representatives, governmental, employer and worker, from those countries in Europe which were successively invaded, occupied, and enslaved. These representatives, speaking from this tribune, are in a position to give to you and to the world an authoritative picture of the conditions on the continent of Europe which has not yet been given and which could not be given in any other way. They will give it to whom? They will give it, if they follow my suggestion, to an audience which has a special character. They will give it to the representatives of governments, to the representatives of great organizations of workers, and of the powerful organizations of employers who are the best intermediaries through whom that picture can be authoritatively carried to the rest of the world.

When I make this suggestion I am not unmindful of the fact—nor indeed will the conference be unmindful—that there are other regions of the world in which grave problems have to be faced. But the world is one world, and if we can take this small step of utilizing this meeting of the International Labor Conference in the center of Europe to secure this picture of the economic and social problems which have to be faced in Europe, we shall have made a contribution to the solution of the world's problem as a whole.

It is one world. We cannot hope to secure the objects of economic security and a rising standard of living in a mutilated world—and by a mutilated world I mean a world in which an exhausted Europe cannot play her full part and make her full contribution. We cannot hope to see a prosperous world if a battered and dismasted Europe is allowed to drift onto the rocks of economic disaster. We should, I think, bear in our minds the truth which we acclaimed at Philadelphia, that poverty anywhere is a menace to prosperity everywhere (No. 9, p. 35).

Mr. VAN DEN TEMPEL (Government delegate, Netherlands). On two occasions already I have had the honor of representing the occupied Netherlands, the first time at the International Labor Conference at New York, in 1941, and the second time in 1944 at Philadelphia. I now represent a free Holland. We are grateful for the liberation, and we are very thankful to the valient men and women from the Allied nations who took such an enormous part in this liberation. But it is a great heartbreak for us to realize the indescribable misery of our country, caused by the merciless foe; and the same remarks apply to Indonesia.

It would carry us too far to attempt to give an extensive picture of all the suffering which our country has had to endure, of the economic, social and financial disruption, of the great general shortage of the primary necessities of life, and of the great misery, both physical and moral, which, moreover, still exists. This picture, however, must in many respects resemble that of other European peoples—both great and small—which have been victims of German brutality.

In many respects the Netherlands is one of the most tried and tormented of the border countries of Germany. This is partly due to the fact that the glorious attack of the Allies in the autumn of 1944 could not be brought to a successful issue. The Allies performed outstanding deeds of heroism during the battle of Arnhem. But this temporary failure had awful consequences for our country. There followed the terrible winter of 1944–45. A part of our country had already fallen a prey to the sea. After the battle at Arnhem the Germans systematically extended the inundation, and a considerable part of the country was flooded.

In consequence of the heroic strike of the railway personnel who came out on strike at the request of the Allied Command, practically all civilian transport had come to a standstill. Very soon famine was raging in the towns of an already exhausted country. During that winter our families lived on a few potatoes, with now and then a piece of bread, but chiefly on sugar beets. Fuel was so scarce that people demolished the houses in order to get firewood. Hunger oedema spread rapidly.

If this situation had lasted even for a short time longer the consequences would have been catastrophic. These months of famine have imprinted deep marks on our people.

The 5th of May 1945 saw the liberation of the Netherlands. As from this date reconstruction has been firmly taken in hand, and one can already notice a considerable progress compared with the deepest point of misery and dislocation. The Supreme Allied Headquarters greatly and efficiently assisted us with food supplies, which have been deeply appreciated, and help was rendered to us by various countries in different ways. As a result of this aid and of our own efforts we progress step by step. The Dutch people eagerly desire to rise to their former state of prosperity and social progress after this catastrophe, which overtook us through no fault of our own.

But it would be dangerous to give free rein to illusions. Reconstruction and rebuilding are still in their very early stages, and if relief and help for rehabilitation and reconstruction were stopped or reduced, or if some misfortune were to befall us, the consequences for our people would be very grave indeed. It is an unfortunate coincidence that at the same time Indonesia, as a result of Japanese aggression, is in very difficult circumstances, and that the reconstruction and reinforcement of the basis for future cooperation, on the principle of equality, must be accomplished at a time when we need simultaneously so much of our energy for the reconstruction of the European part of the Kingdom.

Restricting my remarks to the Netherlands, I have to point out with much emphasis that, though we are making good progress, a satisfactory restoration will require great efforts over a long period. This reconstruction will only succeed on condition that international help during the transition period is really effective. There is no doubt about the fact that the prolongation of economic and social dislocation in Western Europe involves great dangers, not only to the countries directly concerned but also to the international situation as a whole.

We are gathered here in order to further the great purposes of the International Labor Organization, but we must fully realize that the problem concerning full employment and social progress in the countries we have in mind will not arise in the near future in the ordinary and traditional way. These countries must first of all, if I may say so, embark on a struggle to maintain themselves by very elementary methods, and they will have to seek sympathy and help from the Allies.

The Acting Director states in his excellent report, on page 161, that "the immediate problems of Europe were vastly graver in nature and extent than had been assumed." We are longing for the realization of the social aims of the International Labor Organization both in our own country and throughout the world, but, as the Acting Director very rightly states, on page 161, "long-term policy has no significance unless the short-term policy has been successful."

Confining myself to the Netherlands, the dislocation everywhere is still tremendous, the food supply is still scanty, there is an appalling shortage of clothes, shoes, and all types of requirements. This shortage of the necessities of daily life literally gnaws the energy of the population. Public-health conditions are still bad; the mortality rate is high, while infant mortality, for example, is at present still nearly four times the normal figure. There is an acute housing shortage. In districts where bombing or land warfare caused widespread destruction people now live in cellars and barns.

The picture of the economic life is by no means much more favorable. None of us will ever forget the sight after the German withdrawal of the desolate and grey water sides covering the once prosperous and fertile territories. Economic life has been totally undermined by the occupation. In particular three principal factors, complicated by many others, dominate the situation—transport difficulties, the shortage of electrical energy, and the shortage of raw materials.

The merchant navy has dropped to half its former tonnage, and for the time being this remainder is almost exclusively in Allied service. The inland fleet, which is of enormous importance in our country with its network of inland waterways, has suffered great losses. The railways, in addition, have also suffered enormously. The coal output must be considered as very precarious. Industry, in which half the population of the Netherlands makes its living, has been seriously affected by the looting and destruction of its machinery and equipment. Nevertheless every effort has been made to restart industry. Work is carried out with the limited facilities at our disposal, but for the near future everything depends on the possibility of fresh supplies.

The monetary system and public finances have been dislocated in an almost incredible manner. Strong measures have been taken to purify our monetary system. Radical financial reforms are in preparation. The national debt has mounted fantastically. Energetic steps are being taken to keep price and wage levels under control. But, under present circumstances, it is extremely difficult to reach definite and lasting results—all this without even mentioning the moral consequences of the war and of occupation, and the evil influence on youth, teaching, and education.

As to the labor market, a general well-founded survey is difficult to effect in these times of changing circumstances. Some characteristics, however, can be given. Intellectual and skilled labor is actually very much in demand. This is to be explained partly by the temporary extension of controlling bodies in every walk of social life and partly by the time lag in training caused by the war.

Of course, there is also the demand for ordinary labor for the work of clearing away debris and for repairs. The Government has just issued an order whereby the superfluous laborers of the towns are forced to accept work in the devastated areas under penalty of the loss of their right to unemployment benefit.

In spite of the demand for repairs, the danger of unemployment lurks in the distance. The only possible solution is to be found in the restoration of normal production, and resumption of normal production, as I have already mentioned, is none too near.

It is obvious that the problem of restitution of labor, and in connection therewith the problem of training and retraining, will play an important part in this respect. Equally obvious is the importance of the education of youth, and the care to be devoted to physical and mental health. But this, too, cannot be realized in the absence of a normal economy; and again normal production cannot be obtained in the absence of international cooperation.

In this connection we venture, in this international gathering, to make the following observations. The position of a small nation in the struggle for recovery is, under the present international political and economic circumstances, far from favorable. The small nation is in many respects dependent on the other powers. Take, for instance, the material stolen by the enemy, a large part of which is still in Germany. It would not be unreasonable to expect that a member of the united and victorious nations could retrieve, within a reasonable time, its stolen property from the country of the beaten enemy, so that its own wounds could be healed and its rehabilitation furthered. But a small nation is dependent on the Great Powers; and while these powers are full of understanding and ready to help, this process of restitution takes a very long time indeed under the present circumstances—longer than can be borne by an exhausted people.

The problem, however, must be visualized on broader lines. The present distress is so great that the question of sufficient help to the liberated countries is one of life and death. Yet it is only during a period of transition that a nation can live on help from abroad.

The Netherlands have always acted on the principle that they will pay, up to the limit of their capacity, for the goods they receive, and they long for the time when they will be able to pay regularly for their imports with their own exports and services, as they have always done in the past. But to do this necessitates, apart from the reconstruction of machinery and of production, and the disposal of raw materials, the possibility of reviving exports as soon as the first elementary needs have been satisfied. One of the obstacles to the more or less complete recovery of the liberated countries in the near future is the fact that their export markets will for the time being be unattainable, if not entirely lost. This applies to countries both large and small.

We are obliged to speak frankly about this matter. In this respect also the position of the small countries, which played an important part in the international market before the war, is more difficult because of the fact that the predominating position of the great powers prevents them from influencing to any great extent the development of the international and monetary policy. Their possibility of self-help in these matters is limited, and, in my opinion, it is there that a great danger lies for the future development and enforcement of the international spirit, for the feeling of solidarity, for international relationships, and for democracy.

The return to a more or less normal state of affairs in the liberated and devastated countries will be a question of many years, even if international solidarity fully develops. The all-important question is: "Will this solidarity manifest itself in the right way, on a sound basis, while at the same time remaining effective and comprehensive?" It seems to me impossible to overemphasize the interest of the whole world in the achievement of an early and sound recovery by a common effort.

Peace, democracy, and social progress are here at stake. We need not have any illusions about the widespread influence of antidemocratic or totalitarian fascist thought in all forms and disguises in many parts of the world. The economic and social misery in the period between the two wars was one of the main causes of this phenomenon. German nazism inspired hope in many hearts at the time of its rise to power. Do not let us underestimate the significance and the force of these influences, do not let us underestimate the influence of the years of economic and social misery on the minds of a tormented generation. It might well prove disastrous if, after the total defeat of fascism, there should follow years and years of economic and social destruction, of misery and disillusionment, while democracy should fail to find a solution for the inevitable difficulties.

Allow me to stress another point of view in this respect. The world wants at this moment commodities of every kind. But during the war the free countries have developed an enormous power of production, and this power will be maintained after the conversion from war economy to peace economy. It may well be that the time is not so far away when it will be difficult to find a market for this growing production, while many parts of the earth will be destitute. The marketing difficulties of well-equipped industries producing at full speed will be increased by the purchasing power in many parts of Europe and other continents, which is still inadequate. Depressions, though not, of course, really comparable to the depression of the thirties, will become manifest and will have the same effect. The result will be a fatal state of affairs, especially in those countries still in the acute stage of recovery and rehabilitation. The political and social repercussions would then be catastrophic.

We realize with a feeling of gratitude that the free peoples have already proceeded to set up the machinery necessary to insure the smooth progress of the future political, economic, and social development of the world. We applaud the application of the functional principle in the new world organization. It remains to the glory of the deeply regretted President Roosevelt, and it is an invaluable result of the great Anglo-American cooperation during the war, that this development has already been prepared and the foundations laid for the future organizations.

But it is now most urgent that this international machinery, animated by the spirit of the Atlantic Charter, should be set to work without delay to relieve the acute distress, and, above all, to shorten the period of recovery, rehabilitation, and reconstruction. This would enable impoverished Europe, bled white by a cruel war, to reach a phase in which a new and happier structure could be built on a solid economic and social basis (No. 12, pp. 64–66).

Who Is Striking?

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mrs. DOUGLAS of California. Mr. Speaker, while Congress has been in recess the UAW-CIO-GM strike has continued, with a great loss to the Nation, to the corporation, and to the strikers in wages which they would have received had the strike not occurred.

In addition to the direct loss suffered by the parties to the dispute, reconversion has been slowed up.

In this and other industrial disputes the public is often too prone to accept the easy explanation of blaming labor, without inquiring too closely into the circumstances which led the workers to the final desperate step of going out on strike, cutting off their wages, their means of daily livelihood, and imperiling their security for the future.

Fortunately, in the GM dispute, the union has, from the beginning of its negotiations gone to unusual pains to lay its case before the public. I refer to pages 9939–9946 of the CONGRESSIONAL RECORD of October 24, 1945, containing the text of a wire addressed to Senator JAMES E. MURRAY, by Walter P. Reuther, vice president and director of the GM Department, UAW-CIO, and the text of part I, part II, section 1, and part II, section 2, of the union's October economic brief; and pages 10411–10414 of the CONGRESSIONAL RECORD of November 6, 1945, containing part II, section 3 of the October economic brief submitted by the union, inserted by the senior Senator from Idaho.

At this point under unanimous consent, I insert in the RECORD the text of the UAW-CIO General Motors' council letter to President Truman dated January 13, and also an article appearing in the January 12, 1946, issue of the Nation, setting forth briefly the union's position in the wage dispute which is now 59 days old:

[From the New York Times of January 14, 1946]

TEXT OF GM STRIKE COUNCIL'S LETTER TO PRESIDENT TRUMAN

DETROIT, January 13.—The text of the letter which the General Motors council of the CIO United Auto Workers sent to President Truman today follows:

"Delegates to the National UAW-CIO General Motors Conference, representing 300,000 workers on strike, have carefully considered the report of your fact-finding board in a special meeting in Detroit today.

"We have voted to recommend to the General Motors workers that they accept the board's recommendations of a 19½-cent-an-hour wage increase and reinstatement of the 1945 contract on the following conditions:

"That you are successful in persuading the corporation to reconsider and accept the board's recommendations by January 21, 1946. We are willing to postpone achievement of our full equity in the situation in the public interest. For that reason, and that alone, we make the above offer.

"Unless the corporation changes its present position and accepts the recommendations, it must assume full responsibility for prolonging the strike and for forcing upon the General Motors strikers and the Nation further hardship.

"In the event the corporation does not accept the board's recommendations by January 21, we shall have no choice but to withdraw our offer to accept the board's recommendation of a 19½-cent-an-hour increase and insist upon our equitable demands.

"If you are able to secure the corporation's acceptance of the 19½ cents increase and the reinstatement of the 1945 contract, and the corporation negotiates a satisfactory settlement of local issues, on that basis we are prepared to terminate the strike."

BOARD'S STATEMENT HAILED

"We welcome the clear statement in the fact-finding board's report that the wage increase will not require any price increase. We believe that this represents a smashing victory for the General Motors workers, for the policies of your administration, Mr. President, and for the American consumers as a whole.

"We believe that the courage and sacrifice of the men and women who have manned the

General Motors picket lines for nearly 60 days deserves the honor and respect of every American for the successful fight they have made to hold the price line. They have been and still are a bulwark against higher prices and inflation.

"Our offer to you, to accept the board's recommendation for a 19½-cents-an-hour increase, is made as our contribution to the national interest and with a view to achieving full production and full employment at the earliest date.

"We are constrained to say that the 19½-cents-an-hour figure does not grant the GM workers the increase which the arithmetic of our case proved and justified.

The 19½ cents wage increase which the fact-finding board recommends represents a finding of fact for the volume of production achieved in 1941.

"The fact-finding board, in assuming that 1946 production levels would not exceed 1941 levels, departed seriously not only from the facts of the General Motors case but from the objectives of new high levels of production and employment without which the economic basis of peace cannot be achieved.

"General Motors workers have more faith than your fact-finding board in America's ability to achieve record levels of production in 1946. The war demonstrated the productive ability of our tools of abundance.

"We want to use these tools of abundance in peace and we want to use them in full in 1946. Record volume of production in auto and other industries can be achieved in 1946. Maximum production is our most potent weapon against inflation. 1946 levels of auto production will far exceed the 1941 levels.

"The board's report lays the basis on which the General Motors workers can in the future rightly claim additional compensation as we achieve these higher levels of production."

"CAPRICIOUS" ACTS CHARGED

"We believe you should call to the attention of the American people the record of capricious irresponsibility displayed by General Motors in this dispute. The General Motors Corp. refused to bargain in good faith, refused Government conciliation, rejected arbitration, scorned cooperation with your fact-finding board, and now, within 24 hours after its report was issued, and without giving it serious consideration, General Motors has rejected the board's recommendation.

"It is regrettable that in our democracy the managerial clique that rules this $2,000,000,000 corporation can be self-deluded into thinking of itself as a sovereign state, not subject to the same moral laws that regulate our other institutions and not responsible to the interests of the Nation and its people.

"Since the corporation has rejected the board's recommendations, we are forced to intensify further our strike action.

"We are, therefore, informing you that we are requesting the UAW-CIO strike strategy committee to take steps to see that UAW members in tool and die jobbing shops immediately cease work on all General Motors work.

"If necessary, we shall ask that the same action be taken in plants working on General Motors parts and accessories, in order to bring the full weight of the union's economic pressure to bear upon the corporation. This is an economic weapon whose use we had withheld thus far in the hope that a fair settlement could be reached without resorting to that action. But apparently economic force is the only language this insolent corporation understands."

[From the Nation of January 12, 1946]

THIS IS YOUR FIGHT!

(By Walter P. Reuther, vice president of the UAW-CIO and director of its General Motors department)

DETROIT, January 3.—In the confusion of peace, much of it carefully planned, we are in danger of losing the clear view of postwar needs which we had during the war. Administrative agencies, congressional postwar planning committees, and business groups, such as the Committee for Economic Development, were generally agreed during the war that after the war we must produce and consume at least 50 percent more than we did in prewar days to avoid a return to chronic mass unemployment. They were agreed that a return to prewar levels of production—and consumption—would mean 19,000,000 unemployed.

This conviction was expressed in the Department of Commerce study, "Markets After the War," which became the bible of the CED. It was reiterated by Senators JAMES E. MURRAY and Harry S. Truman in the 1944 year-end report of their War Contracts Committee, in which they proposed a bill to insure full employment. Last July, Fred Vinson, then Director of War Mobilization and Reconversion, put it this way: "We are in the pleasant predicament of having to learn to live 50 percent better than we have ever lived before." In August, before VJ-day, the Board of Governors of the Federal Reserve System published Post-War Economic Study No. 1, "Jobs, Production and Living Standard," in which these statements were made:

"We shall have an opportunity of living better than we ever have in the past, but only if we so manage our economy as to provide markets for a much larger total product than we have ever had in peacetime.

"Purchases of all classes of goods and services could and should expand greatly. A rise of 40 or 50 percent above prewar levels in consumption goods will be possible and necessary. This would mean that people would buy many more cars than they did during the 1930's, many more ice boxes, and several times the amount of some other goods and services. * * * Resources will be available for this rise in national well-being, but it will require a well-planned and vigorous national public and private business policy to realize this unequaled opportunity.

"We must not accept the miserable alternative of having our products piling up as surpluses for lack of markets and have their output shrink in consequence. We must not suffer our wealth to be the cause of our poverty, or permit the abundance of our resources to be the basis of our want. * * *

"If there is to be a market for the goods and services that will be produced, if employment is to be maintained, the Nation's income must not be permitted to decline materially."

Four days after VJ-day President Truman announced the national reconversion wage-price policy: free collective bargaining between workers and employers was to be restored and wage increases were to be approved up to the point where price increases would result.

On the same day, August 18, the United Automobile Workers of the CIO filed with the General Motors Corporation a demand for a 30-percent increase in hourly wage rates without price increases, asserting that this increase was needed to make up for the loss in take-home pay resulting from abolition of overtime and downgrading in jobs. We said that such an increase in wage rates was directly in the national interest as stated over and over again during the war, that it was in line with the national wage-price policy, that it was necessary to maintain purchasing power during reconversion. We pointed out that to make progress toward a standard of living 50 percent better than we had ever known it was first necessary to hold our ground, to stay where we were, economically, when the war ended.

It seemed to us that the way to begin was to begin. It was only fair to call upon the General Motors Corp., the most profitable corporation in the most profitable industry, to lead the way. We were convinced that past earnings, the certain market for capacity production for at least 3 years, and the lower unit costs of a volume 50 percent above prewar days made it possible for the automotive industry generally—and General Motors most conspicuously—to pay 30 percent higher wage rates without increasing prices and at the same time to pay dividends higher than the high prewar rates.

However, our demand was never "30 percent, or else!" as some editors, politicians, and propagandists have charged. From August 18 up to now we have offered to scale down our demand by whatever amount was proved necessary to prevent an increase in prices. But we said that until and unless G. M. proved it could not pay 30 percent, we would not reduce our demand by one red cent.

On October 2 GM turned down our demand as "unreasonable." No counter-proposal was made.

In dismissing our demand as "unreasonable" and in arguing in page advertisements that higher wages meant higher costs and higher prices—suppressing the basic production fact that 50 percent greater volume will mean lower unit costs—General Motors was, to our view, pleading inability to pay higher wage rates.

On October 19 we began presentation of an economic brief in support of our demand. We addressed ourselves to the question of GM's ability to pay. We invited, urged, and begged the GM representatives to discuss our facts, figures, and arguments as presented. They refused. They said, "Go ahead, and when you're all through, we'll make our answer." We read our case to the soles of their shoes perched on the edge of the negotiating table, and to the back of Liberty, which they said was "more interesting than the crap you [the union] are giving us."

When our case was all in, on October 26, Harry Anderson, vice-president of GM, said they would answer us in 10 days. That was at 5 o'clock in the afternoon. Three hours later, on a Nation-wide radio network, he gave GM's answer—a flat rejection.

In the course of the so-called negotiations GM shifted its ground from inability to pay to a refusal to discuss the corporation's ability to pay. In our view the change was made because GM knows that the arithmetic of our case is taken from its own reports and published Government sources, is confirmed by facts hidden in the corporation's books, and is uncontrovertible. This was made plain when GM made its formal answer to our brief on November 7. GM offered the union a wage increase of 10 cents an hour—subsequently increased to 13½ cents—hitched to the right later to use the increase in applying to the OPA for higher prices. (When we asked if GM would offer even a 1-percent wage increase without a price increase, the answer was "no.") In addition GM renewed its proposal that the union join the corporation in petitioning Congress to amend the Wage and Hour Act to raise the normal workweek from 40 to 45 hours.

The UAW-CIO could have settled this wage dispute long ago, without resort to a strike, if the General Motors workers had been willing to join the General Motors management in a double conspiracy against American consumers clamoring for 18,000,000 cars, and against millions of returning veterans and laid-off war workers, including more than 100,000 former GM workers with seniority rights. We could have agreed to take a wage increase and have kept quiet about price increases which, spreading out from automobiles in spiraling inflation, would have taken 15 cents or more out of one pocket for every dime put in the other in high wages. We could have joined the corporation in ganging up on Congress to legalize a longer normal work week at a time when unemployment of between six and nine million is predicted. We could have drawn down on the head of labor the whole blame for the rising pressures of inflation and its dis-

astrous results. We could have focused on labor the justified resentment of millions of unemployed veterans and laid-off war workers. We could have drunk the cup of pure economic poison which the GM management poured out and enticingly set before us on the negotiating table day after day.

Instead, faced with the deliberate, contemptuous, and provocative refusal of GM to bargain collectively in good faith by discussing the ability to pay, and having vainly offered to submit the dispute to arbitration, the GM workers on November 21 went on strike to obtain the demands presented on August 18. The strike, with an appeal to the opinion and judgment of the American people, was their only remaining economic weapon.

Today, with the strike in its second month, and with the GM attitude being copied by other employers across the whole country, General Motors workers and their families are the front-line troops in a home-front war to win the very peace that only 5 months ago it was generally agreed we must have if the war aims of the "four freedoms" were to be more than a sour phrase on the lips of apple-selling veterans of World War II. On GM picket lines and in UAW-CIO union halls and soup kitchens in a hundred American towns and cities the eyes of GM strikers see the postwar needs of this Nation as clearly now as when they were stated before VJ-day by our business and political leaders.

They are exercising the right of free collective bargaining. One of these days the GM management will agree to move the bargaining back from the picket lines to the conference room and to write a contract with the UAW-CIO, which will maintain the purchasing power of GM and other workers, including the farmers and businessmen from whom those workers in years to come will buy more or less, depending on the wages they receive.

Until that day, the strike of the GM workers is the fight of all Americans who want a lasting peace of full production, full consumption, and full employment, year in and year out, spreading beyond the United States, by example, not by conquest, to the rest of this fevered and unhappy world.

Amendments to the Servicemen's Readjustment Act of 1944

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, I am inserting in the RECORD, under unanimous consent, the most important changes made in the Servicemen's Readjustment Act of 1944—the GI bill—as amended by Congress and signed by the President on December 21, 1945. These changes will bring up to date those discharged service men and women who have already received the handbook for service men and women.

EDUCATION AND TRAINING

Extension of time: The time during which a course may be initiated is extended from 2 to 4 years after discharge or end of the war, whichever is later, and the time limit for completing the course is raised from 7 to 9 years after end of the war.

Age limit removed: Any eligible veteran now may receive 1 year of education or training, plus additional education (up to a maximum of 4 years), for total length of active service. He need not have been under 25 years when he entered service, nor need he show that his education was interrupted by war service.

Short intensive courses: Courses are no longer limited to a cost of $500 for an ordinary school year. Short intensive courses may be undertaken and the additional cost prorated against the period of eligibility to which the veteran is entitled at the rate of $500 per school year. No such short course may cost more than $500.

Correspondence courses: A veteran may apply to take a correspondence course under the new provisions, but he is entitled to no subsistence allowance. One-fourth of the elapsed time used in pursuing such a course is charged against the veteran's period of eligibility. Total amount payable for correspondence courses for any veteran is limited to $500.

Subsistence allowance increased: Monthly subsistence allowances are increased from $50 to $65 for veterans without dependents, and from $75 to $90 for veterans with dependents.

VOCATIONAL REHABILITATION OF DISABLED VETERANS

Extension of time: Vocational training under Public Law 16, involving more than 4 years of training, may be begun by a disabled veteran, subject to Veterans' Administration approval, and the time for completing such training is extended from 6 to 9 years after the end of the war.

Subsistence allowance increased: Disabled veterans now will receive a minimum of $105 per month without dependents, $115 with a dependent, plus $10 for the first child, $7 for each additional child and $15 for any dependent parent. This represents an increase over previous allowances. If the veteran is receiving a lesser pension he will receive the above amounts while he is in training status. In no event will his pension be reduced by entering training.

GUARANTY OF HOME, FARM, AND BUSINESS LOANS

Guaranty is automatic: These loans may now be made by any lending agency which is subject to examination and supervision by a Government agency, and restrictions of certain Federal laws are removed. A loan becomes automatically guaranteed if the lending agency and the veteran close the deal, the terms being in accord with the provisions of the act. The only other requirement is that the cost does not exceed the appraisal made by a Veterans' Administration designated appraiser. Loans made by individual lenders (not falling in the class of approved institutions indicated above) must obtain prior approval by Veterans' Administration in order for the loan to be guaranteed.

Amount of real-estate loan guaranty increased: Any loan on real estate may be guaranteed up to a maximum guaranty of $4,000 of the loan, as compared with a $2,000 limit under previous law. The Government guaranty remains 50 percent of the total loan up to the maximum amount. The business loan guaranty limit remains at $2,000, or 50 percent.

Amortization limit extended: Real-estate loans may be amortized over a period up to 25 years, and farm-realty loans up to 40 years. Maturity on nonreal estate loans may not exceed 10 years.

Purchase of lots: Proceeds of a loan may be used to purchase a lot in connection with home construction.

"Normal" value out: Phraseology of the previous law is changed from "reasonable normal value" to "reasonable value" in connection with appraisals of property upon which a guaranteed loan is sought.

Loan purposes broadened: Provisions of the act are liberalized so that loans may be made for all ordinary farming purposes, for any normal business enterprise, and so that existing indebtedness in default may be refinanced in connection with all types of eligible loans.

MISCELLANEOUS PROVISIONS

No deduction from future bonus: That portion of the law (sec. 1505), which provided that any financial benefits received under the act would be deducted from any future bonus authorized, is repealed.

United States veterans in Allied service now eligible: Anyone who served in the active military or naval service of an Allied Government and was a United States citizen, when entering such service is eligible for the benefits of the act and Public Law 16 (78th Cong.). He must, however, be a United States resident at the time claim is filed, and must not be receiving similar benefits from another nation.

Persons on terminal leave: Educational and loan guaranty provision of the act, and vocational rehibilitation under Public Law 16, are extended to persons on terminal leave or who are being hospitalized pending final discharge. No subsistence allowance may be claimed, however, by persons taking education or training under the act or under Public Law 16. This section is made retroactive to June 22, 1944, when the original Servicemen's Readjustment Act became law.

Artificial limbs: Provision is made to insure ample authority for VA to procure prosthetic appliances for veterans and instruct them in the use of such appliances, including payment of any expenses involved in the veteran's traveling to and from the center where the appliance is fitted and training given in its use.

Office space for service organizations: Veterans' Administration is authorized to provide office space, if available, to paid, full-time representatives of recognized veterans' organizations.

Veterans' Administration procurement of space: The act makes permanent Veterans' Administration authority to procure necessary space for administrative, clinical, medical, and out-patient treatment purposes by lease, purchase, construction condemnation, or declaration of taking. This authority previously was limited to 6 months after end of the war.

PROVISIONS NOT CHANGED

Major provisions of the law which remain unchanged are:

Eligibility requirements: A veteran must have served in the active military or naval service on or after September 16, 1940, and prior to the termination of the present war. He must have been discharged or released under conditions other than dishonorable after active service of 90 days or more or because of an injury or disability incurred in line of duty.

Hospitalization program: Veterans' Administration is "authorized and directed" to expedite additional hospital construction and to establish all necessary administrative offices to make veterans' benefits more readily available.

Review of discharge: Ample provision is made for review by the War and Navy Departments of unsatisfactory discharge from service. A new amendment, of minor importance, is designed to clarify the intent of the law.

Job assistance: All previous regulations relating to Government assistance in helping veterans obtain employment are continued. The United States Employment Service and the Veterans' Placement Service Board are directed to cooperate in seeing that all veterans, able and willing to work, obtain employment.

Readjustment allowance: Unemployed veterans who register with an office of the United States Employment Service are entitled to a readjustment allowance of $20 per week while unemployed. An eligible veteran may receive such payments up to a maximum of 1 year, depending on length of service. Self-employed veterans with net earnings of

less than $100 per month may receive an allowance amounting to the difference between net earnings and $100 in any month, up to a maximum of 1 year, also depending on length of service.

WHERE TO APPLY FOR BENEFITS

Prosthetic appliances: Any Veterans' Administration hospital or regional office.

Education and training: Any Veterans' Administration regional office or at the school you wish to attend.

Vocational rehabilitation: Any Veterans' Administration regional office.

Loan guaranty: Any eligible lending institution as outlined above. If negotiating with a private lender, any Veterans' Administration regional office.

Review of discharge: The War Department or the Navy Department, whichever was your branch of service.

Job assistance: Nearest office of United States Employment Service.

Readjustment allowance: Register at nearest office of United States Employment Service.

Some Reflections on the Progress of Science and the Magnuson-Kilgore Bill

EXTENSION OF REMARKS
OF
HON. CHARLES L. GIFFORD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. GIFFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which was published in the 1945 Bulletin of the American Association of University Professors:

SOME REFLECTIONS ON THE PROGRESS OF SCIENCE AND THE MAGNUSON-KILGORE BILL

(By Theodore Koppanyi, Georgetown University)

A disruption of serious proportions in American science is threatened by a bill pending in the Congress which provides for the regulation of scientific research. This bill, popularly known as the Magnuson-Kilgore compromise bill, would establish a National Research Foundation to direct and subsidize science. The effect of the passage of this bill would, in my opinion, be as destructive in the field of science as the atomic bombs were destructive of the Japanese cities of Hiroshima and Nagasaki.

Reference to the atomic bomb in this connection is more than figurative. The movement to bring about governmental control of science is given its chief impetus by the fear and bewilderment which the coming of the atom age has had on legislators, scientists, and the public alike. Confronted by the haunting spectre of destroyed Hiroshima, intelligent men throughout the country are crying for emphasis on science such as we have never seen before.

This widespread recognition of the importance of science is wise. But the pending bill to promote science is not.

In an analysis of the bill a basic wrong immediately leaps to the eye. This is the assumption that scientific research can be "initiated" or "prescribed for."

If this assumption could be grounded, the natural sequel to a National Research Foundation would be Federal foundations to initiate and prescribe for the composition of music, the painting of pictures, the writing of poems, and the establishment of social controls and education, for science is probably the most personal and individualistic of all human endeavors. No agency, however authorized and directed, can develop a national policy for scientific research.

THE NATURE OF SCIENTIFIC RESEARCH

It is generally understood that scientific research attracts and requires a peculiar type of mind, a mind dedicated to the search for truth and devoted exclusively to that end. The scientist knows that he is seldom rewarded with financial success or even with widespread public recognition. He may enjoy the sense of masterly performance, but his primary motivation is intellectual curiosity. The life pattern of the scientist cannot be bought with money nor can it be the product of regimentation. In fact, there are not many milieus that are favorable for the development of a scientific mind. The development of that kind of mind needs an unhampered, unrestricted, unregimented freedom to explore. Scientists must not only know that which is known, but also must possess an awareness of the significance of the unknown and an active curiosity to explore the unknown. For projected jaunts into the realm of the unknown, the true scientist is unwilling and unable to formulate blueprints. In the every nature of the case, he must at all times work experimentally, and his best work is done when he works alone or in the company of sympathetic colleagues who are similarly motivated.

In practice, of course, scientists are not left entirely to themselves. Usually they are members of university faculties or of research institutions and, as such, they have certain duties to perform. It is to the credit of most of the administrations of these institutions, however, that they do not interfere with the freedom of the investigations of scientists and ask few or no questions as to the progress of their research, with the result that few persons outside the institution have any knowledge of what is going on in the institution's laboratories until the results are published in technical periodicals. To be frank, one of the principal reasons why university scientists have enjoyed this freedom is the fact that scientific inquiry has been regarded as an innocent pastime or a hobby and the appropriations for scientific research regarded as a reward for faithful work done by these scientists as teachers or administrators. Be that as it may, the freedom that has been accorded university scientists constitutes the principal reason why university research has brought forth such significant results.

The university scientist does not have to make elaborate petitions for grants and contracts with detailed blueprints; he merely has to get a modest sum of money for the purchase of some necessary instruments, chemicals, glassware, or laboratory animals and then start on his research, responsible only to his own conscience.

It is possible to distinguish between two types of scientific research. One, which marks a fundamental advance over that which is known on the basis of a hunch or intuition and which, since its actual goal is still beyond the horizon, cannot be organized, regimented or, in any real sense, directed. It may yield nothing or it may result in great discoveries. The second type of pure research, along with all applied research, is of the spadework or routine type. The fundamental discovery has already been made, the goal is already in sight and all that is needed is to corroborate, to extend, and to apply the basic observations made. Such research may be organized and directed both in the laboratory of pure science and of industry. In fact, this has been the common practice.

An example may illustrate better the meaning of all this. Insulin was discovered as the result of the great achievement of Joseph von Mering and O. Minkowski, of Breslau, Germany, who had removed the pancreas of dogs and then accidentally stumbled upon the discovery that these depancreatized animals developed diabetes (1889). It is obvious that this kind of discovery could not have been planned or contracted for. Many years later (1922), Frederick G. Banting and C. H. Best, of Toronto, Canada, already knowing that the pancreas elaborates a substance regulating carbohydrate metabolism, actually extracted this substance from the pancreas which others had previously tried to do but did not completely succeed because their extracts were either too toxic or, because of the presence of a protein-digesting enzyme in the pancreas, were inactivated rapidly. Banting and Best had the new idea to extract only the islets of the pancreas allowing the other, the enzyme-containing part of the gland, to degenerate by previous ligation of its duct. Even this discovery would have been hard to organize or to contract for, but now, since the role of the pancreas in diabetes and insulin was known, it became only a matter of time to extend this knowledge, to improve the method of extraction of insulin from the pancreas, to study the action of insulin in animals and in diabetic patients, to purify it and finally—and here is where industry came in—to improve the yield of insulin from animal material and to work out methods for its mass production. This latter type of research, both basic and applied, can and should be organized, directed, and, if you will, contracted for because it is a costly undertaking. In fact, we can depend upon our alert industries to take the lead in initiating and supporting such research.

Basic discoveries in science may be the result of accidents, are often made by the scientist working on a fallacious hypothesis or on the basis of correct theory but the discovery made on the correct basis was not anticipated and turned out to be far more important than the original goal. In this connection, think of Columbus. His working hypothesis was correct, the Indies can indeed be reached by sailing westward, but instead of arriving in Cathay or India he discovered a new continent.

And again, think of the other possibility. Chloral hydrate and chloroform were both discovered by the German chemist, Justus Liebig, by 1832, but the anesthetic action of chloroform was not demonstrated until November 1847, by Sir James Y. Simpson. Liebig himself observed that when chloral hydrate is acted upon by an alkali, chloroform is developed along with a formate of the alkali employed. The discovery of the first hypnotic (sleep-producing drug), chloral hydrate, by Otto Liebreich, of Berlin, is a typical example of how a wrongly conceived working hypothesis can lead to correct results and great discoveries. Liebreich knew of the work of Liebig and Simpson and assumed that the ingestion of chloral hydrate would lead to a slow liberation of chloroform in the body producing a soporific effect. In 1869 he announced the discovery of chloral hydrate as an effective sleep-producing agent. It became so widely used that by 1878 the consumption of chloral hydrate was estimated at 1 ton daily in England and America alone. And yet, as we know now, none of the chloral hydrate is converted in the body into chloroform, chloral hydrate producing its soporific effect by virtue of its own molecular composition.

THE PROMOTION OF BASIC SCIENCE BY A NATIONAL RESEARCH FOUNDATION

Every scientist knows that some of the most important discoveries in the history of science have been made by accident or on the basis of false assumptions. Walter B. Cannon calls it "serendipity," which is defined as "that happy faculty, or luck, of finding unforeseen evidence of one's ideas or, with surprise, coming upon new objects which were not being sought." This is the way

penicillin was discovered, through "serendipity."

Is "serendipity" by act of Congress feasible? Suppose, then, the National Research Foundation should farm out a contract to a scientific investigator for the purpose of discovering a diagnotic test for cancer. Suppose the researcher, during his studies, stumbles upon a drug whose possibilities might be as interesting as those of penicillin. His assignment is to find a test for cancer. So he plugs on at the task for which he has contracted, and what might well have been the most important outcome of his research falls by the wayside until another appropriation is forthcoming for the development of the new drug.

One of the major arguments put forth for passage of the Magnuson-Kilgore measure is that, while this Nation is far ahead of the rest of the world in the field of applied research, we trail behind in basic research. Is this really true?

Almost a century ago, the science of the fossil world was revitalized in this country. With the beginning of this century, after a few feeble European attempts, the experimental method was introduced into morphology, embryology, and allied biological sciences. The Columbia School of Scientists made the study of heridity an exact science. Remember the early American Nobel prize winners: Albert Abraham Michelson in physics, Theodore William Richards in chemistry. Since when have we been behind in basic discoveries? We may be behind in basic science now because some of our most promising youngsters have been absorbed by the armed forces. We may have, for a 5-year period, a lost generation of basic scientists, but since other nations, even those who had a more intelligent approach toward the problem of draft deferments for science students, fared as badly as we did, the situation is not too disturbing. It would hardly interfere with our leadership or, perhaps more modestly, our relative position in the field of basic sciences.

However, whether we are ahead or behind the world in making basic discoveries of scientific phenomena that contribute to man's well-being, the Magnuson-Kilgore bill would do little to help us forge ahead. No amount of Federal money can nourish the genius of the individual scientist devoted to the advancement of knowledge. Actually, Federal money would do more to impede basic research than to further it.

For one thing, research achievement cannot be measured in terms of money. One could point to many relatively poor laboratories in this country where greater discoveries have been made than in some of the best endowed institutions. In fact, if it weren't too indelicate one could enumerate examples showing that the same individuals when working under extremely modest conditions and stress produced great work and both the quantity but particularly the quality of their work diminished when they were placed under very favorable, in fact opulent, circumstances. Also, generally speaking, one cannot maintain that the richest and best equipped research laboratories produce the best and most significant work. I never heard that the discovery of insulin was made possible by huge grants or contracts, nor have I understood that the much-publicized penicillin was discovered by Alexander Fleming in a magnificiently equipped and endowed laboratory.

But, as Al Smith once was reported to have said, "You don't shoot Santa Claus." Why should I as a scientist worry if some poorly supported laboratories are granted Federal funds? The answer is that the plan to establish such grants will impoverish many scientific laboratories. If the bill is passed, even the present modest sources of support may be withdrawn from the scientist who does not get the National Research Foundation's stamp of approval.

Let us take the case of an investigator who has been doing fairly well with the modest support provided by his university's funds. The Magnuson-Kilgore bill is passed. The researcher asks his dean for the continuance of support. The dean may reply: "Apply to the foundation. They have plenty of money to support your research. If it is worth while, they are bound to approve it." And so he applies. The foundation does not think his idea is sound. So he goes back to his dean and asks again for university funds. But the dean says "No," arguing that if he has been turned down by the foundation the university cannot afford to take the chance of supporting his research.

Industry, according to estimates of Dr. Vannevar Bush, Director of the Office of Scientific Research and Development, footed fully 70 percent of the total scientific bill in the United States just before the war. It is also stated that of this amount only about 5 percent was devoted to pure basic research and the rest of it went for the support of applied science needed by the production program of the particular industry. The bulk of money for pure research came from philanthropy and the budgets of educational institutions. It is much to be feared that if the foundation undertakes to appropriate, let us say, $5,000,000 per annum for medical research, this sum of money will be considered amply sufficient by many educational institutions, only lukewarm in their support of research, to take care of the needs of all their staff members on the medical faculty. They might consider themselves relieved of the responsibility of supporting the research programs of their own employees. To make the long story short, much of the fundamental research in this country was supported by driblet contributions, and these driblets may evaporate suddenly if the providers of these driblets get the idea that the Federal Government will take care of all worth-while research.

Dr. Bush, one of the chief supporters of the Federal aid program to research, himself states that "discoveries in medicine have often come from the most remote and unexpected fields of science in the past; and it is probable that this will be equally true in the future. Discovery cannot be achieved by directive." I trust that Dr. Bush realizes that a directive does not have to be a positive dictation from above. There is another equally dangerous kind of directive, direction by elimination and discrimination. All you have to do is to reject all applications for one type of research, approve all applications of another kind of scientific blueprint, and you are directing research all right, and nobody but the victims need to know anything about it. And this kind of direction or coordination is the one to be dreaded, the silent treatment which may be accorded to individuals or institutions unpopular, unorthodox, or for some reason open to suspicion in the eyes of the authorities of the moment. It may hit me today and hit you tomorrow. It could easily lead to a selective elimination not only of certain institutions and individuals but also of certain ideas and theories alike.

The theories and ways of thinking of scientists are as diverse as the world itself. How can we set up a court with the power to pass on what is good and what is not good for science? It might have the same effect as having a court of art, directing artists to follow only the pet artistic theories of members of the board. Although few people are aware of what every scientist knows, science is as much an expression of the individual human being as any of the arts.

One feature of the Magnuson-Kilgore bill, however, would very likely aid in promoting basic research. This is the granting of scholarships for scientific education. A scholarship will not stifle basic discoveries; it will promote them, if the graduate scholar is permitted to do research on his own and not under the aegis of a Federal agency. But even here safeguards are necessary. It is essential that Government scholarships and fellowships be distributed on a regional basis, not only with reference to scholars but also with reference to colleges. Chances are that if the Government were to give scholarships with no reservation as to where they might be spent, the great majority of budding scholars would gravitate toward the highly endowed universities of the East. The small southern, western, and midwestern colleges, where many a discovery has been made despite scarcity of funds, would suffer and perhaps become sterile.

However, it is a fallacy to think that the selection of promising young scientists whose lives are to be devoted to the advancement of scientific frontiers can be based on competitive examinations or school records. The biographies of eminent scientists reveal that no fool-proof method of selection can yet be proposed. The point is that we should not fall into the error of believing that the foundation will be able to select and salvage all the available human scientific material. We should beware of a situation where all the future generations of scientists are handpicked by Government agencies, becoming, as it were, after graduation active or reserve officers of a Federal scientific army.

ADMINISTRATION OF THE NATIONAL RESEARCH FOUNDATION

The question whether the foundation be presided over by a director or by a committee representing some of the outstanding scientific brains of the country is less important than the fundamental problem of administration of this supreme court and treasury department of science. Since there cannot be any national policy of science as there is a national policy of labor or finance, it is pointless to argue that a director appointed by the President of the United States would apply Democratic or Republican Party politics in managing the affairs of the foundation. He would obviously have to be advised on every detail in carrying out the directions embodied in the act of Congress by one or, more likely, many committees of experts. The question again is whether any committee, however ably selected, can or should organize or give directives for scientific explorations into the unknown.

The history of scientific progress clearly shows that hypotheses of youngsters were often "pooh-poohed" by the authorities of the age and not seldom the youngsters proved right and in their turn became the authorities who again "pooh-poohed" the ideas of the younger generation and were again succeeded by still other youngsters. The flow of progress springs from the undeveloped sources of intellect inherent in newcomers on the scene and the authorities, regrettable as it may seem, have to pass on. To empower authorities of any age or even any decade to act as supreme arbiters of science stifles the rise of foolish youngsters or unpopular colleagues and stops science.

The proponents of the bill assume that the selection of the best scientists of the moment as heads of the foundation will insure that under their direction the progress of science, that is, the exploration of the unknown will be maintained or even accelerated. These leaders in science have for the most part explored some segments of the unknown, but should be the first to admit their lack of omniscience and their inability to forecast the directions which such explorations of the unknown should take. If they could make such forecasts, the hypotheses on which future research is to be based would already be known and the actual investigation already under way in their own laboratories. What we are dealing with, therefore, is an attempt to organize what in essence is unknown. This is obviously not regarded as feasible or practical by scientists acquainted with the actual methods, trials, and tribulations of research and can be classed only as

a mirage envisioned by well-intentioned individuals who have never been initiated into research or, if they have, never have analyzed the course of their own and their colleagues' progress. What is required, more than good intentions and optimistic visions of a scientific millenium, is a face-to-face acquaintance with the hard, real facts of science and how it progresses.

Problems in basic science should not be submitted for approval or disapproval to any director or to any group of directors of any foundation. We may take it for granted that clairvoyance is not a common characteristic of human beings, not even of great scientists. And it would take nothing short of clairvoyance to pass upon, to coordinate, or to farm out fundamental research problems. The spadework type of research, however, whether pure or applied, may be rendered more efficient by governmental or industrial cooperation. The fact of the matter is that such cooperative research programs have been under way for many years. They are responsible for the many improvements in the standardization of food products and drugs and, last but not least, for forging the weapons of our victory.

The Food and Drug Administration probably knows best how to organize and direct an extensive research program to safeguard the health of the Nation, and the Army and Navy authorities should be the final judges as to the needs of a scientific national defense research program. A national research foundation, if one is needed, should confine its activities (a) to supporting Government research particularly in the interest of public health and national defense, (b) to coordinating such Government research activities in the sense that it should try to eliminate duplications, and (c) to securing the cooperation and expert advice of private laboratories and individuals in the interest of such research programs. It should be distinctly understood, however, that the freedom of science and scientists should not be impaired by this program, even if the individual investigators happen to be Government employees. The foundation should not attempt to monopolize the direction of basic research and should refrain from putting the stamp of approval or disapproval on individual scientists, laboratories, or institutions.

Incidentally, the bill proposes that the members of the advisory committees of the foundation be compensated on a per diem basis. The task these men are asked to perform, however, is a most important and responsible undertaking. They could not be expected to do it properly in their spare time, in a more or less amateurish fashion. They are faced with a tremendous responsibility, and their public responsibility should be emphasized by adequate remuneration, preferably by generous per annum salaries.

CLARIFYING THE ISSUES

My objections to this bill are not based on the old fear of Federal control as such. Many controls that have been established by the Federal Government were and are necessary in the interest of the general welfare and have been and are being wisely administered. In this connection I have in mind the Pure Food and Drug Act, the Securities and Exchange Act, the Fair Labor Standards Act, and the act creating the Interstate Commerce Commission for the regulation of railroads. All of these regulatory acts were opposed by the private interests concerned on the ground that they were attempts by the Federal Government to regiment private business. This, however, was not the purpose of any one of them, nor has it been a result of their enactment. An abundance of evidence shows that these controls were necessary in the interest of the general welfare and that they served this useful purpose. In support of the proposals for governmental regulation of science, however, it cannot be said that such regulation is necessary in the interest of general welfare, nor can it be said that scientists who oppose such regulations are motivated by selfish interest. That fact, plus the fact that governmental regulation of scientific inquiry, whether by the Federal Government or the government of several States, would impede scientific development to the detriment of the general welfare, constitutes the basis for my opposition to the Magnuson-Kilgore bill.

In this connection it should be clearly understood that the above arguments are not directed against Government sponsorship of research for national defense. Without imitating the Nazi's Wehrwissenschaften, i. e., subordinating all scientific activity to the Nation's ability to make war, we must still have science for defense. Let the Government develop bombs, gases, airships, and other war materials. But let us not confuse the science of war with the science of peace and pure science. Let the Government and its scientific aids study all problems that may be of possible use in the next war. Let this scientific program be as inclusive as possible. But let us not permit the Government, or rather a group of scientists advising the Government, to regulate the science of peaceful discoveries and inventions.

Such regulation by directive or by negative elimination would have a completely deadening effect on scientific advancement in the United States. Did I say United States? If I read the English of the bill correctly, more is involved than that. One version of the bill says that at least 20 percent of the money appropriated for the National Research Foundation must be spent for the programs of the Division of National Defense; 20 percent must be spent on the Division of Medical Research. That leave 60 percent of the funds unguarded. There is nothing to prevent, in the bill as it is presently written, expenditure of 60 percent of the appropriated funds on inquiries into the daily habits of sheep in Yugoslavia.

There is a provision in the bill for dissemination of scientific information and exchange of scientific intelligence between this country and abroad. There is hardly any need for a new Government agency or for more funds for this purpose. We have able popular science writers and an adequate number of popular scientific magazines; we have Science Service supplying newspapers, magazines, and interested laymen with up-to-date news on the progress of science. We have plenty of national and regional meetings of diverse scientific societies in this country; we have international congresses in various branches of science, and abstract journals published in this country and abroad cover in forms of brief résumés scientific papers published anywhere in the world. It is to be feared that support of such activity by Federal money would only lead to sinecures and the creation of a new type of scholar, the traveling scientist, who could do much more for science by sticking to his home-town laboratory.

The Kilgore bill, although not the Magnuson bill, has a proposal that the results of research which are contrary to national interest should not be made public. This proposal that discoveries or inventions should be kept secret, even though it may not be urged in the final bill which reaches the Senate, is still dangerous when you realize that so distinguished, and usually intelligent, a Senator as HARLEY KILGORE promotes it. What then would come of such inventions as nitroglycerin or atomic power? If a board felt that such an invention would be dangerous to the public, as it was to Hiroshima and Nagasaki, it could suppress it. And mankind, stopped at the barriers of a new age, would be deprived not only of a chemical that can blast rocks to make new tunnels but also of a drug that lowers blood pressure and stops the agonizing pain in angina pectoris. If such a board, with such authority, had existed in prehistoric times, we might still be in the stone age.

If the bill passes, this country may be facing a situation which, according to a resolution recently passed by the southwestern section of the Society for Experimental Biology and Medicine, may easily lead to "the development of a scientific orthodoxy, which would be detrimental to the ideals of science and democracy and to the further development of our civilization."

Can we devise safeguards insuring that the National Research Foundation's influence be exerted for the good and not to the detriment of science and country? Probably not, but certain measures, certain safeguards may act as safety valves for the present and the future.

The most important safeguard is publicity. The director and the committees of the foundation will be spending public money. Therefore the terms of each grant and contract (with the possible exception of contracts in the Division of National Defense) should be made public. What is perhaps even more important, every request for a grant or contract should be printed in a special bulletin published by the foundation and the reasons for a grant or its rejection clearly and specifically stated. The name of the applicant, the name of his institution, and the names of the members of the committee recommending the approval or rejection of the grant, should be listed in the bulletin.

The next safeguard should be impersonality. Money should be appropriated not so much to individuals as to institutions which in the past have demonstrated their willingness and ability to produce research as evidenced by publications in reputable national scientific periodicals. One argument for the bill is that during the war years the universities have been dipping deeply into their endowments and privately endowed research laboratories are hard put. The argument is that interest on the endowments is insufficient to promote research and capital must be spent. There is a danger of exhaustion of the funds, it is said. Therefore, unless the Government steps in, no one will be able to promote research, neither the universities nor privately endowed laboratories. General Government subsidy to these privately endowed research laboratories would solve the problem of dwindling endowments and eliminate the always unpleasant controversies of the merits and demerits of individual research projects. Also it would put the responsibility of dealing with Government agencies where it belongs, namely, on administrators and executives, and active scientists would not be obliged to spend most of their time in answering questionnaires or filing reports. The Government grants to universities and research institutions could be distributed by the beneficiary institutions, en famille as it were. The men at each university or laboratory know each other best and it should be presumed that they are the best judges of what each man in his milieu could do with his test tube or Bunsen burner.

Another safeguard may be sharing the burden. I recognize that scientific research is in need of funds. That has always been true, even in the best endowed universities. But better than for the Federal Government to make outright grants to universities would be a system under which the universities would shoulder part of the cost. The university could pay anywhere from 20 to 50 percent of the cost of research. If the university is given a share in paying for the support of research, the university will have a much greater voice in what is done in that research. And let no university think that it can relax and let George, or rather Sam, do it. A university may also indicate its willingness to share in the expenses of government fellowship or scholarship funds and thus prove its interest in the future of science and remove the exclusive responsi-

bility of the Federal Government in the promotion of American science.

The tenure and method of selection of the members of the various committees of the National Research Foundation is another item worthy of consideration. Scientists, old and young, from all parts of the country, and from different types of universities and research laboratories should be represented on the boards. National scientific societies probably would also like to elect representatives to the various committees. No scientist should be made to serve for more than 1 year on any of the committees, since it is presumed that no scientist with active research affiliation would consent to become a bureaucrat willingly or for over long periods of time.

And the last and most important safeguard should be a general enlightenment as to the real nature of science and scientists. In the past scientists had one thing in common: nobody ever told them what to do. They had contracts with nobody, although some of them have been accused of having contracts with the devil. To initiate research by grants or contracts must not only fail, but such a program would be wasteful in the extreme. A clear understanding that basic research cannot be regimented, but routine, spadework, applied research may be programmed or even coordinated whenever the need arises, should help the Government or industry to spend its money wisely.

You can spend a lot of money and get no return. But if you trust in human ingenuity, motivated by desire of public service, the love of science, recognition, and maybe selfish aims alike, you will have done more for basic science than you could ever do with billions of dollars of Federal money. The atmosphere in which science flourishes and discoveries are made is that of unhampered freedom, not an atmosphere filled with contracts and questionnaires.

Ceiling Price on Raw Cotton

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. McKENZIE. Mr. Speaker, the proposal of the OPA to put a ceiling price on raw cotton is one of the most vicious blows ever struck at the American farmer. It is unfair and unwarranted and is another attempt to hold down the living standard and wage earnings of the cotton farmer.

When Chester Bowles announced his intention to put a maximum ceiling of 24.09 cents per pound on the highest grades of cotton and then scale the price of other grades down by the use of a synthetic scale adjustment he was merely attempting to gain more power and control over the already overregulated farmer. It would mean a slave wage of 21 to 22 cents per hour for the southern cotton farmer—barely half of the present minimum wage standard of 40 cents per hour, and they are now talking of a 60-cent or even a 75-cent minimum wage standard. Why discriminate against the southern cotton farmer? Has he not just as much right to live and eat and wear clothes and send his children to school as the industrial worker? His work is just as hard if not harder, his product is just as essential. Anyone who knows anything at all about cotton knows that it takes a minimum of 1 hour's work to produce 1 pound of cotton—and they want to put a ceiling of 24.09 cents a pound on this work. What for? To hold down the price of living? "Baloney." The only living it would hold down would be the farmer's living. There is not one iota of sense to the whole proposal.

Oh, I know people are going to say that there is a ceiling on the finished product, the shirts, the sheets, the handkerchiefs, and so forth, and so there should be a ceiling on the raw product. Any informed person knows better than that. The ceiling on the finished product automatically puts a ceiling on the raw product because there is just so much the manufacturers can pay for raw materials, labor, and other costs. We all know that. But listen to this—a shirt sells for from $3 up if you can find one, and the raw cotton in that shirt weighs approximately half a pound, grosses the farmer approximately 11 to 12 cents and nets him only 2 or 3 cents. Where does the rest of that $3 go? Not to the farmer. Why if the farmer got twice as much for his cotton it should not affect the sale price of the shirt. There is too much spread and too much processing and distribution cost. It is unfair. It is poor economics.

Let us put it another way. At present prices the average bale of cotton grosses the farmer about $120, when processed and manufactured into ordinary cotton handkerchiefs, the kind you buy at the 5-and-10-cent store, that same bale of handkerchiefs selling at retail brings from $3,000 to $5,000. Who gets the difference? Not the farmer.

These are just two glaring examples, Mr. Speaker. I could go on and on for there are thousands of cotton commodities, but these two examples will suffice to illustrate my point.

If Chester Bowles is sincere about keeping the cost of living down why does he not do something about the wide spread between the producing farmer and the consuming public? Is he trying to protect the manufacturer, the middleman, and distributor at the expense of the farmer? It looks like it. If he holds the ceiling on the finished product, I assure you, Mr. Speaker, there is no probability of the price of cotton running away, but there is quite a possibility that the farmer will, as he should, get more for his cotton than he is now getting. He is entitled to a slice of the enormous spread, and I am going to do my utmost to see that he gets it.

But, Mr. Speaker, there is another factor that is working against the sudden increase in the price of cotton that Mr. Bowles seems to fear so much. Does not Mr. Bowles know that in spite of the enormous wartime consumption of cotton we still have a carry-over of more than 5,000,000 bales of cotton in the warehouses? Most of this cotton belongs to the Government and Mr. Bowles, being such an important part of the Government, surely should know about it.

I am unalterably opposed and will fight against a ceiling on raw cotton. It will only further retard the back breaking production of this most important commodity and make the lot and living standards of the farmer that much harder. Let us kill this vicious proposal.

Mystery of Foreign Policy by Administration Muddles Demobilization Policies

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks, I feel it is imperative to call to the attention of my colleagues two of the recent letters, among the many I have received, which I believe are representative of the feelings of our veterans concerning demobilization, in spite of the recent explanation of policies by our brilliant leader, Chief of Staff of the Army, Gen. Dwight Eisenhower.

In testifying, General Eisenhower made a statement which I believe hits at the crux of the matter. After referring to the spectacular success of demobilization, he said that the "Army was rapidly approaching the foreseen juncture of two incompatibles: the speed of demobilization and our duties at home and overseas—the occupation mission delegated to us by higher authority."

In my opinion, there lies the force which has resulted in confusion, vacillation, and misrepresentation by our Government to our veterans and to the public. The administration controls our occupation policies. But what are they? What is our policy in China? What is our policy in Germany? How long are we going to stick our fingers into far-off countries without the public's knowing what is going on? Why does not the administration forthrightly tell us why we continue to occupy some of the jungles of the Pacific? Our veterans are entitled to know what commitments our administration has made and on what grounds, if they are to be kept indefinitely occupying these remote spots. The public also should be advised on how the administration and the military expect to maintain support from the public and the servicemen when it fails to make clear its objectives.

In the public interest, I believe that the administration and the State Department should immediately set forth its reasons for using the hidden-ball tactics. How can we be expected to reach the goal of peace with our world-wide allies, when our leaders who are formulating our international policies lack the spirit and honesty to explain to the people what is going on. I think it is time for our foreign policy, if any, to be fully clarified for our veterans so they will know why they are being kept overseas,

instead of being handed a mess of double talk. It is up to the administration to speak out. The public wants to know. The servicemen who have the job to do should be taken into the confidence of their leaders. We in Congress should be given a first-hand insight into these policies. Then we could be able to go intelligently about the business of securing the peace. But we cannot do it when the administration continues to meddle in foreign affairs without the knowledge and benefit of public opinion. It will only lead to further demoralization and mass defiance of authority.

Let us hear a clear explanation by the administration of the mystery as to what the "occupation mission delegated by higher authority" is.

The letters follow:

I am writing this letter in the capacity of a taxpayer, property owner, and voter in the district which you represent, and also as a member of the Army of the United States.

I was drafted into the Army in November 1942 and have been overseas since October 1944. Since those of us who are overseas have more or less lost our ability to have an active voice in the present policies of Government, I am taking this opportunity to voice my feelings to you.

I would like to have information to clarify the following questions:

1. What are you doing to help us return to civilian life, and release us from Army service, which we did not desire, but when called upon executed to the best of our ability?

2. For some length of time people who are over 26 years of age or with children have not been drafted. Yet those of us who were over 30 years of age when drafted, and have children, are still serving in the Army overseas. Why can't something be done to release those of us who want to return to civilian life and our families?

3. The Navy publishes its program for discharge as high as 2 months in advance. Yet the Army will not divulge information on the current month. What is the necessity for all this secrecy? We feel the least that could be done would be a simple and clear statement of what policy the War Department intends to follow.

4. Secretary of War Patterson, on his recent visit to Guam and the Pacific, seemed very poorly informed on current discharge policies, and made what we considered a very poor impression for a man in the important position which he occupies. Is it not the duty of our Representatives to see that these men are informed, and to protect the interests of their constituents?

5. Secretary of War Patterson seemed ignorant of the fact that points are not accumulating with time spent overseas. Why aren't they? The Navy follows this practice, and at least their members know that every month spent overseas means more points for them toward discharge.

6. Does the meager information possessed by our Secretary of War indicate the standard of knowledge that is possessed by other members of our Government?

7. The Army declared recently that a shortage of shipping was retarding demobilization. Yet the Navy has said repeatedly that there are plenty of ships for all. On January 2 the Navy declared that there was an excess of shipping, and that 100 ships of the "magic-carpet" fleet were being retired. What are we to think in the face of such statements?

8. Many men who have spent their entire Army career in the United States are being discharged. Yet those of us who have been overseas for over a year are given no idea of when we can expect to be discharged. Is this fair? We feel that as long as there are enlisted men and officers in the States who have not served overseas, they are not surplus until those who are now overseas are returned. Perhaps it would cost more money that way, but we are the present and future taxpayers of America, and we think we should have a voice in the manner in which our money will be spent.

First and foremost, I am voicing my own feelings in this matter, but I am also echoing the sentiments of thousands of other servicemen overseas. Many of us have won no Purple Hearts, Congressional Medals of Honor, or even battle stars, but we feel that we have done our duty in an assignment in which we had no choice, that our duty has been done, and has been well done, and we are more than ready to go home. I would appreciate hearing from you as to what is being done, or what can be done to alleviate the present situation.

TO WHOM IT DOES CONCERN:

Until January 5, 1946, most of us were at least partially satisfied with the progress of the demobilization program and the movement of troops to the United States, even though it was slower than had been promised us by the War Department. And, having accepted their alibis for failure to provide adequate transportation, despite the fact that we are the possessors of the largest navies and merchant fleets in the history of the world, we were patient, having faith in the promises from the leaders of our country and Army; that we would be returned home with the fullest possible expediency, that we could return to our families and jobs and to the normal pursuit of happiness of the life we left behind, when we answered our country's call.

Suddenly, and for no tangible or logical reason, at least of which we have been informed, the War Department issued an order calling for the retardation of demobilization, using as their alibi to an incredulous soldiery, who knows the truth, the worn-out and shallow theme that the degree of essentiality shall determine discharges, and now, without regard for these soldiers, who gave their unstinted measure of sacrifice to duty and devotion, they forced upon us a condition which definitely illustrated to you people at home, and to us in the Army, that the War Department will stop at nothing to gain their militaristic ends.

The War Department continually and consistently refused to answer any and all arguments and criticisms brought by its soldiers against the unjust policies of their demobilization program. Yet at all times, they accuse the soldiers of an unreasoning and emotional attitude while they themselves, as a traditional, last refuge of those who are unable to answer arguments or charges directed against their disreputable policies, employ the classic propaganda trick used by the dictators and have resorted to name-calling and scapegoatism. As a consequence, millions of GI's fighting for a return to the democratic way of life are branded as "Communists" and "hotheads." These are the same men, your sons, brothers, husbands, and neighbors, who yesterday defeated the greatest combination of military power in the history of the world, making possible the victory over fascism, and the liberation of enslaved nations. Today we are addressed as homesick, lace-pants babies, isolationists, Communists, and radicals who must be suppressed. We have also been accused of sabotaging the peace, the securing of which is the primary job of our leaders and statesmen. We have in numerous places mentioned the War Department, and we wish to make it clear that we recognize that there are in that Department and in other headquarters subordinate to it, individuals, who are not only intelligent but fair-minded men in sympathy with the plight of the GI's. Our attack is not against these individuals. We offer as an example of these characteristics a man who has demonstrated on more than one occasion that he is honest, able, and a friend of the GI's—Gen. Dwight D. Eisenhower.

These are the facts—the plain mathematical truths—and we defy the War Department to dispute or discredit them. The War Department contends that in order to maintain the Nation's peace it is our responsibility to support an Army of 1,600,000 men. We do not dispute this fact. Our indoctrination as soldiers directs us not to question the statements and policies of the War Department. However, in view of the scare headlines and published innuendoes, we deem it essential to the security of our American democracy to unmask these falsehoods and half truths so that you, the people of the United States, may know the true facts confronting us on this issue. From a peak Army strength of 8,300,000 men, the Army has discharged 4,200,000. If we are to put any credence in the War Department statement of the hardships in deploying these men to their homes, the results are commendable, indeed, by simple subtraction, and by using these same War Department figures, we find there are still some 4,100,000 men remaining. Add to these men an admitted draft of 300,000 since VJ-day and, further, add also the voluntary enlistments of 400,000 men, we reach a grand total of 4,800,000 men. We, as soldiers, are not protesting against the required size of the peacetime Army; what we want everyone to know is that with an admitted surplus, above and beyond the War Department needs, the War Department has exercised the unfair prerogative of retarding demobilization. As yet the War Department refuses to explain the reason for holding these men in excess of its admitted needs. Still another grave problem confronts the American people. It is a confirmed fact shown by the War Department policies that by creating confusion and doubt in the minds of the American people it has made its intent clear to blackmail our Congress into accepting military conscription as the only solution for rapid demobilization.

We soldiers know, as does the world at large, through bitter experience, the attending evils of militarism. These evils have their birth when a people can be deluded into accepting military conscription as a component part of our natural way of life. Our Congress, to whom the War Department is responsible, is also your duly elected representatives. They are sent to Washington to give articulate voice to your mutual desires and opinions. We appeal to you to join your voice with ours against this infringement of all that America holds dear. We demand that you exercise and shoulder this responsibility which you owe, not only to us who are affected today but to the yet unborn generations of Americans to whom freedom has become a heritage.

Encroachment of Federal Power in the Utility Field

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Purcell L. Smith, president of the National Association of Electric Companies,

Washington, D. C., at a forum on public utilities, sponsored by Investors League, Inc., at Chicago, Ill., November 29, 1945:

The wording of my subject represents a happy choice of terms by the League for there is no better word than "encroachment" to describe the public ownership movement in the United States. Webster tells us that "to encroach" means "to invade insidiously and appropriate the province of another * * * to trench on another's limits by gradual usurpation or intrusion * * * to transgress the just bounds."

I believe there is general agreement that Federal power has and is continuing to encroach in the electric light and power field, but I think that the methods of this encroachment and the extent of the invasion are not matters of common knowledge. Furthermore, I am sure that the citizens of this country are unaware of the implications of this movement as they affect, not only our economy, but also the character of our political institutions.

According to the data of the Edison Electric Institute, approximately 12 percent of the installed electric generating capacity in this country at the end of 1944 was owned by the Federal Government, Federal authorities, or agencies financed through United States Government funds and about 7 percent was owned by municipalities or similar public bodies. Some of these publicly owned or publicly financed electric operations were based upon reasonable and fair economics and are entitled to respect and credit for fine accomplishment. But the economics became quite changed when the revenue needs of governments, particularly, the United States Government, became so great during the depression, followed by the tremendous financial requirements of preparing for defense and after Pearl Harbor waging two wars.

I wish to call to your attention that this approximate 19 percent of the electric supply operates without paying any taxes or equivalent thereof to the United States Government and in some instances does not pay either directly or indirectly any State, county, or municipal taxes. This is a serious matter from the viewpoint of all taxpayers of the United States, which, of course, includes all investors, except those who own securities free from taxes. It was estimated by the Edison Electric Institute that the Federal taxes paid by the privately owned electric companies of the United States in 1942 was $397,000,000; in 1943, $448,000,000; in 1944, $468,000,000; and I believe it is reasonable to estimate that the 1945 taxes will be around $450,000,000. The public power group's Federal taxes will be nothing. In addition, the security holders of the private power companies pay income taxes on the interest and dividends which they receive, meaning additional millions of dollars paid into the Federal Treasury, whereas, many of the publicly owned projects are financed by revenue bonds or municipal bonds on which interest is tax exempt and the owners thereof pay no income tax on such interest. It was estimated recently by a witness before the Securities Subcommittee of the House Interstate and Foreign Commerce Committee that if public power had paid comparable taxes, they and their security holders would have paid into the United States Treasury at least $135,000,000 for the year 1943 and an estimated aggregate for the 6 years 1940 to 1945, inclusive, probably in excess of $650,000,000.

It was only a little more than 50 years ago that Thomas Edison built his first electric generating station, which was the beginning of the electric light and power industry. Isolated plants sprang up around the country and these were later integrated into power systems. The pioneers of the electric-power industry had no easy road as they sought to promote the use of electric energy while at the same time they wrestled with problems of finance and engineering. In those early days, when the "going was tough," there was no encroachment of Federal power.

For many years the Socialist Party had been trying to get a foothold on the American political stage, but with little success. Their bold program to overthrow the Constitution of the United States was not relished by the American people and during World War I some of their leaders were jailed for subversive activities. After World War I, however, they recognized the impossibility of bringing about an outright revolution and they changed their tactics and developed a new program known as "boring from within." From that time on their strategy has been to operate within the framework of our political system to achieve the objectives of socialism.

Having been unable to make any headway through the normal political channels, the socialists evolved a new strategy based on economic control. And, in casting about for what they hope will be a quick and sure means of establishing economic control, their choice was the new, fast growing, and widespread industry—the electric power industry. Today their strategy was stated very clearly and simply by Carl D. Thompson, national campaign manager and one-time nominee for President on the ticket of the Socialist Party.

Mr. Thompson said, "Successful public ownership of power production means an adequate control of transportation and of industrial forces dependent upon electrical power of their successful operation."

I think that neither Mr. Thompson nor anyone else can make a clearer statement of the basic reason for Federal encroachment in the utility field. But Mr. Thompson went even further and gave a frank outline of how the Socialists would gain their objectives. He announced that "the Socialists will push their campaigns. They will capture cities. Later they will control State legislatures and, finally, the United States Congress and the Supreme Court * * * and finally the Nation will take over one after the other of the public utilities, mines, railroads, interurban electric lines, power plants, telephone and telegraph systems, waterways, forests."

And the methods by which the Socialists were to gain these objectives were outlined by another Socialist leader, H. S. Raushenbush, who said, "Between cataclysmic socialism (by which is meant armed revolution) and encroachment control, the latter will be the only one acceptable to this Nation for a long while. The workers are more apt to support a power authority."

Inasmuch as this was written some 6 years before the passage of the act creating the Tennessee Valley Authority I think we can take Mr. Raushenbush's statement as something more than prophecy. In fact, if we accept the theory of cause and effect we have good reason to assume that Mr. Raushenbush and his fellow Socialists had a hand in securing the effect which was so dear to their hearts.

Now the Socialists, having realized the impossibility of socializing America in one fell swoop, acknowledge that the country would have to pass through what they called a transitional state before complete socialization could be achieved. Mr. Raushenbush, having described several transitional methods, came to the conclusion, as he stated, "A fourth attempt, which I look upon as much more hopeful, is the one which seeks to set up, through Government ownership at Muscle Shoals, at Boulder Dam, and on the St. Lawrence, yardsticks by which the efficiency of private ownership under regulation may be measured."

Now that statement, on its face, appears innocuous enough. Who could quarrel with the purely objective desire to measure the efficiency of private ownership? Thus described, it sounds like a project of the Bureau of Standards. But we will discover that the yardstick which was to be used in this pseudoscientific measurement was to be a yardstick the like of which the Bureau of Standards never saw and never hoped to see.

In the early days of the electric-service industry the technology of the industry had not progressed to the point where integrated systems were possible. Each community had its own plant. Most of them were privately owned and operated but, of course, many municipalities had their own plants.

For a time, therefore, the public-power proponents worked assiduously for municipal ownership, seeking to have towns take over the private plants serving them.

Later on, bolder steps were taken by private companies to develop transmission techniques that would permit transmission of electric service over widespread areas with consequent substantial economies, efficiencies, and advantages. Inasmuch as the service areas of the municipal plants were usually confined to a relatively small number of square miles, it became apparent that many of the municipal-ownership projects could not give the same quality of service as the private systems nor as economically or efficiently. As a result, many of the municipal plants were absorbed into the private systems. Out of a total of 3,900 municipal systems which were established at one time or another in the United States, only 1,870 remained at the end of 1935.

The public-power proponents, of course, did not overlook any opportunities of the financial debacle of 1929 and the early thirties and the resulting severe economic depression to extend encroachment on much broader lines than the municipal-ownership plants. Vast sums were being appropriated by the United States Congress to stimulate industrial activity throughout the country. The public-power proponents saw in this activity an opportunity to enlarge their empire through the medium of the use of a generous Congress attempting to lift the national economy out of depression depths.

Some time back the Public Ownership League, in a gloating article in its magazine, proclaimed that, "Step by step this superpower plan is being realized. The Tennessee Valley has become an outstanding reality. The Boulder Dam has been finished. The Bonneville power system is nearing completion. * * * Grand Coulee is well on the way. In the map one can see the extent to which our dream of 1922–25 has already taken form and also the next steps that are being proposed."

Federal encroachment in the utility field cannot be denied. Can we then ignore the implications of this success . . . namely the complete socialization of the utility industry, followed by the socialization of other industries?

As a contrast, I quote to you from the New York Times of the 15th of this month reporting on an address made by the Honorable Harold L. Ickes at the annual meeting of the American Petroleum Institute in Chicago on November 14:

"'Both domestically and abroad, the oil should be done, just as far as possible, by private industry,' the speaker also said, 'I would consider it unwise and unfortunate for Government to interpose itself in any phase of the oil business which can be handled by the industry efficiently and economically and with the satisfaction that a fair profit brings.'"

This is the same gentlemen who is Secretary of the Interior where Mr. H. S. Raushenbush is, I believe, project analyst for the Power Division of the Department.

I have referred earlier to the very substantial discrimination again privately owned electric companies by reason of the tax exemption subsidy enjoyed by public power.

Public-power promoters have taken advantage of this exemption and have profited and capitalized upon it, for if an electric-utility property, which is privately owned paying substantial income taxes, were to go into Federal ownership, there would be no income taxes to pay and hence public ownership could afford to pay a higher price for the property, generally speaking, than another private owner could. Furthermore, in most cases by which public-ownership promoters acquire or bring about the acquisition of properties formerly owned by tax-paying private owners, such transactions and operations have not been subject to regulatory control and approval by Federal or State agencies.

As serious as the existing picture is for the reasons heretofore stated, the public-power advocates are planning still more Federal projects, either as primary hydroelectric developments or so-called multiple-purpose projects in connection with flood control, rivers and harbors, irrigation, navigation, and reclamation. The total dreams are staggering in billions of dollars required to complete the ultimate plans. A few of such projects have economic and public merit as to power features. Most of them do not, but a lot of poor economies can be buried when the operations are exempt from all Federal taxes and can also be buried in the maze of finances of the United States Government.

The National Association of Electric Companies has already engaged in having presidents of its member companies present some of the facts concerning many of these projects before appropriate committees of the Congress, and will continue to do so from time to time. We believe that Congress is interested in having the facts. The Committee on Appropriations in the House of Representatives on Monday of this week made a report to the whole House on the first deficiency appropriation bill 1946, and I quote you certain excerpts from that report:

"It is incumbent upon the Congress to get governmental costs down as early as may be practicable to levels consistent with a sound postwar economy. That is the aim of the committee and it is solicitous of all of the help and support it can get. It means turning a deaf ear many times to importunities which ignore the general good. It means a close watch upon executive agencies to check extravagances, and, as regards personnel, to see that the best utilization is made of forces already employed. There is ever an urge to expand. The committee is convinced that in many cases the principal need is better and firmer coordination and direction by top administrators.

* * * * *

"The committee regrets to say that it is rare to meet with witnesses who evidence a conception of the need to contract Governmental spending. A spending psychology has grown up in Government which must be dissipated. As Secretary of the Navy Forrestal recently tersely expressed it, we must recapture economy.

* * * * *

"* * * The committee believes that a number of the undertakings should have further investigation, particularly those which contemplate commencing construction of so-called multipurpose dams entailing ultimate separate costs of as much as $130,000,000. They may be thoroughly justified, but the committee is reluctant to recommend them without further inquiry into the merits of features not essential to proection against floods. Rather than purpose a partial program, approval is withheld of the entire submission for reconsideration by the War Department subcommittee early in January in connection with the War Department civil functions appropriation bill.

* * * * *

"In connection with the denial of funds for power-market and transmission-line studies and surveys the committee has taken the position that the Government should not go into the business of constructing transmission lines to market power developed at Government dams and that the activity, desirous of securing such power should construct such lines to the point where Government power is being generated."

Let me make it very clear that the association that I represent, and its member companies, have gone on record in favor of flood control where needed, good improvements on rivers and harbors that are of true public interest and needed irrigation and reclamation, provided the money will be well and sensibly spent and has honest economics as the primary motive for its expenditure.

The Challenge of the Children

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, January 18, 1946

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks, the following information given in a broadcast over the NBC network December 28, 1945, may be of interest to those Members of the House, and private citizens who are concerned with the present threat to world health caused by lack of food, clothing, and medical care for the growing generation in Europe and Asia:

Most of us have had a gay and merry Christmas—our first since the war began—surrounded by families and children. In Europe and Asia today there are pitifully few who can say, "We have had a merry Christmas. We look forward to a happy new year."

For millions of children are in imminent danger of starvation and freezing as winter comes to Europe.

That is the tragic conclusion reached by five international relief organizations. They report today that a terrifyingly large number of the world's children—if they survive at all—will never become healthy grown-ups. They will suffer the terrible after effects of starvation for years to come—rickets, tuberculosis, bone diseases, and many other afflictions, including stunted bodies and, worst of all, stunted minds.

You don't have to be an expert to forsee what this means to the entire world—including America. Disease knows no boundaries—epidemics can sweep through the weakened children of Europe and Asia, reach across the oceans, and strike our own babies. Weakened children grow up to be weak adults. Children who are mentally crippled grow up to be mentally crippled adults, easily victimized by unscrupulous, cruel, aggressive dictators.

Unless food, clothes, and medical care arrive to strengthen and protect the sickly children of Europe and Asia today, they will surely grow up to contaminate, to menace, yes and to fight your children tomorrow.

The scope of the problem is so great as to demand prompt and continuing action by such international agencies as the United Nations Relief and Rehabilitation Association. It is good to note that UNRRA on the job is doing ever better work—and in 1946 will, we hope, do still more. But no governmental or intergovernmental agency can do the whole job—and the little children of Europe cannot wait for cumbersome state machinery to swing into aid.

What is the actual situation of the children of Europe? The agricultural experts of UNRRA report that domestic food production in Europe this winter will be sufficient to provide the 90,000,000 people who do not live on farms with about 1,200 calories per person each day. One thousand two hundred calories is less than half the amount of food you and I eat every day. One thousand two hundred calories is just about enough for children 3 to 5 years old. Children 5 to 7 years old need 1,440 calories; children 7 to 9 years old need 1,680; children from 9 to 15 years of age need amounts ranging from 1,920 to 2,400 calories per day. So, you see, the average European city child more than 5 years old will be starving little by little this winter.

That is the way it is in Europe as a whole. In some countries it is even worse. In France, infant mortality has increased 50 percent. Tuberculosis there among adolescents has increased 40 percent. In Belgium, 23 percent of the children in rural areas and 34 percent of the children in cities are critically undernourished. UNRRA reports that there are one and one-half million undernourished kids in Yugoslavia.

Foreign Minister Masaryk of Czechoslovakia reports that nearly 800,000 children in his country are ripened by hunger for epidemics. Seven million children in Poland have been orphaned, at the same time that 75 percent of the health and child welfare centers which should be caring for them were destroyed. In Italy, 1,000,000 children under 2 years, and 7,000,000 more between 2 and 14, urgently need food and clothing just to stay alive. More than 1,000,000 Greek children are being consumed, flesh and bone, by hunger, and malaria and tuberculosis rage. In Holland, Norway, Denmark, and Finland—in Luxembourg, Albania, the Balkan countries, the Near East, Asia—it's the same story. Listen, the children of every country ravished by the Nazis and by the Japanese war lords, and hammered by the terrible air and artillery bombardments we had to lay down in order to conquer them, face the most terrible winter poor little children have ever known in history.

The size of the relief problem is shown by a recent report of the Department of Agriculture. In order to raise the food allowance of the peoples of continental Europe to only 2,000 calories per day will require the importation of 18,000,000 tons of foods in 1946.

And it isn't only food; it's clothing, medical care, and education. Schools and hospitals were destroyed wholesale by the Nazis. And even if the schools had been left standing, in four countries alone—France, Belgium, Holland, and Norway—no less than 10,000,000 children will be unable to attend them if they lack clothing and shoes. How would you like to send your kids to school in the kind of weather we're having, without a coat or sweater, and barefoot, too?

But, thank God, people with even a little knowledge of the terrible need are not just wringing their hands. Concrete steps are being taken today to ameliorate the situation to the full limit of means made available by American generosity. The American Council of Voluntary Agencies for Foreign Service, Inc., on which virtually every child-relief organization in the United States is represented, is serving as a clearing house for the information you want about these children. From the council and from member organizations I have learned something of the relief work which has been made possible by gifts of money and food and clothing from the American people.

Through the efforts of American Relief for Holland, for example, the children of the Netherlands have received since their liberation more than 3,000,000 pounds of food, including cereal products, strained fruits, vegetables, milk products, soups, and so on.

The Near East Foundation is taking partial or entire care of 17,830 Greek children in

winter and summer colonies, providing food and also medical treatment for children disabled by war.

American Relief for Italy has provided 100,000 Italian children with vitamins and with one daily pint of milk since last July. It has sent to Italy almost 19,000,000 pounds of milk, clothing, and medicine.

The Youth Aliyah of Hadassah has collected at camps, has fed and housed and then transported to Palestine, 8,000 children since the start of the war and has provided their maintenance, education, and health care upon arrival.

Statistically, these are just a few high spots of the relief picture. Tremendously useful work in the field of child rescue and rehabilitation is being done by the various agencies constituting the American Council of Voluntary Agencies for Foreign Service, Inc., which has offices at 122 East Twenty-second Street, New York, N. Y.

The membership of this council includes:

AMERICAN COUNCIL OF VOLUNTARY AGENCIES FOR FOREIGN SERVICE, INC.

Committee on Child Welfare.
Committee on Cooperatives.
Committee on Displaced Persons (subcommittees on camps and displaced Russians).
Committee on Material Aid (subcommittee on shippers and purchasers and allocations of supplies).
Committee on Insurance.
Committee on War Fund Agencies.

The officers of the council are: Dr. Joseph P. Chamberlain, chairman; Rt. Rev. Msgr. Patrick A O'Boyle, vice chairman; Dr. Joseph C. Hyman, vice chairman; Dr. A. L. Warnshuis, secretary; and Miss Charlotte E. Owen, executive secretary.

But what they and all the other splendid organizations are doing, calls for no expert analysis. It's just what you and I would do in their place—applying common-sense methods to accomplish as much as possible with their limited funds. They collect money to buy food and clothes in this country, and on the scene. They are supplying medicines. They provide homeless children with homes, reestablish schools, and they try to reunite the lost children with their parents if, oh, if their poor parents are alive.

I got in touch with all the organizations in the field. From them I received an impressive list of things they'd like to do for these heart-breaking children. Time, which works against these children even as I speak, again makes it impossible for me to do more than touch upon their plans.

American Relief for Italy wants to enlarge its program of emergency feeding for the 100,000 most sorely stricken Italian children. It wants to provide shoes, shoes, shoes, for many, many more bare-frostbitten little Italian feet.

The Greek War Relief and the Near East Foundation recommend immediate action to provide winter clothing and blankets—or blanket cloth—for 1,500,000 children—and layettes for 50,000 cradles. The Foundation says that after December, the only basic foods remaining for Greek children will be some cereals and a pitiful supply of milk.

The Polish War Relief wants contributions in cash or in kind of great quantities of condensed milk, cocoa, rice, and cod-liver oil.

American Relief for France wants, above all, shipments of food, medicine, and clothing. They say that 7,200,000 out of 13,700,000 French children urgently require health supervision and increased feeding; 2,400,000 need special medical attention as well as increased feeding.

But in every country devastated by the Nazis the needs are essentially the same—food, medicine, clothing. Do you want to know the details of the needs of 60 of these worthy organizations? Then please, I urge you, get in touch at once with the American Council of Voluntary Agencies for Foreign Service at 122 East Twenty-second Street, New York. Phone your radio station if you can't remember that name.

It is to the eternal credit of the American people that we have already contributed generously to the aid of less fortunate peoples through the National War Fund and through our churches and other organizations. But what we've done already is not enough, not nearly enough. With every bright tick of the clock in your warm home a child dies in the cold and dark in Europe. A child you could save.

Abraham Lincoln said that this Nation cannot endure half slave and half free. This Nation, with its Allies, has just fought and won a war on the principle that this world cannot continue half slave and half free. The world has been freed of the threat of Germany and Japan. But it will not remain free if half of its people grow up wrecked and crippled in mind, body, and soul.

For if we really want to win the peace we must suffer the little children to come to us—and give them aid.

And let us all make our own new year happier by trying to save the innocent children of Europe.

Public Defender Legislation Vitally Needed at This Time

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. KEFAUVER. Mr. Speaker, for a number of years leading jurists, lawyers, and Members of Congress have been interested in installing a public defender system for impecunious defendants charged with crime in the Federal courts. This movement has been approved by various bar associations.

During the last few years Hon. EMANUEL CELLER, Member of Congress from New York, and I have had bills pending before the Committee on the Judiciary of the House to effectuate this greatly needed judicial reform. Congressman CELLER's current bill is H. R. 186. I have pending H. R. 444, which provides for a public defender system for the District of Columbia, and H. R. 442, which sets up a system of public defenders in all of the Federal districts. These bills have recently been considered by the Judicial Conference. The Conference has approved the general plan but recommends a different bill.

In order that Members of both bodies and particularly the Committees on the Judiciary may have the benefit of the recommendation of the Judicial Conference, I am today introducing a bill which contains the recommendation of the Conference.

Recent developments, such as the sedition trial in the District of Columbia, impressively show the increasing need of a public defender plan in our Federal courts. I hope that the legislation may

receive early and favorable consideration.

I include herein a letter to Judge HATTON SUMNERS, chairman of the Judiciary Commitee, from Henry P. Chandler, Administrator of the Administrative Office of the United States Courts, which sets forth the recommendations of the Judicial Conference. The letter, dated December 17, 1945, is as follows:

ADMINISTRATIVE OFFICE OF THE
UNITED STATES COURTS,
Washington, D. C., December 17, 1945.

Hon. HATTON W. SUMNERS,
Chairman, Committee on the Judiciary,
House of Representatives,
Washington, D. C.

DEAR JUDGE SUMNERS: With further reference to your letter of November 13, 1945, inquiring about certain bills pending before the Committee on the Judiciary to provide for public defenders in the district courts of the United States and of the District of Columbia (H. R. 186, 442, and 444), I transmit a bill for the same general purpose recommended by the Judicial Conference of Senior Circuit Judges and embodying most of the features of one of the bills referred to (H. R. 442) but also adding a feature.

The Judicial Conference of Senior Circuit Judges has been considering over a period of 8 years the best method of providing for the defense of poor persons accused of crime in the Federal courts. Plans proposed have been of one or the other of two types: One, the appointment by the courts of public defenders to be compensated by a salary; and the other, the payment of compensation to counsel appointed by the courts in particular cases. Two of the bills referred to in your letter (H. R. 442 and 444) provide for the former method. The Judicial Conference of Senior Circuit Judges has been inclined to favor that method, and at its annual meeting in September 1942 recommended the enactment of a bill pending in the House of Representatives of the Seventy-seventh Congress (H. R. 6628) corresponding with the pending bill (H. R. 442).

The district judges of the same districts, however, usually the districts of smaller population, preferred for their districts provision for the payment of compensation and reimbursement of expenses of counsel appointed by the court to represent defendants in particular cases. Confronted with this conflict of views as to methods, the judicial conference of senior circuit judges at its annual meeting in 1943 appointed a committee on the subject, consisting of Circuit Judge Augustus N. Hand of New York, chairman, Circuit Judge Otto Kerner of Chicago, and District Judges Guy K. Bard of Philadelphia and Eugene Rice of Muskogee, Okla. This committee, after conferring with the different classes of persons concerned with the defense of indigent defendants in criminal cases, judges, prosecutors, representatives of legal-aid organizations, and the committee of the American Bar Association on legal aid work, and considering how the diverse points of view above-mentioned might be reconciled, presented a report with a recommended bill to the Judicial Conference of Senior Circuit Judges at the annual meeting of that body in September 1944.

The judicial conference, in accordance with the practice in such matters, caused the report and bill to be circulated among the judges of the country with a request for an expression of their views. Such replies as were received were considered by the committee which was continued for that purpose, and the committee presented a supplemental report at the meeting of the judicial conference held in September last. By the report the committee recommended with slight amendments the bill previously proposed. The report and the bill in the amended form enclosed were thereupon approved by the judicial conference. Copies of the original and the supplemental reports of the committee are also enclosed.

The gist of the committee's recommendation and the new bill is that each district court is empowered in its discretion to appoint a public defender upon a salary very much as provided in the pending bill (H. R. 442), but the court of each district, except one having a city of more than 500,000 population, is also given the alternative of providing if it prefers for the compensation of counsel appointed by the court to represent indigent defendants in particular cases. The rate of compensation in that event shall not be in excess of $25 a day for the time spent in trial and preparation. Provision is made, also, for the reimbursement of expenses reasonably incurred in the representation when approved by the court. A limit of $3,000 is placed upon the aggregate amount which may be expended for the compensation and reimbursement of counsel in any year under such a plan.

It was the view of the committee and the Judicial Conference that the representation of poor defendants charged with crime could no longer be effectively provided for upon a voluntary basis, and that some plan for reimbursement of expenses and compensation of counsel in proper cases was essential. The committee and the conference were further of the view that in the districts having cities of large population (the size of which was set at 500,000 or over) the plan of appointing counsel in separate cases did not work satisfactorily or provide adequate representation in the long run and that the appointment of a public defender whose regular duty it should be to defend defendants too poor to employ counsel, was the only adequate way of meeting the need. They considered that the experience of large cities in which provision is made for public defenders in the State criminal systems demonstrates this. But recognizing that there is a disposition in various districts to prefer the system of payment to counsel appointed in particular cases, the committee and the Judicial Conference recommended the alternative of that nature which has been mentioned, for all districts except those containing highly populous cities. The limitation of $3,000 was prescribed because it was considered that if it was necessary to provide for the representation of poor defendants often enough to call for a greater expenditure than that per year, the purpose could better be accomplished by the appointment of a public defender to serve in all such cases at an annual salary which need not be any greater than proportionate to the volume of the work.

I do not discuss in this letter the detailed provisions of the three bills which you mention because the Judicial Conference submits the bill inclosed, and I hope that your committee may be willing to consider it as an alternative. The provisions of the pending bill inclosed correspond generally with the provisions of the pending bill (H. R. 442) as far as that goes. The principal differences are that (1) the pending bill places a maximum limit upon the salary which may be paid to a public defender as fixed by the Judicial Conference at $7,500 per annum; (2) it provides that if in any case in a district in which there is a public defender there is such a conflict in interest among the defendants that they cannot all be properly represented by the public defender, the court shall be authorized to assign separate counsel to one or more of them and to allow compensation to the separate counsel as in districts in which there is no public defender; (3) it omits the provision of section 2 of the pending bill that it shall be the duty of the United States marshals to serve without charge all subpenas issued in behalf of any defendant who is represented by a public defender upon the request of the defendant, for the reason that this matter is believed to be adequately covered by the proposed Rule of Criminal Procedure No. 17 (b) prescribing a procedure for the same purpose. In addition the bill recommended as inclosed, contains the optional provision above stated for the payment of compensation to counsel for poor defendants appointed in particular cases, subject to the prescribed limitations.

The payment of public defenders by salary as provided in the enclosed bill and the pending bill, H. R. 442, is considered preferable to the provision for payment by fees as provided in the pending bill, H. R. 186. Also, it is believed that if a public defender is appointed for the District of Columbia it would be better that he should be appointed by the District Court for the District and his salary fixed by the Judicial Conference of Senior Circuit Judges as provided in the enclosed bill, than that he should be appointed by the President and his compensation fixed by the Attorney General as provided in the pending bill, H. R. 444.

There is a crying need, as is recognized by those who are familiar with the administration of criminal justice in the Federal courts, for authority to pay reasonable compensation to counsel appointed by the courts for indigent defendants. Too long action has been impeded by the conflict between those who would accomplish this exclusively by public defenders and those who would do it solely by compensating counsel appointed in individual cases. The bill enclosed is offered as a way of reconciling these two points of view. It leaves in each district, except in the districts containing cities with large populations in which the superiority of the public defender seems clear, the choice to the district court concerned. As such I trust that the bill may receive the approval of the Congress and be enacted. I am authorized to say that the bill has the approval of the committee on legal-aid work of the American Bar Association, which as you know has long been interested in bringing about adequate representation of poor persons accused of crime.

With kind regards, I am,

Sincerely yours,

HENRY P. CHANDLER.

A Reply to the President

EXTENSION OF REMARKS
OF
HON. FRED BRADLEY
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. BRADLEY of Michigan. Mr. Speaker, when the President last addressed the Nation on January 3, he asked the people to write their Congressmen to tell us their "views concerning the grave problems facing our country." Insofar as individual letters are concerned, I have received very few, and most of those in opposition to the President's program.

However, I did receive a very constructive suggestion in the form of a petition signed by 191 voters in the village of Elk Rapids, Mich., in my district, which has a population of 818 people according to the latest figures I have. I suggest the President give careful heed to sound suggestions such as these coming from the "grass root" citizens.

The petition follows:

A REPLY TO THE PRESIDENT

ELK RAPIDS, MICH., *January 7, 1946.*

To Michigan Members of Both Houses of Congress:

The President, in his radio address to the Nation on January 3, urges the people to tell

you our "views concerning the grave problems facing our country." In patriotic response, we, voters of Antrim County, submit the following nonpartisan views to which we affix our names:

1. Now that the war is over, so-called "one-man government" should cease; legislative prerogatives should be restored to Congress; and the President should resume his normal function of carrying out the will of Congress rather than demanding that Congress carry out his will.

2. Second in importance is the balancing of the Federal Budget and paying off the national debt. This should be accomplished by drastic curtailment of, or elimination of, war-built bureaus; the reduction of expenses of every Department to approach a prewar status at the earliest practical moment; the abrupt stoppage of all new appropriations not actually essential and by deferment of all new social and other proposed Federal activities which call for more Government employees and more spending.

3. If, under existing legislation, the Government is to supervise labor strike votes, such legislation should be modified to make mandatory, with proper penalties, that all employees vote, by strictly secret ballot, and that only a very high percentage of such employees, at least 85 percent, shall have the power to deprive the dissenting minority of their wages and normal livelihood.

My commission expires on February 8, 1949.

Galveston Labor Council Recommends Sea Wall Extension for Protection of Port and Harbor Facilities and Public and Private Property

EXTENSION OF REMARKS
OF
HON. JOSEPH J. MANSFIELD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. MANSFIELD of Texas. Mr. Speaker, on January 8 of the present year a hearing was held in Galveston by Col. D. W. Griffiths, United States district engineer, on a resolution for the extension of the Galveston sea wall to afford protection to the navigation channels and other port facilities at Galveston; and for the protection of property, both private- and Government-owned, including a United States airfield on which the Government has expended approximately $7,000,000, and a Government housing project representing an expenditure of $1,300,000 of Government funds which furnishes homes for 500 families; all of which at present is unprotected from disastrous hurricanes on the coast.

The proposed sea-wall extension would afford employment for several thousand returning soldiers for an indefinite period of time. The Galveston Labor Council, of which Mr. B. A. Gritta is president, has taken part in recommending the improvement and submitted at the hearing their resolution favoring it, which is as follows:

To Col. D. W. Griffiths,
District Engineers, United States Army:

Joint resolution adopted by the Galveston Labor Council and the Galveston Building and Construction Trades Council comprised of all A. F. of L. labor unions in Galveston County, representing 20,000 members, urging extension of the sea wall westward

Whereas Galveston is an island approximately 2 miles wide and 30 miles long, 17 feet above sea level at its highest point; and

Whereas because of its location on the Gulf coast it is susceptible to high tides whenever tropical disturbances appear in the Gulf; and

Whereas whenever these high tides appear, because the island is so low, particularly in portions unprotected by the sea wall which in most instances are about 4 or 5 feet above sea level, it causes material property damage to home owners, in many cases causing them to lose their homes, clothes, bedding, and livestock; and

Whereas the Government now owns considerable facilities in areas now unprotected by the sea wall, and are subject to great financial losses whenever high tides appear; and

Whereas considerable moneys could be saved by the Government and the worldly possessions of the residents in this area be protected by a 3-mile extension westward of the sea wall; and

Whereas the Government has seen the necessity for sea-wall protection for Galveston since the year of 1900 and helped to provide this sea wall so life and property could be protected; and

Whereas we have just completed one of the most horrible and costly wars ever fought on any battlefields and the soldiers now returning from the fields of battle are looking for gainful employment; and

Whereas the building of the sea-wall extension will provide employment for a large number of returning veterans, assuring them of an opportunity of gainful employment to some degree: Now, therefore, be it

Resolved, That the Galveston Labor Council and the Galveston Building Trades Council urge the United States engineers to recommend that sufficient appropriations be granted for extending the sea wall 3 miles westward; and be it further

Resolved, That the United States engineers be requested to urge that this appropriation be granted immediately so work may be started as soon as possible, thereby providing employment for the returning veteran who may otherwise be unemployed; and be it further

Resolved, That the United States engineers be requested to urge granting of appropriations for the sea wall to protect the lives and property of the residents of that area and to protect the properties owned by the United States Government; and be it further

Resolved, That the Galveston Labor Council and the Galveston Building Trades Council in its meeting assembled adopt this resolution and the members of the Galveston Labor Council and the Galveston Building Trades Council urge the United States engineers to use their influence in obtaining sufficient appropriations so work on this project may be started immediately.

Respectfully submitted.

B. A. GRITTA,
President, Galveston Labor Council.

Unity

EXTENSION OF REMARKS
OF
HON. SHERMAN ADAMS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. ADAMS. Mr. Speaker, with permission heretofore granted me, it is my privilege to insert the remarks made by the gentleman from Arkansas, the Honorable BROOKS HAYS, at the Washington Cathedral on January 13, 1946, on the subject of unity. There surely could be no topic more timely or of greater universal significance than that selected by

the gentleman from Arkansas. The suggestions made in these remarks are worthy of sober thought:

I want to talk to you about unity, in our own Nation and in the world. Religion rather than government must provide the stimulus for achieving unity—at least unity upon terms which are tolerable. Government cannot supply the motive for unity—it can supply only the mechanical arrangements by which it may be expressed. We in the Congress are aware of the threat of disunity because all of the conflicts of life—social, economic, and political—seem to converge in the Capitol of the United States. Those of us who have political responsibilities are concerned with it because unity is associated with stability and order, and disunity is destructive of the finest and most wholesome things in political life.

At the same time the question arises, "Unity under what conditions and on what terms?" If unity is indispensable for a stable and orderly system it must be admitted that order is sometimes imposed under intolerable terms. France was relatively stable and orderly in the period of German occupation; there was unity of a sort. But I was in France a few days after our soldiers had liberated the country and in spite of the confusion which went with a sudden collapse of the economic and political procedures to which they were accustomed, there was unfeigned happiness because the people were free again. We seek national and world unity without the loss of vital principles in a Christian order.

The relationship which religion bears to the great enterprise of government is a close one. Religion is often defined in terms of beauty, truth, and goodness, and the commitments of democratic government also embrace these elements. We have in the Capitol and the buildings which surround it the inspiration of physical beauty. May our performance of official duties be in harmony with it. The institution of representative government is itself a beautiful conception and we are in a peculiar sense the guardians of it. We might well apply the injunction of Christopher Morley, "There is nothing so tragic as to have a thing of beauty committed to the care of one who does not appreciate its value and its beauty."

The pursuit of truth is also inherent in political life, for as we know it in America government is an expanding and growing institution, and must remain progressive and free by devotion to truth.

It is apparent, too, that political activity should involve the third element, that of faith in the triumph of goodness. I was reminded of this fact the other day in reading the address delivered by Dr. Howard M. Jones, president of the American Academy of Arts and Sciences, at a school for German prisoners of war about to return to their own country to share in the framing of new patterns of life. "It is not enough," he said, "for you to resist evil—you must have the strength to believe in the good." So government and politics must turn more and more to the sources of religious faith and guidance in a confused and difficult period.

We should probably define unity first in terms of individual experience. I had an interesting conversation recently with a friend whose company I enjoy and while all of our talks are overshadowed by practical politics, we sometimes explore the recesses of faith which are adjacent to political pursuits. One of us raised the question about a man's conversion—when does he become a Christian?—and I cited an example of how it may sometimes come through independent and personal efforts quite aside from formal or systematic religious instruction.

As an example I cited the experience of a college roommate in 1917, one of the wisest and best men I ever knew. He was a science student, and like true men of science was undogmatic. He questioned the tenets of Christianity. In those days students supplied their own furniture, so we shopped around for the minimum needs and got, among other bargains, an iron bed for $3. It was never referred to as "the bed"—it was always "the $3 bed." He spent considerably less time on the $3 bed than I—he was too busy with his chemistry. I explored his devotion to "the scientific method," his avoidance of dogmatism, his aloofness to religion. "You're so scientific you won't be sure of anything, not even that the $3 bed can't walk," I said. "Well, I wouldn't say it that way," he said. "If I stuck strictly to the scientific approach, I'd have to say it like this: 'There are no known physical laws by which the $3 bed can in the absence of applied external force change its location.'" He added: "If the $3 bed appeared to walk, science would be wholly unprepared for that phenomenon, but instead of denying that it occurred would begin a search for the principles and laws that had suddenly operated like that." Profound, I thought, for a sophomore. And I remember it to this day as an incident in our philosophical exchanges.

When a man of such fidelity to experimentation and research comes through with a strong conviction it should carry weight and his judgments on religion, therefore, impressed me. Years later after he became head of the science department of a great college and a leading layman of his church he told me of his faith. "I have thought it through," he said, "the universe cannot be explained in strictly physical terms. There are great spiritual processes to be reckoned with." Using a mathematical expression he added, "Now I am an integer, I am not a fraction any longer.' Then he spoke of God's concern for the individual in a way that carries greater emphasis for me than any sermon could have.

My friend then cited an experience of his involving one of our political contemporaries who grew up in the Midwest under conditions which tended to stifle every impulse for greatness. He described the hardships that the man encountered in his youth and in his early professional life and explained how provincialism and narrowness threatened to rob him of the possibilities of leadership in spite of his great natural endowments. But something happened to this man. He crashed through the barriers and became a statesman. When I asked for the explanation the answer was that he found how to identify himself with the sufferings of other people, even those in distant parts of the world and this, my friend agreed, is another form of conversion. If I had to deal with a single method for achieving unity I would stick to this type of Christian experience and would emphasize the indispensability of a force which lifts us above our immediate and personal concerns into the life of the world's distressed people.

The love of one's fellow man simply must find adequate expression, it must have a world scope. Fortunately the world's attention is focused on international conferences that are designed to produce the structure of a world government, one based upon Christian ideals. We should have recognized this as a great challenge to our religious faith many years ago, and the delay in recognizing it as such was tragic and costly. The Nazis sensed the fact that the old order was collapsing, and marching out of their own borders they determined to organize the world along the lines of cruelty and power. That we were aroused to resist that effort signifies that there is great vitality in our devotion to freedom and in our resolution to retain human kindness and brotherhood as the basis for a world organization.

Faith in ourselves and in our capacity for self-government is the basis for unity. Man cannot renounce the power to govern. This idea was doubtless in the mind of the psalmist when he said, "What is man, that Thou art mindful of him and the son of man that Thou visitest him. Thou hast made him a little lower than the angels and hast crowned him with glory and honor. Thou hast made him to have dominion over the works of Thy hands, Thou has put all things under his feet." As Col. Francis Miller of Virginia put it: "The world will be organized, the issue is, Shall it be by force or by those who believe in Christian methods."

Unity should not be confused with uniformity. Men do not need to act and think alike to live in unity and peace. Their social and religious life embraces historic preferences, and consequently the cultural and national ties that tend to separate or at least to distinguish people are to be respected in a Christian brotherhood. One of the great decisions of history was that of the Church in Jerusalem in the early days of the Christian era when the conclusion was reached that in order to become a Christian one need not cease being a Greek or a Roman. This right to retain and cherish a group attachment is associated with the basic rights of man. It is respected because individual men and women consider it a phase of enrichment and perfection of their own lives. America has made a unique contribution in this respect. The individual rather than the State has always been our chief concern, and this tradition is rooted in the Christian concept of man's dignity and worth. It is a great privilege to live in a country whose Government recognizes human rights but they are ours inherently because we are of the human family and not because of the Government's graciousness.

If we cannot agree on legislative formulas that are pressed rather vigorously by some members of our important minorities we can at least exert ourselves to guard and protect minority rights and avoid frictions between groups. We must, if we give the world a demonstration of national unity as a preface to leadership for world unity, find a way to destroy hate and suspicion. We must work toward harmonious relations based upon mutual respect. There must be demonstration rather than argumentation about the Christian ideal of unity. It is more important that we create an atmosphere in which solutions to problems may be sought in friendliness than to come up with the right answers to specific questions. Christianity is primarily a process and we cannot influence the world to join us in the pursuit of Christian objectives unless we proceed in this spirit.

Some goals cannot be achieved by force. Our example therefore becomes important, for circumstances have made America's leadership the most significant force for world reconstruction. We cannot decide some questions for the German and Japanese people but we can prove our devotion to the principles of liberty and justice. If they should remain blind to the evils that overtook them there would be tragic consequences, but since we cannot decide for them we can only hope to influence their thinking in the right direction and failing in that resolve to deal firmly with any revival of the terrible evil which produced the war.

Our policy would not be Christian if it were not both charitable and righteous. Our resolutions of kindness and compassion must not lead to indifference to the threat of evil. We must approach our problem "with malice toward none but with firmness in the right * * *." The world must understand that there are some values in which we believe devotedly and "for which we will expend our resources and our lives."

One of the immediate requirements, in fact, of a successful occupation policy both in Europe and in the Orient, is to make it very clear that America does stand for something in the world and that we will not consider merely our comfort and convenience or our narrow national interests. Adherence to our Christian ideal of a peaceful and united world requires an alertness to the evils of aggres-

sion based upon suspicion and distrust. We must build upon new foundations and with faith that by conscious effort the terrible evil that swept over the Old World can be distilled from their common life. To entertain that faith relieves us of none of the solemn commitments involved in our participation in the war.

In a world that will be subject to potential violence until the processes of reeducation and spiritual awakening are advanced the Christian community must exhibit an enlightened and uncredulous faith emphasizing its constructive aspects. We should emerge from the crucial transition period having demonstrated that justice can be achieved without vengeance and peace maintained by the application of Christian principles.

Humanity is one—Paul was right, "God has made of one blood all the nations of this earth." Science is constantly confirming this assertion of unity and the necessity for establishing our institutions accordingly.

It was eloquently formulated by Cicero, who spoke of it in terms of law: " 'True law' is right reason, consonant with nature, everlasting and unchanging. We cannot alter or repeal that law, and no man can be relieved by any legislature of the obligations which it imposes. It does not differ for Rome or Athens, for the present or the future, but one unchanging law shall be for all times and peoples. To violate it is to deny our own nature."

The Christian religion, building upon the same concept, extends the idea of good will and human brotherhood, giving us the positive hope of achieving that unity upon which the strength for an enduring world depends.

Let Us Have Facts

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. SABATH. Mr. Speaker, under leave to extend my remarks, I am inserting in the CONGRESSIONAL RECORD the text of a speech I made over radio station WIND, Chicago, Ill., on December 29, 1945, almost a month ago, together with a brief additional statement of my own at this time:

Long before the defeat of the Nazis, big business waged a campaign through press and radio, and by full pages of paid advertising, to impress the people with the necessity of early reconversion; that is, the converting of plants from war to civilian production. The deliberate purpose of this propaganda was to create in the minds of Congress and the people of the country the impression that reconversion must be aided by the Government; that immediate assistance and reduction of taxes was required. Due to this tremendous propaganda, Congress passed a law to reduce the income tax for 1946, and eliminate the excess-profits tax, with a total saving to business of about $3,000,000,000. This was in addition to tax gifts of $6,000,000,000 or more under the so-called Ruml plan. But the great surpluses and reserves held by these corporations, amounting to at least $26,000,000,000 and perhaps to as much as $30,000,000,000, were not made known; nor was it made known to the public that these industries have been reconverting, reconstructing, rebuilding, and enlarging their plants while they still were engaged on war contracts, and that many added the costs of reconversion to their Government contracts. No sooner had the bill been passed reducing income taxes for 1946 and eliminating excess-profits taxes, and notwithstanding the great profits and surpluses, than big business began continuously to demand higher ceilings, or removal of price ceilings entirely, on all their products to still further increase their profits. The ever-increasing cost of their products, including the cost of food, constantly pushed up the cost of living.

But immediately after VE-day hours of labor were reduced from 48 hours a week to 40, which reduced take-home pay, in many instances, as much as 40 percent. Naturally, the wage earners urged and pleaded for an adjustment of their wages to enable them to exist. There were a few industrialists who saw the need of adjusting the wages, but most of the larger corporations refused to give any consideration to the just demands of their employees, and in many instances have even refused to comply with findings of Government agencies. In desperate efforts to secure an adjustment or increase in their shrunken pay envelopes, some unions were obliged to call strikes. It is conceded now that this was playing into the hands of the industries, because most of them, having made enough, yes, tremendous, profits, in the first 9 months of 1945 had come to the conclusion that to continue to increase their profits for the balance of the year would tend to increase their income and excess-profits taxes for 1945. Many of them, therefore, were more than willing to shut down or curtail their operations. At the same time, however, organized labor was charged with the restrictions on production of much-needed civilian goods, which the manufacturers themselves actually brought about. The facts are that there are tremendous quantities of civilian goods on hand now and held for sale at higher prices and profit in 1946. These goods are being deliberately withheld from the market, awaiting the reduction of taxes in 1946, and in the hope of obtaining higher prices in 1946, through repealing or amending the Price Control Act, which, as administered by the Office of Price Administration, has done so much to hold down the already high prices of all commodities.

The headlines and the full pages of advertising which told us how necessary it was to aid industry in reconversion have now been turned to the attack on organized labor. The strikes are magnified, and every effort is being made through press and radio to hold labor responsible for strikes instead of placing the blame where it belongs—on the industries. These strikes, though they amounted to only three-fourths of 1 percent, were exaggerated and publicized, and used to urge and demand legislation against organized labor. Hence the Smith-May-Arends bill, amending the original Smith-Connally Act, prohibiting organized labor from collecting a niggardly dollar per member for political education. True, the bill would preclude contributions from corporations but it does not restrict officers or stockholders from contributing tremendous sums, as the Du Pont and Pew families and many others have contributed thousands upon thousands of dollars to Republican Presidential, congressional, and other political campaigns. Still, the contribution of a lowly dollar by a laboring man would be made a crime. Of course, there were other bills which were pressed hard for passage, such as the Hobbs bill, all for the purpose of weakening, and, if possible, destroying, organized labor. All this, notwithstanding the fact that organized labor has kept its pledge to the country not to strike in wartime. This pledge has been kept faithfully, with but minor exceptions. The President, fearing the enactment of such unjust, unfair, and unreasonable laws that would in no way reduce strikes but would create greater strife, has recommended and urged legislation to bring about harmony and adjustment of conditions. He has also recommended the creation of fact-finding boards. I myself felt that if all the facts were brought to light, it was bound to inure to the interests of labor as well as to industry and the country, and to be advantageous to the peaceful adjustment of the differences now existing.

Unfortunately, the recommendations of the President for full employment legislation, for the increase of wages to a minimum of 65 cents an hour, to provide compensation to the unemployed for at least 6 months, and other beneficial recommendations made by him, have not received the favorable consideration to which they are entitled. But I am satisfied that after the return of Congress, and after Members hear from the people at home, they will realize that the people stand by the President, and will cast their votes for the fair legislation urged by the President.

Personally, I have the utmost confidence in our President, and though some labor leaders criticize his recommendations for fact-finding boards, I repeat that his interests are with labor, and he is deeply interested in bringing peace and harmony to labor, industry, and the consumer, with regard for the rights of all. In fact, his main interest is in creating a lasting harmony throughout the Nation, among all classes.

To conclude, I am grateful for this opportunity of wishing all of you a very happy new year.

Mr. Speaker, since I made this broadcast the action of the General Motors Corp., the United States Steel Corp., the Westinghouse Electric Corp., and the Western Electric Co., Inc., and the packing industry, all controlled by Wall Street, have substantiated my statements that they and not the labor unions have forced and worked to the end to bring about a general strike in the hope that they will be able to keep wages down and destroy the unions and organized labor. Besides, they have refused to comply with the rulings of the United States Conciliation Service and have also refused to heed the President's plea to a 3 cents per hour wage increase, not withstanding that the CIO has signified its intention to accept the recommendations. Further, these organizations are refusing to produce their books and records which, no doubt, will show that the great profits which they have derived from Government contracts would make possible an increase in wages after payment of taxes and the usual dividends to their stockholders, and still leave them a great surplus.

Subsidies in the Meat-Packing Industry

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. SMITH of Ohio. Mr. Speaker, we witnessed this morning before the House Banking and Currency Committee an event of such transcending importance that every citizen of the United States

should be informed about it. Representatives of the Agriculture Department and Reconstruction Finance Corporation appeared before this committee with a request that subsidies for the meat-packing industry be increased by the amount of $125,000,000. Two hundred and fifty million dollars are still available from former authorizations for subsidies to the meat-packing industry. Previous subsidies paid to the meat-packing industry contributed to the wages received by its workers. The $250,000,000 still available for this purpose will in the future be a factor entering into the wage structure, as would also the $125,000,000 requested if approved.

Employees of the meat-packing industry are now on a strike for higher wages. Insofar as these subsidies enter into and become a part of the wages of the meat-packing employees, the transaction represents nothing less than the subsidization of their wages by taxpayers' money.

Does President Truman really believe that our people are so naive that they are unable to see through this procedure? It certainly does not take much intelligence to perceive that the $125,000,000 requested for subsidies to the meat-packing industries would place him in a better position to support a wage increase for the workers of that industry. If this is not an attempt to buy votes with taxpayers' money, then what is it?

If wages of employees in the meat-packing industry are to be subsidized by taxpayers' money, why not the same for wages in all other industries? The principle is, of course, purely communistic. Further, it is inflationary because under the present system of financing Government costs, the money the Government pays out in the form of subsidies can, in reality, not be derived from direct taxes but will be provided in part or in whole by Government printing-press money.

And be it remembered that Government printing-press money is the one and only cause of serious or uncontrollable inflation. Shortage of goods can and does cause price rises but never true inflation.

UNO Pulling Together for Peace—London Meeting Now in Session Augurs Well-Being Through World Comity—World Collaboration Marches On, Despite Cynics

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 21, 1946

Mr. DOYLE. Mr. Speaker, at London all last week, and again today there sits in the same conference room, the duly chosen representatives of almost all the nations of the world. The United Nations Organization is functioning with clarity and dispatch. Who said it would never get even this far? Who said Russia would never send a representative nor participate in this history-making, voluntary world-wide collaboration? Well, Russia sits there, too. And, they are following democratic processes in their deliberations. The small nations, too, have just recognition and responsibilities by reason of elective leadership.

And here on our very shores a UNO committee seeks for a permanent home site for the world organization. Think of it. Think of the responsibility as well as honor it places upon us in the United States.

Several months ago a Member of this House told me that UNO would never even get to first base. Well, I am so happy now, that I then told him he was of too little faith and he also needed to add a basketful of good works to a new supply of faith. He had been reading my remarks in the Appendix of the CONGRESSIONAL RECORD of March 27, 1945, at page A1507 entitled "Footsteps on the Pathway to Enduring World Peace," and he frankly said he felt my hopes there expressed would never find a birthplace. Well, they have and the child is now a husky UNO—with many "daddies" and "mothers" too.

In those remarks on March 27 last, I said that there had never existed in modern history, a like opportunity to initiate a world cooperative for world peace, world understanding, world brotherhood. And, Mr. Speaker, I think it was on March 12, 1945, in my remarks at page A1146 of the Appendix of the CONGRESSIONAL RECORD, I said that, "Cynicism, criticism, the lack of faith, the lack of hope—these weaknesses have no place in the thinking and prayers of any American who sincerely desires that there be peace on earth and good will toward all men." Then the San Francisco United Nations Peace Conference came on April 25, 1945.

So today, Mr. Speaker, as we tussle with our domestic national problems it should behoove us to recall and realize, and with a deep sense of gratitude and gravity too, that our five distinguished American citizens are in London, in a world legislative body, making a pattern for world peace, because of world-wide understanding and world-wide collaboration—by all nations, large or small.

Ours is cause for great rejoicing that so much progress has already been made in London. The ultimate will now be reached—the ultimate is perfection itself. But, sir, why should we expect of a meeting of many nations, speaking many tongues, what we of our race and our tongue have not accomplished on our continent?

Let us breathe only good will, cooperation, understanding, and brotherhood toward the epochal United Nations Organization as it gets under way. Its life line extends right back to this very Congress. Each day of this atomic age makes us daily more dependent upon the UNO, for our daily safety and freedom from fears, which would be certain to permeate from an uncontrolled world—controlled for peace—instead of for pillage.

Long Beach Editorial Says "Action Is Up to Congress"—American People "Want Action on Bills by Congress"

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 14, 1946

Mr. DOYLE. Mr. Speaker, I am pleased to call attention of Members of this Congress to the editorial in the Long Beach Press Telegram of January 4, 1946. This newspaper is published daily in my home city of Long Beach, Calif., a city of at least 300,000 people. It speaks so clearly and powerfully—it happens to be generally rated as "Republican" in political alinements—that it is especially indicative of how many folks in my district feel about the radio message of President Truman.

Apropo of the editorial's comment "Let them be reported out of committee and debated and voted upon by the full membership of the Congress"; I wish to call attention to my own speech along this line, in this House on June 8, 1945, and which appears at page 5828 of the CONGRESSIONAL RECORD.

In part, I then spoke as follows:

I ask that this great legislative body be given an opportunity to discuss and debate and decide this bill on its merits and every other bill too, which is reported out of any of the duly constituted committees of this great legislative body. Let the House itself decide the merits of the bill; the House is qualified and entitled to this opportunity. To refuse it is dangerous and destructive to legislative process. * * * No, I am condemning the system which weakens democratic processes for which I will always speak out and defend.

The editorial follows:

ACTION IS UP TO CONGRESS

President Truman's program for reconversion of industry and reemployment of labor is economically unsound in some particulars, but he is everlastingly right in his rebuke to Congress for delay and obstruction when the time for action to avoid national disaster is rapidly passing.

The President's radio address last night was for the frankly stated purpose of putting Members of Congress "on the spot" for their failure in the nearly 5 months since Japan sued for peace to meet the issues of reconversion.

Precious time has been lost, and the cost to the American people, in retarded reconversion, hampered production, and the blocking of reemployment, is high. There is not much left of the time within which the transition of the Nation's industry from conditions of war to those of peace can be accomplished without an economic crash. It is as if the driver of a heavily loaded truck had to shift gears while on a steep grade; it must be done quickly, or the driver will lose control and the vehicle roll down hill, with rapidly increasing momentum, to disaster.

Unless the deadlock that prevents American industry from going into high production of civilian goods can be broken, these consequences must be expected: Scarcities of housing and other necessities of life, already worse than during the war, will be dangerously aggravated; the pinch of unemployment already being felt in some sections of

the country will clamp down its viselike grip on the Nation as it did in the 1930's; the unemployed will have to live on their savings, use up their unemployment insurance, cash their war bonds and spend the money, thus exhausting their resources; and the restriction of production, causing scarcities, plus the enormous volume of currency and credit produced by the Government's deficit financing, will run up the cost of living to inflationary heights.

"Every day that production is delayed and civilian goods are kept from our markets by strikes or lock-outs brings injury to our reconversion program," the President said warningly and truly. "Already millions of dollars in wages have been lost to workers. Laboring men and women are using up their savings."

And the United States is using up the time given it to establish successfully a peacetime economy.

"What the American people want is action," said the President. They want action, and they will get it if they let their Members of Congress know that they must act in this emergency or be retired from public life.

Congress has the choice of accepting President Truman's program for ending of strikes and lock-outs and speeding industrial reconversion, or of formulating and passing its own program. There is no possible justification of the practice by certain congressional committees of bottling up key measures of economic recovery. They are recommended by the President of the United States. Action in these matters is essential to the prosperity and welfare of the American people. Possibly the measures in committee could be improved by amendment; perhaps they should be rejected and substitutes adopted. Let them be reported out of committee and debated and voted upon by the full membership of Congress. Doing nothing, which has been the policy of Congress, is indefensible, for it is trifling with the vital interests of the Nation.

By appealing to the people over the head of Congress, President Truman has recognized the truth that the public interest is fundamental and paramount. The American people is the all-powerful pressure group once it is aroused, and rightfully so, for the people's welfare is the purpose of government.

The American Nation speaks in the voice of the President when he demands action to end the strikes and lock-outs which are threatening the United States with disaster. Any Congressman who ignores this voice will do so with peril to his political life. The record made by Congress in its 1946 session in dealing with industrial strife and the curse of strikes will be decisive in the elections this year.

Radio Address of Hon. Fred Bradley, of Michigan

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

January 20, 22, and 23, 1946

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my radio broadcast put on the air over radio station WSOO, Sault Ste. Marie, Mich., January 22; Station WMAM, Marinette, Wis., January 20; and Station WDBC, Escanaba, Mich., January 23:

On VE-day, May 12, 1945, we had approximately 8,000,000 men in our Army—today we have less than 3,000,000—scattered all over the world. We began demobilizing immediately. Naturally, every one of those 8,000,000 wanted to get home just as soon as he could. The American people looked more to the Congress than they did to the Army to return these men to their homes as fast as possible. Consequently, when we returned to Washington last September General Marshall addressed an informal joint meeting of both Houses of Congress and explained the Army's plan for demobilizing and the speed with which it hoped to proceed. At that time I reported to you the essence of General Marshall's talk. Having now retired he has been replaced by General Eisenhower, who did such a splendid job defeating the enemy in the European theater. General Eisenhower immediately found himself thrown into a cauldron of criticism—not only from the boys overseas but from the fathers and mothers—sons and daughters—and sweethearts here at home but also from Members of Congress who, in the interest of their constituents have been asking why the War Department announced early this year that they would have to slowdown their demobilization program. I have received many letters on the subject while I remained in Washington through the 3-week interval between the first and second session of this Congress and, I presume, that had I gone back home into the district I would have had many, many more complaints about this slow-down. Other Members who returned home told me that the pressure was so great that they had no vacation whatsoever; that they were hounded night and day—and a number of them in despair were literally driven back to Washington in order to get a few days much needed rest before they began to tackle the arduous legislative duties with which we are faced in this second session of the Seventy-ninth Congress.

Because of this near hysteria which has developed we had another informal joint meeting of the Members of both Houses in the auditorium of the Congressional Library last Tuesday morning at which time we were addressed by General Eisenhower, Admiral Nimitz, and his personnel officer, Admiral Denfeld. To me that meeting was very informative and the Army and Navy representatives both set forth the facts. However, it took both of them about an hour to give us the entire picture of the reasons for the proclaimed slow-down. It must be obvious to you who are listening to me now that it is utterly impossible for us to digest in an ordinary letter to any one of you an hour's explanation by these top military men. Indeed, I cannot do it in a 15-minute broadcast. I can only touch some of the highlights today of General Eisenhower's explanation. I might tell you, however, that immediately following that joint meeting I made a speech on the floor of the House in which I recommended that both General Eisenhower and Admiral Nimitz, themselves, go on a Nation-wide—indeed a worldwide—broadcast program and tell all of you in as brief a message as possible what they told us. As I prepare this broadcast I notice that General Eisenhower will be on the air tonight, Friday, and I understand that Admiral Nimitz will be on the air very shortly. I hope that their explanations will satisfy you to such an extent that it will not be necessary for you to write us further because, based on their explanations, I am personally convinced that they are doing the best they can, taking everything into consideration, and that there is nothing Congress can do about it unless the Congress of the United States tells the Army and Navy, "Now that the war is over we do not want you to police Japan and Germany, we want you to leave every gun, tank, automobile, every piece of amphibious equipment, for which the American people paid billions and billions of dollars, over there; let it go plumb to Hades." If you want us to take that action then, of course, we can bring back the boys who are on police duty in Japan and Germany; we can bring back the boys loading valuable equipment and shipping it back to the United States as fast as possible.

There is $7,000,000,000 worth of it in Europe—7,000,000 tons in the Pacific. Here is another angle that General Eisenhower pointed out to us. We have at this moment under our responsibility in the European theater over 100 depots in which we have deposited captured enemy war matériel and in just one alone there is 400,000 tons of live enemy ammunition. We can bring back the boys who are guarding all of our own and the enemies' equipment if that is what you want us to do—but tell us to do that with our eyes open and with your eyes open so that you will know what kind of responsibility you are passing on to Congress. Why, any nation in Europe right today which could get its hands on the vast stores of American equipment and the captured equipment could start a war right over again tomorrow, and your boys would have to get back into uniform and put an end to it once more. If that is what you want—tell us in so many words instead of constantly demanding that we bring the boys back at once.

We can bring back the doctors and nurses who are administering to the ills of the boys still over there; we can bring back high-point cooks who are still there to feed the boys who are being inducted and those who are enlisting to replace those men over there and let them go hungry; we can bring them all back if you tell the Congress of the United States that that is what you want done and leave all that equipment there for Germany and Japan to rearm themselves and start another war—that is the only answer I can give you as to how we can go ahead at the present rate—on which we have been proceeding—in this demobilization program.

Now, let us look at the matter factually. Just what has the Army been doing in this demobilization program. As of January 11, 1946, 5,123,000 have been discharged. Last September General Marshall told us that he expected by this time—over a 4-month period—two and one-half million men and women would be discharged from the Army. As an actual fact, however, that number has been exceeded by 1,655,000 men and women—which means that 1,655,000 men and women who had no expectation of getting home for Christmas as of last September are now back in civilian clothes—if they can find the clothes. That remarkable record was over a million a month. Now, had we continued that way—if the Congress ordered General Eisenhower to continue bringing men home at that same speed, every man and woman in the Army of the United States would have been in civilian clothes by April 1 of this year—and that is unthinkable, of course, unless we are to give up the Army entirely. That is the entire reason for the slow-down unless, by your demand as I have stated earlier, you want the Congress to forget that we fought and won a war and drop everything where it is now. When the day is done farmers, as a rule, drive their teams back into the barn or drive their tractors out of the field. The workman lays his tools away for the night so that they will be ready for the next day's job. He does not leave them scattered around on the bench for somebody to pick up and walk off with or have somebody steal his means of making a living. A policeman—the protector of our life and liberty—when he goes home at night he does not leave his gun and billy hanging on the nearest lamp post—he takes it home and protects it because he doesn't know when he may have to use it to protect your

life and mine—and so it is with the Army. We must bring back our tools of war and somebody must be there to bring them back and protect them while they are still over there and until such time as we can get this equipment properly loaded aboard ship to return it and store it away in this country—not leave it out on Flanders Field to rot and rust, or leave it in the Malay jungles or on those islands in the Pacific we are giving up or turning back to our erstwhile Allies—we must protect it.

Now, I am just as anxious as any of you are—and I believe the Army is, too—to get those boys back as fast as possible, but we must be practical, not emotional nor hysterical about it. I believe, also, you are just as disturbed about these overseas mass protests that have almost bordered on mutiny and which are an unfortunate national disgrace, in my opinion, so let us examine some of the reasons for that.

Capt. Lowell M. Limpus, a New York News staff correspondent, who recently returned from the Philippines, where he covered the Yamashita trial and served as a war correspondent during the closing scenes of the war, gave a pretty good analysis of the cause of this unrest over there in an article on January 7. I have sought to verify his statements, and so far as I can find, he seems to have analyzed the situation excellently. It is outrageous that our Army should not put an immediate stop to this disgraceful behavior on the part of some of these new brass hats in the Pacific. Let me quote from the article:

"Too many newly arrived brass hats having a good time for themselves and neglecting their men while they let discipline and morale go to hell; that's apparently one of the principal reasons for what is getting dangerously close to open mutiny among our forces in the Philippines. It is a situation which has been worrying conscientious officers of the Regular Army for months, but they've been hoping it would work itself out in time. Evidently it hasn't and the accumulated neglect of many weeks is beginning to boil over. Now a lot of 'good-time Charlies' from Washington are beginning to pay for that neglect of the men. They've been looking after their own comfort and letting their subordinates stew in the sweltering Tropics. Swarms of high-ranking staff officers who rushed to the Far East, as soon as the shooting ended, have been concentrating on finding luxurious quarters for themselves in that war-shattered area and enjoying life therein once they were installed, and they don't seem to have paid too much attention to the men while they were doing it. * * * Very few of these comfort-seeking gentry wear battle stars or combat ribbons. They arrived on the scene after Japan surrendered and pulled their rank right and left on the boys who did the actual fighting. They snatched souvenirs greedily—and therein lies one cause of a lot of friction that hasn't been discussed publicly.

"Many a staff delegation swooped down on the combat units and confiscated heaps of samurai swords and daggers from the men who captured them. Then they took them back and distributed them according to rank among the be-starred and be-eagled tourists from Washington, while the boys who had won medals in action fretted and fumed—and came home without any souvenirs at all. The staff officers in the well-pressed uniforms even ranked liberated prisoners out of available comforts. I saw whole truckloads of those gaunt, hollow-eyed prisoners—colonels and lieutenant colonels themselves—driven away from the Admiral apartments in Manila, to which they were first taken, and dumped in a muddy replacement center, 20 miles out in the suburbs amid signs reading, 'Be careful. This is malaria country.' Out there the liberated colonels lived in crowded tents, using open latrines, until they were sent back to the States, while newly arrived staff colonels from Washington took over the nice rooms with the private bath in the Admiral. (The replacement depot staff did everything possible for the prisoners but we wondered why the desk officers didn't use the tents, for awhile, anyway.) Enlisted men burned up as they saw these things, and so did a lot of officers. I remember one swearing lieutenant protesting because one of his men sat up all night in a jeep while a staff colonel was inside a private home calling on friends one December night in Manila. Regular officers burned because, as they frequently said, too many of their superiors were betraying one of the oldest traditions of the service, that an officer should look after the comfort of his men before attending to his own. The practice increased steadily throughout the area after the war ended. More and more nice places were off limits except for colonels and generals. There was coffee and doughnuts for officers only at a stand outside the big post exchange, just above Manila City Hall, and a sign forbidding those officers to give any to enlisted men. * * * These things were typical—most of all in the Philippines. And they soon showed their effect on morale. The men became angry and disgusted and they wanted to get home and get away from it all. But mighty few people took the trouble to explain the details of the transportation shortage until they began to boil over.

"Then discipline went bad—especially around Manila. Drunken soldiers roamed the streets, brandishing bottles on Saturday night, and lack of respect for officers became manifest. Some of the officers—mostly regulars—fought a valiant, if losing, battle to preserve discipline and morale, and these officers included a number of colonels and generals. Conditions were excellent around the big base headquarters in Manila and around MacArthur's own headquarters in Tokyo. But these conscientious officers couldn't make much progress amid the general carelessness by which they were surrounded. And their smartly uniformed, well disciplined outfits stood out in bold relief. Contributing to the problem is the fact that many of the men themselves are newly arrived youthful replacements, who haven't been in the Army long enough or had sufficient training to really understand what they are doing. They may be easily led by malcontents, who have legitimate grievances. They really constitute the majority of the men in the theater now. It isn't the army which licked the Japs that is raising a ruckus today. Most of the combat-tried veterans already have been replaced. This is a bunch of kids, led by a few hot-headed men, who have been really abused and neglected."

And I want to add this comment that it has been proven beyond all shadow of doubt that much of the trouble stems from Communist agitators who have somehow or other gotten themselves into Uncle Sam's uniform.

And just one more observation—if you will look back, my friends, you will find that all of this agitation among the troops in China, in the Philippines, in Hawaii, in Europe—all of this stuff came to a head at a carefully predetermined time—the opening of the UNO meeting in London.

Rev. Hewlett Johnson

REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. GAVIN. Mr. Speaker, the Reverend Hewlett Johnson, Dean of Canterbury, recently visited here in America, accepting of our hospitality, lionized by that element in our social life who bend the knee to British aristocracy and who think more of an invitation to tea and crumpets with the British than they do in looking after Uncle Sam's interests. The noted reverend has returned to Britain, where he should have remained in the first place, to tell the world that the United States is 100 years behind the rest of the world and that in religion it is 150 years behind.

Now the reverend's remarks are not at all surprising, as the British have been beefing ever since we declared our independence July 4, 1776; however, I think his remarks are untimely, in view of the fact that Britain is now asking the United States for $4,400,000,000 to subsidize the nationalistic and socialistic program of Britain at the expense of the American taxpayer.

It is questionable how any Member of this House can support such a loan on the terms that have been agreed upon.

The reverend's remarks evidence a lack of appreciation for the courtesies extended him on his recent visit here and a lack of appreciation of our loss of American boys on the western front which former Prime Minister Churchill stated were 60 to 1—certainly we were not behind the rest of the world in this respect.

Think of the audacity of the distinguished British clergyman to criticize a nation which came to the aid of Britain when its back was up against the wall, a nation that supplied the planes, tanks, jeeps, guns, foodstuffs, and manpower that saved the British Isles from becoming a hole in the ground with Hitler sitting on the edge, crowing.

The British have been grubbing on this and every other country of the world since they became a world empire. Others have fought its wars. We have contributed in two wars, and in World war II we had 1,300,000 casualties, also poured in billions of dollars in money. The loans from the United States have kept the British going financially even though they have repudiated their debts to us. We washed off twenty-five billions of lend-lease in this war as a friendly gesture—all for what?

To maintain the British Empire and to have the very reverend gentleman tell us we have been off the beam for the past 100 years.

I cannot understand why our State Department would engineer a deal without first giving the duly elected representatives of the people an opportunity to pass judgment on the loan.

It certainly would be gratifying if the State Department would stiffen a bit and cut out the appeasement, become realistic and look out for Uncle Sam's interests before dishing out every dime we have.

If the Members of this Congress were asked to contribute their own money to buy bonds to finance this loan I believe there would be but few bonds purchased—if any. And to vote $4,400,000,000 of the American taxpayers' money—at this time—when we have already saddled a debt on the American people of $300,000,000 will call for a lot of explana-

tion to the good people back home who will have to pay the bill.

We, I might say, are gluttons for punishment.

Should OPA Be Continued?

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD an editorial from the Omaha Morning World-Herald of January 17, entitled "The Crumbling Dike."

Mr. Speaker, the subject of renewing the authority of the OPA should soon come before this Congress. There is a mountain of evidence everywhere that the OPA has not controlled inflation. The objectives of the OPA have been acceptable to the American people, but the methods they have used have been deplorable. The OPA, through their snoopers, have been going about Nebraska and other States, spying on the merchant and going under the assumption that every merchant is a crook. It is my opinion that no merchants have been able to follow all of the maze and intricate regulations as put out by the OPA and not be in technical violation of some of these regulations.

It is time for this Congress to realize that the war is over, and that the OPA was set up as a war agency, and any controls which may be necessary upon rents and prices of essential articles, ought now to be transferred to some old established agency of Government. The OPA should be discontinued permanently, and the regulations which are needed should be transferred without delay. If this is not done now, the Congress will be blamed for continuing an agency which is no longer needed. It may be our last chance to relieve the American people of a lot of foolish regulations which have been forced upon them by the OPA.

It is my opinion that competition will now take care of items of food. Many items will be much cheaper if the OPA would simply remove the ceiling prices. It is only natural that the merchant, when given a ceiling price, will sell that article at the ceiling price. There is an ample supply of food in all lines, with the possible exception of butter and sugar. Take off the foolish regulations and the ceiling prices which hamstring the merchants and the American people and the cost of living will decline.

The Congress should take some action now and not wait until just a few days before this act is to expire and then have the administration rush in with a fire call that something must be done at once. It is unfair to the public and the merchants of the country who have carried on in such a patriotic fashion during the last 4 years.

The editorial follows:

THE CRUMBLING DIKE

An 18-cent boost in the price of butter?

That hits home. What in the world has happened to our inflation controls, we ask one another? Perhaps this man Bowles has been right in insisting on rigid price limits as the only protection for the consumer.

But let's look at what has happened, not only to butter but to other commodities upon which the pressures for price raises are so great that they can no longer be ignored.

Butter prices have been low in comparison with prices of other cream products, so low that cream and butterfat have been diverted to the manufacture of more profitable items.

The cause was an inadequate price-control system for all cream products. Butter was out of line. To get it back in line the Government tells us there will have to be a whopping big price increase. Otherwise, no butter production.

The same situation applies to meat. The prospects are for price increases if packing-house workers and livestock raisers are going to keep busy producing for the consumer.

The same goes for steel, where the price situation is such that the steel companies say they can't induce the men to work at wages the companies can pay under their price ceilings. For the same reason automobile production is paralyzed, electrical-appliance production is retarded, the whole process of reconversion slowed up.

But, say the bitter-enders who stick with Chester Bowles, isn't it true that OPA price control, despite its mistakes, does protect the consumer?

And the answer unfortunately is no, not very well. Not in the case of products in great demand, such as automobiles and building materials, hosiery, scarce foods, and many, many more items.

The Wall Street Journal recently made a country-wide survey of ceiling price enforcement and found it "shot full of holes." Black markets, it found, are rampant in all the items that Americans want badly.

The situation breeds racketeering. It freezes out respectable manufacturers and encourages fly-by-nights with their sleezy goods and questionable business methods. Ready to cooperate with them are an army of new get-rich-quick middlemen who will peddle whatever is offered at whatever price is asked.

At the bottom of this unholy black-market pyramid are millions of Americans who see quite clearly that the chiseler is once again favored. They have verified their suspicions with a quick glance at the strange brand name, the high price, the poorer quality.

While OPA enforcement officers flit about the countryside fining grocers for what is little more than a technical disregard of the sugar rationing regulations, vast floods of legal but shoddy merchandise are taking the consumer's dollar.

That is the price and inflation picture as it is today. The spectacle of Chester Bowles, holding his finger in the dike while its walls crumble about him, is far from reassuring. His sincerity is not questioned, but his judgment may well be.

Rescind Carry-Back

REMARKS

OF

HON. CHARLES R. SAVAGE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. SAVAGE. Mr. Speaker, I fear that Congress has been too liberal to big business in this country, and I feel that General Motors and the steel companies have been taking advantage of our generosity in giving them carry-backs on their taxes. I do not think any President has ever tried harder than President Truman to settle the strikes. The workers have accepted the President's proposal, and they are to be congratulated for putting the Nation's interest above their own, but General Motors and the steel industry have turned it down. The workers have no carry-backs on taxes, and perhaps if the steel companies and General Motors had no carry-backs they would have been more willing to accept the President's proposal.

Under the carry-back provision it would be possible for General Motors to receive $165,000,000 without ever turning a wheel. The same applies to the steel industry. If it does not produce a thing for the rest of the year, the United States Treasury will pay the dividends for the corporations. I think, perhaps, we made a mistake, and we should correct it by repealing the carry-backs. Congress passed the carry-back provision with the idea that it would aid reconversion, but it is actually retarding reconversion because these industrialists are taking advantage of the provision in making an all-out effort to break unions and get the workingman back on a starvation wage. They are out to destroy labor. They have tried it before. We know the tactics that Girdler has used, and I believe the whole industry is trying to carry on the same thing now. The difference between the industry's offer and the President's recommendation was so small that the recommendation should have been accepted by industry the same as it was by labor. Industry's failure to do so indicates there is something bigger in the cards. That is the destruction of labor unions and the resultant wage cuts. That is what they are using the carry-back for.

The following newspaper article, written by Thomas L. Stokes, brilliant columnist, describes the situation in more adequate terms than I am capable of:

CONSPIRACY SIGNS

(By Thomas L. Stokes)

It seems more than a coincidence that only a few days apart General Motors rejects a wage finding by a Presidential fact-finding board and United States Steel refuses a compromise wage figure offered by the President of the United States intervening on behalf of the public.

In each case the unions accepted the findings, which were much below their demands.

Big motors and big steel.

Sometime back, even before VJ-day, there were charges by labor leaders that big industry was going to start a union-busting campaign after the war. A combination of big motors and big steel was cited specifically as the offensive weapon. These charges at the time made the usual impression that such charges do from union leaders who themselves intend to take the offensive for wage increases. In short, they were somewhat discounted, even though there were significant signs about.

Now, with the latest action of General Motors and United States Steel, it all seems to add up to just about what the union leaders were charging. That is, a conspiracy by the

big interests to move in and take over, now that the people have lost the champion in the White House who was so quick to detect and expose the machinations of the big fellows, and to rally the people against them. They are capitalizing, too, upon the confusion that naturally follows a war, with the public weary and punch-drunk.

The big boys first thought they could take Harry Truman, Mr. Roosevelt's successor, into camp. They thought he was their man. They have found out different. Now they seem determined to break him, if possible. He does not, it is true, have the maneuvering abilities of his predecessor.

Breaking the power of the unions and breaking the power of the administration are all part and parcel of the same plot as it begins to unfold, in the view of those here who have watched and analyzed the various moves.

The tip-off came when big motors and big steel thumbed their noses at the President, the representative of the people, in what looks like a carefully premeditated gesture.

There are a few simple facts to remember in this situation. In each case, the awards proposed respectively by a fact-finding board and by the President were about half-way between those asked by the union and offered by the company. Without going into all the figures each proposed award seemed reasonable.

The point is made that President Truman stepped into the steel case before the fact-finding board had investigated fully and reported. But he stepped in, as any President is expected to do, in the public interest. It was an emergency case.

There is another thing to remember. Both General Motors and United States Steel netted handsome profits in the war, both have a nice backlog, and both were treated most considerably by Congress, along with all industry, in repeal of the excess-profits tax and making available various tax refunds. Congress, in fact, hastened to do that while it held up action on such measures for the benefit of workers as increased unemployment compensation and the full-employment bill, neither yet enacted.

Big industry, it would seem, can ill afford to fail the country at this time.

There seems little doubt that public sympathy will be out with the folks on the picket line.

An Overseas Soldier Denounces Racial Bigotry

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. COFFEE. Mr. Speaker, one of our overseas soldiers has written me a letter in which he expresses himself strongly concerning the fighting qualities of American Negro troops and in which he denounces those who disparage the Negro and would continue to divide American citizens into first- and second-class categories. His words in support of me and my crusade against all forms of racial and religious intolerance are inspiring.

It is time that the American people are awakened to the dangers in the offing. They should be alerted to recognize the dark clouds hovering on the horizon. Of what value a victory over nazism, anti-Semitism, and racial superiority's falacious doctrines elsewhere while tolerating if not encouraging similar reprehensible practices here. But let the soldier's letter speak for itself:

NOVEMBER 22, 1945.

DEAR SIR: In our Army newspaper "Round-up" here in the Indian theater I have read of your speaking out against the barring of Negro Pianist Hazel Scott from Constitution Hall by the Daughters of the American Revolution. May I highly commend your splendid show of Americanism. We soldiers have very litttle prejudice among us. We have seen the work of the Negro troops on the Burma Road and read of their aid in the fight for victory in other theaters all over the world. To read that any organization composed of people who had their tea and crumpets every day during the war had the nerve to take such an un-American stand makes us fellows boil.

When the American people start to bar certain individuals from their lawful rights then we are on the road to disaster. We fought that false philosophy in bloody battles in both Europe and the Far East What a hollow victory if some of the Negro troops return to their native land after losing an arm or a leg or blind for the rest of their lives and there find the same injustices that they fought so valiantly to defeat.

Therefore may I once again express my gratitude and pleasure in being able to read of your splendid action in condemning this show of racialism.

Very truly yours,

——— ———.

Address by Mayor of Lynn, Mass.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Daily Evening Item, Lynn, Mass., recently:

MAYOR COLE'S ADDRESS

Courageously facing the facts of postwar municipal life, Mayor Cole painted a straightforward and realistic picture of Lynn's major problems in the coming 2 years in his inaugural address to the city council today.

Pointing out that the utopian age for municipal government vanished with the coming of peace and that cities must now reassume the normal financial burdens from which they were temporarily freed during the conflict, the mayor was not content to chart a program designed merely to restore conventional services. Rather, with the initiative and confidence typical of the returning serviceman, he proposed new and bold departures to keep Lynn abreast of progressive municipalities throughout the country.

Most ambitious of these proposals is his recommendation that steps be taken at once to provide the city with an appropriate war memorial in the form of a new city hall. For years it has been generally recognized that Lynn's city hall is inadequate for the proper functioning of a municipality of our size. And ever since the end of World War I there have been vague discussions but no definite action concerning an enduring tribute to our fighting men. Mayor Cole, in one bold stroke, has suggested the solution of both problems in one undertaking. Refreshing, indeed, is this indication that we may expect action rather than aimless talk in the new administration.

The mayor, keenly conscious from his own military experience of the sacrifices of our young men and women in the recent war, urges that immediate recognition be given Lynn residents who served in World War II by the placing of a suitable plaque in the foyer of the present city hall, bearing the names of those who made the supreme sacrifice.

Even more tangible, from the veteran's viewpoint, is the mayor's recommendation that sufficient funds be placed at the disposal of the director of the department of rehabilitation to assist men and women upon their discharge from the armed forces and that immediate steps be taken to provide more adequate quarters for this vital work. The council should lose no time in following these recommendations which will have the hearty approval of citizens generally.

Heartening, too, is Mayor Cole's program for an immediate resumption of construction work in the street and sewer departments, which has been practically nil during the war years. His specific proposal that Union Street, one of the city's busiest downtown arteries, be resurfaced from Central Square to Chestnut Street, will bring a fervent "Amen" from the thousands of motorists who use that street regularly. Property owners and the general public will also respond enthusiastically to his proposal that sidewalk construction, neglected during the war, be resumed.

The mayor will go a long way toward solving the city's growing juvenile delinquency problem by his determination to provide sufficient funds in the 1946 budget to put the city's playgrounds in better and safer condition and to provide them with adequate equipment.

Mayor Cole's tendency toward direct action ratner than dilatory discussion is further reflected in his recommendation that the Campbell Building on Stewart Street, the Little property on Ocean Street, and other parcels now owned by the city be offered for sale at once through public advertising so that such properties may be restored to the city's revenue producing column. There has been altogether too much shilly-shallying on these matters.

The mayor's other recommendations, including the bringing of the police and fire departments' personnel to the figures called for by ordinance, closer supervision of liquor establishments to wipe out present abhorent conditions in some of them, and strict adherence to the city charter provision calling for the public advertising for bids on all materials and supplies costing $500 or more, will, if followed, help to eliminate annoying evils and inadequacies.

The mayor warns his colleagues that a return to progressive, "do-something" administration will involve financial problems and that expenditures in some necessary directions must be offset by economies in others. Mayor Cole asks for cooperation, not subservience, by the city council and an end to petty bickering and name-calling. His program, which will be amplified as he finds time to study municipal affairs in more detail after his long absence in the service, provides a sound and progressive pattern for the running of the city. We bespeak for him the sincere assistance of the city council and a continuance of that support by the citizenry as a whole which gave him such an overwhelming mandate in the November election.

Assistant Secretary Hensel, of the Navy Department, and Representative Randolph Disagree Again in Reference to Unification by the Armed Forces

EXTENSION OF REMARKS
OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. RANDOLPH. Mr. Speaker, under date of December 20, 1945, I placed in the Appendix—pages A5724–A5725—of the CONGRESSIONAL RECORD correspondence between the Honorable H. Struve Hensel, the Assistant Secretary of the Navy, and myself, in reference to the subject matter of a single Department of Defense. I herewith include a further exchange of letters with Mr. Hensel on this important subject:

THE ASSISTANT SECRETARY OF THE NAVY,
Washington, December 22, 1945.

Hon. JENNINGS RANDOLPH,
House of Representatives,
Washington, D. C.

MY DEAR MR. RANDOLPH: I have your letter of December 1945, in reply to my letter of December 14. I am quite surprised at your references to the heat in my letter. I have reread my letter and yours several times and I think any impartial mind would find the heat much more on your side. In any event, no heat was intended by me, although the statements I characterized as unsupported are, in my opinion, still unsupported, in spite of your letter. The major statements made by you in reply to my challenge of John Cowles' statements were so phrased as to be impossible of check or confirmation. They would not be accepted anywhere as proof of anything except that you were so informed.

In the first place, although you mock my unfamiliarity with strategic matters, your letter starts with an admission of the correctness of my statement that there was a split of command in the War Department between the Army under General MacArthur and the Army Strategic Air Forces. In that respect I was clearly correct and that was the only factual statement I made with respect to strategy.

Then I asked the question, Why did not the single Secretary of War prevent that split within his own Department? Your explanation that such split of command under a single Secretary was necessary because there was a split of command between the Army under General MacArthur and the Navy under Admiral Nimitz is a novel one. Why the Army had to split its command because the Navy consolidated its own air, sea, submarine, and marine forces is hard for me to follow.

But I do not think we will make much progress by debating that point further. Judgment as to the soundness of your explanation can be left to those who read these letters. I am, however, constrained to wonder why people discussing the need for a single Secretary in order to assure unity of command in the field always omit any reference to that split under the single Secretary of War. I wonder further why, after some public revelation of that split in the War Department command, it has been found possible to put the Twentieth Air Force under General MacArthur, although there has been no change in the Navy command in the Pacific. Don't you concede yet that unity of command in the field is possible without a single Secretary?

Furthermore, I wish you would check with your informant as to whether the Twentieth Army Air Force was really under the command of the Joint Chiefs of Staff. I have always been told that the Twentieth Army Air Force was under the command of Gen. H. H. Arnold, Commanding General of the Army Air Forces—and answerable only to the Joint Chiefs of Staff in the same manner that the Navy was so answerable. If my information is correct, your explanation of the reason for the split of command in the War Department needs considerable modification.

Your allegation that the savings claimed by John Cowles, Esq., were really possible is hardly proved by the listing of four very general categories of possible savings without detail or substantiating evidence. You know that such general statements would never be accepted anywhere as evidence of anything. You must have been aware that I could not possibly check the correctness of your statements when all identifying details were omitted. The blind statement that $372,067,000 could be saved in 17 items of research and development alone is still an unsupported statement. It is frankly challenged. The same is true with respect to the other items which you group generally under the headings of "Purchasing," "Facilities," and "Supply and materials handling."

I appeal to your sense of fairness to give me a break-down of these statements so that they can be checked. No witness facing the possibility of cross-examination has ever made any such statements. I would also appreciate the name of your informant and a detailed statement of the manner in which the savings were calculated—with a list of the items involved. Please give me the information in such form that a check can be made.

The items which you listed to demonstrate five instances of competitive bidding between the services turn out to be only one item of competitive bidding and four alleged program conflicts. And the only item of competitive bidding you could find was in respect of some water tanks in Miami, Fla. That case certainly seems de minimis when we are discussing billions but I will have it checked. I will also check your allegations of program conflicts which are far from competitive bidding. Your comment as to my "preoccupation with lumber (the forests and the trees)" seems to need no answer or check.

I am, of course, very pleased that we now have some promise of discussing the details of these extravagant claims. I trust you will promptly insert this letter in the CONGRESSIONAL RECORD so that my side of the case is presented forthwith and the readers of the RECORD are not left thinking you have really answered my questions or challenge.

Sincerely yours,

H. STRUVE HENSEL.

JANUARY 21, 1946.

Hon. H. STRUVE HENSEL,
The Assistant Secretary,
Navy Department,
Washington, D. C.

DEAR MR. HENSEL: Your letter of December 22, 1945, acknowledged in my absence by my secretary, has been read and re-read most carefully.

I confess that the points intended to be made by your four paragraphs relating to command are far from clear and their significance to the issue before us is, if I understand them, obscure. If any discussion of them is to further our mutual understanding and the enlightenment of "those who read these letters," it appears that I must correct certain concepts which appear fundamental to your thinking.

You apparently do not realize that, so far as United States forces were concerned, supreme direction, under the President, was vested in the Joint Chiefs of Staff. This direction over the various theaters of operations and commands functioned through that member of the Joint Chiefs, as executive agent, deemed best qualified in relation to the nature of anticipated operations. General Marshall acted as executive agent of the Joint Chiefs of Staff for the North African, Mediterranean, European, and Southwest Pacific theaters; Admiral King for the Central Pacific and South Pacific theaters, and, subsequently, the Pacific Ocean areas, and General Arnold for the strategic air forces in Europe, which operated in and over several theaters, and for the Twentieth Air Force and subsequently the strategic air forces in the Pacific where similar conditions obtained.

The operations of the Twentieth Air Force, and subsequently the strategic air forces in the Pacific, in and through several established theaters, were described to you in my previous letter. The strategic considerations which dictated the establishment of these organizations, by the Joint Chiefs of Staff, distinct from any of the affected theater commands, were, I think, adequately set forth therein. You, no doubt, are aware that this followed the pattern previously established by the Joint Chiefs of Staff for the strategic air forces in Europe operating both from the Mediterranean and European theaters.

It will, I think, be clear to you from the foregoing that the organization of the strategic air force in both wars was dictated by the versatility of the air arm and the far-flung nature of its operations, encompassing the area included in more than one theater. It did not represent a split in command within the War Department, as you describe it, but a division of command responsibility determined by the Joint Chiefs of Staff to meet strategic considerations. As I wrote you, had a single, unified command been established for the Pacific Basin or had it appeared practicable to the Combined and Joint Chiefs of Staff to consolidate the European and Mediterranean theaters, the distinct air command would presumably have been unnecessary. Your reference to split of command with the War Department would be equally applicable—though of no applicability whatever—to Admiral Nimitz's command in the Central Pacific and Admiral Halsey's command in the South Pacific.

As for the figures I gave in four general categories, I included them only as an assurance to you that I had assured myself that the savings claimed in John Cowles' article could be substantiated. I do not feel that an item-by-item debate in correspondence between us is the medium for proof or disproof of savings to be realized under unification of our armed forces. Forthcoming hearings on legislation to effect this unification before the House Committee on Expenditures in the Executive Departments, of which I am a member, will presumably provide both the Congress and the public with detailed statements as to savings possible under a single department, as well as the proof, subject to the careful scrutiny and examination of the committee. In that forum experts on both sides will be heard and their evidence carefully weighed.

I also have before me your letter of January 7, 1946. This communication will be studied very carefully, as per my conversation with you a few days ago when I had the genuine pleasure of meeting you personally for the first time.

Sincerely yours,

JENNINGS RANDOLPH.

A Communication From an Air Corps Officer

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a communication I have received from one of my constituents:

THREE HUNDRED AND FIFTH BOMB GROUP (CASUAL POOL),
St. Trond, Belgium, December 7, 1945.

For your information, part of an article from the Stars and Stripes of December 7, 1945, is quoted:

"OFFICER LACK DELAYS THEIR REDEPLOYMENT

"Because of a critical officer shortage, * * * the Army will ration the redeployment of officers who became eligible for release December 1, it was disclosed at USFET (rear) Headquarters yesterday.

"The plans are to let the officers go 'economically' over a period of 60 days as provided for in a recent War Department cable to the theater. It means officers who became eligible for separation December 1 may be held until January 31, 1946."

In October at St. Trond, Belgium, for example, a pool of Air Force personnel was formed to accommodate officers declared surplus and nonessential to occupational and close-out organizations.

Since they have been in this casual pool the salaries for these 367 officers have exceeded one-quarter million dollars, which is only an incidental part of the total cost to the taxpayers. Ir return, these officers have performed no duties.

Their point scores vary from 39 to 74, with an average of 65. In the United States flying officers are being discharged with as few as 19 points. This is an indication that there is a surplus of flying officers in the States as well as in this theater.

The plan presented by the War Department is in direct conflict with the situation in which these officers find themselves. The two reasons responsible are as follows:

1. A point system which has become inadequate.

2. A plan to keep officers here because of an "officer lack," which obviously does not exist in the Air Force.

These officers feel that some positive action should be taken to remedy this situation immediately

For the casual officers:

P. F. RINALDO,
First Lieutenant, Air Corps.

Good News About the State Department

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. COFFEE. Mr. Speaker, no one has been more critical of the State Department over the years than have I, when I felt that it was deserving of censure. On the other hand, I have been always eager to extend a handclasp of warm friendship and support when our State Department did something deserving of commendation. Recently, our State Department has evidenced a stiffening attitude toward fascism. This has heartened true lovers of democracy throughout the country. Perhaps it has provoked attacks from certain fair-weather friends who were mistakenly given positions of power and influence in our diplomatic corps. It is to be hoped that these will be rapidly purged. A recent editorial in a great Tennessee newspaper lauds our State Department for calling home Ambassador Norman Armour from Franco Fascist Spain and for recalling Spruille Braden from the Argentine and thereafter elevating him.

The editorial is as follows:

[From the Nashville Tennesseean of November 21, 1945]

COLD SHOULDER

The unofficial report that Ambassador Norman Armour is to be called home from Madrid as a sign of disapproval of Francisco Franco's Fascist government promotes the hope that the State Department is making an effort to catch up with public opinion.

The report takes on added significance in that it was released in conjunction with the return of James C. Dunn from Europe. Mr. Dunn has been the main inspirer of the Department's silk-glove policy toward the Spanish Fascists for nearly a decade. Whether he saw new light on his trip and therefore has given assent to the move or has been overruled is open to conjecture. At least, the recall of Mr. Armour would be a complete reversal of the Dunn-Carlton-Hayes policy.

Unlike Mr. Hayes, whose sympathies for the military-clerical-feudal regime of Franco grossly overbalanced his judgment and watered down the policy which should have been pursued, Mr. Armour has dealt with the Fascist crowd in Madrid as a firm and unyielding representative of a democracy should. His recall, which would be as far as our Government could go at this time without a formal breaking off of relations, would be a cold shoulder not only to the present government in Spain but also to plans to make it respectable with certain skin-deep changes, such as the abolition of the Falange, and the personal retirement of bloody Franco.

The recall and elevation of Spruille Braden to an important post in the State Department leaves Juan Peron's government in Argentina without formal recognition. Consistency requires that we also recall our representative from Spain. In the present world there is no place for the discredited umbrella policy.

Letter From General Motors Employee

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. WOODRUFF. Mr. Speaker, today I received a letter from an employee of General Motors in Detroit. The writer is a long-time employee of that company. He is a veteran of the Spanish War, and evidently a man of good judgment. I am offering this letter for the RECORD, and for obvious reasons am withholding his signature:

DETROIT, MICH., *January 19, 1946.*
Congressman ROY WOODRUFF,
Washington, D. C.

DEAR COMRADE: As my Congressman is sewed up, body, soul, and breeches with the CIO I do not have strong hopes of getting a reply from him to a letter that I recently wrote him, so I am writing to you because I know you as a comrade of the Spanish-American War, and a friend of the underdog.

Comrade, isn't there some way of ending these needless strikes? Why should I and thousands of others be kept in idleness when we want to work? I am sure thousands in the other plants feel the same way. This strike has taken the bread out of their mouths. Unlike them I have my pension so it is not so hard on me, but at that it is plenty hard enough.

Comrade WOODRUFF, I have carried a union card since shortly after the Spanish-American War and no one knows better than I do all that unions have done for us, shorter hours, better pay, and better working conditions for us working men. Old Sam Gompers was the greatest labor leader this country has yet produced. He knew how to settle labor disputes between labor and employer without losing weeks of time. Old Sam wasn't much on publicity but he certainly knew how to look after his membership. How different now! Our unions are being led by a lot of self-seeking ballyhooers who seem to care little for us. Their pay goes on, strike or no strike, but we have to pay the fiddler. When we strike our pay stops.

Friend WOODRUFF, can't Congress do something to stop all this foolishness, and that is just what it is? I can give you the names of many, many General Motors' workers who are well satisfied with the settlement offer the company has made us. We want to go back to work, but a small and well organized group in our unions won't let us.

I ask you, Comrade WOODRUFF, is America still a free country, and if it is why can't those of us who are satisfied with General Motors' offer go back to work? You would be surprised at the number of us who don't like the way our leaders are leading. I guess we showed that in the mayor fight. I have been voting New Deal since the Hoover days, but I am through and so is a lot of others that I can name. I don't know how much you could do, but for God's sake do what you can. This thing cannot continue much longer. If it does we will have a blow-up here in Detroit that will put some of our leaders out of business. I hope you will answer this letter because I am getting kind of tired with writing Congressmen and not getting any answer.

Were you in Cuba, or the Philippines, during the Spanish War? I served in Cuba.

My best wishes to you, Comrade.

Yours very truly,

_____.

P. S.—Has a bill been put in to increase our pensions? I would like to retire and make room for a younger man, now that my family is grown and scattered.

The Housing Shortage

EXTENSION OF REMARKS
OF
HON. BENJAMIN J. RABIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. RABIN. Mr. Speaker, the American Veterans' Committee and Mr. Franklin D. Roosevelt, Jr., its chairman on

housing, are doing a splendid job to awaken the American people to the seriousness of the housing shortage and to urge the necessity for some expeditious and effective means of solving that problem.

Under leave given to me to extend my remarks, I include in the RECORD a radio address made by Franklin D. Roosevelt, Jr., on January 17, 1946, over a coast-to-coast broadcast of the Mutual network, on the subject of the housing shortage:

Good evening, ladies and gentlemen, the critical shortage of housing in the United States is something that must concern every American because by the end of 1946 there will be 3,000,000 families searching in vain for homes of their own, and if the present rate of home building continues for the next 10 years, there will then be 8,000,000 American families homeless. These are appalling figures, but they are the conservative estimates of the National Housing Agency in Washington.

During the war, no bombs fell on our great country and no homes were destroyed from enemy action, but still millions of American soldiers and sailors are returning home to find that there is no decent shelter for themselves and their families and that in many of our major cities the picture looks black for years to come.

This crisis is not something which has developed overnight. It has been building up for the last 15 years. During the depression, the majority of home building was done for the higher-income groups, and very little low-cost housing was undertaken. During the war, all construction materials went into building our great war factories and the temporary housing erected at these factories to give adequate shelter to our war workers. Even before the end of the war, all of our cities were overcrowded and now our returning veterans find that they are aggravating an already serious condition.

It is true that many people looked upon housing as a boring subject, until the veteran's crying need for a decent place to house his family dramatized the issue. I have heard many people say that the veteran needs this and the veteran wants that, but let's put first things first. Before a man can get a job, he must have a decent place to live in. I have seen some of my fellow veterans, with their wives and children, sleeping in the lobbies of our great railroad stations and hotels, here, in the proud city of New York. Another veteran, with his wife and baby, slept in his automobile for 3 nights, before he could find a one-room apartment. These are but two of the many tragic, similar stories.

However, let me emphasize right here and now that the veteran does not consider this to be his problem alone. We, of the American Veterans' Committee, feel very strongly that the veteran must not consider himself as a member of a group apart, working for its own special interest, at the expense of the rest of the community. Rather, we feel that we can only continue serving the best interests of our country and our fellow Americans by becoming a constructive and integrated force within our community, working with all other groups to achieve a better life for all Americans.

The housing problem resolves itself into two parts.

First, we must achieve an immediate temporary solution, to tide us over the winter months until a long-range permanent housing program for the Nation can get under way.

In various communities, this temporary solution may take many different forms. In Minneapolis, for example, part of Mayor Humphrey's plan is to convert some vacant school buildings. Here in New York, the American Veterans' Committee organized a rally last October, to discuss the local housing shortage. Out of this forum came several workable suggestions.

We urged that the city administration buy from the Federal Government a minimum of 10,000 temporary housing units, which the Federal Government had erected during the war, to house war workers. An example of such housing was the city of Oak Ridge, Tenn., which was built in 6 weeks and housed 75,000 men and women, who produced the atomic bomb. Such housing could be transported to New York and installed in a matter of a few weeks. We also urged the enactment of State legislation to ease the shortage and strongly backed such Federal legislation as the Wagner-Ellender-Taft bill.

In the ensuing months, partly due to our repeated protests, New York City became housing conscious. Mayor William O'Dwyer assumed office on January 1, and in the first 10 days of his administration, placed an order with the Federal Government for 7,000 temporary housing units and 1,345 Quonset huts. The veterans of New York City congratulate Mayor O'Dwyer on his swift cutting of red tape in his efforts to solve his city's most pressing problem.

The New York State administration, under Governor Dewey, has acquired some Army and Navy barracks in the New York area which are being converted into approximately 3,500 temporary housing units. Together, this means almost 12,000 temporary housing units for the veterans and their families which will be available within the next few weeks.

This is not a complete solution, but it certainly is a step in the right direction.

Many people, both in New York and in other large cities, have urged, as a temporary solution, that the old law tenements, the cold-water, unheated slums, which have existed too long, be slightly modified and turned over to the veterans. I am sure that all of you agree with me in my opposition to such a solution. We do not wish our present problem to be used as the excuse for continuing in existence the slums, which should have been removed many years ago. If they are somewhat rehabilitated now, it will prolong their existence for years to come. Too many veterans know too much about foxhole existence to ever agree to subject themselves, their young wives and children to the slop-holes which are the slums—the blight on the faces of our great cities.

The second part of this housing problem is the long-range one—what are we doing today to insure that 8,000,000 American families will not be homeless 10 years from now. Here again, time is of the essence. We must start now to solve the problem of tomorrow. If the housing industry could rapidly adapt itself to the present situation and could go to work building homes, more than 4,000,000 Americans would be employed in this industry. But, unfortunately, there are many and complex obstacles holding back the beginning of immediate construction. Without placing the blame on any single group, let me enumerate the three main obstacles. They are, fluctuating labor costs, shortage of materials, and uncertainty as to OPA ceilings. In brief, due to these obstacles, construction is going ahead at an appallingly slow rate. Only 400,000 homes will be completed in 1946, and still 3,000,000 families will be homeless. As President Truman stated in his January 3d address to the Nation, this is an emergency situation, which requires an emergency solution. Congress has passed the Mead bill, which provides $195,000,000 to facilitate the moving of temporary and semipermanent war workers' housing to cities which now need it most, but this again is only a step in the right direction and cannot be considered as a permanent solution to the long-range problem.

Also pending before Congress is the Wagner-Ellender-Taft bill, which, briefly, will initiate a long-range, low-cost national housing program. This legislation recognizes that the greatest need exists in the lower-income groups of the Nation, and the American Veterans Committee has not only appeared before the congressional committee in favor of this bill but we have initiated a Nation-wide campaign of letters and telegrams to Congressmen, urging its immediate passage. But, unfortunately, I do not feel that this legislation alone goes far enough. For example, it will provide, over a period of years, approximately 50,000 low-cost housing units for the city of New York. This is only a drop in the bucket. More than 3,000 veterans are returning to New York City each week, and it is easy to see that they alone could gobble up these new housing units in about 4 months.

For this reason I do not feel that the Wagner-Ellender-Taft bill can be considered the emergency solution to which President Truman referred on January 3.

However, about a month ago Representative BENJAMIN J. RABIN, of New York, introduced a bill in the Congress which we, of the American Veterans' Committee, along with many labor and business groups, feel is the only emergency solution for this crisis. This proposed legislation has now come to be called the Rabin plan, and, briefly, it is this:

Using the emergency powers of the President, the executive branch of the Federal Government is given authority to build, through private contractors, permanent housing of whatever nature and in whatever localities it is considered necessary to meet the present shortage. The contracts will be subject to renegotiation when the buildings are complete.

All necessary materials may be allocated by the President's representative in charge of this program, thus insuring an adequate supply of materials for low-cost housing. After completion, and after the OPA has determined the rent ceilings, the buildings will be sold to private management groups at a price which will give them a fair return on their investment.

In this connection, I would like to point out that the OPA, unless extended by the Congress, will cease to exist on June 30 of this year. I consider that the termination of OPA price and rent controls would be nothing short of a national calamity and the veteran, along with other low-income groups, would suffer most. But, if by any chance the few selfish groups who are seeking to end the OPA this June might be successful, I feel that the sale contracts on all housing units built and sold under the Rabin plan should be subject to renegotiation, if and when the private management groups increase the rents in any of these buildings. I feel this because the private management groups would then be getting a much greater return on their money, and the Federal Government, which had assumed the initial risk in going ahead with the construction, is entitled to recover any loss it might have incurred.

In short, this is the kind of simple plan which has made many people exclaim: "Why didn't somebody think of this sooner?"

This is the same method that the Government used in war to build our great war plants and I am convinced that it is the only adequate solution for this emergency. There are plenty of homeless veterans and civilians who will tell you, in all sincerity, that the war is not over for them until they have found a decent place in which to live.

The new veteran wishes to solve the problems of his Nation in cooperation with all of his fellow Americans. Only by working together can each community and the Nation as a whole solve our present housing shortage.

It is my deep conviction that not only the veteran, but every American, is entitled to a decent home—a decent home in which to raise his family—the Americans of tomorrow.

Pearl Harbor Fiasco

EXTENSION OF REMARKS
OF
HON. JOHN B. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I include an editorial from a widely read and highly regarded neighborhood newspaper serving a part of the Eleventh Congressional District of Missouri, the South Side Journal, of Wednesday, December 19, 1945:

PEARL HARBOR FIASCO

The so-called Pearl Harbor probe has degenerated into a farce comedy which is altogether unworthy of a great power like the United States which stands now in the role of unquestioned victor on land, on the sea, in the air throughout the Far East, throughout Europe, and wherever our military, naval, and air forces have met the enemy.

As a matter of fact, the Pearl Harbor episode which precipitated the ultimate clash with Japan, has best been explained by the GI who said the other day that the Nips just pulled a fast one. It was sneak attack against which human precautions, however great, would undoubtedly have been futile.

Efforts of investigators to narrow down "responsibility" for the Pearl Harbor tragedy, thus far have been singularly unsuccessful. To us they represent so much wasted time which might better be directed towards the solutions of many genuinely pressing problems at home and one or two foreign problems which cry for immediate, careful attention.

Efforts to pin on the late Franklin D. Roosevelt the blame for our precipitation into the recent conflict, which seems not yet to be ended, are highly reprehensible. To some who are political minded, it might seem expedient to do this. But the consensus of American equity and justice finds such efforts abhorrent. Mr. Roosevelt never was among those who believed we should be in the position of being helpless when the inevitable crisis came, and most of our readers will recall that he warned us far in advance of actual hostilities of the peril in which we stood. His Chicago speech, directed specifically against the German Nazi regime, met with howls of anguish from those who now seek to charge him and his aides with criminal neglect leading to the conflict.

The American businessmen who sold Japan scrap iron and airplanes, well-knowing the uses to which these items could and probably would be put, should be in the dock. Upon them rests a large share of the blame for the recent conflict which has been so costly to us in men, material, and money. The same businessmen whose shipments of scrap iron were piled up on west coast docks on December 7, 1941, ready for shipment to Japan, knew they weren't shipping this metal to be used for the manufacture of skillets and teakettles for resale in America. They knew, or had every reason to know, that Japan had imperialistic designs, that hatred of the United States had been fostered among the Japanese over more than a generation, and that the Japs who were smart, but not quite smart enough, might be ready to strike in view of Hitler's supposed successes and strength.

The Pearl Harbor probe has disgusted even the men sent out from Washington to direct it. We feel the same way. There is no defense against treachery except eternal vigilance; such vigilance as is confined not to a few officials in Washington or in isolated spots; but vigilance which includes all the people, and vigilance in which patriotism far transcends greed.

Pearl Harbor is the price we paid for unpreparedness. We are unable to see that individual responsibility of military and naval leaders, individual responsibility of our leaders in Washington, has anything to do with the matter at this stage of the game. We have paid the price. We have won the victory.

There are manifold problems in the United States much closer to the people than ascertaining who, if anyone besides the Japanese themselves, may have been responsible for Pearl Harbor. There is the housing problem which at this moment is most acute. There is the problem of industrial relations which must have immediate and intelligent consideration. There is the problem of economic readjustment. All these cry out for exclusive attention. Let us demand that official Washington tackle those problems. After they have been solved, there will still be time to determine who among Americans was responsible for the Pearl Harbor tragedy, if we then think that is important.

Let us, in heaven's name, quit playing kid games and get down to adult business.

Mr. Farley's Visit

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Binghamton (N. Y.) Sun of December 14, 1945:

MR. FARLEY'S VISIT

There is always a welcome in Binghamton for Big Jim Farley, a man who has the courage of his convictions.

Mr. Farley's mission is not political this time, at least on the surface. He is touring the State in the interests of the Alfred E. Smith memorial, a project which should have the wholehearted support of all admirers of the former East Side boy who became one of the most colorful figures in national life. No more fitting tribute to the memory of the former Governor could have been devised than a modern hospital building, fully equipped and dedicated to the care of the common people of New York, always so close to Al Smith's heart.

As one of New York State's greatest Democratic Governors, Mr. Smith was ever friendly and tolerant toward the people of the strongly Republican southern tier and a frequent visitor to Triple Cities, where he delighted in renewing many warm friendships. The people of this section, regardless of politics, shared with the whole Nation a feeling of genuine admiration and affection for the lovable Al. And this should make Mr. Farley's mission both pleasant and profitable.

It is to be hoped, however, that the courageous Jim hasn't lost interest in politics. A Republican newspaper may be open to the suspicion that an expression of this kind is not entirely unselfish, since the former Postmaster General did contribute something to Republican success in the last State election. We are unselfish, however, in a sincere desire to keep in public life men of Jim Farley's stamina. There is a definite need for his type of leadership, his outspoken convictions and determination to stick to any course he deems to be right.

Unquestionably Mr. Farley will be an important factor in the 1946 campaign in this State and it would be shortsighted, as well as selfish, for any Republican to father the hope that differences of the past in the Democratic organization may be kept alive. Republicans expect to win the next State election on the merits of candidates and principles and, in these days of stress, a decision based upon anything else would be unfortunate.

It was Jim Farley who said as recently as last February that if issues are not discussed on their merits, but on personality; if any political group tries to stir up hatred, and of course thereby provokes hatred on the other side, or if resort is had to the tactics of abuse, it becomes extremely difficult for these groups ever to agree again.

"Men tend to repay hatred with hatred," he told a Lincoln Day gathering at that time, "or insult with insult, and if that process is allowed to go, it becomes impossible for them finally to cooperate in carrying out any course of action. And yet, in a democracy like our own, our entire national life is a vast cooperation scheme. To the technical politician, extremism is not only a crime, it is a blunder."

A reasonable statement from a reasonable individual. There should be little difficulty in reaching an understanding with anyone who holds this point of view. However, there are indications that Democratic leadership within the State still has some distance to go in arriving at such an understanding. Be that as it may, the Tier is glad to welcome Mr. Farley and to wish him every success in the worthy undertaking which is the prime reason for his visit at this time.

Status Quo Demanded

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STIGLER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. STIGLER. Mr. Speaker, the United States Employment Service is an important cog in the machinery designed to assist in the readjustment of our returning veterans. Under leave to extend my remarks, I include the following editorial from the Thursday, January 17, 1946, issue of the Stars and Stripes. This editorial is included—not because it is the last word on this subject, nor because I subscribe to its contents in their entirety—but because it appeared in a service publication read by thousands of service men and women as well as veterans throughout the world:

STATUS QUO DEMANDED

As this comment is written, it seems evident that the Congress will soon have before it for action another bill seeking to transfer back to State control the functions of the United States Employment Service. The President's veto of the so-called rescission bill which was intended to save the taxpayers a big slice of money previously appropriated for war expenditures, but which had attached to it a rider to wipe out the USES in 100 days, leaves the whole question still up in the air. At present, proposed legislation would place the transfer date at June 30, 1947. However, the certainty that a compromise time will be arrived at gives rise to grave concern among organized veterans who have devoted much study to the question of job placement.

It goes without argument that under normal conditions the States should exercise at least some control over employment. Everybody but the confirmed bureaucrat will agree

to that, and even the highest USES officials whose jobs depend upon Federal supervision are in accord with this ideal. The matter of States' rights is concerned. Politics and patronage are involved. A multitude of other considerations enter the picture. The veterans' organizations not only will not quarrel with the proposition but will be for it wholeheartedly. The debate hinges only on timing. What will be best for the applicant? And so far as veterans are concerned, the problem is, what will be best for the veteran? If he was good enough to fight for his country, he is good enough now to have a job found for him. Unless those able to work are given gainful employment, this country of ours is in for a period of confusion and discontent that will pale other troublous moments in our history into insignificance.

In a sense, the USES is another of those babies that were nurtured by the major veterans' organizations. They did not conceive it, but they have given it their constant support. Through the years of its existence, it has performed a tremendous service. It has been a rock of refuge to the jobless and has put millions to work. The Veterans' Employment Service, one of its major branches has been officered by veterans who understand the men with whom they served and who know their shortcomings as well as their virtues. Having had to take much time and effort to sell veterans' rights to the people at large, the foremost consideration must therefore be the reaction on discharged servicemen of a transfer back to local jurisdiction of a benefit that could well mean bread and butter to men and women who have preserved their Government against its enemies, or a lack of the means of actual survival.

The USES is a well-coordinated Nationwide institution. Even though, for political reasons, it has been batted around from pillar to post every now and again, it has turned in a most creditable performance. In December alone it responded to 1,800,000 calls for information about available work. Requests have jumped by 5,000,000 since last July, a rate of a million a month. Over 600,000 of these appeals were from war veterans alone, as against 142,000 in July. A total of a million and three-quarters of veterans have registered in USES offices for jobs. The office has not called upon the Government for much in added appropriations either; its personnel has increased only by 4 percent in spite of the emergency occasioned by hasty demobilization. Those are figures worth examining, and it might be well to ask ourselves what, in addition to turmoil, might happen should the Employment Service be sent back to the State level at times like these.

Despite the fact that veterans differ very little in most respects from other classes of citizens, it is certain that their problems are quite dissimilar. Their treatment rates prior attention. They have given much more to their country than any others. The war just concluded has been a specialized one. It dealt in specialization. Service and attempts to reorient following service produce what we are wont to call "itchy feet." Having been in uniform for month upon month, subject to the will of others, they became, in a real sense, automatons. Nearly 900,000 World War II veterans are receiving compensation for service-incurred disabilities; they must submit themselves to radical readjustment. Hundreds of thousands of the 8,000,000 who have received discharges are back at school or are planning to continue their educations or take vocational training. Some are not yet ready for work. Others, unfortunately, cannot hope ever to compete openly at labor. Army pay was good, and allowances were generous, so a large number married, took on added responsibilities and, having heard much about war wages, expect to be placed in positions beyond their capabilities. While shopping around for jobs, 450,000 dischargees have applied for and received unemployment compensation of $20 weekly under the GI bill of rights, an increase since last July of more than 410,000 at a cost exceeding $10,000,000 each days.

These facts and figures are straws in the wind. Demobilization is only half completed. Two million of those already out have not yet entered the labor market. They will very soon, and their numbers will be augmented by millions more as they come out of uniform. Having earned and having learned, they will want new jobs in keeping with their added earning power and in accord with their self-conceived ability to earn. When reconversion really gets under way, when the present epidemic of work stoppages is relieved and when America gets settled down to its vast and destined duty of rebuilding a war-torn world and feeding and clothing its destitute people, skillful and qualified counsel must be available.

Treating with workers who want work, and especially with veterans who need jobs and who will demand the best they can get, requires patience and understanding. Experienced men and women under a single supervision at levels from the national on down are ready to perform the exacting task expected of them. However desirable might be the ultimate decentralization to State control of the USES, the time of such accomplishment is certainly not practical until the peak of the load of applicants has been passed, and that point has not yet been reached by a long shot.

Organized veterans have demonstrated their belief in decentralization of all Government activities. They believe now that State control of employment is a desirable and logical objective, but that for purposes of standardization and effectiveness and for purposes of standardization and effectiveness and for maintenance of high standards, there should be some Federal supervision. But veterans are also convinced that no transfer can be successfully accomplished now when the labor situation, particularly as it relates to our servicemen and women, is so acute. Nor can it be done without grave danger of tearing down much that has been so well built by time and toil.

The conclusion is inescapable. In keeping with our convictions that our veterans, as well as the whole people, be well served, the Employment Service should continue nationally until further events warrant a change. The interests of those who won the war demand the status quo.

Hollywood Writers Mobilization

EXTENSION OF REMARKS
OF
HON. NED R. HEALY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. HEALY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the attention of the Members of the House to the outstanding contribution of the Hollywood Writers Mobilization to the war which has now been successfully concluded.

The Hollywood Writers Mobilization is a group of 3,500 motion-picture, radio, and newspaper writers, educators, and screen and radio directors and producers. It represents the world's largest pool of talent connected with the mass agencies of communication. During the war and the reconversion period it has placed its resources of talent and experience in the service of the Government, the war agencies, and the armed forces.

Since December 14, 1941, the Hollywood Writers Mobilization has handled a wide variety of assignments at the request of almost every type of war agency and of many Government departments. It has also cooperated in many community activities relating directly or indirectly to the war emergency, and initiated a large number of educational projects designed to aid workers in the mass communications industries meet the issues of war and peace.

This mobilization of writing power has achieved the following record in contributions to war activities:

Documentary and short-subject films	210
Radio scripts	1,069
Army and Navy camp sketches	910
War-bond and blood-bank speeches	920
War agency brochures	29
Feature articles on war activities	125
Songs	60
Posters and slogans	350

This material has been turned out on a voluntary basis by screen, radio, newspaper and magazine writers, cartoonists, publicists and novelists working in close collaboration with university educators, scholars, and scientists. The close tie existing between the Hollywood Writers Mobilization and the University of California has brought together for the first time working writers, artists, directors, and producers and trained university scholars in a joint effort to understand more intelligently the techniques and responsibilities of mass communication.

Many of the film and radio contributions to the war services have been directed and produced under the supervision of the Mobilization with the help of research facilities and specialized knowledge brought to the projects by university scholars.

Assignments for such material have come from the following war and Government agencies: War Department, Navy Department, Treasury Department, Agriculture Department, State Department, Office of War Information, War Production Board, War Activities Committee, Office of Price Administration, United Service Organizations, Women's Auxiliary Ambulance Corps, all branches of armed services, United Nations Relief, American Red Cross, Hollywood Victory Committee.

Through its close cooperation with the scholars and scientists of the University of California, the Hollywood Writers Mobilization has been able to serve more effectively the cause of the United States both in war and peace. Through research work, seminars, and conferences it has been able to provide essential background for writers performing many kinds of services requested by the United States Government and its agencies.

Recently, in cooperation with the University of California, the Mobilization has sponsored an important new publication, the Hollywood Quarterly, published by the University of California Press. The purpose of this journal is to give mature and timely consideration to the problems of motion pictures, radio, and television. The magazine is a tangible recognition of the importance of these agencies of communication both in the field of entertainment and education. It gives intelligent consideration to the

inherent possibilities of these agencies as instruments of international understanding and world peace.

The following editorial statement published in the first issue of this new periodical is worthy of the consideration of every American:

The war, with its complex demands for indoctrination, propaganda, and specialized training, emphasized the social function of film and radio. One of the first casualties of the conflict was the "pure entertainment" myth, which had served to camouflage the social irresponsibility and creative impotence of much of the material presented on the screen and over the air.

The motion picture and the radio reflected the anxieties and hopes of the long crisis and reported the tumult and prayer that marked the day of victory. What part will the motion picture and the radio play in the consolidation of the victory, in the creation of new patterns of world culture and understanding?

The editors of the Hollywood Quarterly are not so incautious as to attempt an answer to this question. Rather, the purpose of the magazine will be to seek an answer in presenting the record of research and exploration in motion pictures and radio in order to provide a basis for evaluation of economic, social, aesthetic, educational, and technological trends. The first issue of the Hollywood Quarterly is necessarily experimental; the scope of subject matter, and the stimulating but somewhat unsystematic diversity of style and viewpoint that characterizes the various articles suggest the difficulty of selection and arrangement, and the lack of precedent even in limiting and defining the field of investigation. If a clearer understanding, not only of current techniques of the film and radio but also of the social, educational, and aesthetic functions, is arrived at, the editors will feel that the Quarterly has justified itself indeed.

The Speech President Truman Did Not Make

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. SMITH of Wisconsin. Mr. Speaker, I am offering for the RECORD an editorial prepared by Mr. Mason H. Dobson, editor of the Beloit (Wis.) Daily News, issue of January 8, 1946, in which he presumes a speech that President Truman did not make. It is pointed out that had this speech been made as suggested by Editor Dobson, I am sure that the Congressmen would have had a real response from the people. The response to the speech made by President Truman to Members of this body I am sure was extremely light. At least, it has been in my office. Mr. Dobson gives a much better speech than President Truman. Under permission granted to revise and extend my remarks, I am including the editorial or speech in question:

BY THE WAY

(By Mason H. Dobson)

(EDITOR'S NOTE.—This is the fireside chat which President Truman did not make.)

Fellow citizens, the President of the United States is going to talk to you a few minutes and what he's going to say isn't going to be politic, as you will see. He believes this is the time to be plain, not politic.

This is not the time, your President believes, to be worrying about a second term, or a third, or a fourth. It is time to think about a second term when we have surmounted the grave and dangerous problems of the first. These problems—at this moment the greatest in the economic history of your Nation—have not yet been surmounted.

I am convinced they never will be surmounted until we mend our ways.

Since I have been President, and for many years before, Americans have been running down here to Washington to dump their problems upon the President and upon Congress. Once you folks used to settle your own problems, but lately you've quit trying. You seem to think it's the President's job, and Congress', to make life easy and safe and secure for everybody. For instance:

I have been asked to see that there is a house for everybody who wants one. But neither the President nor Congress can chop a single tree, or saw a single log, or drive a single nail. Neither the President nor Congress has the power to make a single American chop a tree, or saw a log, or drive a nail. Men must do these things; and before they do them they must want to do them. You're silly to think the President or Congress can solve the housing shortage—but you can solve it, if you want to, my fellow citizens. It won't be solved any other way; and it will take work.

A lot of you have asked me to appoint a housing expediter. But a housing expediter can't chop the trees and saw the logs and drive nails. So I'm not going to appoint a housing expediter down here in Washington. That would do no good whatever. Instead I'm going to appoint some expediters who can do some good. I'm appointing every logger, every sawmill manager and employee, every contractor, every carpenter, plumber, bricklayer, stonemason, and every man and woman in America who has anything to do with producing materials and fixtures and furnishings for homes expediters to get the job done.

There isn't anybody but you can do it, anyway, and I'm asking you to do it now. I'm putting the problem strictly to you because it's your problem and you are the only ones who can lick it, if you want to. It will take work, not more laws, to get it done.

A lot of my fellow citizens have been hurrying down here to demand that Government money—which is your money—be utilized to build houses. Yet right now your banks are filled with idle money which can be borrowed at exceptionally favorable rates of interest to build houses, if there was anything with which to build houses. While all this credit—the greatest savings assets in history—is unused, is it your idea we should spend your taxes to do the job? If this is your idea, is it a good idea? Will you let me know what you think?

You have saved a lot of money, my fellow citizens, during the war. You have it in cash and war bonds and life insurance and many other things. So I suggest you ought to be doing some worrying about inflation. I'm sure you know that scarcity of consumer goods is the greatest incentive to inflation. What are you doing to produce? You'd better begin thinking about that if you want your bonds to maintain their present values. You can make them worth 100 cents on the dollar, or a dime—take your choice. Neither Congress nor your President can take the responsibility for that decision from you, even if they wanted to.

If there is going to be a run-away race between wages and prices, we're going to have a hell of a time. Are you doing any thinking about that, my countrymen? How about price controls? Remember what happened when we took them off citrus fruits? Want that to happen with everything? It wasn't the President or Congress that boosted citrus prices? Remember?

Looking at it from the White House it seems that a lot of you folks want everybody's prices controlled but your own. You acted that way when you patronized the black markets in gasoline and tires and cheese and butter and a lot of other stuff. You wanted all the breaks, didn't you? And to hell with everybody else. Well, you've got to get over that—or take the consequences, which won't be nice.

Fact of the matter is—this is straight from the East Room—too many of you folks are thinking too much about your personal interests and not enough about your country's interests. So we can easily be headed for a general break-down in production—which means inflation. We can be headed for chaotic crippling of communications and transport. You can have it that way if you want it; you can do as you please; you will anyway. But I'm warning you.

As your President I have to warn you that chaos creates Hitlers and Mussolinis and all the other tyrants who have ended the chaos, but destroyed liberty at the same time. I am asking you to choose between the ordered self-discipline of a free people who do the things necessary to preserve their liberties, and the regimented tyranny of a dictator. Have it your own way. No one but you can decide.

There is more I could say, but I guess you know what I mean. So I'll close, but in closing let me say:

Don't any of you go worrying about my second term. I'm not. Because if we all keep headed the way we're headed now you couldn't give me a second term if you made it unanimous. If every man Jack of us, big and little and all together, don't mend our ways anybody can be your next President and welcome to it. I'll feel sorry for him.

(EDITOR'S NOTE.—The reasnn Mr. Truman didn't make this fireside chat is because a lot of people, including Mr. Hannegan and the Democratic National Committee, wouldn't like it.)

Disposition of Surplus Government Materials to War Veterans

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following letter and resolution:

THE AMERICAN LEGION,
HEADQUARTERS DEPARTMENT
OF PENNSYLVANIA,
Brookville, Pa., January 14, 1946.

Hon. L. H. GAVIN,
Member of Congress, Nineteenth District of Pennsylvania, House Office Building, Washington, D. C.

DEAR MR. GAVIN: As adjutant of the twenty-seventh district, American Legion, Department of Pennsylvania, comprising the counties of Clarion, Jefferson, Armstrong, and Indiana, I am instructed to forward to you the enclosed copy of a resolution passed by the John Jacob Fisher Post, No 62, of the American Legion, Punxsutawney, Pa., relative to disposition of surplus Government material to war veterans, which resolution was unanimously adopted by the Jefferson County Council of the American Legion on Janu-

ary 10, 1946, and was on January 6, 1946, unanimously adopted and approved at a regular meeting of the twenty-seventh district of the American Legion held in Indiana, Pa.

The action of the twenty-seventh district in adopting this resolution and directing that a copy thereof be placed in the hands of our representatives in the House and Senate, represents the desires on the matters contained in the resolution of approximately 5,000 actively enrolled members of the American Legion in the four counties comprising said district.

Your prompt efforts in obtaining the necessary action demanded by the resolution will be appreciated.

Respectfully yours,

WILLIAM A. SYKES,
Adjutant, Twenty-seventh District,
Brookville, Pa.

Whereas the Congress of the United States by law has made available certain surplus materials now owned and controlled by various Government agencies; and

Whereas the law provides that veterans shall be given preference in purchasing surplus materials; and

Whereas the various Government agencies, due to inefficient help, lack of clarification of certain regulations, or by direct refusal to comply with the provisions of the law, have repeatedly withheld these materials from veterans desiring to purchase them; and

Whereas specific cases have been cited of direct refusals on the part of those in authority to dispose of certain surplus materials to veterans, at the same time disposing of these same materials to larger financial groups; and

Whereas returning veterans have been handicapped in establishing business due to lack of ability to secure these materials: Now, therefore, be it

Resolved by the John Jacob Fisher Post No. 62, the American Legion, That the proper authorities be asked to investigate through proper channels the reason for refusal on the part of the various Government agencies to turn over these materials to returning veterans; and be it further

Resolved, That an effort be made to secure legislation giving priority and preference to veterans in the purchase of these materials regardless of the amount involved.

The above resolution was unanimously adopted by the John Jacob Fisher Post, No. 62, the American Legion, at its regular meeting on January 4, 1946.

Attest:

J. R. DODSON,
Commander.
HORACE A. BROWN,
Adjutant.

The attached resolution was unanimously adopted at a regular meeting of the Jefferson County Council, the American Legion, on January 10, 1946, at Reynoldsville, Pa., when a majority of the members of the Jefferson County Council were present.

Attest:

JOSEPH PALAGGO,
Commander.
JAMES A. YUENGERT,
Adjutant.

The attached resolution was unanimously adopted at a regular meeting of the twenty-seventh district, the American Legion, on January 6, 1946, in Indiana, Pa., when a majority of the posts of the twenty-seventh district were represented.

Attest:

JACKSON R. DODSON,
Commander.
WILLIAM A. SYKES,
Adjutant.

Judge Elbert Gary and Benjamin Fairless

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. MADDEN. Mr. Speaker, in addressing the House yesterday afternoon, among other things, I called the Members' attention to the fact that Judge Elbert Gary, former chairman of the board for United States Steel, was 100 percent wrong 25 years ago when he said, "Steel could not be profitably produced unless labor work 12 hours per day and 7 days per week."

I also said that Benjamin Fairless, today's president of United States Steel, was 100 percent wrong when he said United States Steel would endure great financial harm if it complied with President Truman's 18½-cents-per-hour compromise, which is a 3½-cent increase over the corporation's offer.

The editorial in the Washington Times-Herald this morning confirms my statement. The editorial is captioned "Fairless made a mistake." One paragraph in this editorial sets out the following opinion of the Times-Herald:

In our opinion, Mr. Fairless did not exhibit a high type of industrial statesmanship in turning down the President's suggestions and letting the steel strike start. Why he did it, we don't know—whether on his own initiative on orders from big United States Steel stockholders. But he needn't have done it.

The last paragraph of this editorial contains the following:

What effect Fairless' mistake will have on Fairless himself we can't predict. We think, though, that in the end he will have to back down somehow from the uncompromising position he has taken, and that he may have to resign as president of Big Steel. We do not think majority public opinion will back him up in this case. Majority public opinion is sometimes decisive in big strikes; and you can't buck the President of the United States, a powerful Nation-wide union, and majority public opinion all put together.

Reports From European Labor—II

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mrs. LUCE. Mr. Speaker, the reports of present postwar conditions in the various European countries given to the International Labor Conference by representatives of the countries themselves are of special value to American legislators and interested citizens in disclosing the tragic problems which our allies and friends must solve in order to feed, clothe, house, and provide employment for their populations.

These statements by the Netherlands' workers' delegate, the Belgian Government delegate, the Polish Government delegate, the Greek Government delegate, and a summation by the Secretary-General of the Conference show to what an extent the loss of manpower and of equipment hinders reconstruction and how, without speedy aid from less-distressed areas, this situation may lead to widespread despair:

Mr. KUPERS (workers' delegate, Netherlands). Before dealing with the Director's report, I should like to take the opportunity of expressing my profound gratitude to the Allied armies which liberated our country and our people from the yoke of the German oppressor under which they have suffered for five long years. The people of Holland are also deeply indebted to all those countries—almost too numerous to mention—which have done so much to help to alleviate their material needs. It is due to this help that thousands of men, women and children who were threatened with death from starvation and privation have been saved.

As requested by the Acting Director in the plenary sitting of the Conference of October 22, I shall try to give a summary of the most important events since the beginning of the occupation of my country.

Of the 2,000,000 dwellings in Holland, about 85,000 have been completely destroyed, more than 35,000 have been heavily damaged, and 273,000 have suffered minor damage; some 8,000 farms have been razed to the ground. Of the large shipbuilding yards in our country, only a single one has remained intact; all the others have been either destroyed or very considerably damaged. The same applies to the port installations in Rotterdam and Amsterdam. In hundreds of factories, plant and machinery have either been destroyed or transported to Germany. The livestock of our country has decreased by 40 to 50 percent and the stocks of poultry by 90 percent. One hundred and ninety-five thousand hectares of the most fertile soil have been inundated by the Germans, a large part with salt water, which means that it will take many years before this soil can again yield its normal production. The damage done to our railway system is so great that it puts us back to the position we were in 75 years ago. The potato crop is more than 1,500,000 tons smaller than before the war, due to lack of fertilizers, and the wheat crop is 300,000 tons less. Further, some millions of bicycles and hundreds of thousands of radio sets have been confiscated by the German oppressors.

These are only a few figures, but they by no means give a complete picture. Far worse has been the fate of hundreds of thousands of our countrymen, thousands of whom have suffered in the prisons and concentration camps, or have been shot. More than 370,000 workers were deported to Germany, and forced to work for the enemy.

Most of all our countrymen of Jewish origin have suffered, and out of 120,000 of these, 95,000 were murdered in Germany and in Poland. The number of people suffering from hunger oedema in Amsterdam was, at the end of May of this year, 25,000 or 30,000, and many of these died.

Holland has been plundered and looted, but we are determined to rebuild it. For this purpose, however, we urgently need the assistance of those members of the United Nations which are in a position to help us. Thanks to the assistance rendered by a number of friendly nations, the food situation has somewhat improved. We are, however, still suffering from an appalling lack of raw materials such as iron, cotton, wood—to mention only a few—which will enable us to set our industries in working order again and to combat the increasing unemployment.

No figures as regards the present extent of unemployment can be given, because the

registers of the employment exchanges in many cities have been destroyed by the Dutch resistance movement, and because a large proportion of the staff of these institutions has had to be dismissed, owing to their collaboration with the enemy. It is no exaggeration, however, to say that there are at least half a million unemployed. Even the clearing up of devastated areas and the opening up of public works to alleviate this great unemployment is being hampered on account of the lack of the necessary tools, such as picks, shovels, wheelbarrows, trucks, etc. An additional difficulty is the lack of sufficient housing in those parts of the country which have been the hardest hit by the war.

The statements made on page 41 of the Director's report I can fully substantiate. Full employment continues to be a primary objective of the peoples of the United Nations, but the most essential thing is that those countries which have been hardest hit should obtain the necessary raw materials to enable them to set production in motion once again. Give us the tools and we will finish the job.

The trade-union movement has also suffered severely under the terror of the invader. During the first months after the surrender of Holland the behavior of the Germans was fairly correct, but this attitude changed very quickly after the military government was replaced by a civil government under the leadership of the Austrian Seiss-Inquart. Every effort was made to imbue the Dutch people, little by little, with national socialist principles. In July 1940 the executive of the Dutch Federation of Trade Unions was dismissed and replaced by Dutch Nazis. The Roman Catholic trade-union movement and the Protestant Federation were placed under the supervision of German commissars. In July 1941 the executive of these federations decided to liquidate their organizations.

Nine months later practically all the executive members of unions affiliated to the Dutch Federation of Trade Unions resigned, because they too refused to obey the Germans, and hundreds of thousands of members left their unions. The Nationalist Socialist Labor Front, which was founded on May 1, 1942, never ventured to publish its membership figures. (No. 22, pp. 134, 135.)

Mr. TROCLET (Government delegate, Belgium). In view of the sufferings of the occupied and oppressed countries, the Acting Director suggested that we should give an account of the situation in those countries. We agree that these facts should be known, so that they may contribute to the extermination of any idea of fascism and dictatorship. The facts which I shall give are far from representing all the damage we have suffered, but they correspond to what can be estimated.

The real assets destroyed in Belgium, in belgian francs of 1938, are as follows: Public services, 1,538,000,000; houses, 464,527 destroyed, value 15,150,000,000; farms, 30,800 destroyed, material loss 4,551,000,000; industrial and commercial buildings, 16,786 destroyed, value 22,650,000,000; ships and ports, 2,989,000,000; railways and transport, 12,257,000,000; roads (one-third of the bridges destroyed), 1,182,000,000. To this list can be added: Movable property, 3,874,000,000; scientific property, 914,000,000; cultural property, 10,329,000,000; values and shares, 549,000,000. The movable and immovable property damaged comes, therefore, to a total of 65,700,000,000, or about 2,300,000,000 in dollars.

But, alas, the damage sustained by Belgium is not limited to that. Two hundred and thirty thousand Belgian workers were deported to Germany for forced labor; 18,000 of these died after being deported. In addition, 30,000 Belgians were deported to France, so that the figure of deportees has risen to 260,000, or one-sixth of the working population.

It is to the honor of Belgium that the number of political prisoners was 70,000, including 20,000 Jews, or 1 in 120 of the total population, 1 in 170 if the Jews are not included. Of these, 32,000 will never come back. The number of military victims of the war is 9,000. During the first year of occupation there were 200,000 Belgian prisoners of war, and 65,000 remained prisoners for the rest of the war.

The state of health of the Belgian people has suffered during the war, especially from bad feeding. An inquiry made among the working classes of Brussels by the ministry of public health indicates that one-fifth only could show all their members in good health. There is no relation between the income of families and health. About a third have had one or more of their members affected by tuberculosis. Of young people in 1941, an inquiry shows that 53 percent suffered from underfeeding. Rationing allowed only 1,100 to 1,300 calories, whereas a growing child needed 1,800 to 2,000. In 1942, of about 14,000 children examined, 20 percent were weakly; 8.2 percent suffered from rickets, tuberculosis and other pulmonary diseases, 3.8 percent from other illnesses.

This makes a percentage of weakly and sick of 32 percent. Among young people in employment, nearly 50 percent were under weight. In 1938 there were 8,327 children under 14 suffering from tuberculosis. In 1943 the figure had almost trebled. This really disastrous situation makes us anxious for the future, for these young people are now between 20 and 23 years of age.

The spoliation of Belgium by an insidious financial policy has had serious effects for, apart from damage, destruction, and removal of goods, and the death or weakness of many people, there has been a complex system of spoliation, resulting in the removal of Belgian property and causing inflation of currency and unbacked credit. As the cost of occupation, the Germans levied 100,000,000 francs a month during the first 14 months, and then one and a half million francs, whereas the largest sums estimated by experts in accordance with the law of the nations would have been 60,000,000 francs a month.

Besides this, we had to pay six and one-quarter millions in various other ways. The Germans also deprived us of 4,223 milliards in the form of German currency left in Belgium at the time of liberation. Then the Germans took from Belgium, by means of a clearing system, for which we paid, 62,665,000,000 francs worth of services and property of various sorts. It is calculated that the various payments required by the occupying authorities amount in all to 67,500,000,000 Belgian francs at 1938 values, or $2,274,000,000. Added to the material damage, this represents more than $4,850,000,000, an enormous figure for a little country. This does not include the allowances which we have thought it necessary to pay to the widows, the orphans, and the victims of all sorts. My Department has over 19,000 claims of various kinds, mostly for occupational accidents during work in Germany.

As regards young workers, Belgium was in a particularly difficult situation when it was liberated. The enemy took our young persons and attempted to force them into the service of its war economy. The great majority of young men and girls refused to obey the enemy decrees concerning forced labor, and fled to the woods or entered the resistance movement. This caused a worsening of the moral and health situation of young persons, already affected by underfeeding and all sorts of other troubles. Since liberation we have been trying to incorporate them in the collective effort of the nation for a rapid return to normal life.

We have also attempted to protect the health of young workers more efficiently, and to undertake the vocational retraining of disabled persons. The Ministry of Labor has endeavored to secure the direct participation of young workers in its work by consulting them on the measures to be taken. An advisory committee for young persons in employment has been established, including representatives of the four great democratic organizations of young persons. (No. 24, pp. 145, 146.)

Mr. STANCZYK (Government delegate, Poland). In studying the Director's report we confirm once more the greatness and value of the work done by the United Nations members of the International Labor Organization in order to secure to the working classes of the world better conditions of life. In thanking the Director and his staff for the performance of this responsible work, most of which has been carried out under war conditions, I would like to emphasize that if the International Labor Organization has survived the war tempest without interruption, it has been due to the vitality of the ideals which are the basis of its existence and of our common aspirations, and also because of the efforts made by the Director and his collaborators connected with the realization of the tasks of our Organization.

Divided by violence into three parts by the reactionary powers of Czarist Russia, Prussia, and Austria, and after 100 years of servitude and exploitation, the Polish Nation recovered its independence after World War I. Alas, that war, conducted on Polish soil, ruined our country economically and impoverished the population. After regaining its independence, the Polish Nation began at once to reestablish itself. Twenty years only passed and Poland again became the battlefield of a second war, infinitely more terrible in its consequences for the Polish people. After the First Great War we not only had to rebuild our ruined economic life, to make productive again our arable soil made barren by the war, to reconstruct our burnt-down towns and villages, but we also wished to secure for our working masses as good conditions of existence as were possible in these unfavorable circumstances. Therefore, in the first years of our independence we did all that we could to guarantee to the Polish working people social legislation which could protect them from exploitation and make them safe.

In these first years we instituted maximum working hours for all employed in industry, trade, and transport. Under the law, workers and employees were paid overtime; for the first 2 hours exceeding 8 hours a day, time and a half, and for any further overtime and for work on Sundays and holidays, double time. Legislation was passed so that workers and employees should have holidays with pay; 8 days after 1 year of employment and 15 days after 3 years. We introduced the law concerning the protection of children and young people and of women's work. This law prohibits the employment of women and young people in work especially harmful to health, in night work and in mines. Decrees were issued concerning industrial health and safety, industrial hygiene, inspection of labor, labor courts of justice, employment exchanges, collective agreements, labor disputes, arbitration, and conciliation on the protection of agricultural workers, home workers, housekeepers, and domestic servants.

All these decrees created a charter of rights protecting the Polish workers against arbitrariness and exploitation by employers. And the laws which secured to all persons gainfully employed free medical care, cash allowances in case of disease and in case of continuous inability to work due to old age, industrial accident or invalidity, retirement

and invalidity pensions, preserved the workers from misery during times of unemployment or during inability to work. (No. 24, pp. 149, 150.)

Mr. ARGYROPOULOS (interpretation) (Government delegate, Greece). Figures show that the three occupations which Greece suffered—the Italian, the German, and the Bulgarian—have created enormous havoc. Here are some figures. Out of 6,500 towns and villages in Greece, 1,339 have been destroyed; 870 of these wholly wiped out, and 1,200,000 people are homeless. From 1941 to 1942 there were seven times more deaths than in normal times. Among 7,500,000 inhabitants there are 400,000 cases of tuberculosis, and one-third of our population are suffering from malaria. As regards transport, we have lost 70 to 90 or 100 percent of our railways, shipping, and aircraft. Our power stations have been destroyed. The production of the only two products which can bring us foreign currency, currants and tobacco, has been reduced by 50 to 85 percent. (No. 29, p. 180.)

Mr. TOTH (interpretation) (Government delegate, Hungary). I do not want to give you an unduly highly colored picture of the disastrous situation of my country, but I must give you a few details to indicate the extent of our economic distress. In the first place, the industry, which was one of the main sources of our national income, has lost half of its producing power. A large number of factories were either destroyed or had their equipment carried away by the Germans. Some 40,000 trucks loaded with machinery, industrial products, and raw materials were taken away from our country and are now in Germany, Austria, or Czechoslovakia. As to our means of transport, we have left only 10 percent of the locomotives and 25 percent of the other rolling stock which we had before the war.

In Budapest 5,500 houses were completely destroyed and over 30,000 were seriously damaged. In agriculture the situation is even worse. This year's harvest produced only 8,000,000 quintals of wheat, whereas the amount necessary for us is 20,000,000 quitals. Seventy-five percent of our livestock has disappeared. In view of these facts it is not surprising that the country is suffering from a tremendous shortage of food and essential products. This has caused a great rise in prices, which is likely to give rise to social disturbances.

As a result our currency is losing all its value and its purchasing power is falling steadily. A fortnight ago a kilogram of flour cost 1,000 pengoes and a box of matches 100. Before the war the American dollar was worth 5.25 pengoes. The official rate of exchange today is 8,250 pengoes to the dollar, and on the black market its value has reached a figure which I should be ashamed to admit. Thus we are in the middle of a period of inflation. Forty-two thousand million pengoes in the form of notes had been issued at the end of September, and it is said that a further milliar is issued every day.

The prospects for the winter are gloomy, particularly as regards heating and food. Our economic recovery is entirely dependent upon assistance from abroad, but in addition to systematic measures for reconstruction we need emergency assistance. In this connection I should like to appeal to the representatives of UNRRA, who are here today, to consider the possibility of some immediate action to reduce the suffering of a large section of the population of Hungary. (No. 29, page 182.)

The SECRETARY-GENERAL. I should like to thank all those speakers from European countries who responded to my invitation to give the Conference an account of the conditions in their countries and the problems by which they are faced. It is of interest to note that while they were speaking here a debate on the same subject was taking place in the House of Commons in England, and the eloquent speech of Mr. Ernest Bevin, the British Secretary of State for Foreign Affairs, on that occasion indicates how fully the British Government is alive to the gravity of the situation.

I believe the speeches delivered here will help to bring the problem into a still sharper focus. Seen as it has been put before us, country by country, rather than in a series of generalizations, it makes an infinitely deeper human appeal to which I am sure the general conscience of the world will respond. It is my intention to bring together these speeches in some suitable way so that they may be available for detailed study. Certainly, the picture they reveal is somber. But hard though it may be, nowhere do we find it tinged with the blackness of despair.

As Mr. Godart so movingly said, "The spirit of resistance against oppression has kept its full ardor and its readiness to accept all necessary sacrifices, and so against the hard picture I have painted must be set our energetic confidence in our destiny, our will to recovery, our faith in international cooperation."

It goes without saying that in concentrating attention on Europe's problems, the problems of other regions in the world must not be forgotten. They, too, call for understanding and action. There can also be no question of priority, of leaving them aside until Europe's problems have been solved. In a world which is one, the solution of the problems of one region is dependent on the solution of the problems in the others.

The oneness of the world makes all of equal importance and urgency.

Good Advice From Jim Farley

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Watertown (N. Y.) Times of December 13, 1945:

GOOD ADVICE FROM JIM FARLEY

Just before leaving New York City for an up-State tour, James A. Farley gave some good advice to Tammany Hall. He said that the Democratic city ticket had been elected by an overwhelming majority but that it would be turned over 4 years hence by just as overwhelming a vote if it failed in its duty to provide good, efficient, and honest government.

In other words, Mr. Farley said, "It is up to Tammany Hall." The people have given it the responsibility and on the manner in which it carries out this responsibility will depend its chances in the next election. If it fails, Farley said, "It will be cast out into exterior darkness, as it has been in the past, and fittingly so."

No one can say that Jim Farley is not a practical politician but because he is practical he knows what others less skilled in the art of politics do not know. That is that good government is the best politics. LaGuardia was elected three times as mayor of New York over Tammany opposition because he gave the people good government. He proved that the Tammany majority is not a firm one. After 12 years, the Democrats return to control the city hall. As Farley expresses it, they are on trial.

For one credited which seeking the Democratic nomination for governor next year, Mr. Farley's speech was a courageous one and yet it is entirely in keeping with his character. Tammany will do well to heed the advice of one who speaks from the experience of years in national, State, and municipal politics.

Amendment of Labor Laws

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, there is constantly coming to my office resolutions and expressions of the people of my State, urging that some action be taken by this Congress to level off the difficulties that prevail in the country between those who employ and those who work.

Under leave to extend my remarks, I include the following resolution which came to me from the Chamber of Commerce of Devils Lake, N. Dak.:

Whereas after 4 years of the most horrible conflict in history we have emerged victorious only to be threatened by the paralysis of business and industry throughout the Nation, caused by the uncontrolled ambitions and demands of certain unions; and

Whereas almost from its inception business has been subject to Government regulation and held accountable for its acts on every score; and

Whereas unless Congress places appropriate controls on unions, the very foundation of the structure of American business will be destroyed by the proposal of the unions to seize the books of business through the innocent-sounding Government fact-finding panels, virtually permitting them to dictate the specifications for production, sales, and administration of business, and thus rupture the American pattern of free enterprise that has developed the highest standard of living and wages on earth today: Now, therefore, be it

Resolved, That the board of directors of the Devils Lake Chamber of Commerce in meeting on January 15, 1946, does urgently recommend to the delegation from North Dakota in the Congress of the United States that the members of such delegation exert all possible effort to the enactment of legislation to:

1. Adjust basic labor laws to recognize industry as well as labor.

2. Prohibit union contracts in restraint of trade.

3. Establish effective penalties and preventive measures to avoid breaking of contracts by labor.

4. Require the same degree of legal responsibility of labor unions as from industry.

5. Make closed-shop contracts illegal.

6 Make legislative corrections of Supreme Court ruling permitting interference with traffic on highways.

7. Prohibit union contributions to political campaigns on the same basis as corporations.

DEVILS LAKE CHAMBER OF COMMERCE,
LYLE HARRINGTON, *President*,
DONALD J. DONAHUE, *Secretary*.

Address by Hon. Thomas J. Lane, of Massachusetts, Concerning Victory Clothing Collection

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an address which I delivered over radio station WLAW, Lawrence, Mass., recently, on the victory clothing collection for overseas relief:

This is a white Christmas and a peaceful Christmas, the first one we have enjoyed since 1940. The scourge of war is over and a heavy burden has been lifted from our hearts. The night of wintry black-out are past and the windows of stores and homes are filled with friendly light and not with the darkness of fear. For tens of millions of our people, the waiting and the dreading is gone and now we look forward with hope and confidence to living. Half of our boys in service are back in civilian life to enjoy the first Yuletide at home in several years. The ports of Boston, New York, San Francisco, and Los Angeles are filled with transports, daily bringing back thousands of our gallant men and women fron the far corners of the earth. The railroads are taxed to capacity and more, shuttling back and forth all over the country, bringing our loved ones from the ports of disembarkation to the warmth and affection and magic of home. This Christmas, peace is more than a word. It is joyous relief, welling up from the hearts of all.

The people, freed from anxiety and sacrifice, have gone out on a shopping spree that has broken all records. It is because we want to share this Christmas in happiness, knowing that our men have left the fighting and the dying behind them. We celebrate a peace-crowning victory.

We are thankful for these blessings which are ours. We should oe doubly thankful for that which we have been spared. The war did not ravage our women and our children, it did not lay waste our homes and our factories. The war did not touch us with hunger, disease, and exposure to the elements.

Let us remember that it has left this curse upon hundreds of millions of our fellow human beings. The war is over, but for many of them, the humble people all over the earth, the suffering has just begun. Grim winter has come to them through the broken windows and shell-torn walls and bomb-gutted roofs of places they once called home. There is not enough fuel, not enough clothing, not enough food for them to survive. Sick, starving, shivering people cannot work, they cannot start the long road back to reconstruction. Without help, they can only suffer and die.

This is the Christmas facing most of Europe and Asia. It is not a pretty picture, but it must be faced. The tragic misery of it we can understand only in a small measure because we are not in that situation. Yet, we must try to understand it and do something about it, for it is our responsibility. In this one world, these are our brothers. They were our allies, France, Poland, Italy, Greece, China and the Philippines; these will suffer most.

While we in America are happy and prosperous in the peace so recently won, let us never forget that this peace is uncertain while hundreds of millions of others suffer. To insure the peace, we've got to help them. There is no other way.

Six years and more of war—China had been fighting the invader since 1931—have left a terrible toll. What was built up through generations of labor, has been destroyed and the people have been reduced to a primitive level of existence. Last week, in the city of Shanghai, 70 bodies were picked up from the streets, victims of hunger and exposure.

In Europe, which felt the full fury of war, the destruction has been appalling. The people beg for food and clothes. Tens of thousands of babies will certainly die this winter when they might have—when they could be saved.

Take Normandy, which is a food-producing area. There are no pots or stoves. Trucks and cars have no fuel or tires. There are no shoes or blankets. Hundreds of thousands of people have no change of underclothing. In one city, out of 18,000 houses, 11,000 by actual count, have been destroyed. In the Calvados Department, corresponding to one of our States, 450 out of 765 villages were ruined. In one village there is not a single house left. Paris is hungrier than at any time since the siege of 1870. France may soon have nearly half of her industrial labor force on the dole. Shipping space is not available to bring in the raw materials without which men cannot work to manufacture the garments they urgently need.

Yet France is faring better than Belgium. The great textile factories of this country are locked up. They can't produce without cotton and wool. They have no money to buy from us. And Europe needs clothing even more than she needs food.

In Poland the Nazis methodically stole everything, determined to wipe out the people through hunger and exposure. In Yugoslavia, there are no matches, salt, needles, or leather. Five hundred thousand destitute children who have survived their parents, are roaming the country half naked. The clothing of the whole population is hardly better; it has been estimated that 80 p cent of all Yugoslavs are in rags. In Greece the economic breakdown became so final that the whole nation had to be put on relief. Only yesterday, it was announced from Washington that the demands for aid from the stricken millions of Europe and Asia, is far beyond the resources of UNRRA.

Two million tons of civilian supplies have been pumped into Italy. The country, however, was so ravaged by bitter fighting, that this relief is merely a drop in the bucket. Many an Italian lives on what the United States soldiers leave on their plates. Much of Italy is mountainous, which means cold at this time of the year, yet hundreds of thousands of the people have no shoes. In the great city of Rome, before the splendid monuments, you will find women and children begging for food and clothing. Tuberculosis is mounting rapidly in that unfortunate country.

A short time ago, I was approached by the representatives of a local Italian-American Society. Stirred by the tales of suffering that came to them in letters from the old country, these men resolved to do something about it. They conducted a campaign among their members to raise a relief fund, and they collected a sizeable sum. How to employ the money was now the question. It would be foolish to send the money for it would be swallowed up in the black market overseas, where the few shoes bring $50 and more a pair. The only solution was to send goods direct for the relief of the town in Italy where many of these men were born. What goods? Any kind of goods which the people could use to make clothing for themselves. Send the goods—the Italians will do the rest. But it is not so easy to buy a large quantity of goods, even in America. Knowing this, the members of the committee told me that they would be grateful if they could find a way to buy the linings of surplus United States Army overcoats, the linings which the poor people in the old country could make up into suits and dresses. Think of it. Grateful for the linings of overcoats. I quote this to bring home to you the desperate predicament of Europe and what some of our citizens are trying to do in order to relieve this suffering. It is a responsibility which all of us must share.

The United Nations Relief and Rehabilitation Adminjstration, to which all the United Nations contribute, is working hard to cope with this grim and staggering problem. But it cannot do the job alone.

Accordingly, in April of this year, a clothing collection drive for overseas relief, duplicated in other United Nations, was held in our country. To this you responded generously. Twenty-five million children, men and women, in the war-torn countries will have received clothing donated by you, but many times 25 million are still destitute, and winter is upon them.

Another desperate call for help is going out to you. In a letter written to the Hon. Henry J. Kaiser, who is national chairman for the forthcoming drive, President Harry S. Truman wrote: "Without adequate clothing and other necessities of life to sustain victims of war on the long road to rehabilitation there can be no peace. I therefore, ask you and the more than 7,000 local chairman of the United National Clothing Collection to lead the Nation in another clothing collection drive for the relief of victims of war."

Get ready now. When will this clothing be collected? From January 7 to January 31, 1946. This time, the Nation-wide goal has been raised to 100,000,000 garments for infants, children, men, and women, to be distributed free and without discrimination of any kind in every war-swept country.

What type of garments will be collected? Coats, suits, trousers, skirts, dresses, shirts, sweaters, underwear, shoes, overshoes, rubbers, knitwear, pajamas, night gowns, blankets, bedding, piece goods, remnants, and draperies. The following items are not desired: Straw hats, toys, feather beds, pillows, mattresses, novelties, and household furnishings. What is needed most is used clothing for both winter and summer wear. Although clothing need not be in perfect repair, it must be useful to the people who will receive it. All types of washable garments should be washed before they are given to the collection, but need not be ironed. Other garments should be clean and sanitary, but need not be drycleaned before being contributed.

John J. Kane of 80 Lynn Street, Lawrence, is chairman of the local committee. He is being assisted by a large and hard-working committee which has the active support of our churches, our schools, our theaters, our local government and all of our social, fraternal, and charitable organizations.

But let all of us start today. Look in your closets, look in the attic, for the clothing and the shoes you put away but which you know you will never wear again. Don't let this clutter go to waste. To tens of millions of homeless people in Europe and Asia the old clothes we keep to feed the moths will spell the difference between life and death. So let us put these discarded clothes to work for suffering humanity.

This is our chance to contribute to the making of the peace, in which all of us have a stake. This peace will not happen; it must be earned by understanding and mutual helpfulness. We are not being asked to give money, but only the outmoded clothes which we wouldn't care to put on. They are of no use to us, but they can and will protect the

tragic victims of war who have been stripped of all they possess.

Peace on earth, good will toward men. In 2 days we honor the birth of Him who came to save mankind. In the spirit and the practice of His teaching, let us do our part to help those less fortunate than ourselves. For He came to show the way. With the grace of Christian love, He went forth to heal the sick, to feed the hungry, and to clothe the naked.

On Christmas Day we are happy. We celebrate the birth of our Savior and our hearts go out in Christian fellowship to all. And as we move on to the beginning of the new year and a new way of life, let all of us make this resolution: "That we shall be ready to give, as generously as we can, to the victory clothing collection for overseas relief."

In the name of the child Jesus, let us help the children of men in all ravaged lands, who will freeze if we deny them.

For there, but for the grace of God, go we.

Is Uncle Sam Becoming Sappy?

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. SHORT. Mr. Speaker, in accordance with my unanimous-consent request, which was granted, I am inserting in the CONGRESSIONAL RECORD a statement on the proposed British loan, by our former colleague, the able and fearless Hon. Hamilton Fish, who served with high honor and great distinction in the House of Representatives for many years.

The statement is concise, and does not mince words, and in my opinion reflects the overwhelming patriotic sentiment of the American people:

IS UNCLE SAM BECOMING SAPPY?

(By Hamilton Fish, Member of Congress, 1920–44)

When will the American people wake up and put a snuffer on the administration spenders who are trying to give away our money to every foreign power that comes begging and pleading poverty? If we open up our Treasury doors to the British, we will have set the pattern for the rest of the European nations to come to Washington, hat in hand, and request additional billions of American dollars. Applications for foreign loans, once the precedent is established, may total $25,000,000,000.

We spent three hundred billions to win the war—more than the combined expenditures of all our allies. We have canceled most of the lend-lease aid and asked for nothing in return, which is exactly what we got—nothing at all.

It is now proposed by the administration to lend Britain $3,750,000,000 with no interest payment for 5 years. The proposal, in my opinion, is the height of deception and is virtually a fraud on the American people.

It is quite obvious, under such a provision, that the loan will not be repaid. The British Labor Party now in power obtains the use of billions of dollars to socialize private industries in England and the Conservative Party refuses to vote approval of the loan so that if it returns to power in 5 years it can easily repudiate the entire loan.

Most economists anticipate a world-wide financial panic in 5 years after production has caught up and surpassed the buying demands. In that case the proposed British loan will be worthless and we will again become Uncle Sap holding the money bag, both in peace and in war. If, of course, we should suggest even payment of the interest at a later date, we would again become Uncle Shylock. The British Government offered a loan of $40,000,000 to Greece a few days ago. What kind of a merry-go-round is this? Why must we always pay for European wars we did not start, and continue to be the international Santa Claus?

The only way to end this duplicity and giving away of our taxpayers money is for the American people, regardless of party, to write or wire their Senators and Congressmen to vote against any loans or gifts to any foreign nations.

The Congress has an obligation to put our own financial house in order, stop deficit spending, balance the Budget, and provide jobs and loans for our returning veterans. Why should Congress approve a loan to Britain to help socialize England without interest for 5 years and make our own World War veterans pay 4 percent on governmental loans? It does not make sense.

A few selfish business interests who may profit temporarily by loans to Great Britain are spreading propaganda for the proposal. What about free American wage earners whose jobs and wage scale will be lowered to meet the competition from British and other foreign nations subsidized by our money?

I am bitterly and unreservedly opposed to loans to socialize Britain or to Soviet Russia to communize Europe. Let us give a billion dollars or more to feed and clothe the starving and destitute war-stricken people of Europe, but not one dollar to socialize or communize Europe.

The vote in the Congress will be close. The American people must snap out of their apathy before it is too late and serve notice on their Members of Congress that they were sent to Washington to safeguard the United States Treasury and not to join in raids on it for the benefit of the British, Russians, or any other foreign nation. If Congress insists on spending money which we will have to collect from the American people, as it is not in the Treasury, why not give preference to our old folks and aged who helped to build up America and will spend it in this country and not throw it away all over the world. If we loan billions to foreign nations we will have no funds to extend social security or unemployment benefits for our own people. Certainly Stalin would take $6,000,000,000 without a thought of paying it back. Why not? It would be in strange accord with the diabolical advice of both Lenin and Stalin to cause practical bankruptcy to make would-be victim nations fully ripe for Communist seizure. Let us stop our steady move to national bankruptcy.

If Congress insists on making the British loan under the whip and spur of the administration spenders, then a provision should be included giving us permanent possession of all the British islands off our eastern coast which are of no economic or financial use to her, but are necessary for our own future security. There should also be a proviso that not one dollar will be paid until all British and Indian troops are withdrawn from the aggressive and imperialistic war in Java.

In all fairness, the Congress, if it decides to approve the loan, should authorize a special bond issue payable solely out of interest and capital payments by the British. This would enable the extreme pro-British and adherents of the loan to buy to their hearts' content subject to the risk. The same type of bond issue should be authorized for Russia and other foreign nations.

There will always be an America, if our own international spenders do not give it away.

For whom were our war veterans fighting—America or Great Britain and Soviet Russia? The American people must decide without reservations whether they intend to put the interests of America first or that of foreign nations.

The time has come to try to save America and our own free institutions and stop subsidizing socialism, communism, and totalitarianism abroad by siphoning our wealth into Britain, Russia, and other foreign nations knowing full well that it will not be repaid. We were not repaid for loans made after the last war except from Finland, and there is less chance of getting anything back this time but ill will and ingratitude from the proposed loans.

GI Protests

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Clinton (Mass.) Daily Item:

WHO'S RUNNING THE COUNTRY? ASKS GRIFFIN WHO SAYS GI'S PROTESTS ARE AIMED AT POLITICAL RUSE TO ENFORCE PEACE DRAFT

John Griffin, of the Washington (D. C.) Bureau of the Boston Post, said, in Sunday's edition:

One of the causes of unrest among soldiers who are at present in foreign lands is the belief that the Army is using them in its campaign to put over peacetime compulsory military training. All observers in the areas where the unrest has been marked, are agreed on that.

There are other reasons, of course. One is that under the system adopted, favored soldiers can be sent home, just as was the son of a general brought home from the Pacific for discharge in order to resume his studies at medical school.

Another is the antics of officers who have no regard for the welfare of their men and the wide gap between the way enlisted men live and the way officers get along.

ONE BIG REASON

But the most compelling reason for the massing of men in protest is the feeling that they are being used, that the Army leaders are using them to put over the peacetime training system and that the State Department is using them as a political weapon.

Eventually there will have to be a showdown, and it could be that the uprising protest in the Philippines and other areas will force it soon. It could be that the average GI and the average man at home is beginning to see through the whole Army scheme to put over compulsory training in peacetime, and further, is beginning to realize what it would be like under that system.

These protests are not something that can readily be dismissed as unimportant. Their importance can hardly be estimated, for they reflect a state of mind which thus far in our national existence has been markedly American. That is, the reluctance to have anything to do with foreign countries beyond what is necessary in the ordinary life of nations.

In other words, Americans never have wanted to be monkeying around in other

countries under control of military men, and they don't want to now. They will do what they feel is necessary to win a war and to hold up our end, but they won't allow themselves to be used as diplomatic weapons or economic weapons.

Whether you like it or not, they are not internationalists. They think the United States is a pretty sweet country, and they don't want any part of other lands. When their work is done in winning a war, they want to get home.

Home means something to them, and all the passionate utterances of those who would put over the one world idea won't convince them that home is all countries or any country.

KNOW THE SCORE

They know the score pretty well, too. When they are told, as they and other Americans were last week, that although enlistments are breaking all records the numbers still fell far short of meeting Army requirements, they undoubtedly check the figures against earlier statistics and statements.

When Army leaders first went before congressional committees to sell them the need for peacetime compulsory military service, some of the Members of Congress suggested that inducements be made for enlistments.

The Army leaders agreed that they would try out a plan, although they were not keen for it. But public pressure prevented them from putting over the compulsory system, and they undertook the enlistment project.

So, right after VJ-day, President Truman announced, in urging continuation of the draft, that 50,000 men a month were needed to cover the needs of replacements in the armed forces without interfering with the return of the men who had served.

RECORD ENLISTMENTS

Well, what are the figures? According to the Army, enlistments in the 5 months since the fighting stopped will be 400,000, although that does not represent the complete totals.

And how does that average up? It averages 80,000 per month, which is 30,000 per month more than President Truman said the Army would need.

The War Department is going to review the entire demobilization situation. When that is undertaken some of the officials ought to try to keep in mind that the troops they are dealing with are not slaves, nor are they regimented peasants who think all there is in life is deference to upper classes.

They are young Americans whose heritage is freedom and equality; young men who are willing to fight against any odds to preserve their country; patriotic youths who can't see the necessity for their occupying friendly lands thousands of miles away from home when the war has been over 5 months.

They are the men described by General Styer, Philippine commander, and General MacArthur in a joint statement as "good men who have performed magnificently under campaign conditions and inherently are not challenging discipline or authority."

It is only a few days ago that General McNarney, American commander in Germany, said that not more than 300,000 men would be needed by July 1 for occupational purposes, and General MacArthur had previously stated that no more than 200,000 will be needed in Japan.

NO NEED OF DRAFT

Why, then, is it necessary to keep hundreds of thousands of men in the Philippines and in places where there are more than enough already? Why, then, does General Eisenhower have to decide suddenly that more men ought to be sent home, and why does the War Department have to review its whole program of demobilization?

Why, for that matter, is there any necessity of continuing the draft? No necessity has been shown. Of course, some of the important people in the War Department didn't like it, and the State Department also was upset when General MacArthur cut the essential occupying force to 200,000.

They apparently would prefer people to believe that many more are needed in occupied areas than are actually necessary, in view of commanders who are in the best position to know. The facts haven't yet revealed the necessity for more men than are being obtained from voluntary enlistments.

Yet practically every one of the generals insists that the draft be continued and that further means of delaying discharges should be used. They all insist, too, that peacetime compulsory military training is needed.

But they are doing their own cause a lot of harm in that respect. The draft system ends on May 15, according to law, and, of course, the Army wants to do everything possible to have it extended. They would prefer that it be continued until a permanent conscription system has been put into effect.

WHO'S RUNNING THE COUNTRY?

You'd think the Army was running the country if you noted all their demands. They want to decide how long the draft shall continue, whether troops now in service shall be discharged, and when and whether the United States should compel the youth of this country to undergo military training all through the peacetime years.

That isn't their function at all. Those things belong to the people represented by Congress. The Army should be told by the Congress how big it should be.

The question of compulsory training is one for Congress, despite the suspicious unanimity of opinion in high Army circles.

Who Made the Money in This War?

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. COFFEE. Mr. Speaker, there are many citizens who are disturbed and perturbed by the spectacle of the vast fortunes made during this war by profiteers and racketeers. Many will recall that all veterans organizations adopted resolutions at annual conventions each year, following the end of World War I, in which they proclaimed their relentless hostility to the making of profits out of wars. The American Legion and the Veterans of Foreign Wars suggested that we draft property as well as manpower in the next war. This was in the period of 1919 to 1940. But when 1940 came, somehow or other the Congress allowed the manufacturers to make the usual commercial killing out of war. With great reluctance and under terrific pressure the Congress finally was compelled to impose an excess-profits tax running up, in some cases, to 90 percent. Great Britain had, from the inception of the war, levied a 100-percent excess-profits tax in addition to granting to a national commission the power arbitrarily to disallow certain corporate expenses claimed against tax charges. Meanwhile we permitted numerous loopholes. Salaries were raised enormously at the beginning, although frozen later. We proceeded to extend the draft, we raised from $30 to $50 a month the compensation paid the inductee. The question arises, Who made the money in this war? In an article in the January 1946 issue of This Month magazine I have discussed this subject. The article is as follows:

WHO MADE THE MONEY IN THIS WAR?

(By Representative JOHN M. COFFEE)

When the full bill for participation in the war is presented to the American people, it is expected to total $336,000,000,000. That is almost 11 times the cost of World War I. It is the equivalent of taking $2,551 from the pocket of every man, woman, and child in this country.

That, in dollars and cents, is the price we have paid for victory. It does not take into account the cost in human lives; 259,637 killed, 35,328 missing, 651,934 wounded. It does not include the suffering, the sacrifice, and ultimate waste of war.

There is another side to the ledger, the credit side. For there are those in the United States, as in other countries, who have made an enormous profit from the war.

In the years that preceded World War II a series of congressional investigations uncovered startling evidence of World War I profiteering. Public opinion was shocked and outraged, even though only a meager trickle of the sordid details ever reached it. Evidence was produced, for example, that:

British, French, German, and American industrialists made a profit from every soldier killed on either side.

Four years of war profits created 22,000 new millionaires in this country.

During the 4 war years—1915–18—United States industry made a profit, after taxes, of $28,500,000,000. Net earnings of United States corporations in those 4 years were as high as in the preceding 10 years.

By 1926, according to a Federal Trade Commission report, 59 percent of the Nation's material was in the hands of 1 percent of the population; 31 percent was owned by 12 percent of the people; the vast majority (87 percent) owned less than 10 percent of the Nation's wealth.

About 30 percent of the national wealth was owned by corporations. Some 70 percent of all corporate stock was owned by only 1 percent of the stockholders.

Thus, as the Nation increased in wealth, its people as a whole became poorer. More economic power passed into the hands of fewer men. War had accelerated this process.

Just after Pearl Harbor the late President Roosevelt pledged that there would be no profiteering from this war. It was precisely to prevent the excesses of World War I that Congress imposed heavy war taxes (in some cases four times the prewar level) and applied a surplus-profits tax to all corporate earnings.

The extent to which this noble purpose was fulfilled has just been revealed in separate studies made by Government and private agencies. Here are some of their conclusions:

Net profits (about $56,000,000,000) made by United States corporations during World War II far exceeded those recorded in any similar period in history.

During this war the number of billion-dollar companies in the United States increased by 11, making a total of 43.

Despite high war and excess-profits taxes, net profits after taxes of industry (1940–45) averaged 250 percent above prewar levels.

Since Pearl Harbor (1942–45) profits after taxes averaged 300 percent above prewar levels.

But even this picture is not complete, because it is an over-all picture. It includes all corporations, big and small alike,

and many of the small ones went out of business during the war years or only just broke even. This means that if we consider only those corporations and industries which recorded a profit, the size of their earnings will stagger us even more.

Take a look at these percentage increases in 1944 earnings, compiled by the OPA. Compare with average prewar (1936–39) earnings in the same industries.

	Percent
Motor-vehicle parts	596
Iron, steel, and byproducts	252
Lumber and timber byproducts	1,064
Electrical machinery	434
Communications equipment	521
Industrial electrical equipment	399
Other electrical products	772
Nonelectrical machinery	360
Engines and turbines	2,431
Transportation equipment	658
Aircraft and parts	1,686
Railroad equipment	318
Food and kindred products	150
Meat products	271
Apparel	280
Textile-mill products	522
Petroleum and coal products	159
Rubber products	698
Bituminous and other soft coal	1,148

And here is how the special Senate committee investigating the national defense program summed up the situation:

"The Planning Division of the War Production Board has estimated that net profits, after renegotiation and taxes, of the war industries (metals, chemicals, petroleum, and rubber) for the four war years will be about $16,000,000,000. Since the proportion of civilian business in these industries had been very small, almost all these profits may be regarded as coming from Government business. Such profits are about twice the prewar average of such industries."

The Senate committee also investigated the relative earnings of the 100 United States corporations which had the largest volume of war business. They discovered that, after all deductions for wartime taxes in 1942, 3 companies made more than 10 times their average prewar net profit; 19 earned more than three times prewar profits; 24 others between one and three times normal profits. Of the remainder, 12 companies which had shown average deficits during the prewar base period, earned in 1942 a net profit of between one and eighteen million dollars.

Many of us have criticized organized labor for striking in wartime and believe even now that labor demands for increased wages are unreasonable. Unions have been accused of being unpatriotic. But let's look at their side of the picture.

The cost of living, as every housewife knows, has gone up tremendously during the war years. A large part of the increased wages has gone simply to pay for that inflation. The unions, according to their own research bureaus and the evidence of Government agencies, know that the corporations have been making these fantastic profits.

A study, called Five Years of War Profits, published by the Research Bureau of the United Steelworkers of America (CIO), reveals further facts on the earnings of big corporations. It may be assumed that the unions base their decisions to strike or not to strike on these revelations. The study claims that 200 great steel corporations earned more than $2,000,000,000 in open and concealed profits during the war. From 1940 to 1945 the industry averaged a profit, after taxes, of $245,000,000 per year. Total reported profits in the steel industry, after taxes, for comparative periods are:

1936–39	$576,000,000
1940–44	$1,225,000,000
Increase (percent)	113

The United Auto Workers Union has released a study of 26 aircraft companies and their earnings during comparative years. The percentage increase in this industry is even more staggering.

1936–39	$20,554,274
1941–44	$173,598,422
Increase (percent)	745

If you have ever wondered how to make ends meet after you've paid your taxes, and how an extra few dollars a week would help that household budget, you'll be interested in these statistics on some of the aircraft industries. All these are profits after taxes and include postwar and contingency reserves.

	1936–39 average	1941–44 average	Percent increase
Bell Aircraft	$32,493	$3,845,404	11,743
Bellanca Aircraft	6,153	323,336	5,155
Bendix Aviation	2,480,661	17,883,226	621
Boeing Airplane	−840,038	7,294,040	
Consolidated Vultee	823,702	16,957,763	1,959
Curtiss-Wright	2,954,566	[1]25,351,791	758
Glenn L. Martin	2,083,787	13,569,776	551
Wright Aeronautical	2,544,172	[1]11,517,484	353

[1] Average of 3 years.

While making these profits, however, most companies were not generous with their stockholders. Dividend payments have by no means kept pace with the sharp advance in net profits. If they had, distribution of wealth would have been a little wider. The fact is that corporations paid out a much smaller proportion of their profits in dividends during the war than ever before. Prior to 1940, dividend payments were often two-thirds of net profits; since then they have averaged less than half. While the net income of incorporated business increased 134 percent between 1939 and 1944, dividends in the same period increased only 18 percent.

Reason? The conservative financial magazine Business Week of August 11, 1945, attributes it to the belief that high dividends at a time when war business alone was furnishing most corporate profits would invite public criticism.

Be that as it may, the fact remains that management had at its disposal a working capital 88 percent greater than in 1936. The figure in dollars had jumped from twenty-five billion in 1939 to forty-seven billion in 1945. One result was that corporations had to raise very little new capital for wartime expansion. At the same time, losses in enemy countries were written off or provided for through reserves. Investment in new plants was kept below depreciation charges, written off against taxes, charged to current operating expenses, or financed directly by the Federal Government.

And thus corporations have piled up $31,000,000,000 in undistributed profits and reserves during the war. They have also paid off a billion dollars in long-term debts.

A break-down of assets in the 200 great steel companies, as published by the United Steelworkers of America, further clarifies the situation.

	January 1940	January 1945	Increase
			Percent
Total assets	$4,860,000,000	$6,000,000,000	22
Dividend payments	419,000,000	765,000,000	82
Working capital	1,200,000,000	2,000,000,000	68
General reserves	103,000,000	395,000,000	288
Undistributed profits	585,000,000	1,000,000,000	81
Total financial resources	689,000,000	1,600,000,000	131
Funded debt	903,000,000	652,000,000	−28
Excess working capital over funded debt	308,000,000	1,393,000,000	363

The above figures give you a picture of the steel industry only. Others, of course, have fared as well. The 11 corporations that graduated into the billionaire class during the war make a total of 43 companies with assets of more than a billion dollars. Forty-third on this list is the Ford Motor Co., with total assets of a mere $1,021,325,159. But Ford is exclusively a family holding, while the others are owned by numerous stockholders.

According to a United Press survey, some of the giants and their assets are:

Metropolitan Life, almost $7,000,000,000.

Bell Telephone, more than $6,000,000,000.

Prudential, more than $5,000,000,000.

Chase National Bank, more than $5,000,000,000.

Pennsylvania Railroad, almost $3,000,000,000

Standard Oil of New Jersey, $2,400,000,000.

General Motors, $2,100,000,000.

American industry enters the postwar world with a greatly expanded plant and with tools and equipment far surpassing anything it had in the past. According to a report issued by the War Production Board, more than $25,000,000,000 worth of new plants and equipment were added to the industrial capacity in this country between 1940 and 1944. The Government contributed directly more than two-thirds of the total investment involved.

At the end of 1939 there were 934,000 machine tools in place in this country; by 1944 the number had risen to 1,400,000, an increase of nearly 50 percent. General Motors had 75,000 machine tools in 1940; in October 1943 it reported 143,774 machine tools in place.

Even after industry has financed its own transition to a peacetime production, equal at least to the prewar level of 1941, it will have on hand a fund, estimated by United States Department of Commerce economists in 1944, as between ten and twenty billion dollars left over for plant and other expansion.

It will also get from the Government a flat 10-percent rebate on wartime payments of excess-profits tax as a sort of severance pay to compensate it for the cessation of war contracts. This sum alone amounts to about $2,840,000,000, and is equal to more than half the total net corporate earnings in the banner year of 1937.

In addition, under the carry-back and carry-forward provisions of the excess-profits tax, United States corporations have accumulated with the Government a sort of unemployment insurance. Should the profits of any company in the next 10 years drop below its so-called normal profit level, it is entitled to a cash refund from the United States Treasury to make good these losses. That refund cannot be greater than the total income and excess-profits tax paid during the war. Theoretically, industry has thus a reserve fund of $62,000,000,000 to offset reconversion losses.

The steel companies, for example, face reconversion with savings (net working capital) of $2,000,000,000. Their flat 10-percent rebate from the Treasury will amount to about $200,000,000 more. If they fail to show a cent of profit in 1946, the Treasury must give them a rebate of $149,000,000. This last rebate guarantees them 29 percent more profits than they averaged during the years of peace.

Nowhere in the world, in any period of history, have comparable material gains been registered by industry. The war presumably has wiped out German and Japanese industry. Principal industries in Allied countries have suffered so heavily that it will take them a decade or more to regain even prewar production.

American business today is in the position of completely dominating world trade. It has become so strongly entrenched through its war profits that for many years it need fear no real competition anywhere on the globe.

Congress has not yet passed a comprehensive full employment bill for the American people. But the tax-reduction bill has been rushed through in record time. Principal provision of this bill eliminates the excess-profits tax as of January 1, 1946. The total cut in taxes is almost $6,000,000,000, apportioned as follows between individuals and corporations:

Individuals	$2,784,000,000
Corporations	3,136,000,000

The reduction in individual income taxes is overwhelmingly in favor of the larger income groups. The little man gets $1 a year more to spend; the millionaire gets $44,218 more.

The 900 largest corporations in this country will get a tax reduction averaging $2,000,000 each in 1946. This amounts to a benefit twice that of the rest of the 18,000 corporations which have admitted excess profits. There is no gain whatever for the 261,000 smaller corporations that were never able to report excess profits.

At the same time it was revealed that the deficit in the national budget for 1946 is estimated at $30,000,000,000.

All this, then, must go into the balance in which we weigh our victory. On one side we have the total cost of war: $336,000,000,000 in cash, plus the dead, the wounded, the missing; on the other, the outright profits made by large corporations—some $56,000,000,000 in cash, plus the power to dominate the lives of our people and the peoples of the world.

The GI's Side to the Demobilization Story

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 21, 1946

Mr. CURTIS. Mr. Speaker, on frequent occasions I have taken this floor to urge a speedy and equitable demobilization of the members of our armed forces. These men entered the service to win the war and they have done a splendid job. They are entitled to come home.

Several days ago, Gen. Dwight Eisenhower, the Chief of Staff, and Admiral Chester Nimitz, Chief of Naval Operations, appeared before a joint session of the Congress and stated their views and the views of their respective departments on demobilization. It was right and proper that the Congress should hear these officials, but by the same token the Congress should hear what GI Joe has to say about the slow-down in demobilization.

Mr. Speaker, I have received a great deal of mail, as have other Members of this House, but for the information of the House I wish to quote from a few of the letters I have received.

A young man from the district that I represent, now a corporal in the Army located on Guam, writes me as follows:

I didn't mind being over here sweating it out as long as it looked like someone was trying to get us home but when they start slowing up demobilization it makes one wonder what we were fighting for. The war is over now, so let us go back home to our families and enjoy what we have been fighting for.

A corporal stationed on Saipan writes me under date of January 5 as follows:

Tonight after our evening chow, my buddies and I were listening to the regular 7 o'clock news broadcast from the States, hoping and praying that some encouraging news would be brought forth concerning our return to our families. Instead we hear that the Army has decided that too many men are being released, making the occupation forces of our Army unstable. Well, sir, I think that announcement just about took the last of our hopes and confidence that we will be home soon. Frankly speaking, it welded more strongly in our minds the feeling that we are being held in the service, not to serve our country but to serve a group of military men who are entirely rank-conscious, or have their minds set on the high salaries paid to men of their position. The statement I just made may seem out of reason to you, sir, but in all seriousness I can say the majority of the men in my outfit feel the same way.

A young man at Fairbanks, Alaska, who is a technical sergeant, writes me under date of January 8, as follows:

All men regardless of whether or not they are performing essential duty are being held until they become eligible for discharge under official War Department discharge policies. As you know, this is not true in the United States proper. Once a man becomes excess in the United States he is discharged. I can cite a number of cases where men in the United States with less points and less service than most of us here who were discharged months ago. The military authorities in this theater have made no effort to send excess men to the States. Instead, they request more men. And now the War Department threatens to hold us until replacements are available. Hundreds of men here have been held for months doing nothing except details that will make the living conditions of officers more elaborate than they already are, if such a thing is possible. On the basis of the above, I believe it is time Congress took cognizance of the conditions in Alaska and took some action to remedy the situation. The best way to find out the true situation is not to talk to high-ranking Army officers because they will give all kinds of excuses, but talk to the masses of men in the Army—the enlisted men. They can tell you the true conditions. They can tell you exactly what they have been doing the past few months and how utterly useless their work really is.

Another sergeant, stationed at Yokohama, Japan, on January 7 writes as follows:

The first excuse for the delay in demobilization was the lack of shipping. Now that the shipping problem has been solved, we are informed that we must remain overseas an additional 3 months after our eligibility for discharge because of insufficient replacements. It sounds like a deliberate fraud upon us as American soldiers, voters, and citizens. I cannot believe that our Congress will permit the War Department to abuse us and our families in this way.

A young man writes me on January 7 from Manila, as follows:

We in Manila are quite incensed. Troop ships are going home with empty berths. The Secretary of War has no idea what the score is. General Collins says we aren't going home because the Army needs replacements for us; whereas, three out of four of us know we haven't done a day's work since coming to the islands. I've done virtually nothing, and there are few who have done much more. Most of us spend 4 hours a day in our offices writing letters and reading.

A young man stationed in Manila, who has been in the service for 44 months, writes:

I have refrained from writing you up until this time about the discharge situation, thinking that one should be a little patient and give the War Department a chance to adjust themselves to the situation. But the air is so full of propaganda, half-truths, distortions, and outright lies, and conscious sabotage of the demobilization program, that almost all of the thousands of men over here half way around the world are fully convinced that they are going to now have to fight for a freedom which the American people and "our way of life" said they would be returned to once they had fought for and secured the freedom of our country and the world.

Mr. Speaker, if the war ended on VJ-day, the "duration and 6 months" is about over and these men who have made victory possible are entitled to be home. If the war did not end on VJ-day, Government offices should not be closed on Saturday and all of us on the home front should be working hard to bring the war to a close. The Chief Executive should use his wartime powers to stop strikes and to get a full production going so that, among other things, the returned veteran can have a house to live in and can buy some civilian clothes upon his return. I sincerely hope that further speed can be attained in our demobilization program.

The young man who feels that his youth is being wasted away at some foreign outpost after the fighting stops, and the little children who pray for their daddy's return, are not interested in charts and explanations about demobilization. They want the men brought home.

Letter From a Soldier in India

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. SHORT. Mr. Speaker, under leave granted me, I insert a letter which was written by a constituent of mine in India on November 1, 1945.

Like every other Member of Congress I have received thousands of letters in recent months, since VE-day and particularly since VJ-day, protesting one thing or another. I do not think we should clutter the RECORD with much of this material, which is pretty generally known by the public, as well as Members of Congress. However, many of the GI gripes are justified, and not only the Congress but the Army and Navy should do everything in their power to rectify any wrongs and to correct any mistakes made.

Having traveled through India myself, knowing the country, the people, and the climate as I do, I realize in a small way some of the hardships which our men have and are still suffering in that sad land.

Though there has been no censorship since VJ-day of any soldier's mail, and, while contrary to popular opinion, any man or woman in the armed services is free to write to anyone on any subject he chooses without fear of reprisal, I am, nevertheless, withholding the name of the soldier who wrote the following letter.

I am sure this message will contain information which will be of interest to the public generally and raises some questions which should be brought specifically to the attention of our military authorities. I had the pleasure this morning of calling the last two paragraphs of the letter to the attention of General Eisenhower, who appeared before our Committee on Military Affairs.

The letter follows:

To paraphrase that well known statement by General Stilliwell, American soldiers in India are still taking a "hell of a beating," but this time it seems to be coming from their own Government.

When VJ-day was declared, there were less than 250,000 American troops in India, Burma, and China, approximately one-third the number evacuated from the ETO in a period of about 3 months. Yet 3 months after VJ-day, there are still well over 100,000 troops left in India and Burma. In spite of this, the quota of shipping space allotted to the Indian-Burma theater has been reduced from 15 troop transports during the month of November to a predicted 12 for December. A simultaneous announcement from Washington predicted a surplus of some 34,000 berths during December on transports allotted to the European theater—while staging areas in India are already housing 35,000 troops awaiting transportation to the States. And now comes the telling blow: According to official announcement, 30,000 troops will remain here until the major portion of American property is disposed of—a period estimated to be at least 6 months.

At the time this last announcement was made, rioting was going on in Calcutta. Eight American soldiers were sufficiently injured to require hospitalization and 18 others were treated at dispensaries. The charred body of an American soldier has been found, so badly burned that identification had to be made by a dental bridge. This soldier was on an errand of mercy, the driver of a United States Army ambulance; at least 8 United States Army vehicles were destroyed and over 50 damaged. Demonstrations are now going on in other cities in India, and it is likely that the above situation may be repeated.

American soldiers here are constantly exposed to amebic dysentery and the over-all incidence of this desease among American troops is between 15 and 20 percent. Some indication of the prevalence of this disease is demonstrated by the fact that three widely separated hospitals (units in which sanitation is as good as can be found anywhere in the theater) have had incidences varying from 18 to 45 percent. The incidence of malaria in this theater at one time exceeded 50 percent in certain units and is still endemic.

It is quite necessary to put up with these hazards in time of war, but what excuse do we have for prolonging our stay in India now? No public statement of the over-all value of American property in India has been made, but it is quite likely to be sold for considerably less than its true value. Some of it is being sent back to the United States, but even there it is not likely to be sold on the open market because of the effect this would have on prices. It is well known that here many new items were indiscriminately destroyed, so that they would not be sent back to flood the markets. All in all, it seems quite likely that the property will eventually yield considerably less than its so-called true value.

But one must deduct from this the cost of maintaining 30,000 troops for a period of at least 6 months. It can be estimated that in pay alone this will cost the Government an average of at least $100 per month per man, or, over a period of 6 months, at least $18,000,000. This must be added to the cost of food, clothing, and shelter. Rent on installations to the British will continue, and from now on it is no longer reverse lend-lease. These items will considerably exceed the cost in pay alone.

The over-all picture seems quite clear to us. The difference between the cost of maintaining troops and the income to be expected from the sale of property does not seem to warrant keeping 30,000 men here in India for a period of even 6 months when one places in the balance the health and lives of these men, not to mention the fact that these same men could be performing useful tasks elsewhere, or continuing their education which was interrupted during the war. We certainly agree with the shouts of some of the more exuberant Indians during the recent riots, "Let the Americans quit India, too."

The Cause of Most of Our Domestic Unrest

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. STEVENSON. Mr. Speaker, there has been so much controversy as to the facts relative to the rise in the cost of living, whether it is 15 percent or 50 percent, or more, I concluded it would be worth while to compare prices of food staples and clothing taken from ads in the local paper in my home city of La Crosse, Wis.

I am setting forth the results of this comparison as taken from the ads of the La Crosse Tribune on September 1, 1939, and October 4, 1945. These figures and prices speak for themselves. The increase in the cost of living as reflected in these ads is astounding:

SEPTEMBER 1, 1939	OCTOBER 4, 1945
Hamburger, 1 pound, 14 cents.	Hamburger, 1 pound, 25 cents.
Beef:	
Pot roast, 11 cents a pound.	Not advertised.
Sirloin steak, 17 cents a pound.	Sirloin and round steak, 40 cents a pound.
Chuck roast, 15 cents a pound.	Chuck roast, 26 cents a pound.
Veal roast, 13 cents a pound.	Not advertised.
Veal chops, 17 cents a pound.	Veal chops, 33 cents a pound.
Leg of lamb, 19 cents a pound.	Leg of lamb, 35 cents a pound.
Pork chops, 18 cents a pound.	Pork chops, 33 cents a pound.
Bologna, 14 cents a pound.	Bologna, 27 cents a pound.
Ham, 17 and 19 cents a pound.	Wieners, 39 cents a pound.
Slab bacon, 9 cents a pound.	Bacon, 39 cents a pound.
Spring chickens, 16 cents a pound.	Unavailable.
Early Ohio potatoes, 19 cents a peck.	Potatoes, 49 and 52 cents a peck.
Flour, 49 - pound sack, $1.49.	Flour, 49-pound sack, $2.39.
Peanut butter, 2 pounds, 22 cents.	Peanut butter, 2 pounds, 39 cents.
Bananas, 5 cents a pound.	Unavailable.
Sweetpotatoes (yams) 4 pounds, 25.	Sweetpotatoes, 4 pounds, 42 cents.
Carrots, 4 cents a bunch.	Carrots, 10 cents a bunch.
Watermelons, 35-pound melons, 33 cents.	Unavailable.
Bartlett pears, $1.49 a bushel.	Pears, $4.99.
Colorado peaches, 93 cents a crate.	Not advertised.
Prunes, 69 cents a box.	Prunes, $3.29.
Oranges (small), 15 cents a dozen.	Oranges (same size), 30 cents a dozen.
Tomatoes, 39 cents a bushel, 2 cents a pound.	Tomatoes, not advertised.
Ladies silk dresses, $3.99 and $6.95.	Unavailable.
Cotton frocks, $1 and $3.98.	None advertised.
Silk hosiery, 49, 69, and 79 cents a pair.	None available.
Leather hand bags, $1 and $1.98.	None advertised.
Ladies' sport coats, $9.50 to $19.50.	Sport coats, $45 and $55.
Fur-trimmed coats, $16.50 and $37.50.	Fur-trimmed coats, $69 to $135.
Snow suits, $3.95.	Snow suits, $14.95.
Men's suits, 2 pairs trousers and a vest, $17.50 and $22.50.	$45 and up (one pair trousers, no vest).

I have read ads in the Washington newspapers for men's sport shirts starting at $6.50 and $25. I am wondering how many of my constituents are able to pay $6.50 and $25 for a shirt.

And so I repeat, Mr. Speaker, these revealing figures speak for themselves, and indicate the inflationary trend, which is one of the causes for so much of our domestic unrest.

Mr. Farley's Mission

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, which appeared in the Utica (N. Y.) Press of November 27, 1945:

MR. FARLEY'S MISSION

James A. Farley, who will never be anything but Jim to his Oneida County admirers, will be in Utica this evening on an important mission. He will meet representatives of this and Otsego, Chenango, and Lewis Counties who are interested in the campaign to raise $3,000,000 for the Alfred E. Smith Memorial. This will be a building at St. Vincent's Hospital, New York City. Michael

J. Larkin, Rome, is chairman of the local committee.

Mr. Farley is a worthy spokesman for a good cause. No man of his generation is more deserving of a memorial than Al Smith. He was among the first of our great national leaders to sense the people's rights in Government and to work for their realization.

Although he was a New Yorker, born and bred, the former Governor had the common touch which, in his hands, was not common at all but was a kind of political genius. He was just as persuasive and effective in addressing a Utica audience as one that might have been assembled from his East Side sidewalks.

He made New York's government a reality to its citizens and led many who had previously ignored politics to take an interest in what to him was a vital element of American life. It is appropriate, therefore, that his memorial should take the form of hospital facilities that will be useful to the men and women whom he served so well. And no one is better fitted to speak in behalf of such a project than Smith's old friend, Jim Farley. He is welcome here at any time and doubly so in this cause.

The Strike Problem

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following open letter to the Congress of the United States which appeared in Flint newspapers Thursday, January 17, 1946, and Friday, January 18, 1946:

AN OPEN LETTER TO THE CONGRESS OF THE UNITED STATES

Strikes, slow-downs, and threats of strikes have brought about a domestic crisis in America.

To meet it, the members of the undersigned organizations, representing all classifications of business, agricultural, professional, and service groups in this community, believe that there is imperative need for decisive legislative action.

Such action is needed in the public interest. It is needed now to effect early solution of the present problems and to provide a sound basis for permanent industrial peace.

We believe that existing labor legislation is essentially class legislation, passed to promote the growth of labor unions. The present size and monopolistic power of such labor unions now require that the legislation be rewritten to protect the public interest.

In our judgment, labor laws primarily intended to foster the organization of workers have largely served that purpose and now are being used in an attempt to establish union control of workers, management, and government.

There is no justification for the present exemption of powerful labor organizations from Federal antitrust laws nor can the exemption of unions and their representatives from responsibility under contract be justified.

Such legislative action as must now be taken should be designed to make labor organizations equally responsible under the law with other elements of the community.

In the present crisis, we protest against the misuse of monopolistic power which has blocked the recovery of our national economy, seriously delayed the expansion of industry and business designed to produce full employment and maximum national income, and handcuffed production in a period of pressing consumer demand.

We protest against the misuse of collective bargaining rights for collective bludgeoning purposes and the substitution of revolutionary economic and political objectives for the legitimate objectives of collective bargaining.

We protest against the abuse of the fact-finding procedure in its distortion for the purpose of substituting either a bureaucratic or union dominated economy for our free competitive economy. We warn against the enactment of fact-finding legislation unless based on a sound revision of the one-sided labor laws now on the statute books.

We further protest against those prevalent abuses of the right to strike, including jurisdictional strikes, strikes in violation of agreements, strikes against the Government or in protest of Government decisions, which should be forbidden by law and made subject to appropriate penalties.

The people of the United States, who have chosen you as their representatives, have just brought to a victorious conclusion the most destructive and widest-ranging war in history.

The cost of victory has been without precedent, however measured. In terms of human suffering, human time and effort expended, the costs are incalculable. In terms of property destruction, and exhaustion of resources, they are staggering.

If the desire to retain freedom, which sustained the American people as they struggled through adversity to victory, does not bear fruit, every item of that tremendous cost must be regarded, not as justifiable expenditure, but as flagrant waste.

Upon you, the duly elected representatives of the American people, rests the grave responsibility of making decisions which will determine whether the cost of the conflict was justified, or was a stupendous waste.

By your legislative actions you will determine whether the American people, including our veterans, are to be rewarded or cheated. On January 3, 1946, the President of the United States asked the American people to tell Congress what they want. We want Congress to keep the foregoing in mind during all the deliberations which will shape future legislative programs.

We believe that such legislation shall fall woefully short of the desires of the American people if it is designed to serve the interests of special groups rather than the broad public interests.

We believe that the mass destruction of the war makes mass production in peace an obvious world-wide need. That need constitutes a challenge which the American people have demonstrated themselves uniquely competent to meet. Their freedom to meet it depends primarily upon the formulation of national policy to overcome labor strife.

We seek labor-management peace—cooperation between employees and employer—productive jobs and the abundance for all which flows from high wages and lower prices—opportunity, progress, and growth for every citizen. We believe that these are ends to be achieved by free labor and free management under just laws impartially administered.

Flint Furniture Dealers Association, Genesee County Coal Exchange, Kiwanis Club of Flint, Retail Merchants Association, Flint Association of Home Builders, Genesee County Taxpayers Association, Flint Junior Chamber of Commerce, Flint Milk Dealers Association, Genesee County Farm Bureau, Inc., Flint Wholesale Bakers Association, Rotary Club of Flint, Flint Gasoline Wholesalers, Flint Chamber of Commerce, Flint Automobile Dealers Association, Genesee County Real Estate Board, Allied Construction Industries, Flint Farmers Club, Flint Ice Cream Manufacturers Association.

UNO Representation

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, it is my firm belief that the composition of delegates to the United Nations, now meeting in London, is too topheavy with men. It is a sad commentary of our times that we keep alive the idea that the cures for the world's ills should be determined by men, either alone or in the preponderant majority. These kinds of groups have failed us innumerable times in the past and I feel the present world situation calls for a change in personnel in our own delegation at the opportune time.

I should like to see veterans of this war given representation because then at least one of their number could express the views of his comrades who certainly have earned that right. Let us try and make sure, this time, that this will be the last war, and let us give our veterans a voice in the peace. They have sacrificed the most and they and their families will be expected to pay for the recent war. It is their right to have a voice in the making of the peace so that they and their children will have an assurance that a peaceful and secure world will be theirs.

We should make certain that the women of America are given continued representation on our delegation to the United Nations Organization. I feel that the principles of the Atlantic Charter should be followed out because that declaration pledged, at least six times, that women should be eligible with men to participate in the activities of the UNO. Evidently these pledges have meant nothing, because out of 180 UNO delegates, representing 51 nations, only 5 are women. In addition to this, only one country—Norway—has a woman alternate, and the number of feminine advisers adds up to only six. This is a disappointing and unfair representation to the mothers, wives, and sisters of the men who have fought and died the world over for equal rights and democracy.

We should also have at least one scientist—preferably one well versed in atomic energy—representing us. The atomic age with its implications for good and evil merits an appointment of this sort. We must realize that atomic energy is here to stay and that the future use of this new development has a direct

bearing on the welfare of every person in the world.

Our veterans, women, and scientists may not be politicians, but they will be well able to take care of the people whom they will represent. The lack of recognition accorded to them must be corrected at the first feasible opportunity.

Our elder statesmen have failed us in the past. They have not been able to lay the foundation for a peaceful world based on justice and security for all peoples. In one generation we have gone to war twice and suffered the loss of our best manhood. This must not, if we can help it, happen again. Let us, therefore, see to it that our old-style representation is abolished and our veterans, women, and scientists accorded the right and the privilege to represent us.

Fairless Failure

EXTENSION OF REMARKS
OF
HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. ROWAN. Mr. Speaker, the steel mill area of south Chicago, immediately contiguous to the plant of the Republic Steel Corp., scene of the Memorial Day riots during the last great steel strike in Chicago, views the current strike with great trepidation. Not only the steel workers and their families, but all of the people of that great industrial zone, are hoping that President Benjamin F. Fairless, of the United States Steel Corp., will hear the rumblings of the people of the Nation and reconsider his ultimatum delivered to the President of the United States.

Today two Washington newspapers which do not see eye to eye on many problems, expressed a similar hope, namely, that there would be a speedy termination to this strike which, if it continues, will involve not only the steel industry but most of the manufacturing of the Nation. The Times-Herald, for instance, had as a caption to its editorial "Fairless made a big mistake," and the Washington Post in a front-page editorial analyzed the situation in a somewhat similar manner. Both indicated that Mr. Fairless had failed dismally in the negotiations at the White House.

Evidently he is not like another great executive of the United States Steel Corp. who made his own decision on the eve of a gigantic steel strike. That man was Myron Taylor, chairman of the board of the United States Steel Corp. The United States Steel Corp. at that time was preparing for a strike and it seemed inevitable that there would be a walk-out of all steel workers in the world's greatest industry. Newspaper reports at that time, nearly 10 years ago, stated that Mr. Taylor and his wife were in a Washington hotel at that crucial moment and Mr. Taylor sought an introduction to Mr. John L. Lewis, then the foremost figure in the strike that was impending. Newspapers related that Mr. Taylor and Mr. Lewis signed an agreement. The great United States Steel Corp. made a contract with the CIO of that day and the strike was averted, insofar as "Big Steel" was concerned. "Little Steel" refused and the strike was on, and there was great suffering and hardship as well as 10 deaths in the Memorial Day riot at the gates of the Republic Steel Corp. in south Chicago. If Mr. Fairless had the fearlessness of Mr. Taylor we do not think that steel, "big" or "little," would be in a strike today.

My colleague from Indiana, the Honorable RAY MADDEN in a speech yesterday on the floor appealed for a return of Edward R. Stettinius to his old position in steel stating that if Mr. Stettinius were there the strike would have been averted. Representative BAILEY, of West Virginia in his remarks yesterday, announced that he had introduced legislation that would strike from the Revenue Act of 1945 the carry-back provision affecting revenue from excess-profits taxes paid into the Treasury for the taxable year of 1944–45, which revenue can be claimed by corporations should their 1946 returns show they operated at a loss. Doubtless many Members of Congress voted for that provision because they expected fair play from Fairless et al.

The longer the strike continues the greater will be the indignation not only of organized labor but of all wage earners against United States Steel. It is not too late for Fairless to reconsider and save the day. If he does not the powerful industrialists will learn ere long the enormous pressure that can be exerted by the greatest pressure group in all the world, an aroused American citizenship.

Subjoined are the two editorials from the Washington newspapers of today:

[From the Washington Post of January 22, 1946]

THE PRESIDENT AND THE CRISIS

Twenty-four hours have gone by since the steel plants of this country closed down. Steel is the heart of our industrial system. The heart has now stopped beating, and the entire economy is fast running down. The people seem condemned to watch a knock-down and drag-out fight between labor and management. They must stand by and see the Nation lapse into a state of paralysis.

For weeks they have heard the spokesmen of both sides say their say interminably. It is now time for the public to take the platform. The Post thinks it would be shirking its public responsibilities if it failed to proffer its own ideas about the grave crisis confronting our country.

The effect on reconversion is immediate. Reconversion is stalled. After 8 months of hard work and skillful deployment by labor and management, the goal was actually in sight. We were 90 percent reconverted. Then silence fell on the automotive, meat, and electrical industries. Steel joins them to make the standstill of our industry complete.

It is a criminal set-back, and seems like a conspiracy. But no good will come out of name calling. Men on both sides are acting according to their convictions. There may be exceptions, but we prefer to think of the combatants as good Americans, all animated in the final analysis by a desire to serve the public. The fact remains that, because of inability to agree, they have thrown their hands in. When labor and management in our major industries quit, a crisis is created. We are in a crisis, not a conspiracy.

From this crisis we shall all suffer. The veteran coming back into our civilian life will be hurt. The prostrate world, looking to the United States for a lead in the work as well as the ways of peace, will lose heart.

The drift back of spreading inactivity must be arrested. This the people demand in self-preservation But they have no preventive power. Only the President of the United States can act in their united name.

The Post assumes that President Truman is not quitting.

The President has been damned for stepping into the picture at all. It is said that he ought to let the combatants slug it out. This was sound advice when industrial struggles were minor ripples on our community and our international life. But no such advice is tenable when this fight could conceivably hold up the activity of the entire industrial world.

Those who criticize the President for his intervention would have been the first to criticize him for nonintervention. For he had to intervene. The maintenance of the war powers of his office testifies to the fact that we are still in an emergency. This peace emergency calls just as much for Presidential responsibility as did the war emergency.

We do not suggest that the President should be panicked into hasty steps. But the Nation cannot stew in the present mess much longer without inviting an irremediable disaster. He must bring before him the men who in fact guide our industrial destinies. It is now seen to have been foolish to allow negotiations to go on between representative labor and management which was not equally representative. Labor as a whole was talking to men who had no mandate from the whole industry.

In the steel fight the President seems to have thought Mr. Benjamin Fairless was the decisive voice in the steel industry. It turns out he was mistaken. Let him ask the actual leaders of the steel industry to come to the White House.

Let him go further and ask the real leaders in the other major industries to talk things over.

A national crisis requires a national solution. The heart of our current troubles lies in the absence of a wage-price policy for reconversion. Steel could set the pattern. It has set the pattern before in every great change in our economic history. But in this instance the others may want to have their say along with steel. What makes steel and the others backward is the effort to keep wages and prices in separate compartments. It has never been done before. It does not make sense. Both have got to be squared.

What has happened is simply a breakdown in common sense. Common sense requires that we speed up reconversion. Reconversion means civilian goods. It follows that reconversion is the only way to beat inflation—to stop prices from spiralling, to prevent value from being drained out of our dollars. When this country is reconverted, other countries will have a chance to follow.

The setback can be retrieved by some such action as we have suggested. But every day's delay makes a meeting of minds more difficult. It thrusts the country and the world deeper into economic and social tribulation. In the President's hands is the last peaceful remedy, and no American, anxious for his own and the country's welfare, will deny him the right to invoke it. Mr. Truman would be in default to his own Presidential obligations in this national and international emergency if he balked at it.

[From the Washington Times-Herald of January 22, 1946]

FAIRLESS MADE A BIG MISTAKE

For some weeks past, President Benjamin F. Fairless, of United States Steel, and President Philip Murray of the CIO Steelworkers Union have been conferring off and on with President Truman of the United States.

Object of these conferences was to avert a steel strike if possible. By going to the White House in this matter, and by various public statements while the discussions were in progress, both Fairless and Murray tacitly accepted Mr. Truman as umpire in the steel-wage dispute.

The dispute was over a demand by the union for a pay increase of 25 cents an hour and an offer by United States Steel of a pay increase of 15 cents an hour.

President Truman went into the whole argument as carefully and as thoroughly as he could. Nobody could have given more conscientious, fair-minded attention to the problem.

In the course of the discussions, Murray's steel union cut its demand to 19½ cents an hour. Truman finally came up with a recommendation for an increase of 18½ cents, and the union signified its willingness to accept that.

Mr. Fairless for United States Steel thereupon refused to go for the 18½ cents increase; and the steel strike now has begun.

ECONOMIC EARTHQUAKE

About 750,000 steelworkers belong to Murray's union. About 1,300 plants in 30 States are affected by the strike. It is estimated that the steel industry will lose $10,000,000 in gross revenues for each day the strike lasts, and that the strikers will lose about $6,500,000 per day in wages.

Those are only the first direct effects to be expected. The indirect ones will be coming along within 2 weeks, if the strike lasts 2 weeks, and they will be as bad as the direct effects if not worse. An estimated 40 to 50 percent of United States manufacturing industries need steel. Few of these concerns have any big backlogs of steel on hand.

A strike of any considerable duration will dry up these companies' steel supplies, and they will just have to shut down until they can get steel again. This steel strike can snowball into an economic disaster to the United States.

STATESMANSHIP IN AN INFLATIONARY PERIOD

In our opinion, Mr. Fairless did not exhibit a high type of industrial statesmanship in turning down the President's suggestions and letting the steel strike start.

Why he did it, we don't know—whether on his own initiative or on orders from big United States Steel stockholders. But he needn't have done it.

We are in an inflationary period. That means that workers all along the line are getting pay increases—more dollars in their pay envelopes—and that employers in one way or another are pretty sure to get more dollars with which to meet the pay increases. To be sure, the dollar's buying power is going down all the while, so that nobody really wins; but that is what inflation is.

Fairless could have agreed to the 18½ cents wage increase per hour as recommended by the President in his capacity as unofficial umpire accepted by both Fairless and Murray. Then, after a while, Fairless could have gone before the President or some fact-finding board with data to show that United States Steel could not make a fair profit at current steel prices.

If this evidence had held water, Fairless could have got some sort of increase in the price of steel out of OPA. Not even OPA can do more than slow down the inflationary trend. It can't reverse it, no matter how many crusading speeches Mr. Chester Bowles rolls off his manly chest into the microphones.

Instead of practicing this type of industrial statesmanship in an inflationary period, Fairless chose to buck the present trend of things. The steel strike is on. Nobody knows how long it will last. It can do great damage to the entire country. One thing it can do is to speed up inflation, by sharply cutting down production of real wealth. Production of real wealth is the most reliable of all ways of combating inflation.

What effect Fairless' mistake will have on Fairless himself, we can't predict. We think, though, that in the end he will have to back down somehow from the uncompromising position he has taken, and that he may have to resign as president of Big Steel. We do not think majority public opinion will back him up in this case. Majority public opinion is sometimes decisive in big strikes; and you can't buck the President of the United States, a powerful Nation-wide union, and majority public opinion all put together.

OPA Policies

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. LeFEVRE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article by Mr. Forrest, president of the National Retail Lumber Dealers' Association:

NRLDA PRESIDENT FORREST URGES PROMPT CHANGE IN OPA POLICIES

S. L. Forrest, president of the National Retail Lumber Dealers Association, this week issued the following statement concerning the present housing crisis and Government moves to help alleviate the situation:

"No group connected with supplying the homes of the Nation is more fully aware of the shortage of homes than the 25,000 retail lumber dealers located in every town and hamlet of the Nation, for they are normally responsible for 60 percent to 70 percent of the housing built.

"Lumber dealers are now building up to the limit of materials and labor, but these at present are inadequate.

"It is our belief that the labor shortage will correct itself as more men are released from the services, but the material shortage still depends largely on the actions of Government."

OPA RETARDS PRODUCTION

"OPA, while set up to serve a worthy cause, is, by its lack of practical and realistic application of sound policies, materially holding back production.

"OPA's pricing policy is still largely the same as before VJ-day. In all the major species, except one, it has exactly the same price schedule in effect now that it used in getting production for war supplies. The industry has pleaded with OPA to revise this policy and put the emphasis on the items needed for home building, rather than things needed for shipbuilding, boxing, crating, etc., but to no avail. OPA refuses to take suggestions on this point from the groups who actually produce the homes, preferring rather to follow its own unrealistic policy which is the greatest single factor today blocking the solution of the lumber shortage problem."

DEALERS MUST TELL PUBLIC

"The lumber dealers have not fought OPA and price ceilings up to now, but we feel that our first duty is to those who need homes. We have now come to a critical position where we must tell the public the real truth. OPA must be made to change its policy, or it must be done away with. Nothing will head off inflation like production of housing and this is what we must have. Nothing must be allowed to stand in the way.

"The most potent lobby in Washington today is the OPA lobby and those supporting socialized housing. These groups are determined to keep controls in their hands rather than give private industry such assistance as Government can. This is a time when all forces in the Nation must work together to get housing, and Congress will have to step in and reform OPA or kill it. It is our belief that its reformation at the present time would be preferable, but its obstructionistic policies must be stopped if we are t produce houses in volume. It is unfortunate when a Government agency gets so far away from the constructive course for which it was set up by Congress. However, since Congress set it up, Congress can force a change of policy, or it can do away with the office. The way it now operates, the remedy is worse than the disease."

STOP LUMBER EXPORTS

"It remains to be seen what the proposed priority for veterans will accomplish. The crying need, however, is production and all other moves, at best, are only sedatives and stop-gap measures. With OPA rests the greatest responsibility for production. The retail lumber dealers hope the OPA can be made to realize this, and forced to act before the wrath of the American people and Congress forces its abolition.

"Export of lumber should be stopped until the critical housing shortage is relieved.

"No industry should be given a price advantage over housing—and this is now being done. Railroads are an example of this.

"The NRLDA membership has been and still is behind any practical program that will lead to production of the maximum number of homes. Homes must be built for our returning veterans. It must be remembered, however, that we can only build up to the supply of materials available.

"Government must recognize that homes are built by taking appropriate action and not by giving lip service to an industry. Ideologies must not be allowed to interfere with constructive action."

The Phony Liberals

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. ELLIS. Mr. Speaker, today I submit for the consideration of the Members of the House an editorial from the Parkersburg News of January 21, 1946, published in Parkersburg, W. Va., and edited by Mr. Herman E. Gieske.

The editor, in his usual vigorous style, certainly presents an interesting point of view regarding the position of the two political parties and the use of the word "liberal." I commend it to you as a piece of sound reasoning.

THE PHONY LIBERALS

Epithet hurling, of course, continues to be a great American political pastime. When reasonable argument fails, political agitators "smear" their opponents with a few choice epithets. Fortunately the public is wise to this merry game, which in former times, was

called mud-slinging. When a candidate has only abuse and villification for his opponent it is usually only a smoke screen to cover his own weakness. There is a trend in modern day, however, which is of a more subtle character. That is for a contender to degrade and abuse the hallowed symbols and shibboleths of his opponents. The use of the word "liberal" is in point. Formerly it connoted one of the highest and best forms of political activity. But now even the Communists style themselves "liberals," when, as everyone knows, a Communist dictatorship is just about as liberal as a thumbscrew. It tramples minorities into the dust, which would be anathema to any true liberal, and abolishes freedom of speech and freedom of the press. And while we are on this theme, let it be remembered that any government which makes the state all powerful, regiments the people and robs them of their liberties, is not radical, but reactionary. The historic constitutional government of the United States is still the most radical government in the world, and the Republican Party as the chief champion of that Government is still the most radical party in the world. Totalitarian rule, or Stalinism, as espoused by the New Deal, is a return to tyrannies that were old when Caesar was in his heyday. In championing the freedom of the individual man the Republicans are the true liberals of modern times. One hesitates to claim it, only because the word "liberal" has been so debased and degraded by phonies who use it only as a mask to conceal their sinister designs upon our Republic.

More Bugs in Bargaining

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Leo Wolman, which appeared in the Washington Post of December 20, 1945:

FACT-FINDING BOARD, LIKE ALL FEDERAL UNITS, GIVES LABOR BEST DEAL

(By Leo Wolman)

Whether or not General Motors should have accepted the wage recommendations of the fact-finding board is debatable. Much can be said for accepting the board's figure in the interest of peace and resumption of production, while rejecting the board's arguments and theories and disclaiming responsibility for the consequences of its recommendations.

But there can be little question that the board's report is unsatisfactory and amateurish. If this is what we may expect from fact-finding boards, the less we have of them the better. The figure of 19.5 cents an hour, arrived at by the board, is an arbitrary figure based on belief that everybody, and General Motors more than all, will make lots of money in 1946 and the years to follow, and hence should pay 19.5 instead of 13.5 cents.

The way the board handles specific facts and arguments is an index to validity of the entire report. Only a close reading will disclose the uncertain foundation on which the board's conclusions rest.

IMPORTANT FACTORS IGNORED IN TAKE-HOME PAY

Quite obviously maintenance of take-home pay was a prime consideration in the board's calculations. But in dealing with estimates, it omits reference to relevant but embarrassing items and, for all practical purposes, makes decisions on highly important questions of policy that would seem to go beyond the board's authority. Thus, in its computations of future take-home pay, it makes no allowance for gains from lowered taxes or retention of earnings deducted during the war to pay for war bonds. Yet, both of these items were regularly subtracted by Government agencies in the estimates they made of actual take-home pay during the war.

But the major decision of the board is to reject General Motor's view that the work-week will average 45 hours and to accept the union's contention that it will average close to 40. This decision, of course, determined the final result. General Motors pointed out that take-home pay on a 45-hour week would exceed war earnings by a substantial amount, even if no allowance were made for savings from taxes and discontinuance of pay-roll deductions. The board elects to reject the 45-hour week and, thus, prejudices all future negotiations concerning this matter not only between GM and UAW, but between any company and union.

Apparently the board anticipates no savings from increased productivity since it seems to think productivity will be no greater in 1946 than in 1941. The union estimates a 5-percent increase, though claiming it might exceed 10. The company aims to restore the productivity of 1939. But on this important issue, the board seems far from clear.

SEEMS QUEER WAY TO PROMOTE NEGOTIATING

Likewise on the matter of down-grading, the board finds it hard to make facts fit the theory. The average figures seem to show no loss from down-grading, but the board concludes "there is an element of loss of earnings through down-grading and demotion which, through it cannot be measured, should be given some weight."

The report ends with a general disclaimer to the effect that the GM case was decided on its "own particular merits" and, hence, what the board said in that case was no guide to general wage policy. That may be the intention. But the figure set will come close to being the figure below which unions will refuse to settle.

What this all amounts to is that labor negotiators can do better with the Government than with employers. Therefore, they can afford to lift their demands, refuse to settle on what employers offer and wait until they get a better offer from the Government. This seems a queer way to promote collective bargaining and avoid strikes.

Bring the Soldiers Home

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Clinton (Mass.) Daily Item of January 15, 1946:

BRING THE SOLDIERS HOME

It is apparent to all who read that the brazen attempt to keep men in the Army regardless of necessity or points has now reached a stage where every parent, relative, and friend of Clinton and vicinity World War II veterans who are still in uniform should take their pens in hand and in scorching, burning English demand of Congress that it move at once and take affirmative steps that will result in the immediate return to the United States of the hundreds of thousands of soldiers in the European and Pacific theaters of operation who are merely marking time in idleness under the inexcusable conduct of the higher-ups who have adopted a plan which they believe will continue them in their jobs and aid in saddling on the Nation the sinister and menacing program of shackling the youth of America to a war machine during the years when they should be afforded educational facilities that will equip them for constructive work in this Nation instead of training them to kill, maim, and destroy in unholy, unrighteous, unjustified and unnecessary wars.

The latest and most threatening gesture of the domineering brass hats is the order that issues of Stars and Stripes shall no longer carry a word of criticism by GI's because they are being kept in a condition bordering on slavery when they are entitled by every argument and fact to be returned to the United States and honorably discharged.

Shades of Russia! Have we, in the United States, reached the point where despoilers of civilization strutting in officers' uniforms can clamp down on the freedom of the press in this unprecedented and ruthless manner?

Were not these GI's told when they were torn from their homes and put into uniform that they were fighting for the four freedoms?

And now they are figuratively and literally informed that they cannot voice their views in any issue of Stars and Stripes, which to date has been the medium through which they could express themselves.

So, after all, the noble statement that they were to fight for freedom was only a 100-percent lie fashioned by a gang of diabolical egoists bent on destruction at any cost and at the expense of the lives of countless thousands of the Nation's young men who deserved a better fate.

The outbreaks in Germany, the Philippines, Hawaii, Calcutta, and elsewhere were hailed with glee by members of the families and friends of GI's in the United States as fully justified and as harbingers of early action looking to the immediate return to this country of the men now resenting their continued retention in the Army.

There is not the slightest question in the minds of veterans who have recently been discharged and returned to their homes that redeployment has been deliberately slowed down in order to bolster up and force un-American compulsory military training on the country.

Many of the men who have been discharged say the point system is a joke, and has been used as a two-edged sword to keep men in uniform instead of getting them out.

An unconscionable gang of generals and colonels is seeking to continue playing war in order that they may retain commands, and thus prevent their being deposed to their permanent grades of majors and lieutenants.

Many other soldiers believe that one of the primary objects in balking redeployment is to support the United States State Department in its imperialistic program.

Soldiers who have been courageous enough to express themselves in mass meetings and parades and in hot cablegrams to the higher-ups are on solid ground as flat promises made by the palsied War Department have been wilfully and flagrantly flouted time and again.

The soldiers were told that when shipping was available they could come home. Ample shipping is now available and has been for some time in both the European and Pacific theaters of war.

They were told that all men would be sent home as soon as they were eligible for discharge, but it is a matter of record that thousands who have all the qualifications are still being held in uniform overseas with little or no expectation of their being brought to the States.

They were told that March 20 had been set as the date of discharge of all men with two or more years of service, but thousands who possess this qualification are now told they must remain overseas indefinitely.

The nasty mess results from the failure to provide for the transition period between war and peace, according to so astute a commentator as David Lawrence. The War Department fiddled and devoted itself to extraneous controversies such as the proposed merger of the Army and Navy Departments and the compulsory military training fetish and never have a thought to the necessities of the hour.

It failed to decide how long troops would be needed in the European and Pacific areas and what missions must be arranged.

The stupidity of the Department is best illustrated by the red-faced admission of Secretary of War Patterson that he did not know that points were not given for Army service since last September, all of which bears out the opinion of many Massachusetts Congressmen that as an executive he has been a failure and ought to be filling a judgeship because his equipment is more judicial than administrative.

Drew Pearson is another commentator who pans the War Department for its inertia in dealing with demobilization and in ignoring what has appeared in servicemen's newspapers, in thousands of letters that poured in on him and other commentators as well as Senators and Congressmen, all indicating that resentment at their treatment had reached the boiling point after having been brewing for months and months.

He says the resentment springs from a sense of injustice and frustration and agrees with other commentators that the War Department deliberately slowed up demobilization in order to put the heat on conscription.

Nor are the GI's happy about McNarney's statement that low-point men might now come home earlier than high-point soldiers whose services are considered more essential, which, they know full well, means paving the way for the return of Senators' sons, football players, and anybody who can exercise political pull, provided they make themselves sufficiently nonessential.

Of course, the effect of this McNarney order was to add to the resentment of the GI's and to stimulate the determination to make themselves just as nonessential as possible and thus place a premium on inefficiency. The man who is doing a good job has to stay on and the one who does a poor job and is nonessential can come home.

The soldiers well know that the claim of the "brass hats" that fast discharge of men makes for inefficiency is the "bunk" and doesn't bear the light of day, as for instance, the Brooks Hospital Center, at San Antonio, Tex., which handled 10,000 patients at its peak but now is down to less than 2,500, yet its staff continues at 75 percent of what it was at the peak period. Scores of similar cases are known and cited by the soldiers to contradict the claims of the Army officials.

It is high time for concerted action and not mere bombastic promises and words.

The complaints aired by the GI's at one of the mass meetings in Germany that their friends in the United States have gone back on them are justified in many quarters.

The opportunity now presents itself to overcome this complaint by appealing to Congress to cut the filthy mess of red tape and delay that now binds overseas soldiers.

Opium: World Menace

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of January 19, 1946:

OPIUM: WORLD MENACE—UNITED STATES URGED TO TAKE UP CUDGELS ONCE MORE AGAINST THIS ENEMY OF ALL NATIONS

(By Disturbed Observer)

The war and its close have dramatically brought the opium problem once more to the attention of the world. General MacArthur's prompt handling of the situation in Japan came at an opportune and critical moment. By the use of this insidious drug as a weapon of war, the Japanese sought to paralyze the resistance of the Chinese. Today the flood of opium is riding at high tide throughout Asia—a constant menace to the thousands of American troops stationed in the East. The war may be over, but it will be months, if not years, before our soldiers and sailors leave the continent of Asia.

While MacArthur has put the spotlight on Japan, it is to be noted that it is largely opium from Iran that Japan imported to manufacture into its sinister derivatives, heroin and morphine. Iran produces, roughly, 600 tons of opium a year. In Iran the United States had some 30,000 American troops to guard lend-lease goods going to Russia. A fleet of ships brought the goods to ports in the Persian Gulf, and on these ships were many thousands of American seamen. With little or no control exercised in this ancient land, opium peddlers roamed the streets and bazaars. For a minimum price it was possible to procure this drug, which if resold in the United States or black market would bring 20 times the original cost.

The women of America, learning of this menace to their sons and husbands in the East, protested to the Government, begging that immediate steps be taken to protect them. The outcry of the women brought Representative WALTER H. JUDD, of Minnesota, to the rescue, who introduced a resolution in Congress asking the President to urge the opium-producing countries to restrict the cultivation of the poppy plant to legitimate needs. The resolution was passed unanimously by both Houses of Congress and signed by the President. This was over 2 years ago.

So far but one country has taken seriously the appeal of the United States. Last summer Afghanistan replied that she had determined to cease completely the production of opium. We are still waiting for action on the part of Iran and India. In Asia today there remain three countries in which opium is produced on a large scale—China, Iran, and India. In Korea, to a smaller degree, the Japanese forced the planting of the poppy.

We know that China bitterly opposed the use of opium for a century and more. By 1916 the country had all but eliminated the scourge and had stringent laws to prevent its use or production. Then came the ruthless attempts of the Japanese to reinstate opium. With the defeat of Japan, however, the Chinese government is making every effort once more to eradicate the evil.

While the British and Netherlands possessions in the East were in the hands of the Japanese, it was unequivocally declared by both governments that when their territories were freed they intended to abolish the opium monopolies and forbid the use of opium. Equally gratifying at this time was Great Britain's public acceptance of America's long-expressed opinion that only by controlling the production of opium could the problem ever be solved.

After the Far East colonies had been restored, it was hoped that Great Britain would immediately enforce the terms of her war declarations, both as to the abolishment of her opium monopolies and the use of opium in the countries once more under her control. Instead there comes drifting out of the East the old and familiar assertion that, after all the use of the opium by the oriental is not really injurious.

Despite the appeal of the United States 2 years ago, opium is still being produced in both Iran and India with the knowledge and consent of their governments, and from these countries large quantities of opium are entering the United States and the illicit traffic of the world.

With war restrictions removed and the shipping routes once more open to commerce, unless immediate steps are taken to check the enormous overproduction of opium in the East, the United States and the world will soon be flooded with this devastating drug.

Why has this pernicious evil been revived? Nearly 40 years ago President Theodore Roosevelt dragged it from its hiding place in the Far East and put it on the international stage for solution. He at once abolished the opium monopoly we had inherited from Spain in the Philippines and closed the opium dens, declaring the United States would never take revenue based on the corruption of an eastern people whom we had undertaken to protect.

Under the leadership of the United States, definite progress was being made in solving the problem up to the outbreak of the First World War. At its conclusion and under the terms of the Versailles Treaty, the opium problem was taken from the leadership of the United States and the jurisdiction of The Hague and placed in the hands of a committee of the League of Nations in Geneva for solution—a committee composed primarily of the governments whose colonies in Asia were largely dependent upon their opium revenue. After 20 years in the hands of this committee, the opium problem still remained unsolved.

Is it not time for the United States to resume the initiative and put an end to this recognized curse and evil? We have wasted time enough in exchanging futile notes with foreign offices and attending opium conferences. Months are spent in the preparation and transmission of letters and months again before the receipt of an evasive and unsatisfactory reply—concluding invariably with the proposal for calling another conference to take place at some indefinite date. It should be of interest to note that the opium problem was discussed by an international commission at Shanghai as long ago as 1909, at three international opium conferences at the Hague, and more recently at three similar conferences at Geneva under the auspices of the League of Nations. Seven conferences in all.

It is generally understood that the authority over the opium problem previously vested in the League of Nations will be transferred to the United Nations Organization. But there are more direct methods of solving this problem than leaving it to the discretion of such a committee—where for two decades secondary and ineffective measures have been interminably discussed.

It is time evasions and delays should end and that east and west alike be delivered from a common menace.

Why does the United States hold back from taking up the cudgels once more against this evil? The world knows we have no ulterior motive, no political or financial gain in view. This country has steadily refused to permit the production of this dangerous drug within its borders and has stringent laws to prevent it.

To an extraordinary extent America seems to have won the confidence of the nations of the world, both large and small, who look here for leadership in this dark hour. It is up to us to show we deserve this trust.

Veterans' Priority in Purchase of Surplus War Goods

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. CLASON. Mr. Speaker, since my short speech on the floor of the House last Thursday calling attention to the miserable treatment accorded to veterans by the Reconstruction Finance Corporation in the purchase of surplus Army motor vehicles, I am advised by Mr. Ross Williams, sales manager of the Consumer Goods Division of the RFC here in Washington, that he is calling for a report of the entire situation. He has told me that he will check on the situation and report what the facts are.

Obviously there is something wrong when the RFC has had in its possession hundreds of motor vehicles and failed to dispose of them promptly and fairly. In the city of Springfield alone 500 veterans have received certificates from another Government agency indicating that they are entitled to purchase them. Unfortunately, these veterans, thereafter, have been tossed around with loss of time and money to each of them.

For more than 3 months these certificates have not been honored by the RFC, although the veterans go to Fort Devens and select the particular vehicles which they wish to purchase.

In support of the complaints made by these World War II veterans, I include with my remarks the following letter from Mr. Arthur A. Guilbault, adjutant for Post No. 277 of the American Legion in Indian Orchard, Mass.

Such letters deserve prompt attention and should bring results.

POST NO. 277, INC., AMERICAN LEGION,
Indian Orchard, Mass., January 16, 1946.
The Honorable CHARLES R. CLASON,
Congressman, House of Representatives, Washington, D. C.

DEAR MR. CONGRESSMAN: At the meeting of this post held on January 10, 1946, it was voted to bring to your attention for definite action the complaints of several of our members relative to the muddled situation in the handling of surplus war goods and equipment.

For instance, the Smaller War Plants at 1200 Main Street, Springfield, on December 27, 1945, notified our members that a lot No. 18, trucks and cars, would be sold at Whittemore Arsenal, Ayers, Mass. They went down there, and as per instructions from a Mr. Pope, they picked out several numbers in that lot, and then were told to go to No. 600 Washington Street, Boston, to see Mr. Brown. There, they were told that Springfield had no right to release that lot of trucks. The Springfield Smaller War Plants office claims to have a letter from Washington releasing that lot No. 18. We are told that Mr. Lee Manley, regional director of the Springfield office, showed our veterans the utmost courtesy and consideration as far as his end of the business was concerned.

It is quite obvious, Mr. Congressman, that the above confusion between the various bureaus having to do with the same work is a source of much annoyance to the veterans, not to mention the unnecessary expense they have to incur going to these various places for nothing. Other similar complaints hav come to us before of the same nature.

We submit that it is about time that headquarters in Washington get together with its field representatives and issue uniform orders and communications relative to carrying on its work, and that this "veterans' priority" be lived up to in spirit and letter of the law.

You have Post No. 277's permission to use this letter any way you wish to help you clear up this muddled situation so that our veterans will get the proper treatment.

With our best wishes for your continued health and success, and our thanks for your kind consideration.

Very truly yours,
ARTHUR A. GUILBAULT,
Adjutant.

Care of the Physically Handicapped

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. SPARKMAN. Mr. Speaker, I am today introducing a bill to establish a Federal Commission for the Physically Handicapped.

The objective of this measure is to bring into one natural orbit certain Federal activities which deal with problems of the handicapped, but which are not now integrated and coordinated as they very obviously should be; and to provide the thus established Federal Commission for the Physically Handicapped with adequate authority to deal with the varied problems of the 25,000,000 physically handicapped citizens of the United States.

I believe this bill to be a very thorough approach to these problems. It was developed, after long study and practical experience, by the American Federation of the Physically Handicapped, the national organization which has projected a number of very worth-while measures enacted by the Congress on behalf of the disabled, and follows the very elaborate studies made by a special committee of this House headed by the gentleman from Pennsylvania [Mr. KELLEY].

Mr. Paul A. Strachan, president of APPH, states:

The bill represents an effort to establish an agency wherein handicapped may, upon proper application and certification, enter—be medically, surgically, or therapeutically treated; be provided such education and training as may enable the individual to pursue a profession or trade; be placed at suitable, gainful employment; and to have such supervision as may be necessary to properly fit him, or her, into a suitable environment of social and economic life.

It is plain, Mr. Speaker, that the Congress should take immediate steps to develop an over-all program, the purpose of which would be to restore to physical usefulness millions of our citizens who, otherwise, must continue to be a drain upon their families, communities, States, and the Nation itself.

Enactment of this bill will concentrate, within proper limits, needful services for physically handicapped citizens, so that the Congress, the Chief Executive, and the people of the United States will, at all times, know what is required in this field; how many disabled apply; how many are being treated, trained, and placed; the over-all costs, and the final results—all of which, because of the confusion of activities under existing conditions is well-nigh impossible to even estimate.

For the years ahead, when America will be under the greatest strain any nation in the world has ever experienced, we will be in better position to meet these tremendous demands upon our strength and resources, if our people are provided with the means to needed rehabilitation and physical regeneration, so that they may take their part in conserving and building up our national resources, and thereby experience the pride that comes from shouldering a part of the load, and, above all, earning their own way. In short, being producers of wealth, instead of mere tax-eaters.

I hope we may act upon this measure promptly, so that we may thus discharge our obligation to these poor unfortunates, many of whom are unfairly condemned to a life of idleness and despair because of injury or disease which they do not have the means to remedy. We should not—we must not—deal with this situation in any niggardly way, but, boldly seize this opportunity to do what I firmly believe this bill will do—put many of our handicapped citizens in position to earn a decent living.

A bill to establish a Federal Commission for the Physically Handicapped, to define its duties, and for other purposes

Be it enacted, etc., That there is hereby created and established an agency of the United States to be known as the Federal Commission for the Physically Handicapped, which shall administer the provisions of this act, and all activities outlined in the following titles:

TITLE I. FEDERAL COMMISSION FOR THE PHYSICALLY HANDICAPPED

SECTION 101. There is hereby created a Federal Commission for the Physically Handicapped, which shall be an agency of the United States Department of Labor, with the personnel, powers, and duties hereinafter set forth.

SEC. 102. The Federal Commission for the Physically Handicapped (hereinafter referred to as the Commission) shall consist of seven members, as follows:

A president and a secretary, each of whom shall be appointed by the President of the United States, with the advice and consent of the Senate.

The director of the present Office of Vocational Rehabilitation, and the principal employment specialist for physically handicapped in present charge of special units for handicapped, now in United States Employment Service offices.

A representative of the Children's Bureau, to be designated by the Secretary of Labor, who shall be experienced in dealing with the problems of crippled and handicapped children.

A representative of the Public Health Service, to be designated by the Surgeon General, who shall be a qualified medical officer and shall serve as the medical officer of the Commission.

A representative of the Civil Service Commission, to be designated by the Commission, who shall be experienced in dealing with the problems of physically handicapped citizens.

The President of the Commission shall receive a salary of $12,000 a year; the Secretary, $10,000 a year; the Executive Assistant, to be designated from among the members of the Commission by the President, $9,500. and all other members, $9,000 a year: *Provided*, That this shall not be construed to effect a decrease in the compensation of any member designated from persons already in the employ of the Government.

Members designated by the President shall serve for a term of 7 years, and shall be eligible for reappointment. Those designated by the Surgeon General, the Civil Service Commission, and the Secretary of Labor, shall serve for a term of 5 years, or at the will of the appointing authority.

SEC. 103. The Office of Vocational Rehabilitation is transferred from the Federal Security Agency to the Commission, with all personnel, records, and balances of appropriations. All special units for handicapped now operating in the United States Employment Service, are transferred to the Commission, together with all personnel, records, and appropriations, but shall continue to function operationally in the field or local offices of the United States Employment Service and/or State units.

SEC. 104. The Commission is authorized to employ personnel necessary to effectuate the purposes of this act, and to fix their rates of pay in accordance with the Classification Act of 1923, as amended. Whenever practicable, persons so appointed shall be drawn from otherwise qualified but physically handicapped applicants.

TITLE II. FUNCTIONS OF THE COMMISSION

SEC. 201. It is hereby declared that the general welfare of the United States requires the extension of employment opportunities to persons handicapped by physical disability, and the imposition upon employers in industry, having contracts with the Federal Government or any agency or corporation thereof, of a requirement, in filling vacancies, that they place and retain in employment fixed proportions of persons qualified to work, but handicapped by disablement from obtaining employment; that facilities be provided for occupational rehabilitation, including medical and therapeutic treatment and physical and vocational training; and that such employers in industry, having contracts with the Federal Government or any agency or corporation thereof, shall be advised and aided in the introduction of work methods and the adjustment of tools, appliances and machinery necessary to accomodate certain types of disablement.

SEC. 202. (a) It shall be the function of the Commission, in the effectuation of the policy determined in section 201:

To provide for medical, surgical, and therapeutic treatments, the application of prosthetic or orthopedic appliances, hearing aids, eyeglasses, and such other devices as may, by their use, enable physically handicapped individuals to become proficient physically so as to be able to earn their own living, wholly or in part;

To provide for education and training of physically handicapped citizens; and

To provide, whenever possible, for their suitable employment through proper placement.

(b) The Commission shall continue all functions of the Office of Vocational Rehabilitation, and of the Special Units for Handicapped in the United States Employment Service, at the time of their transfer under this act. It shall establish separate divisions, under qualified experts, for special work with the blind, the deaf, the hard of hearing, cardiacs, tuberculous, poliomyelitics, epileptics, amputees, and any other large or distinct groups of physically handicapped.

(c) It shall be the duty of the Commission to—

(1) Collect, tabulate, and make public statistics pertaining to the physically handicapped;

(2) Ascertain what fields of employment are available to the physically handicapped and make such information public;

(3) Acquaint employers in private industry with the special capabilities of the physically handicapped, and encourage their employment, where feasible and practicable, on an equal footing with the nonhandicapped;

(4) Cooperate with public and private agencies, organizations, and individuals in the medical and vocational rehabilitation and placement in suitable employment of physically handicapped citizens.

SEC. 203. The Commission shall appoint an Advisory Council on Employment of the Handicapped, to consist of six members, two of whom shall be selected from lists submitted by bona fide labor organizations; two from the public and two from employers. The President of the Commission, ex officio, shall be Chairman of the Advisory Council. The Council shall act in an advisory capacity to the Commission, and shall meet not less than twice yearly, or upon call of the Chairman. Appointed members shall be entitled to traveling and other necessary expenses and to a per diem of $25 per day for each day of actual service.

TITLE III. REGISTER OF QUALIFIED DISABLED PERSONS

SEC. 301. The Commission shall establish and maintain a register of qualified disabled persons, hereinafter referred to as the register. The register shall be kept in such form, and entries and alterations or removals of entries shall be made in such manner, as the Commission may by regulation prescribe. A person whose name is, for the time being, on the register, is hereafter referred to as a registrant.

SEC. 302. Qualifications for entry of the name of any person on the register shall be established by regulations of the Commission. Such regulations shall afford reasonable assurance—

(a) That the disabled person is 18 years of age or over;

(b) That he is a resident of the State in which he applies for registration; or, if his disability was sustained while in the merchant marine service of the United States, that he was such a resident of the date of entry into such service.

(c) That he is capable of entering into and keeping employment under the conditions in accordance with which, under this act, employment may be offered him.

SEC. 303. Applicants for entry on the register shall make application to the Commission, through its Special Service to Handicapped Units, at any local office of the United States Employment Service. The Commission may, by regulation, prescribe the method of examining applications and procedures for passing upon applications. If, upon examination as prescribed, the Commission is satisfied that an applicant is a qualified disabled person, and that his handicap is likely to continue for 6 months or more from date of application, and he meets all qualifications prescribed by the Commission under section 302, his name shall be entered upon the register. If at any time the Commission is satisfied that any person whose name is on the register no longer meets the prescribed qualifications, it shall remove his name from the register.

A person who ceases to be so registered, at a time when he is in employment with any employer, and who thereafter continues, with only such separation as is mentioned in section 401 (3) in employment with that employer, or with a person taking over in succession to, or jointly with that employer, a business or establishment in which the registrant was employed, shall be treated as a registrant for the purpose of the application of this act to that employer or his successor, as aforesaid.

SEC. 304. The term "qualified disabled person" as used in this act means a person who, on account of congenital deformity, or of injury or disease, is substantially handicapped in obtaining or keeping employment, or in undertaking work on his own account of a kind which, apart from such deformity, injury, or disease, would be suited to his age, experience, and qualifications.

TITLE IV. EMPLOYMENT OF REGISTRANTS

SEC. 401 (a). (1) As used in this act, "employer" means any individual, or the legal representative of a deceased individual, and any organization (including partnership, association, trust, estate, joint-stock company, insurance company, or corporation, whether domestic or foreign) or the receiver, trustee in bankruptcy, trustee or successor thereof, which has in its employment 10 or more individuals.

(2) "Employment" means service performed for remuneration, including, but not limited to, service under a master and servant relationship existing in fact or under a contract of hire, whether written or oral, express or implied, and including service performed for a State or a political subdivision of a State, or an instrumentality of either.

(3) "Taking into employment" shall not be construed to include (a) the reemployment by an employer of a person previously in his employment, after a separation attributable to the employee's illness, or being on vacation, or to other temporary causes; (b) the taking into employment, by a person taking over a business or establishment in succession to, or jointly with, another person who was carrying it on immediately before that time, of any person employed by that business or establishment at the date of such taking over.

(b) With respect to part-time employment, or to employment part-time with one employer and part-time with another, or with the same employer part-time in one class of employment and part-time in another, the Commission may by regulation prescribe the extent to which such employment shall be regarded as employment within the purview of this act.

SEC. 402. (a) It shall be the duty of every employer, in filling vacancies, to take into employment registrants to the number ascertained to be his quota under the provisions of subsection (c) of this section. Except as otherwise provided in this act, no employer shall, at any time, take into employment any person other than a registrant if, immediately after the taking in of that registrant, the number of registrants in his employ would be less than his quota. This requirement shall not apply (1) to an employer's taking or offering to take into his employment any person whom it would have been his duty, apart from this section, to take into his employment by virtue either of any Federal statute, or of any agreement to reinstate, entered into before the effective date of this act; (2) to an employer's taking into his employment any person under permit issued by the Commission, if at the time there are no registrants, or an insufficient number of registrants capable of performing the work.

(b) No employer shall discontinue his employment of a registrant if such discontinuance would result in reducing the number of registrants in his employ below his quota, except (1) for reasonable cause, or (2) in conformity with the terms and conditions of employment with respect to separations, transfers, or reemployment then in effect in the plant or place of employment by virtue of an agreement between such employer and the workers, or (3) by virtue of laws affecting the tenure in employment.

(c) The quota of an employer at any time shall be a number ascertained in accordance

with this subsection. (1) Standard percentage shall be fixed by the Commission and shall be: For plants, industries, or offices or other businesses employing less than 100 persons, not less than 1 percent of the total number of persons employed; for any such business employing over 100 but less than 1,000 persons, not les than 1½ percent of the total number employed; and for any business employing over 1,000 persons, not less than 2 percent of the total number employed. (2) A special percentage shall be determined by the Commission to govern employment in any particular trade or industry, or branch thereof, coming within the scope of this act, or employment with any class of employer, whenever in the opinion of the Commission a percentage either greater or smaller than the standard percentage ought to be assigned, on the ground of distinctive characteristics in the particular employment proposed, with respect to its suitability for disabled persons.

(d) Any employer violating or failing to comply with the provisions of this act shall be guilty of a misdemeanor and subject to a fine of not less than $100, nor more than $1,000. The fact that the making, termination, or modification of a contract may involve a violation of this act, however, shall not affect the operation in law of the contract, or its termination or modification, as the case may be.

TITLE V. PERSONAL CATASTROPHE LOANS

SEC. 501. The Commission shall establish a revolving loan fund, which shall be funded with an initial sum of $5,000,000, which is hereby authorized to be appropriated out of any money in the Treasury not otherwise appropriated. From this fund the Commission shall make personal catastrophe loans as hereafter determined.

SEC. 502. "Personal catastrophe," as used in this title, is defined as any injury, disease or physical defect such that the use of a prosthetic or orthopedic appliance, a hearing aid, eyeglasses, or other devices, would enable the individual affected to return to useful and gainful employment.

SEC. 503. Any person may apply to the Commission for a loan under this title, in such form as the Commission may, by regulation, prescribe. Before making any loan, the Commission shall make such investigations as may be necessary, and shall certify that the applicant is worthy and of good character, and that he appears likely, with the help of a loan, to be restored to useful and gainful employment, and that he has not the instant means of independent action. The Commission may advise applicants, on request, as to types of appliances, but each applicant shall have free choice of the appliance or device best suited to his individual needs.

SEC. 504. Loans under this title shall in no instance exceed $500, and shall in every case be secured by personal note of the applicant, conditioned to make repayment monthly, when employed, or otherwise possessed of funds, with interest at a rate not higher than 2 percent per annum.

TITLE VI. NONFEASIBLE CASES

SEC. 601. Physically handicapped citizens of the United States who, upon application to the Commission, are certified by it as nonfeasible for rehabilitation, and who are totally and permanently disabled and are without means of livelihood or support, shall be paid, by the Bureau of Public Assistance of the Social Security Board the sum of $30 a month, beginning with the month following that in which the Commission's certification is filed with the Social Security Board.

TITLE VII. COOPERATIVE ENTERPRISES FOR HANDICAPPED

SEC. 701. (a) The sum of $10,000,000 is hereby authorized to be appropriated out of any money in the Treasury not otherwise appropriated, for the fiscal year 1947, and $5,000,000 annually for each of the 5 years thereafter, for establishing and maintaining special industries for physically handicapped citizens.

SEC. 702. Out of the foregoing sums the Commission is authorized and empowered to make loans to persons, corporations, States, Territories, or subdivisions or agencies thereof, municipalities, people's utility districts, and cooperative, nonprofit or limited dividend associate organizations organized under the laws of any State or Territory, for the purpose of financing work projects for physically handicapped persons, primarily drawn from the group termed "nonfeasible" for rehabilitation, and requiring special conditions of employment and training, such as is now afforded by various so-called handicapped persons' industries, sheltered work shops, etc. No single loan shall exceed $20,000; and not less than 25 percent in amount of all loans shall be granted in rural areas.

SEC. 703. Such loans shall be made on such terms and conditions as the Commission shall determine: *Provided*, That all loans shall be self-liquidating in not to exceed 25 years, and shall bear interest at a rate equal to the average rate payable by the United States on its obligations, having maturity of 10 years or more, after the dates thereof, issued during the last preceding fiscal year in which any such obligations were issued: *Provided further*, That no loan for the purchase, construction, enlargement, or operation of any plant shall be made without the consent of the State authority having jurisdiction in the premises being first obtained.

TITLE VIII. GRANTS FOR NONFEASIBLE CASES

SEC. 801. There is hereby authorized to be appropriated out of any moneys in the Treasury not otherwise appropriated the sum of $2,000,000 for the fiscal year 1947, and $1,000,000 annually thereafter. From the amounts hereunder appropriated the Commission is authorized and empowered to make outright grants to local nonprofit groups organized with the objective of providing a means of teaching and training physically handicapped persons whose disabilities confine them to their homes or beds—commonly known as shut-ins. Grants shall be made pro rata on the basis of population: *Provided*, That not less than 25 percent of all grants in any fiscal year shall be made to groups located in rural areas.

TITLE IX. SAFETY ENGINEERS

SEC. 901. The Commission is authorized to cooperate with other Federal agencies in devising and arranging for proper safeguards to life and limb in public buildings, and in eliminating and preventing conditions therein tending to promote disease. It may employ safety engineers and sanitary engineers as required, who may, with the consent of the agency having jurisdiction, inspect and report on any and all buildings used by the Federal Government. The Commission may also cooperate with the American Institute of Architects and other interested groups and individuals, with a view to having public and other buildings constructed or remodeled, with ramps instead of stairs, and with railings to facilitate the free and safe movement of the lame and crippled.

TITLE X. TRAINING SCHOOLS

SEC. 1001. The President of the United States shall, within 30 days after the effective date of this act, appoint a Commission of three competent persons to survey the war plants owned by the Government or any instrumentality thereof, and to select 10 plants which upon conclusion of their manufacture of war materials shall be excepted from the surplus property sales program and set aside as training schools for physically handicapped citizens, and for teacher training. Selections shall be made on the basis of their suitability for the proposed use, the cost of conversion for training school purposes, and their regional distribution. The plants so selected shall upon direction of the President be turned over to the Commission for operation as training centers for physically handicapped, as well as for teachers of physically handicapped. Expenses of the Selection Commission, and of the reconversion of plants for use as training centers, shall be met by an appropriation out of the Treasury, which is hereby authorized.

TITLE XI. TREATMENT OF DEAFNESS

SEC. 1101. There is hereby authorized to be appropriated to the Public Health Service, out of any money in the Treasury not otherwise appropriated, the sum of $2,000,000, which shall be available for research, applied medicine and treatment, and necessary expenses to develop, if possible, a cure for deafness. The Public Health Service shall report annually to the President and to Congress the results of its research, and such report shall be printed as a congressional document.

TITLE XII. UNITED STATES CIVIL SERVICE COMMISSION

SEC. 1201. There shall be established in the United States Civil Service Commission a Division for the Physically Handicapped, with a chief, an assistant chief, and such staff as may be required. It shall be the duty of the Division to deal with problems attendant upon the recruitment, examination, and appointment of physically handicapped applicants for employment in the Federal civil service. It is declared to be the policy of Congress that no citizen, otherwise qualified, shall be denied the right to examination and appointment, by reason of physical disability.

SEC. 1202. The expense of the Division for the Physically Handicapped shall hereafter be included in the regular appropriations for the Civil Service Commission. Such sums as may be necessary for the establishment of the Division are hereby authorized to be appropriated.

TITLE XIII. MISCELLANEOUS

SEC. 1301. The Public Health Service shall, through its field employees, report to the local offices of the Commission, as soon as possible after the effective date of this act, the name, address, and other pertinent information of citizens who, by reason of physical disablement, are in need of the services to be afforded by the United States under the terms of this act.

SEC. 1302. The Commission shall have an official seal, which shall be judicially noticed.

SEC. 1302a. For the purpose of administering this act and for the purpose of making the studies, investigations, publications, and reports therein provided for, there is hereby authorized to be appropriated, out of any sums not otherwise appropriated from the Treasury, such amounts as may be necessary.

SEC. 1303. If any provision of this act, or the application thereof to any person or circumstances is held invalid, the remainder of the act and the application of such provision to other persons and circumstances shall not be affected thereby.

SEC. 1304. This act shall be known as the Federal Aid to the Physically Handicapped Act.

SEC. 1305. All laws or parts of laws in conflict with this act are hereby repealed.

SEC. 1306. This act shall be effective 90 days after date of passage.

STATEMENT TO ACCOMPANY PROPOSED BILL TO ESTABLISH A FEDERAL COMMISSION FOR THE PHYSICALLY HANDICAPPED, TO DEFINE ITS DUTIES, AND FOR OTHER PURPOSES

FOREWORD

The consensus of this bill represents 28 years of study and practice in the field of the physically handicapped.

It represents an effort to establish an agency wherein handicapped may, upon proper application and certification, enter, be

medically, surgically, or therapeutically treated; be given such education and training as may enable the individual to pursue a profession, or trade; to be placed at suitable, gainful employment, and to have such supervision as may be necessary to properly fit him, or her, into a suitable environment of social and economic life.

It endeavors to amalgamate certain Federal services which deal with problems of the handicapped, so that these will come into one natural orbit, and thus enable the Congress, the Chief Executive, and the people of the United States to concentrate, within proper limits, needful services for physically handicapped citizens.

It also provides for corollary services which, in the past, have not been provided, and because of their lack, make present operations of the program incomplete, awkward, and, in many instances, wholly inadequate to the needs of the handicapped, and the Nation.

Title I. Federal Commission for the Physically Handicapped

This provides for the composition of the Commission. As shown, it brings into alinement representatives of the chief services now dealing with the handicapped and, by thus combining the experience and knowledge of those most concerned, provides for a vastly smoother means of operation.

It transfers to the Commission the OVR and also special units for handicapped in USES, which are, by way of illustration, like two halves of a whole, but which heretofore have operated as separate units and have, in many instances, duplicated services which should have one direct channel.

Title II. Functions of the Commission

This defines the functions of the Commission, and in addition shows the purpose and method of a real program for handicapped.

It may be pointed out that, under this title, much of the present duplication and very likely waste of effort and money would be eliminated, because the prime objective here is to coordinate many present activities. Also present agencies lack certain requisite powers to educate the public, and particularly employers, on the value of the handicapped as workers, and this title, among other things, supplies that deficiency.

It also establishes an Advisory Council on Employment of the Handicapped, the need for which, as a working and policy-making unit, is apparent.

Title III. Register of qualified persons

This provides for proper registration of handicapped who may apply to the Commission and defines their qualifications, as well as establishes a legal definition of a "qualified disabled person."

Title IV. Employment of registrants

This recognizes and endeavors to partially discharge the obligation of Government to provide opportunities for employment of physically handicapped citizens through mediums under its control. Admittedly this enters a new field—that of endeavoring to have industries or businesses which handle Federal contracts to set aside from 1 to 2 percent of their jobs, to be filled by handicapped people.

However, there is no doubt but that the Federal Government has a grave responsibility with regard to the handicapped, both military and civilian, and there can be no question but that the Government has a right to prescribe wages, working conditions, etc., under present laws, for those who deal in contracts with its various agencies. Such being the case, the Government has a right to impose upon those who seek such contracts the obligation to provide employment for a relatively small number of handicapped people.

If the numbers cited were unreasonable, or disproportionate, there might be some validity in objections, but the time has come when Congress, as an act of simple justice to a large number of our citizens, should enact laws that will assure opportunity for employment of the handicapped.

Title V. Personal catastrophe loans

There are hundreds of thousands, perhaps millions, of citizens, who, because they abhor charity in any form, refuse present benefits under so-called means test, although they may greatly need certain equipment.

But if those same citizens were permitted to borrow money for the express purpose of purchasing needed prosthetic or orthopedic appliances; hearing aids; eyeglasses; wheel chairs, or other appliancess or devices which would enable them to become more proficient, physically, and thus better able to compete on more equal footing with nonhandicapped, there is no doubt but that many of them would do it, and their bodily improvement, and increased productive capacity, figured collectively, would be a great benefit to the whole Nation.

Title VI. Nonfeasible cases

One of the grave defects in present Federal-State rehabilitation laws is that reports of agencies operating thereunder do not cite the number of cases which apply to them for aid, but which are turned down as being nonfeasible for rehabilitation.

It is perfectly natural that such agencies, desiring to put the best foot forward in their public reports, would not, thus, particularly desire to reveal the extent of the cases which they refuse to handle. It has even been charged that they have devoted themselves, in many instances, to easy cases, in order to make a good showing on available funds.

In the light of continued improvement in medicine and surgery, it is reasonable to believe that many such cases, rated nonfeasible, yesterday, or even today, may, within a week, a month, or a year, because of some new discovery, be entirely feasible of rehabilitation.

On the other hand, when only superficial medical examinations are given, as has, no doubt, in many instances been the case, when the applicant is termed "nonfeasible," there is room for a considerable margin of doubt, if not positive error, in such diagnosis, and no medical examination should be accepted that is not thorough, in every respect, as a means of final determination of any case.

It is estimated that there are from 1,000,000 to 3,000,000 nonfeasible cases in the United States of America. These, for the most part, are termed "unemployable handicapped," and are usually bedfast, or confined to wheel chairs, etc. We have evidence that a considerable number are destitute and wholly dependent upon an uncertain charity to sustain even the barest essentials of life.

The only practicable, fair way to deal with this problem is; to see to it that such persons are afforded thorough diagnosis, by qualified experts, and, if the findings show such person to be totally nonfeasible for rehabilitation, then, if such person is destitute, or wholly dependent upon others for livelihood, who, themselves, are unable to bear the expense of providing a living for such nonfeasible, then, that person should be certified by the Commission as wholly unemployable, and certified for a Federal pension—the moderate sum of $30 per month.

This title would act as a double check, most effectively. It would reveal, over the long run, a more accurate picture of the so-called shut-ins, and provide for their needs, however meagerly, by a small pension—if they are disqualified for rehabilitation. On the other hand, the rehabilitation agencies at interest would have to show their hand and attest their incapacity to deal with the problem, by certifying the individual as hopelessly handicapped and unable to provide the means of livelihood, or, make strenuous efforts to find a way to successfully treat, train, and place in employment such person.

We particularly urge upon Congress the need and advisability of approving this title.

Title VII. Cooperative enterprises for handicapped

For many years, students of the handicapped problem have delved into the cooperative field in an effort to devise a means whereby, on however low a subsistence level, certain handicapped, mostly those termed "nonfeasible for rehabilitation," could be brought to some pitch of physical usefulness and earning power.

Charity groups have conducted many such enterprises, but, the fact is outstanding that there is no clear-cut plan, operating nationally, and there is no one plan, apparently, which can be adapted from present set-ups, for use in all instances. This is due to two reasons: One, in certain cities, one or more church groups may attempt operation of such an activity—some of these being known as Good Will Industries. In other cities, fraternal, civic, or other bodies, may attempt a variation of the same idea.

The time has come when there are sufficient handicapped to justify applying the cold light of reason and business management to this problem, even though it must be admitted that, since the objective is betterment of the status of the individual, this cannot be measured precisely in terms of expenditure of dollars and cents, nor yet, receipts from their production activities.

In the main, this must be regarded as would be any other cooperative enterprise, with, perhaps, a little more leeway in dispensation of funds, and considerably more pressure upon the exploitation angles, so that any such cooperative enterprises will not make the mistake of believing that Santa Claus will make up any of their deficiencies, and they need not consider the proposition, as they should, as a strictly business affair, but rather, as a muddled-up, "do-gooder's" effort, sans common-sense planning, proper financing, and businesslike administration.

Setting up such enterprises, across country, would, in the main, provide a channel through which many handicapped might be enabled to earn a living otherwise denied to them. This would be particularly true during periods of national depression, when the surplus labor market would make it wellnigh impossible for handicapped to procure jobs in regular lines of business or industry, in order to keep them out of the bread lines, enterprises of this sort are absolutely necessary.

Title VIII. Grants for nonfeasible cases

Under this title, we are endeavoring to reach the root of the trouble experienced by many handicapped, who are denied any educational facilities at all. This applies, particularly, to those in rural areas, or those districts sparsely settled, and having such distances from home, to schools, that it is impracticable for handicapped to attend such schools.

In the case of the shut-ins this would provide a godsend, as for development of this idea we would see, in the next few years, practical plans and extension of home teaching, etc., bringing all the latest developments in science right to the bedside, by means of radio, motion pictures, television, etc.

This is a very modest beginning on development of a great program—that of teaching the home-bound handicapped.

Title IX. Safety engineers

There is no need to dwell upon this title, which reveals a need so manifest that the Federal Government should immediately take steps to prevent accidents, or illness, in the erection of buildings, and the equipping thereof, and provide such safeguards as may be necessary upon recommendation of qualified sanitary engineers.

Title X. Training schools

Here, indeed, is an important matter. Now that war plants are being declared surplus property, and thrown upon the open market while, at the same time, admittedly, educational facilities, particularly buildings and equipment, are vitally needed at numerous points throughout the United States of America—assuredly, the Government should set aside a few such plants and, if necessary, remodel them for educational purposes.

We desire to emphasize a depressing but important fact: On behalf of the millions of physically handicapped, particularly handicapped children, we protest the grave lack of teachers for handicapped.

It is a matter of deep concern to note that only one major educational institution in the United States of America has a department of education for the physically handicapped, and it is literally impossible for that one institution, Columbia University, to train enough teachers to supply the entire national needs.

There is no point, whatsoever, in reiterating the need for education of the handicapped when there are no facilities with which to provide it, and, no especially trained teachers, to carry out the program.

So, the suggested training centers, to be developed from plants declared surplus property, and now owned by the Federal Government, would supply a great need, both as to training centers for handicapped, themselves, and, likewise, as training centers for teachers of handicapped.

We especially urge upon Congress the immediate need for favorable action on this title.

Title XI. Treatment and prevention of deafness

The United States Public Health Service has had numerous grants, from time to time, for various purposes relevant to the public health, but, the need for study of the causes, and, if possible, development of a means of prevention and cure of deafness, which is growing steadily in our population, is so apparent that there should be no question as to the need for desirability of approval of this title.

Title XII. United States Civil Service Commission

The growing requirements of civil service, dealing with physically handicapped people, necessitate establishing a regular division, within the Commission, for that express purpose. The expense would be nominal; the effects far-reaching, and beneficial.

Title XIII. Miscellaneous

SEC. 1301. Since the United States Public Health Service already has physicians and surgeons covering all parts of the United States of America, there is no good reason why such agents of the USPHS should not, as a regular part of their function, inform the Commission as to those within their respective areas, who would be eligible for services to be performed by the Commission.

This is an effort to short-circuit much of the waste motion which prevents speedy handling of cases, particularly in locating; having proper application made; processing, and completing essential work on behalf of rehabilitation of the individual.

FEDERAL AGENCIES DEALING WITH PHYSICALLY HANDICAPPED AND PUBLIC HEALTH

Library of Congress: Books for the adult blind, service for the blind.

Office of Scientific Research and Development: Committee on Medical Research.

War Manpower Commission: Bureau Manpower Utilization, Bureau of Placement, Bureau of Training, Bureau Selective Service, Women's Advisory Committee.

War Relocation Authority.

War Shipping Administration: Recruitment and Manning Division.

President's War Relief Control Board.

Treasury: Procurement Division (Administration of Wagner-O'Day Act).

War Department: Office Surgeon General.

Navy Department: Bureau Medicine and Surgery.

Department of Agriculture: Farm Security Administration, Bureau Human Nutrition and Home Economics, Extension Service, Bureau Agricultural Economics.

Department of Labor: Children's Bureau, Women's Bureau, Division Labor Standards, Bureau Labor Statistics.

War Production Board: Manpower requirements.

Federal Security Agency: United States Office of Education, Columbia Institution for the Deaf, Public Health Service, St. Elizabeths Hospital, Freedmen's Hospital, Social Security Board, Committee on Economic Security, Office of Vocational Rehabilitation.

Federal Board of Hospitalization.

United States Civil Service Commission.

United States Employees Compensation Commission.

Veterans' Administration.

National Academy of Sciences.

American National Red Cross.

Department of Commerce: Census Bureau.

Department of Interior: Indian Affairs, Health Division, Bureau of Mines, Health and Safety Branch.

Office of War Mobilization and Reconversion: Division of Retraining and Reemployment.

Federal Advisory Board for Vocational Rehabilitation.

INTERNATIONAL ORGANIZATIONS IN WHICH THE UNITED STATES GOVERNMENT PARTICIPATES

Pan American Sanitation Board.

American International Institute for the Protection of Childhood.

Gorgas Memorial Laboratory.

International Office of Public Health.

Prepared by American Federation of the Physically Handicapped, Inc., national headquarters, 1376 National Press Building, Washington, D. C.

Letter to the President

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to the President of the United States:

THE SWEET SHEET,
Opelousas, La., January 5, 1946.

Hon. HARRY S. TRUMAN,
Pennsylvania Avenue,
Washington, D. C.

DEAR HARRY: As you and I are the top men of this old United States of America in our various spheres, I thought I'd write the first letter of the new year to you.

I thought, too, I'd wish you a Happy New Year before Congress met again 'cause from your point of view, those boys are getting pretty unruly—but the real truth of the matter is, Harry, they are just about following out as near as possible what the folks back home want. Lots of folks back here on the side roads don't agree with some of your ideas, Harry. Instead of trying to do what will get the most votes—let's do what will be best for the most voters.

I chat with quite a few of those Congressmen and take it from me, they know that the voters are about fed up on almost 16 years of "isms" and theories, and millions of us had hoped that you would take hold and put the old country back on a more realistic basis and cut out the beautiful "dreams."

I don't blame you for being confused, Harry, for I spend a few dazed days up there every now and then myself, so I can appreciate how it is for the fellow who has to stay there—you deserve a trip back home to old Missouri or a ride on the Potomac.

You have assembled "fact finding" commissions up there to get the facts on one side only—tell 'em to look at all the books of both sides and publish the truth of what they find out and it is possible that the demand for some company's books would end right there. Lots o' folks want the lights turned on the other fellow—but they yell bloody murder when you turn the lights their way.

And yesterday's facts are no good tomorrow, Harry—they are just like news: no good the next day. We know what we are talking about, Harry, because on August 28 we loaded a car of sweets and the facts showed $65 profit; 30 days later the same facts revealed a loss of $900. Now how can you use such facts as that at the bank?

We are sending a fact-finding commission of our own to Europe. We want to know why they are not eating sweetpotatoes over there. I hope we find out.

The fact is, we are trying to tell the world how to run their affairs, and we are not doing so good ourselves. Let's quit "telling 'em" and "show 'em" how to make a country happy and prosperous. The fellow who doesn't want to work should be permitted to go home and starve, but the fellow who wants to work should be protected with our Army, Navy, marines, and Air Force.

A happy New Year, Harry—with my fingers crossed.

Sincerely,

DEZAUCHE—HIMSELF.

P. S.—Sweetpotato business is swell. Thank you.

The sheet was written before you talked to me and the other stockholders last night, Harry, so I am adding this to keep the record straight. You asked that we express ourselves to our Representatives. Hon. HENRY D. LARCADE, who represents this district, knows how I stand and the others he represents; and when he votes against your "isms," it is because his people feel that way.

We had hoped, Harry, that you would not carry on or try to perpetuate the many "notions" that we had to put up with during the war days and that we could get this United States of America stock company back into the hands of the stockholders.

It is my opinion that you expressed nothing that will benefit us last night. Your principal gripe was against Congress for not doing your bidding and General Motors for desiring to run their own business.

Don't forget that it is safer to place the management of this Nation in the hands of Congress and the Senate than in the hands of one man—some 600 men could come nearer being right than just you. One man means dictator—Congress and the Senate are the only ones that can prevent that, and our prayers are that they will remain on the job and prevent it.

I agree with you that labor has the right to strike—I have the right to quit work if I so desire—but I don't agree that labor has the right nor do I have the right to stand in line with a stick and intimidate the man who doesn't agree with me and wants to work. Free labor means that you have the right to work when you want to or not to if you want to. If we are to protect the man who don't want to work—we should also protect the man who does want to work. That's the kind of law we need. I'll help you get that one.

And I'll help you get one to protect the property of these who don't agree with a group, whether it is industry or a group of men who want to work.

If I was a labor leader, I'd say to the men who depended on me to steer them, "Let's go to work and while we work and earn and serve our country and our families, we shall carry on negotiations with our employers to the end that conditions shall be bettered for all of us." I may be "wet," but it makes good sense to me; of course, I'm pretty dumb because I still have to work and worry 24 hours per day.

No, Harry, you are disappointing the old U. S. A. We had high hopes with you at the wheel. This is a grown-up Nation—we know how to walk—we have gone places and still going places. Your job is plenty tough, I know that, but look at that guy in the mirror; he may be wrong, too, sometimes.

Sincerely,

DEZAUCHE—HIMSELF.

The Labor Problem

EXTENSION OF REMARKS
OF
HON. ROBERT SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1946

Mr. SIKES. Mr. Speaker, I present for careful study two timely articles from the Christian Science Monitor, which enjoys just renown for the moderation and soundness of its views. They are entitled "Mr. Truman Steps In" and "As the Moderates Think."

With these I present a later article from the Washington Post, likewise distinguished for its editorial viewpoints. It is entitled "The President and the Crisis."

[From the Christian Science Monitor of December 4, 1945]

MR. TRUMAN STEPS IN

The form of Government action President Truman has now invoked to prevent large-scale, reconversion-delaying work stoppages should have a fair trial. Eight years ago this newspaper proposed that the methods which have proved so successful under the Railway Labor Act be applied to other industrial disputes where the public had a vital interest. We have repeatedly urged it since, and believe now that the fact-finding plan can greatly reduce industrial warfare.

Mr. Truman is aiming at both short-term and long-term remedies. For one—the situation created by the General Motors strike and the threatened walk-out of steel workers—he is using his Executive powers to set up a board for voluntary arbitration. For the long-range problem, he is recommending that Congress authorize the procedure by legislation.

It has succeeded in the railway field partly because of a recognized public interest and partly because the railway brotherhoods are responsible, disciplined unions. In some fields where it may now be applied the public interest is not so clearly defined, and neither unions nor management have always displayed a high degree of statesmanship. But this approach promises much more than any hasty hodgepodge of vindictive legislation, such as the Smith-Connally Act.

The immediate effect of the President's intervention in the automobile strike may appear to be against the workers, who are asked to go back to work. But the UAW does not seem to be in a particularly strong position, and if the fact-finding gets into a study of General Motors books, the union may welcome Government action more than the company. Even so, the company may accept a decision by a board of recognized caliber and fairness where it would continue to refuse to show its books to the union.

Mr. Truman is stepping into a seeming vacuum, left by the failure of the Labor-Management Conference to propose specific machinery and by the approaching demise of the War Labor Board. Yet intervention of Government involves several dangers, including political favoritism toward one side or the other. And industry may object that the fact-finding process involves an interference with its rights to judge what part of profits should be sown back into production, the setting aside of reserves, etc.

The question to be settled is: When is the public interest vitally affected by industrial strife? As the President says, Government intervention to force arbitration—even though the decision is enforceable only by public opinion—should be held to clear cases. But with companies and unions growing larger, and with the national economy more closely knit, such cases can no longer be limited to the railways or vital public utilities.

Public opinion is bound to be a decisive factor in large-scale industrial warfare. It is far better to have its decision made on the basis of a fact-finding board's report than on the basis of prejudice and partial information played upon by "war" headlines and public-relations strategists. The method promises better to achieve the aim Mr. Truman sets—good labor relations "based on justice and not on tests of strength."

[From the Christian Science Monitor of January 16, 1946]

AS THE MODERATES THINK

Congressmen have come back to Washington, all of them pressed, and many of them eager, to do something toward halting the wave of major strikes.

What can Congress do to be effective, and what should it do to be wise? This is a time of heightened emotions on the subject when partisanship runs strong. It is within such times that Congress finds it can move with decision but for that very reason needs to call upon thinking done in the cooler air of detachment from the immediate crisis.

The judgments of moderates who speak from long and intimate experience with labor-management relations can be assembled into a rough frame of reference within which Congress' proposals can be viewed. The outlines look something like this:

Americans are living in an era of huge, Nation-wide industrial corporations, and hence of huge, Nation-wide labor organizations. They are, for better or for worse, part of the system. The job is to work toward insuring that relations between the two follow some reasonable relation to the general welfare. That means at least a minimum degree of public regulation, and, in extremities, control.

Everyone, including labor, agrees that unions must assume greater responsibility. Responsibility to its own members might be helped by public audit of accounts, by making the freedom and honesty of union elections a matter of public concern, and by outlawing racketeering practices, such as exorbitant initiation fees. Responsibility to management seems attainable less practically by legal penalties for contract violations than by mutual guaranties written into contracts—such as that pending in the Ford negotiations and the one embodied in the Kaiser-Frazer pact.

Strikes can't be abolished by outlawing them for the simple but potent reason that strikes are often as much mass protests by citizens as they are manipulations by labor leaders. On this point authoritative opinion is strong: The hope for avoiding strikes lies in machinery, procedures, practices—anything—that disposes of the small issues and grievances before they snowball to strike proportions.

Here the public interest has long been represented by State and Federal mediation and arbitration services, available on call. Any improvement in these services is progress. Fact-finding boards help to break deadlocks by bringing a reasonably enlightened public opinion to bear. They can function as remedies of early, and in most cases, of last resort.

But increasingly acute is the problem of what to do when disputes in public utilities and in such industries as coal, oil, milk, and meat, have exhausted the resources of conciliation and voluntary arbitration. Government seizure may restore the services but it does not dispose of the controversy. Congress then may find itself obliged to consider means to compel arbitration of such disputes which directly imperil public health and safety. Compulsory arbitration is distasteful to both management and labor. But it is a possible remedy which the very complexity of modern economic life may, of itself, force into a place beside the civil courts as an agency of peace and order.

[From the Washington Post of January 22, 1946]

THE PRESIDENT AND THE CRISIS

Twenty-four hours have gone by since the steel plants of this country closed down. Steel is the heart of our industrial system. The heart has now stopped beating, and the entire economy is fast running down. The people seem condemned to watch a knock-down and drag-out fight between labor and management. They must stand by and see the Nation lapse into a state of paralysis.

For weeks they have heard the spokesmen of both sides say their say interminably. It is now time for the public to take the platform. The Post thinks it would be shirking its public responsibilities if it failed to proffer its own ideas about the grave crisis confronting our country.

The effect on reconversion is immediate. Reconversion is stalled. After 8 months of hard work and skillful deployment by labor and management, the goal was actually in sight. We were 90 percent reconverted. Then silence fell on the automotive, meat, and electrical industries. Steel joins them to make the standstill of our industry complete.

It is a criminal set-back, and seems like a conspiracy. But no good will come out of name calling. Men on both sides are acting according to their convictions. There may be exceptions, but we prefer to think of the combatants as good Americans, all animated in the final analysis by a desire to serve the public. The fact remains that, because of inability to agree, they have thrown their hands in. When labor and management in our major industries quit, a crisis is created. We are in a crisis, not a conspiracy.

From this crisis we shall all suffer. The veteran coming back into our civilian life will be hurt. The prostrate world, looking to the United States for a lead in the work as well as the ways of peace, will lose heart.

The drift back of spreading inactivity must be arrested. This the people demand in self-preservation. But they have no preventive power. Only the President of the United States can act in their united name.

The Post assumes that President Truman is not quitting.

The President has been damned for stepping into the picture at all. It is said that he ought to let the combatants slug it out. This was sound advice when industrial struggles were minor ripples on our community and our international life. But no such advice is tenable when this fight could conceivably hold up the activity of the entire industrial world.

Those who criticize the President for his intervention would have been the first to criticize him for nonintervention. For he had to intervene. The maintenance of the war powers of his office testifies to the fact that we are still in an emergency. This peace emergency calls just as much for Presidential responsibility as did the war emergency.

We do not suggest that the President should be panicked into hasty steps. But the Nation cannot stew in the present mess much longer without inviting an irremediable disaster. He must bring before him the men who in fact guide our industrial destinies. It is now seen to have been foolish to allow negotiations to go on between representative labor and management which was not equally representative. Labor as a whole was talking to men who had no mandate from the whole industry.

In the steel fight the President seems to have thought Mr. Benjamin Fairless was the decisive voice in the steel industry. It turns out he was mistaken. Let him ask the actual leaders of the steel industry to come to the White House.

Let him go further and ask the real leaders in the other major industries to talk things over.

A national crisis requires a national solution. The heart of our current troubles lies in the absence of a wage-price policy for reconversion. Steel could set the pattern. It has set the pattern before in every great change in our economic history. But in this instance the others may want to have their say along with steel. What makes steel and others backward is the effort to keep wages and prices in separate compartments. It has never been done before. It does not make sense. Both have got to be squared.

What has happened is simply a break-down in common sense. Common sense requires that we speed up reconversion. Reconversion means civilian goods. It follows that reconversion is the only way to beat inflation—to stop prices from spiraling—to prevent value from being drained out of our dollars. When this country is reconverted other countries will have a chance to follow.

The set-back can be retrieved by some such action as we have suggested. But every day's delay makes a meeting of minds more difficult. It thrusts the country and the world deeper into economic and social tribulation. In the President's hands is the last peaceful remedy, and no American, anxious for his own and the country's welfare, will deny him the right to invoke it. Mr. Truman would be in default to his own Presidential obligations in this national and international emergency if he balked at it.

Unemployment

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Star-Journal of January 10, 1946:

WIDE OF THE MARK

In his speech to the people the other night President Truman said that "unemployment has not reached anything like the level which was feared." That is a decided understatement.

Immediately after VJ-day last August 14 the Federal War Manpower Commission estimated that within 3 months—that is, by mid-November 1945—unemployment "might exceed" 5,000,000. That was the most official estimate by ranking Government economists, but there were other Government estimates, not out of line with this one, that 3,100,000 persons would be unemployed in the third quarter of 1945 and 6,300,000 in the fourth quarter. Sidney Hillman estimated that unemployment by last fall would be 10,000,000.

Today, with demobilization well under way but far from complete, and with reconversion far behind what it might have been because of labor controversies and uncertainties about Government policy, actual employment is somewhere between 51,000,000 and 52,500,000—and is growing steadily.

Unemployment is increasing while employment grows because servicemen are being discharged faster than reconversion is proceeding. But unemployment has at no time exceeded 2,000,000 and the peak official figure has been 1,520,000 in the week of October 7–13, 1945.

Elsewhere in last week's address President Truman asked again for full-employment legislation "not only to tide us over the reconversion period but also to carry us on to our goal of full production and a higher standard of living."

Disregarding the fact that full employment legislation never was proposed as a reconversion measure, and that its machinery would not have begun to function for another 6 months even if it had been passed the day after VJ-day, consider this central fact about it in the light of the official Government predictions about unemployment compared with actualities:

The very core of the full-employment bill was its provision that the President predict the pace of business and the volume of employment a year and a half ahead and recommend to Congress measures, including Federal public works, to bring employment into balance.

If Government economists were 200 percent off—as they were—in their estimate of what unemployment would be 3 months ahead, how can the President and Congress expect to work 18 months ahead with any precision?

It happens that the Government experts guessed far too high. But whether they reckon too high or too low is incidental. The point is that economic forecasting is not yet an exact science, and the kind of Government planning which the full employment bill is based upon, and which so many people naively assume would solve our difficulties, is not planning at all in the precise sense, but political mumbo-jumbo.

Obviously it is part of the business of the President and Congress to stimulate employment. Only a relatively small congressional minority would oppose the idea. The reason the full employment measure backed by President Truman and so much of organized labor has gotten nowhere in Congress is simply that it won't do what its champions are pretending or believing. The experience of the last 5 months has proved it again.

Reduction of National Debt Limit

REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1946

Mr. CARLSON. Mr. Speaker, let us lock the barn door on our national debt before it is too late.

President Truman, in his message to Congress, stated that the public debt which now amounts to $278,000,000,000 will decrease several billion dollars during the next 18 months. This may be an overoptimistic statement on the part of the President, but it is most encouraging.

Congress should make provision to reduce the statutory national debt limit as we are able to reduce our debt. If Congress does not vote to reduce our national debt limit, it will remain at $300,000,000,000. This margin between the debt limit and the actual debt would be a temptation for careless, extravagant spending of Federal funds. Now is the time to protect our Treasury with an amendment that provides for automatic reduction of our debt limit as we reduce our national debt. It was with that thought in mind that I presented an amendment providing for an automatic reduction in our national debt limit as we reduce our bonded indebtedness after the war. I offered this amendment in committee in April 1945 during the consideration of H. R. 2404, which was reported by the Ways and Means Committee and provided for an increase of the authorized debt of the United States from $260,000,000,000 to $300,000,000,000. The amendment I offered reads as follows:

Provided further, That whenever the President, by proclamation, or the Congress, by concurrent resolution, declares the cessation of hostilities or the termination of the present war, whichever is the earlier, that reductions of bonded indebtedness by the Federal Government be accompanied automatically by a reduction in the national debt limit of like amount.

This amendment was considered by the legal counsel of our committee and by representatives of the Treasury. After considerable study and discussion, it was agreed by the committee that this matter be left for future study and discussion.

Now is the time to revive this amendment, but without limitation to the official declaration of peace. I submit that it would be the only way for the executive and legislative branches to implement the good faith of the budget of 1946–47.

Otherwise, the budget becomes only a document which allows for a margin of error of $30,000,000,000; as a catch-all for all manner of new spending and extravagance.

This body alone, is the steward of Government finances. But for that good reason, should it spend its time reviewing items of a $35,000,000,000 budget and leave a blank check for $30,000,000,000 more? I note with approval that Senator BYRD adheres to this policy.

I am sure that 85,000,000 bondholders and 40,000,000 taxpayers would applaud, too.

I have no illusions about a rapid reduction in our national debt, but I am concerned with what rate our debt limit is reduced whereby to take care of our indebtedness. The reduction and the management of our national debt is going to be a problem for generations to come. If we should decide to retire the debt in annual installments over a period of 100 years, it will involve a charge of approximately $3,000,000,000 per year. This, together with an interest charge of $5,000,000,000 would total approximately $8,000,000,000 annually. Every effort should be made to reduce our national

debt from the sale of surplus war material, funds which have been impounded from the various war activities and the sinking fund which has been set aside for debt retirement during the past few years.

By no stretch of imagination can these funds salvaged from the war effort be regarded as anything but money borrowed from the American people. It would be most dishonest to use them otherwise than for repayment.

Demobilization

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include two statements issued from the Pacific by soldiers who are questioning the demobilization program.

The first is entitled "Potential Veteran—Do You Want To Go Home?" The statement outlines some of the promises made to our soldiers by the armed forces. It then sets forth the facts to show how they have been deceived. It is not a pleasant statement, but I believe reflects the thinking of the average GI who feels that his country has broken faith with him.

The second statement entitled "Untruth and Consequences," again states the dissatisfaction with the Army and our Government. These soldiers, who were promised that they might return home, are appealing directly to the people of the United States for fair play.

The statements follow:

POTENTIAL VETERAN, DO YOU WANT TO GO HOME?

We were told:

1. There will be no empty berths returning to United States. (War Department.)
2. We need only 200,000 men for occupation. (MacArthur.)
3. No men will be held after they become eligible. (War Department.)
4. Men not needed for occupation or surplus property disposal will be home by March 1, 1946. (Secretary Patterson.)
5. By March 1946 all men with 2 years service will be eligible. (War Department.)
6. When shipping is available men will go home. (Secretary Patterson when on Guam.)
7. Sixty-eight thousand more berths assigned to AFWESPAC. (War Department.)

Facts:

1. Navy takes 103 ships off Pacific run. (Daily Pacifican, January 4.)
2. Ships leave Manila partly empty. (Daily Pacifican, January 5.)
3. "I didn't know men overseas had stopped accumulating points." (Secretary Patterson.)
4. Secretary Patterson on Guam said he didn't know 2-year men were to become eligible in March 1946.
5. Discharges cut in half; a man may be kept in the Pacific 3 months after becoming eligible. (Lieutenant General Collins.)

This is the story! The Army is up to its old tricks! Believing public opinion sufficiently placated by discharges to date, the Army hopes that it can fall back on such lousy talk as—"but men are not yet eligible". The Army has intentionally slowed down discharges. First it said that there were no ships for men eligible. Now that there is shipping the Army refuses to lower points. Lieutenant General Collins says that due to too many discharges the points will be dropped less than five a month.

Do you want to be used as pressure to get through compulsory military training legislation?

If you want to get home, then do something. Write or cable your family and Congressman. Insist that the Senate investigating committee in Manila Monday hold open hearings for the GI's.

Or do you prefer "Golden Gate in forty-eight"?

UNTRUTH AND CONSEQUENCES

Is Patterson stupid and ignorant of the facts or does he think that we're that gullible. His statements to the press were a direct insult to the American soldiers' intelligence. It has been said of this administration that this is the golden age of incompetency or no brains at the top; however we are underestimating their menace to our welfare. First, it is no ships, now no replacements; are we going to sit by and let them blackmail our families and hold us as hostages to push through their compulsory military training program? We have the right to know definitely when each and every one of us is going home. We are not gathering here to create a disturbance or have a good time, this is serious business. Our Army heads have failed us, our Government is failing us. Now we are appealing directly to the people of the United States only in the interest of fair play. The war is over and we see no need of occupying Allied Nations.

We want to go home.

The Meat Packing Strike

REMARKS
OF
HON. HOWARD W. SMITH
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. SMITH of Virginia. Mr. Speaker, on day before yesterday, I received a telegram from a reliable citizen informing me that the War Department had issued an order prohibiting all units of the Army from proceeding across any picket line that might be established by strikers around meat-packing plants. I was unable to believe that such a thing was possible and therefore wired the commanding general of the Third Corps Area for the facts. I received in reply the following telegram:

The following wire was dispatched January 19 to all installation commanders under this command: "Until further orders Army trucks under your command will not be permitted to cross picket lines established by striking meat packing unions without agreement with local labor representative concerned."

EDDY,
C. G., Third S. V. C.

I have never expected to live to see the day when the dictatorship of any labor union or other private organization over the Government of the United States would reach the disgraceful stage when the commanding officers of the United States Army would have to ask the gracious permission of labor union officials to allow Army trucks to go about their lawful business in procuring the necessary food and supplies for the armed forces.

It seems to me that this situation needs some clarification. Are we to understand that the general must ask the permission of any striking labor union before he can obtain the necessary meat to feed our Army? That is certainly the plain implication of the order.

The next question is: If the dictators of the labor union decline permission to obtain meat for the soldiers, what, when, where, and how do the soldiers eat? If they cannot eat beef, do they eat pork and beans? And if the pork-and-beans unions strike, must we then ask permission from that set of dictators, or must the soldiers eat something else?

Another question presents itself. If the unions have taken over the United States Army, it would appear that there is a division of command. Both A. F. of L. and CIO meat-packers' unions are striking. Whose permission must the general obtain in order to feed his Army? Must he have the permission of Gen. William Green of the A. F. of L. or Gen. Philip Murray of the CIO? Or must he have permission of both generals?

But, on the other hand, suppose Gen. William Green graciously accords the soldiers permission to eat, but Gen. Philip Murray refuses. What then is the result on the soldiers' bill of fare?

It seems to me that all of these questions lead to demonstrate the dire necessity for having a unification of command. Perhaps someone can suggest a plan by which we can unify the A. F. of L. and the CIO so that the War Department, in order to feed our soldiers, may only have to require the permission of one labor dictator instead of a number.

I hope that the Military Affairs Committee, which has jurisdiction to investigate the conduct of the War Department, will proceed at once to investigate this subject and relieve the anxiety of the American people on this very vital question of who commands the United States Army.

Chester Bowles, Price Administrator, Clarifies Notice of January 15 Respecting Ceilings for 1946 Cotton Crop

EXTENSION OF REMARKS
OF
HON. WILLIAM M. WHITTINGTON
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. WHITTINGTON. Mr. Speaker, there is general agreement among cotton growers that ceilings on raw cotton are unworkable and unenforceable. The crop of 1945 was not only one of the shortest, but probably the most expensive ever produced. Cotton growers were shocked when on January 15, 1946, the Office of Price Administration issued an advance release of a notice of ceilings

on the 1946 cotton crop. I quote from the advance release:

OPA explained that the purpose of the announcement is to put growers on notice of the maximum price they can expect to get for their crop under OPA ceilings.

I further quote from the administrative notice:

The proposed maximum price in each case is the base price of 24.09 cents per pound.

The Representatives in Congress from the cotton-producing States promptly met and after full discussion appointed a committee from each of the cotton-producing States to convey to Chester Bowles, Price Administrator, and to Clinton Anderson, Secretary of Agriculture, the unanimous protest of the Representatives from the cotton-producing States to the proposed ceilings on raw cotton and the unanimous request that said ceilings be revoked.

Following conferences between Mr. Bowles, Price Administrator, and Mr. Anderson, Secretary of Agriculture, and the committee, Mr. Bowles gave out a clarifying press release on Tuesday, January 22, 1946. After the release was made the committee reported to the Representatives from the Cotton Belt on the conferences with the Price Administrator and the Secretary of Agriculture. The Representatives again emphasized their opposition to the proposed ceilings and the committee was continued for further protests upon the assurances of the Price Administrator and the Secretary of Agriculture that no further steps would be taken with respect to ceilings on raw cotton without notice to the committee, and without an opportunity to the committee to present further views and protests of the Representatives opposing ceilings before any decision for ceilings was reached or announced.

Under leave to extend my remarks, I include the said clarifying press release of Chester Bowles, Price Administrator, of January 22, 1946, as follows:

On January 15, 1946, I issued an advance notice of proposed ceiling prices on the 1946 crop of cotton. Some misapprehensions among cotton growers have resulted from an apparent misunderstanding of that statement. I wish, therefore, to clarify several points.

The notice applies only to the 1946 crop. The proposed ceiling prices contained in the advance notice represent the legal minimum levels at which ceilings would be established if it should become necessary to take such action later in the season. Under no circumstances will ceilings be fixed on the 1946 crop at less than the announced prices. If ceiling prices are established at a later date they can, of course, be higher than the prices proposed in the notice. In other words, the prices in the notice are the lowest ceiling prices that can be established, not the highest.

An advance notice of this character is required under the act to be given at least 15 days before the normal planting season. Cotton is normally planted in southern Texas beginning about February 1. As Price Administrator, I would have been remiss in my duties if I had failed to issue the recent notice covering raw cotton produced in the crop year 1946. The market for raw cotton has been advancing steadily since last August and is now above parity. Without such a notice, it would have been legally impossible to established any ceiling prices later in the year, regardless of what happened to cotton prices. It is a technical procedure.

Should we consider that an inflationary situation is developing in the future in the price of cotton so that ceilings would seem to be necessary, I would call in a representative group of cotton growers to consult with and advise me on every aspect of this problem. I shall give consideration to their recommendations. This is the orderly procedure set up under the Price Control Act.

It is sincerely hoped that a program of ceiling prices for cotton marketed after the beginning of the 1946 marketing year will be unnecessary. If it becomes evident that the price of cotton is becoming stabilized because of improvement in supply or other reasons, no ceiling will be imposed. I am very conscious of the difficulties which might be encountered in the administration of cotton ceilings.

The situation is being constantly watched and every relevant factor and circumstance will receive thorough consideration. The final decisions on whether there should or should not be ceiling prices on raw cotton and at what level are still to be made.

It has been our policy to place ceilings on basic agricultural commodities when prices reach or exceed parity, as is the case with wheat and corn.

Price action affecting agricultural products must be a joint decision of the Secretary of Agriculture and OPA. The announcement made on January 15 was approved by both agencies. Any ceiling imposed at a later date would similarly require the approval of both agencies.

Rigid OPA Price Control

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 15, 1946

Mr. WOODRUFF. Mr. Speaker, one of the most serious obstacles to reconversion—one which must be removed before the goals of reconversion can be attained—is the rigid pattern set by the Office of Price Administration in attempting to control prices.

OPA, itself, could contribute toward the establishment of a stable peacetime economy and without producing additional inflation, by adopting a broad policy toward price alterations, simply stated. Simplification is a necessity. Court decisions affecting OPA, OPA orders, amendments to those orders, and Executive orders relating to the OPA, filled 18 large volumes by the spring of 1945. Much of this material is so involved as to be incapable of interpretation by businessmen and their legal advisers. Even OPA lawyers privately admit their inability to understand this accumulation.

It is high time that this wartime stock pile of price procedure, which involves the actual making of law by a nonlaw-making branch of the Government should be surveyed and the needless and detrimental parts junked. The stockholders who invest in industry; management, with the responsibility of operating industry; labor, whose wages come from industry; and the consumer, whose purchasing power supports industry—all have a vital stake in getting OPA to establish a broad price policy, simply stated.

OPA could certainly give a powerful impetus to reconversion if it would supersede its price-fogging methods with a policy announcement to the effect; for instance, that—

OPA will no longer try to handle price details of industry. Industry itself may handle its own price details within this limitation: Take the 1940 selling price, plus the actual increase since 1940 in basic wages, excluding overtime, and the actual increase in the cost of purchase of goods and services as the basis of the product's selling price.

Such an action would constructively stimulate every sector of American economy. It would not be of a temporary or of an artificial nature, for it would reach everyone, irrespective of the type of employment in which he was engaged. By using 1940—our last full peacetime production year—as normal, the elemental injustice contained in President Truman's address on wages and prices on October 30 can be corrected. The President said, in part:

There are several reasons why I believe that industry as a whole can afford substantial wage increases without price increases. * * * Improvements in machinery and manufacturing know-how developed in the war can certainly result in more goods per hour and additional room for wage increases.

The Truman premise ignores the fact that industry has been engaged in war production since 1941 and much of the peacetime know-how must now be regained. Labor expert Leo Wolman, in the Washington Post of November 4, stated:

The most prolific and the most popular source of economies is, of course, greater efficiency. It is from the increased output per man and per man-hour that most people hope to receive substantial increases in pay. But * * * the hopes are illusory. Out of an estimated labor force in 1940 of 54,000,000, less than 30,000,000 were employed in industry and some 25,000,000 in rendering service to the public. No one * * * anticipates a spectacular advance in service efficiency important enough to absorb the considerable wage advance since 1939.

In other words, OPA is now applying its rigid price-control methods to industries which, through their very nature, or because they are now confronted with the expense of reconversion, find it most difficult to regain the peacetime know-how, laid aside to produce for war.

To reach all industries in a "broad price policy, simply stated," the OPA should apply this policy first to the major industries which most affect the national income. Construction, automobile manufacture, steel, electrical equipment, and transportation would, naturally, come under this classification. With increased freedom to work out their own destiny by the handling of within-industry price details, the people of the United States could well look forward to augmented productivity and prosperity. It might well be that there would be no further need to stimulate smaller industries, directly dependent on the basic industries, since prosperity in the parent field would be reflected in any offshoots of that field.

Nevertheless, it would be important to follow up the initial application of self-determination within the larger Nation-wide industries with an extension of the same policy to independent and unrelated industries. This second step could well be made within 2 months after the first, since such a period would give sufficient time to establish the practical working out of the new OPA policy and to get together data on possible improvements.

This, in essence, would then be—not a sudden relaxation of OPA wartime price controls—but a reapplication, realistically made, of such controls to altered peacetime circumstances. Meanwhile, this process in action should be kept continually before an informed public. Stockholders, management, labor, and consumers are parts of that public. It is a major fallacy to consider any group as isolated from the welfare of the whole.

With OPA's new policy in actual operation—and with the American people knowing the reason for creating that policy and the goals established in order to return to peacetime industry, what is next on the uphill road to reconversion?

Here is where the Director of Reconversion would come into the picture. In this situation, the Director could well call in the top executives of individual companies in industries where the new OPA policy was in action for special consultation. It would be the Director's task to seek an unofficial and private pledge to price for volume during the next 9 months. Of course, such a pledge would be effective only if the broad OPA policy had been publicly announced and if the OPA had every intention of standing back of such announced policy.

There should be no question as to the sincerity of these private pledges entered into by heads of Government agencies and business executives. The smooth functioning of the late War Production Board's industrial scheduling was based on such agreements. Under Chairman Nelson and later under Chairman Krug, much of the success of the United States in doing as Gen. Nathan Bedford Forrest said—in getting there "fu'stest with the mostest men"—as directly due to the absolute integrity and to the carrying out to the letter of promises made by management to the WPB heads.

And there is no reason to believe that leaders of industry would not cooperate equally as well with the Reconversion Director and OPA Director Bowles—if the industrial leaders are given a clear idea of what is expected of them, specific assurances that the agencies involved will work with them rather than against them, and a simple, just price policy for them to apply within their own industries.

A broad price policy, simply stated, would tend to benefit OPA by enlisting industry on its side. As it now operates, OPA, in a legislative sense, formulates price regulation. Then, in a judicial sense, it interprets those same rules. Finally, in an administrative sense, OPA sees to it that the rules are enforced. Thus, a single Government agency, in actual practice, exercises the three distinct functions of our Government as set down in the Constitution as the basis for our system of checks and balances—the legislative, the judicial, and the executive. It is this unwarranted concentration of powers which underlies the instinctive American distrust of OPA. As a nation, we grumble over small inconveniences, but we deeply resent usurpation of authority.

What would a broad price policy, simply stated, do to remove this difficulty? Industry, by assuming the responsibility of handling within-industry price details, would take away the offensive and unconstitutional legislative function of OPA. At the conferences between top executives of individual companies and the Director of Reconversion, a single interpretation of the industry-created price regulations could be reached—thus, eliminating OPA's offensive and unconstitutional judicial function. What would remain? OPA's recognized and constitutional function as an administrative agency. It could then act as an efficient policing agent to bring to justice possible violations of the rules which industry itself had made and whose interpretation had been agreed upon between representatives of industry and the Director of Reconversion.

A return to basic American principles could be accomplished while, at the same time, making progress in establishing American economy on a firm and sound basis.

The possibility of attaining such goals is a challenge to industry, to labor and to government. A broad OPA price policy, simply stated, is not only worth trying for; it is worth utilizing our combined effort and our combined experience to achieve. In our present economic crisis we cannot afford to evade our responsibility. We must act and act now. Procrastination is inexcusable for we have long known and we know today, that OPA's rigid price-control methods have been and are now stumbling blocks to reconversion. We also know how those stumbling blocks can be removed.

Let us get the old OPA quagmire price policy out of the way. Let us get on with the new, broad, simple OPA policy. Let us grasp our postwar future by refusing to remain bogged down in our wartime past.

I wish it distinctly understood that I am not opposing an OPA policy that recognizes the fact that no business can nor will long continue to operate at a loss; that no sane individual will take his money out of the bank and invest in a new enterprise; that no small manufacturer who has temporarily engaged in war work can safely return to peacetime production unless his increased costs are reflected in his selling price.

The sooner this fact is recognized and the policy of OPA is amended accordingly, the sooner reconversion will be completed and our people, all of them who can and will work, can have the jobs they need. All of us will then be able to quickly get the many things we want and need.

Surplus Government Property

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a resolution from the American Legion Post, No. 7, of Alliance, Nebr.

This resolution points out the great dissatisfaction with the present method of disposing of surplus property. It indicates plainly the very things that have been emphasized upon this floor many times. It must be apparent by now that the Surplus Property Act, as passed by Congress, is not being administered as intended by this Congress. Unless something is done to straighten out this problem, it may well prove to be one of the major scandals following this war.

The resolution follows:

Whereas veterans are finding it more and more difficult to purchase surplus Government property, to which preferential right has been provided by law; and

Whereas the supply of such property is adequate, but due to conditions beyond the veterans' control, little if any of this property is getting into their hands; and

Whereas the veteran is in need of such property, and as rules and regulations now laid down by the certification agency requires that he spend considerable time and expense to appear personally at the headquarters of such certification agency to establish his eligibility; and, after receiving such certification he may find it necessary to travel many miles and in the opposite direction to make the purchase of property desired; and

Whereas the certification and disposal agencies have been changed numerous times by Executive order and regulations which further curtails and delays veteran's possibilities of obtaining such property for which he is otherwise eligible: Therefore be it

Resolved, That Alliance Post No. 7, American Legion, hereby directs appropriate action be taken to make it possible that the presentation of a veteran's honorable discharge certificate to the disposal agency be sufficient evidence to establish priority and eligibility to purchase any surplus Government property within the limits of fair share distribution. It is further directed that a more uniform method of notification of time, location, and type of surplus properties offered for sale be made available to veterans; be it further

Resolved, That a copy of this resolution be spread on the minutes of this meeting and copies mailed to all American Legion posts in Nebraska, the department and national headquarters of the American Legion, the national legislative committee of the American Legion, all Nebraska Members of Congress, and chairman of Veterans' Affairs Committee of the Congress.

Adopted by Alliance Post, No. 7, American Legion, Alliance, Nebr., this 16th day of January 1946.

R. V. COPSEY,
Post Commander.
P. A. MOLLER,
Post Adjutant.

Report of Board of Visitors to United States Merchant Marine Academy

EXTENSION OF REMARKS
OF
HON. J. HARDIN PETERSON
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. PETERSON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of the Congressional Board of Visitors to the United States Merchant Marine Academy, Kings Point, N. Y., June 8, 1945:

REPORT OF THE BOARD OF VISITORS TO THE UNITED STATES MERCHANT MARINE ACADEMY, 1945

KINGS POINT, N. Y., *June 8, 1945.*

THE PRESIDENT OF THE SENATE.
THE SPEAKER OF THE HOUSE OF REPRESENTATIVES.

GENTLEMEN: Pursuant to Public Law 301, Seventy-eighth Congress, second session, approved May 11, 1944, the following Senators and Members of the House of Representatives were designated to constitute the 1945 Board of Visitors to the United States Merchant Marine Academy:

SENATORS

By the Vice President:
HARLEY M. KILGORE, of West Virginia.
By the Committee on Commerce:
JOSIAH W. BAILEY, of North Carolina (ex officio).
THEODORE G. BILBO, of Mississippi.
ALEXANDER WILEY, of Wisconsin.

MEMBERS OF THE HOUSE OF REPRESENTATIVES

By the Speaker of the House:
EUGENE J. KEOGH, Ninth Congressional District of New York.
ELLSWORTH B. BUCK, Eleventh Congressional District of New York.
By the Merchant Marine and Fisheries Committee:
SCHUYLER OTIS BLAND, First Congressional District of Virginia (ex officio).
RICHARD J. WELCH, Fifth Congressional District of California.
J. HARDIN PETERSON, First Congressional District of Florida.
FRANK W BOYKIN, First Congressional District of Alabama

Representatives HENRY M. JACKSON, Second Congressional District of Washington, and JAMES DOMENGEAUX, Third Congressional District of Louisiana, were later appointed in the places of Mr SCHUYLER OTIS BLAND, of Virginia, and Mr. FRANK W. BOYKIN, of Alabama, respectively, who were unable to attend.

Representative ALVIN F. WEICHEL, Thirteenth Congressional District of Ohio, a member of the House Committee on Merchant Marine and Fisheries, accompanied the Board.

The members of the Board were accompanied from Washington to Kings Point by the following officers from headquarters of the training organization of the War Shipping Administration: Commodore Telfair Knight, USMS, Assistant Deputy Administrator for Training and Commandant of the United States Maritime Service; Lt. Comdr. John T. Everett, USNR, operations officer of the United States Merchant Marine Cadet Corps; Comdr. Sam H. McConnell, USMS, chief public relations officer of the training organization; Lt. Comdr. Hale Boggs, USMS, chief legal officer of the training organization; and Lt. Comdr. Clifford W. Sandberg, USNR, of the Academy staff and secretary to the Board.

The Board assembled at Wiley Hall, Kings Point, at 10 a. m., Thursday, June 7, 1945, where the members were received by the Superintendent, Commodore Giles C. Stedman, USNR, and his staff.

The following members of the Board were present at the first meeting: Senator ALEXANDER WILEY, Representatives J. HARDIN PETERSON, JAMES DOMENGEAUX, RICHARD J. WELCH, ALVIN F. WEICHEL, and ELLSWORTH B. BUCK.

FIRST MEETING OF THE BOARD OF VISITORS

Senator ALEXANDER WILEY served as temporary chairman for the purpose of organization.

Representative J. HARDIN PETERSON was elected permanent chairman of the Board. Lt. Comdr. Clifford W. Sandberg, USNR, and Lt. Comdr. William L. Bull, USMS, were designated as secretary and assistant secretary of the Board, respectively.

At the request of the chairman, the Superintendent and his staff joined the Board in conference. The Superintendent was invited to make such reports on the state of the Academy as he deemed pertinent and proper. Accordingly, Commodore Giles C. Stedman, USNR, submitted a report, a copy of which is forwarded herewith.

The meeting was then opened for general questions.

Upon the termination of the question period, the Superintendent invited the Chairman to designate a member of the Board to address the regiment of cadet-midshipmen immediately prior to the regimental review at 4 p. m. on Kendrick Field. Senator WILEY was unanimously selected by the Board to make this address.

At this time the regimental commander, Cadet-Midshipman A. B. De Laski, United States Merchant Marine Cadet Corps, was presented to the Chairman and members of the Board when he extended them an invitation to join the regiment of cadet-midshipmen at luncheon at Delano Hall.

Recess was taken at 11:45 a. m.

After interviewing a group of cadet-midshipmen from his home State, Representative RICHARD J. WELCH left Kings Point at 12:30 p. m., being unable to remain for the balance of the visit.

MEETING WITH THE REGIMENT OF CADET-MIDSHIPMEN

At 12:35 p. m. the members of the Board were escorted to Delano Hall by the cadet-midshipmen regimental commander and his staff for luncheon with the regiment.

After luncheon each member of the Board conducted a 30-minute private conference with cadet-midshipmen from his home State.

Accompanied by assigned officer escorts, the Board proceeded at 2 p. m. on a general inspe tion of the Academy, visiting Barry Hall, cadet-midshipmen barracks, the receiving barracks in Furuseth Hall, and the departments of seamanship and navigation, engineering, and naval science; Bowditch, Fulton, ar ' C'Hara Halls, respectively, as well as the improvised chapel in Wiley Hall.

At 4 p. m. the Board witnessed the review of the regiment of cadet-midshipmen on Kendrick Field, following brief addresses by Senator WILEY, Representative PETERSON, and the Superintendent.

SUPERINTENDENT'S RECEPTION AND DINNER

The Superintendent's reception and dinner in honor of the Board, which had been augmented by the arrival of Representative HENRY M JACKSON, was held in Markin House at 7:30 p. m. It was attended also by Commodore Knight, Captain McNulty, and the members of the Superintendent's staff.

Upon conclusion of the dinner, a documentary film, Future Leaders of Our Merchant Marine, depicting the activities of the Academy and Cadet Corps, was shown.

Because of previous commitments, Representative JAMES DOMENGEAUX left Kings Point at the conclusion of the dinner.

FRIDAY, JUNE 8, 1945

Because of a pressing legislative calendar in the Senate, Senator WILEY found it necessary to leave Kings Point for Washington, D. C., at 8:30 a. m. Commencing at 9 a. m., the Board was escorted on a tour of Samuels Hall, where they inspected the sail loft, marlinspike seamanship room, the signaling classrooms, bridge, and other training and life-saving equipment.

At 9:30 a. m., the Board left Mallory Pier on the *T. V. William Webb* for a short cruise on Long Island Sound to view the waterfront facilities of the Academy. Upon return from this cruise the Board proceeded to Wiley Hall, convening at 10 a. m. for their second formal conference, having been joined by Representative EUGENE J. KEOGH.

Present at the second formal conference were Representatives J. HARDIN PETERSON, EUGENE J. KEOGH, HENRY M. JACKSON, ALVIN F. WEICHEL, ELLSWORTH B. BUCK.

In accordance with their previously expressed isl., the Board received a delegation of 25 cadet-midshipmen selected at random from each class at Kings Point. At this point, the secretary and assistant secretary withdrew from the conference room and members of the Board conferred with the cadet-midshipmen in closed session.

Upon the recall of the secretary and assistant secretary to the conference room, the Board requested Commodore Knight, Captain McNulty and the Superintendent to appear before them.

Commodore Knight, who has served in an executive capacity with the entire training program since its inception in 1938, presented the respects of Vice Adm. Emory S. Land, Administrator, and Capt. Edward Macauley, deputy administrator in charge of the training program, and addressed the Board briefly recounting the history of the cadet training program and explaining that Congress, in passing the Merchant Marine Act of 1936, gave the Maritime Commission a joint mandate to build and man modern American ships. The training program, including the United States Maritime Service, the supervision of State maritime academies, as well as the United States Merchant Marine Cadet Corps, was a direct outgrowth of this mandate.

The United States Merchant Marine Cadet Corps and its Academy as well as the entire training program, Commodore Knight pointed out, are permanently established by statute and will function after the war in the Maritime Commission. Tentative postwar plans have already been outlined to Congress and are published in the report of the Worley committee. These plans contemplate an Academy enrollment of approximately 1,200 during the postwar years.

At the conclusion of Commodore Knight's statement, the chairman instructed the secretary to invite the Academy staff officers to rejoin the conference. At this time the chairman and other members of the Board expressed their appreciation for the information furnished them and for the courtesies extended.

Upon the departure of the Superintendent and Academy staff, the Board continued its deliberations in executive session. Its comments and recommendations are set forth below. There being no further business, the Board adjourned at 11:45 a. m. The members then attended a buffet luncheon at the senior officers' mess, following which they took their departure from Kings Point at their pleasure.

After due deliberation, and as a result of the two formal conferences held with the Superintendent and members of the Academy staff, cadet-midshipmen of the regiment, and the several inspections conducted, the Board

of Visitors respectfully submits the following general comments and specific recommendations:

GENERAL COMMENTS

1. To dispel any misunderstanding, the Board desires to strongly emphasize the fact that the United States Merchant Marine Cadet Corps was created prior to the war pursuant to the provisions of the Merchant Marine Act of 1936, as amended, and that its site at Kings Point, N. Y., was acquired for the purpose of constructing a permanent Merchant Marine Academy as shown by the reports which accompanied House Joint Resolution No. 260 (Public Law 472, 77th Cong.; 56 Stat. 124), approved March 4, 1942.

2. The Board desires to record its appreciation and admiration of the foresight, tenacity, and devotion to duty displayed by the supervisor of the United States Merchant Marine Cadet Corps, Capt. R. R. McNulty, USNR, for his efforts in bringing about the creation of the United States Merchant Marine Cadet Corps and its Academy at Kings Point, and for his administration of the functions of the corps since its inception in 1938.

3. The Board also desires to commend Vice Adm. Emory Scott Land, USN (retired), Administrator of the War Shipping Administration; Deputy Administrator Edward Macauley, and Commodore Telfair Knight, USMS, under whom Capt. R. R. McNulty, USNR, and Commodore Giles C. Stedman, USNR, serve, for their wisdom and guidance in the development of the training program for officers and seamen of our merchant marine of which the United States Merchant Marine Cadet Corps and its Academy at Kings Point are a part.

4. The Board recognizes that while the present plant and facilities of the Academy may have been adequate for the needs of the wartime training program, it is impressed with the necessity for an expansion of facilities if the ultimate aims and objectives for which the Academy was created are to be realized. The most obvious immediate needs of the Academy are for an adequate library and a suitable chapel.

5. It is the considered opinion of the Board that the United States Merchant Marine Cadet Corps and its Academy at Kings Point are a most vital adjunct to the maintenance of a strong merchant marine and Naval Reserve. Upon the character and education of our officer personnel will largely depend the security of our position in the field of international commerce and our status as a sea power.

6. The Board is gratified to learn of the resumption of competitive examinations for entrance to the Cadet Corps on the basis of State quota allotments, along the lines of those conducted in 1939 and 1940, which were suspended after Pearl Harbor. This action was the result of recommendation made by the Board of Visitors in 1944. It is believed that the competitive method of selection will result in securing the highest type and most apt young men for officers training in the merchant marine. It is the Board's thought that in addition to the Nation-wide competitive examination system, steps be taken to develop fully the possibility of working out a process of screening prospective entrants for leadership and officerlike qualities before admission to the Academy.

7. In the discussion of the curriculum, it was developed that the present course of the United States Merchant Marine Cadet Corps would be extended from 2 to 3 years effective September 1, 1945. Further, that the 3 years consist of 6 months at either of the United States Merchant Marine Cadet Corps basic schools at Pass Christian, Miss., or San Mateo, Calif., followed by 6 months on merchant ships and 24 months at Kings Point. The Board encourages those responsible for this progressive step and hopes that measures will be taken to extend the course to 4 years at an early date. In this connection, the Board believes that consideration should be given to adopt post-graduate or refresher courses for wartime graduates so that they may be placed on a comparable level with the men in the extended course. It is understood that such refresher courses will be given at the United State Maritime Service Officers' Schools at Fort Trumbull and Alameda. Further, the Board feels that appropriate measures should be taken to have the Academy placed upon an accredited basis for the awarding of degrees.

8. To qualify the United States Merchant Marine Academy to issue degrees, the Board feels that a properly equipped library building should be provided.

9. It is clearly evident to the Board that the present facilities for divine worship at the United States Merchant Marine Academy are wholly inadequate. The improvised chapel in Wiley Hall seating 100, which is less than 7 percent of the cadet-midshipmen complement, is entirely too small for holding adequate religious services.

SPECIFIC RECOMMENDATIONS

1. The Board specifically recommends that funds be made available as soon as possible for a suitable chapel and an adequate library.

2. The Board specifically recommends that funds be provided for the development of adequate athletic and recreational facilities.

3. The Board specifically recommends that the Superintendent's discretionary fund be authorized in the sum of $3,500 per annum, an increase of $1,000 over the present fund.

CONCLUSION

The members of the Board have been particularly impressed with the splendid establishment at Kings Point, the highly efficient educational program and the fine type of young men participating therein, and wish to congratulate the Superintendent, Commodore Giles C. Stedman, USNR, his officers, cadet-midshipmen, and personnel of the United States Merchant Marine Academy for their outstanding accomplishments.

The Board is unanimous in its commendation of the morale and spirit at the Academy, and expresses its appreciation of the many courtesies extended during their visit.

To Lieutenant Commander Sandberg, secretary to the Board of Visitors, and to Lieutenant Commander Bull, assistant secretary, the Board expresses its sincere appreciation of their invaluable assistance and untiring efforts on its behalf.

Respectfully submitted.

J. HARDIN PETERSON, Chairman; ALEXANDER WILEY; HARLEY M. KILGORE; THEO. G. BILBO; JAMES DOMENGEAUX; EUGENE J. KEOGH; RICHARD J. WELCH; ELLSWORTH R. BUCK.

Sugar-Coated Socialized Medicine

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the St. Louis Globe Democrat entitled "Sugar-Coated Socialized Medicine."

Mr. Speaker, I am certain that when the people affected by this political socialized medicine realize that they must make the major contribution to this fund and then have someone in Washington tell them who they might call when they are ill, they will be less enthusiastic about socialized medicine.

The editorial follows:

SUGAR-COATED SOCIALIZED MEDICINE

President Truman in his health message to Congress last month declared he is not proposing socialized medicine. Almost simultaneously a National Health Act, embodying his requests, was introduced in Congress by Senators WAGNER and MURRAY and Representative DINGELL (S. 1606—H. R. 4730). They, too, insist that the proposed legislation does not aim at socialized medicine. The reiteration suggests that both the President and the legislators fear the American people will believe socialized medicine is inherent in the bills and don't want it. We believe this is the sentiment of an overwhelming majority.

The President has recommended that Federal funds be used to construct hospitals and related facilities, to expand the Public Health and Maternal and Child Health Services; to assist medical research and education; to aid in the prepayment of medical costs, and to protect against loss of wages from sickness and disability.

With the first three provisions there can be little quarrel. Medical authorities themselves have long advocated such extensions, with Federal aid to States, where need is shown, being administered by States. These were largely embodied in the Hill-Burton bill introduced in the Senate last February.

The Wagner-Murray-Dingell bills would appropriate $950,000,000 over the next 9 years for these purposes—probably not an excessive amount. But the catch lies in the last two sections providing for health and disability unemployment insurance—sections which clearly belie contentions that socialized medicine is not contemplated.

In brief these would insure full personal health services to all social security beneficiaries and their dependents—probably 110,000,000 persons. Cost is estimated at $4,000,000,000. This fund would be at the sole disposal of the Social Security Administrator and the Surgeon General of the United States Public Health Service. Under direction of the Administrator the latter is authorized to hire doctors, dentists, nurses, laboratory technicians, and establish rates of pay; fix fee schedules for physicians' and dentists' services; decree qualifications for specialists; determine the number of individuals for whom any doctor or dentist may provide services, and determine which hospitals may provide service for patients and under what conditions.

Significantly, the measures set out no mode of revenue raising, but the administration has suggested a 4-percent pay-roll deduction from both employee and employer might be necessary. The omission lends plausibility to the wide charge that Senator MURRAY left it out to further the no-socialization deception and to permit it to be referred to the Senate Committee on Education and Labor, chairmanned by himself, rather than to the more frugal Committee on Finance.

Since the State administrative committees it provides would be purely advisory, it is clear the Surgeon General would be cast in the role of a medical dictator holding a $4,000,000,000 political club with which to punish or remold the private practice of medicine to fit any sociological theory he might hold. Meanwhile workers would be forced to pay into the system, however much they might dislike it or however much undeserving derelicts might cash in on it. President Truman says the system must be "highly decentralized in administration." Let him who has not seen national bureaucracy in operation believe that one. Whoever holds the purse runs the show, and from the place where the money is held.

This is the standpoint also from which the sickness and disability, compensation is undesirable. All workers would be dependent on the Government for jobless payments.

The change-over logically would involve transfer of State unemployment reserves to the Social Security Board, and give the agency full control over all labor and working conditions throughout the Nation, with authority to shift workers from State to State.

Admittedly there are many shortcomings to our present medical-care system. But surely there are means to overcome them without submitting to a multibillion-dollar political dictatorship which amounts to socialized medicine, the President notwithstanding.

Veterans' Compensation

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. WOODRUFF. Mr. Speaker, today I received a letter from the mother of a youngster recently separated from the service, after having served 5 years and 10 months in the United States Air Corps, 3 years of which he served in China, in Burma, and in India. He enlisted in the service before he had completed his education and consequently had no job to which he could return following his discharge. He persistently sought employment, and in November last he finally was called to the Chevrolet plant in Bay City, Mich., for work. He has been on the job only 2 days, 2 hours and 45 minutes when the CIO ordered the strike which still exists.

This was this youngster's first attempt at industrial work. He was not a member of the union, and he had no vote either for or against the strike. He was broke and anxious to work. He found himself without a job and he now is denied veteran's unemployment compensation because of something for which he was not in the slightest degree responsible.

I believe the situation in which this boy finds himself is similar to that of many thousands of other discharged soldiers and sailors. Certainly the Congress should take action to speedily remedy this deplorable situation.

Mr. Speaker, under leave to extend my remarks, I include the letter from this mother. I have known this family for many years. The father was a veteran of the First World War and likewise is a veteran of the Second World War. These people spring from a breed that believes when one accepts the privileges of citizenship they likewise gladly accept the responsibilities thereof. They are among the very finest citizens we have.

The letter follows:

STANDISH, MICH., *January 22, 1946.*
Hon. ROY O. WOODRUFF,
House of Representatives,
Washington, D. C.

MY DEAR SIR: I just finished writing to the Veterans' Bureau and will write several more letters on the same subject today.

It seems our Government needs to be reminded that our returned veterans have problems that might well be considered along with the loan for Great Britain. I am thoroughly sick and disgusted with the whole English mess, and I dare say the American women all feel the same way.

My son returned to civilian life September 29, 1945, after having served 5 years and 10 months in the United States Air Corps. Three years he served in China, Burma, and India. (It did not add to his or my love for England.)

Prior to his enlistment he was a schoolboy, so he had no job to come back to. His mustering-out pay went for clothing, doctor bills, and board and room in the city while seeking employment. In November he finally was called to the Chevrolet plant in Bay City. Just 2 days, 2 hours, and 45 minutes later the CIO ordered the strike.

This was my son's first attempt at industrial work. He is not a member of the union and had no vote, either for or against the strike. He was broke and wanted to work. But he is now denied veterans' compensation because he worked 18 hours and 45 minutes for Chevrolet.

Will you kindly tell me if this is an example of what we may expect in treatment for returned veterans of foreign service from a supposedly democratic United States? And who in the meantime (while the unions keep him out of work, with no compensation) is supposed to support this lad and other thousands in similar positions?

Personally, I believe the Government is giving these kids a rotten deal in return for hardship, heartache, medals, and ribbons.

You have made Michigan a wonderful Congressman, and I am sure you will do all and everything possible for her boys.

Sincerely,

MRS. ANNA M. SANFORD.

Communists Close Schools—CIO Hikes the Rent

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. HOFFMAN. Mr. Speaker, from Flint, Mich., comes a letter enclosing three newspaper articles which throw some light on the forces back of some of the strikes and a hint as to how the CIO, when it becomes an employer, forgets its propaganda in behalf of the renter—of tenants.

The writer states that he is "not a politician because I am not educated enough to explain in words what I have in my heart. Thought you might do something to put across just what kind of men are at the heads of our [Flint] unions."

The writer of this letter may not, in one sense of the word, be educated, but he is a worker and he evidently knows something of what it is all about, for, after referring to the fact that the war which the young men had fought made it possible for union men to get higher wages, wrote:

Now, those boys can't put on demonstrations just to come home but these unionists defy all WLB orders and have been given everything they asked for just for their vote. But if the soldiers put on more demonstrations, they are told they are liable to court martial.

We all thought possibly Mr. Truman would try to build up some of the things that had been torn down previously, but guess we are all disappointed.

The clipping from the Flint Journal of Thursday, January 17, 1946, reads as follows:

ALL SCHOOLS CLOSED EXCEPT HAZELTON—HERE'S THE MAN LEADING PUBLIC SCHOOLS SHUT-DOWN

Leader of the education strike which has paralyzed Flint schools is a Communist Party member who, during the war, was a member of a committee named by the Communists to promote understanding of the Communist theories in Flint and Pontiac schools, data gathered by the FBI and other organizations has disclosed.

Casper P. Kenny, identified in Communist data uncovered by Government agencies as "the best worker here," was under constant surveillance during the war by the FBI, Army Intelligence and other organizations whose job it was to carefully watch the activities of sinister characters known to expound ideas and theories detrimental to the structure of the United States.

Kenny is also a convicted bootlegger and served time in the Shiawassee County jail after a conviction in Federal court. He was also arrested by Flint police in 1929 and booked at the city jail here under an assumed name.

Records disclose that Kenny was arrested November 25, 1931, by Mike Burns, now Sheriff Wolcott's deputy, and then Mount Morris chief of police, on a Federal liquor act charge. He was turned over to Federal authorities and sentenced by Federal Judge Arthur J. Tuttle, to 60 days. He was arrested and held for investigation by Flint police in 1929 under the name of Casper Douglas. He was later released.

Government authorities have disclosed that Kenny frequently attended Communist meetings, and before Russia entered the war was active in a campaign promoting the Communist theory that American workers should not aid Britain and her allies. After Russia entered the war, pamphlets urging workers to retain their right to strike during the war were destroyed and replaced by others advocating a no strike pledge—a complete about face to which Kenny subscribed, documents show.

Investigators report that Kenny, also state representative from Flint, maintained his membership in the Communist Party during this campaign and it was only through Kenny that certain people could be admitted to Communist meetings and educational programs.

In a letter confiscated by authorities and written to Pat Toohy, secretary of the Communist Party of Michigan by Hugo Beisinger, Flint secretary of the party, describing a recent quarrel in which Kenny and a woman had become engaged at a Communist Party rally, Kenny was identified thus:

"Both Cap (Casper Kenny) and Lou Baraty, best guys here, are incensed over the affair." Investigators said it was proven the Cap mentioned in the letter was Casper P. Kenny, frequently identified by comrades as "Cap."

The investigators also conferred with men who claimed that Kenny frequently boasted of his Communist affiliations and showed them his card. It was also found that Kenny was in charge of selling subscriptions to the Daily Worker in this area. One of the secret agents purchased a subscription from a man who declared he was working for Kenny. All of the information is now on file with the FBI, Army Intelligence, and other police officials.

Kenny has been seen at various Communist meetings here and other cities. His name and the name of his wife are included on letters and secret documents sent out by Communists to other workers.

The Kenny investigation disclosed a Communist pamphlet sent to all members before

Russia entered the war in which the policies to be followed here were outlined as follows:

"Our position is to remain loyal to the CIO program, defend the right to strike against any forms of compulsory arbitration and mediation for organization of the unorganized.

"Must build and strengthen organized peace movements, the American Peace Movement (Kenny was a member of this movement), so that we link up the struggle for immediate economic objectives with the struggle against the war. We must involve dozens and hundreds of the most militant progressive trade unionists in the peace movement."

Indicating the part public schools were to play in the communistic program here, a pamphlet obtained during the 1941 investigation of Kenny and other persons believed to be subversive, recommended the following program:

"1. Medical aid for Russia.
"2. Free Earl Browder.
"3. Flint V-Clubs campaigns.
"4. IWO mass meetings.

PARTY TASKS

"1. Daily Worker campaign (circulation).
"2. Schools."

The information, released by authorities who felt the public should know the philosophies of a man leading a strike against Flint's education system, contains reams of material linking Kenny to the Communists by Government authorities.

Information disclosing the amount of money Kenny and his wife turned in to the Communist Party headquarters on ticket sales to various Communist functions is included in the secret information gathered by many operatives for the United States Government here.

Kenny was shadowed throughout the war and classified as a character to be watched. He is still under investigation.

WHAT'S BACK OF IT?

The term "Communist" too often is used loosely. Aroused conservatives find it easy to attach the label to liberals as well as to radicals. We have a Communist Party in American politics, and citizens have a right to affiliate with it.

What is wrong and what should be intolerable to those who are Americans first is the subversive work in which some Communists engage. It is the anti-American activity of such individuals to which exception is taken, not their membership in the Communist Party.

This is the issue which now appears in the shut-down of Flint's public schools by a strike of a few employees of the board of education. The closing was largely the work of one person. The course was questioned by many of the maintenance workers themselves, and also by CIO affiliates. The support of the CIO council was in doubt, and rescinding the endorsement has been proposed by UAW-CIO officials.

That this individual has been identified as a Communist is not important. Of grave concern, however, is whether something more than the open demands is involved in this deplorable situation. That is a question which every parent and all other righteous citizens should wish answered.

What does Flint propose to do about it?

A second clipping reads as follows:

SAYS REDS BEHIND SCHOOL STRIKE—SHERIFF CHARGES COMMUNIST INSPIRATION

Sheriff Wolcott today charged tha the CIO public-school strike was Communist-inspired and contributed to juvenile delinquency.

His accusation was made as he expressed growing apprehension over a rise in juvenile delinquency because of the strike.

"It looks to me," he said, "that when there is a strike against the schools, which are part of our Government, it is Communist-inspired. If that isn't promoting juvenile delinquency, what is?"

Explaining that he didn't always agree with the school board, the sheriff declared that if the people were not satisfied with the job it has done, it should be supplanted by legal means.

Picketing of the schools is teaching children to defy the Government, he emphasized. He pointed out that if the city's youth sees the Government flouted, they will lose respect for it.

CIO HIKES THE RENT

The CIO has put out plenty of propaganda berating property owners and landlords because, the CIO charged, rent was being hiked. But the CIO, when it becomes a landlord, sings a different song to another tune. Read the following dispatch dated January 13, 1946, from Flint, Mich.:

CIO SKYROCKETS RENTS IN FLINT OFFICE BUILDING

FLINT, MICH., January 13.—The CIO, which demands a hold-the-line price policy in Michigan, has notified 50 tenants of the CIO building, a 12-story edifice which the union owns in downtown Flint, that their rent will go up 50 to 80 percent February 1.

The tenants include the United States Employment Service, the Community Chest, the War Chest, the Tuberculosis Association, the Catholic Charities, the Boy Scouts of America, the Girl Scouts, the Children's Aid Society, and the Urban League.

One social-service agency, which requested that its name be held confidential, said it was paying rent of $42 a month before the CIO Flint Labor Temple association bought the building in 1943 for a reported price of $100,000. Now the agency's rent is $92 a month, and it will be $136 starting February 1.

Reports From European Labor—III

EXTENSION OF REMARKS
OF
HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mrs. LUCE. Mr. Speaker, our foreign affairs, as well as our foreign commerce, depend upon obtaining as full and factual information as possible on the situation which obtains in those countries abroad with which we maintain friendly relations, and expect to carry on mutually helpful trade.

The following excerpts from reports made last November by representatives of Belgium, Norway, France, Italy, and Finland are helpful to this purpose:

Mr. HEYMAN (interpretation) (Government delegate, Belgium). I wish to give a short statement on certain practical points. I am speaking on behalf of the whole Belgian delegation when I pay tribute, like others before me, to the xcellent report submitted by Mr. Phelan. We think that this report, like all previous ones of our acting director, is conspicuous by its universality, its clarity, and its sincerity. It has universality because all social, economic, and political problems which arise after the 5 years of the war which has ravaged the world are dealt with, but when I refer to its clarity I mean that the problems are discussed so logically that their real scope and extent can be readily appreciated.

Finally, I mention its sincerity, and by that I mean that the report does not shirk any difficulties but suggests solutions for the growing problems which face us in a clear and objective manner.

The acting director, in his introductory speech, requested the representatives of the various countries to explain to this Conference and the world the situation of their countries. In response to that invitation, I should like very briefly to explain to the Conference what is the situation of Belgium. Twice in the course of a quarter of a century Belgium has been invaded by Germany without any valid motive and in violation of all the solemn undertakings to which Germany had subscribed. The result of 4 years of occupation has been, from the economic point of view, that our industrial equipment was largely destroyed, and our transport system largely rendered useless by the removal of rolling stock.

From the point of view of social conditions there has been undernourishment and the health of thousands of our citizens has suffered severely.

Tuberculosis is a particularly serious problem. From the military point of view, 25,000 political prisoners were taken away, and many died in concentration camps and other prisons. Thousands of our soldiers and officers died on the field of battle, while others died as prisoners of war. From the housing point of view, 142,000 houses have disappeared altogether and another 100,000 are uninhabitable. There are 300,000 which can be put into suitable condition for living in again, but unfortunately there is a shortage of building materials.

Such, in brief, is the position in my country. I would like to add, however, that the Belgian people have never lost courage. They are not in the habit of giving way to their disasters. There is one quality which we may claim to possess; that is, we are always ready for hard work. Consequently, Belgium is already rebuilding itself by a common effort in which its industrialists, its traders and its hard-working workers are cooperating.

I should like to take this opportunity of paying a solemn tribute of gratitude from Belgium to her great allies, and in particular to the United Kingdom and the United States of America, for the assistance they gave us in providing us with our most elementary needs from the point of view of food and raw materials to enable us to begin our economic and social reconstruction.

From the social and economic point of view, which is what concerns us here, our parliament, elected in 1938, met in September 1944 and gave the government power to adopt immediately decisions on social security. Benefits had to be adjusted to the price level and monetary situation of the country. We had to adjust wages and pensions of all kinds, family allowances, workmen's compensation, etc., to the changes in the purchasing power of the currency. Labor legislation for workers in general, salaried employees and miners was promulgated. Compulsory sickness and invalidity insurance has been introduced under a national scheme by which contributions are paid by the employers.

We have a system whereby priority for the purchase of furniture and clothing is given to the workers who are specially affected by the war. A special fund for that purpose has been contributed voluntarily by the employers of our country up to a sum of about 6,000,000,000 francs. We are trying to improve the standard of quality of the work performed by our workers who suffered during the war years. The introduction of our social-security system will require about 25 percent of our wages bill to introduce it, and of that sum 16 percent will be paid by the employers. That concludes my first point—a summary of our economic and social development since the war. (No. 13, pp. 72, 73.)

Mr. BERG (Government delegate, Norway). The Secretary-General has asked the delegates from the occupied countries to give the Conference a picture of conditions in their countries. I shall try to give you an impression of the conditions in my country. For more than 5 years Norway has been occupied and terrorized by the German invaders. They enslaved us, pillaged and robbed us in every way. They overthrew our system of law and justice, one of the oldest in western Europe. They trampled under foot individual human rights and the fundamental political rights guaranteed by our more than 125-year-old free constitution. The right of freely expressing our opinion was denied to us.

We were not allowed to assemble in order to discuss our vital interests, and they threatened anyone trying to leave the country with the penalty of death. I am not sure that you fully realize what it means to my colleagues of the Norwegian delegation and to me to have been able to come as freemen to this International Labor Conference. Nor do I think you quite understand my feelings when I speak as a freeman from this international rostrum to a conference of free men and women from every part of the world, without the fear of being seized by the agents of the Gestapo.

We Norwegians know that many other nations have undergone much greater sufferings and have experienced the horrors of war to a much larger extent than we have ourselves. But even for us the war was a tremendous trial. We have experienced horrors and seen human suffering on a scale unprecedented in all our thousand years' life as a nation Huge material values have been destroyed And even worse is the destruction of spiritual and moral values.

Like all occupied countries, Norway is faced with the task of reconstruction, a task which demands of us Norwegians the full employment of all the resources at our disposal. We must build up once again our traditional system of legal rights. We must reestablish that respect for law and justice and for moral values which were the foundations of our national life, and which the invaders have done everything in their power to undermine. We have to reconstruct our national economy, a task which can be accomplished only through the cooperation of all men of good will.

The tasks with which we are faced are tremendous. First of all, we must reconstruct our devastated areas. The provinces which suffered most are those of the far north. When the Germans had to give up the Province of Finnmark, after the capitulation of Finland, they laid waste large districts, practicing liberally the tactics of scorched earth. They cleared the population southward, killed off their cattle, and systematically set fire to all buildings, whether for men or animals. The rest of the country has suffered less severely. The ravages mainly date from the first months after the invasion, during the spring of 1940, and were the result of military operations.

During the whole period of the German occupation, building activities have been at a standstill. All over the country, therefore, there is an acute shortage of housing accommodation. Without any doubt, housing is our main social problem. We must start a large-scale housing program, and everyone is agreed that such a program can be realized only on condition that central and local authorities take the lead in planning it on a national scale.

Another problem of primary importance to us is how we are to renew our merchant marine. Before the war Norway stood fourth among the shipping nations of the world. Great Britain, the United States of America, and Japan only were ahead of us. During the war we lost half our tonnage. If before the war we were able to keep up a relatively high standard of life, it was largely due to our shipping. It is, therefore, a vital condition for regaining and improving that standard that we succeed in bringing our merchant marine up to its prewar strength.

But we must not only rebuild our marine. Practically all our peacetime industries have been far below normal activity during the period of occupation, and must now be given new life. In order to mobilize and exploit to the full all public and private initiative and enterprise, in confident cooperation between the state and private interests, the Government, in accordance with the common program of all the political parties, has set up a Council of Economic Coordination, comprising representatives of the Central Government, of industry and commerce, and of the organizations of employers and employed. This council is to be an advisory body for the Government on questions of economic, financial, and industrial policy. (No. 14, pp. 86-88.)

Mr. GODART (interpretation) (Government delegate, France). The Director suggested that in the course of this discussion the various nations which had suffered during the fighting and the enemy occupation should mention some of the main material and moral consequences of the war for their countries.

I should like therefore briefly to outline what has happened in our country. Whole towns and cities have been completely destroyed, including many ancient historical monuments. The other day, when visiting Versailles, you saw something of what has happened. Over 400,000 buildings have been destroyed and 1,436,000 houses are at present unfit for habitation. Some 50,000 are industrial and commercial buildings which have been completely destroyed, while 175,000 can be repaired. Of private houses, 1,360,000 have been struck by bombs or set on fire; 360,000 have entirely disappeared, and the other million have been partially destroyed. The work of rebuilding will be very slow because of the shortage of building material and equipment. Of our agricultural buildings, 330,000 have no roofs left, and 96,000 farms have been completely destroyed. The peasants nevertheless have returned to their homes and are struggling to continue their work, but, unfortunately, they cannot proceed normally until we have cleared the millions of mines which cover 370,000 hectares of France. Only 6,000,000 mines have as yet been removed.

Over 3,700 kilometers of railways, 5,200 kilometers of canals, and large areas of docks have been blown up and destroyed. Similarly, 6,000 bridges were blown up. We have now only 2,800 locomotives out of 16,000 which existed before the war; 142,000 railway trucks out of 478,000; 6,247 passenger carriages out of 375,000; 6,425 barges out of 12,640; 600,000 motorcars out of 1,800,000, and 180,000 lorries out of 480,000. But the figures which show our losses in those respects by no means represent all that France has suffered.

We must think also of the large numbers of prisoners of war and deported workers. We think of those who died in concentration camps, and we are moved to pity by the suffering of so many French people. We think with shame of those guilty of crimes against liberty and humanity, and of treason against their country. Our children have suffered in health and been retarded in development by lack of proper food. Nevertheless, our people have shown themselves ready to make every sacrifice in resistance against the oppressor, and there is therefore on the other side of the picture a very strong confidence in recovery and restoration in France and an ardent wish to take part in international work. (No. 22, pp. 131, 132.)

Mr. CINGOLANI (interpretation) (Government delegate, Italy)—* * * There are 8,500,000 of our people who still have no roof to cover them during the coming winter. The generous help of UNRRA and other organizations, with the assistance of the Holy See and the Italian Government, has enabled a certain amount of clothing to be distributed to our population. The Italian democratic organizations and the workers' organizations are doing all they can to make our situation known and to deal with our problems.

In the case of Italy we are very short of raw materials and, in addition, the destruction of agricultural land and the drought of recent years have created a great shortage of wheat. The transport system has been disorganized and our mercantile marine has been reduced from over 3,350,000 tons to about 350,000 tons, of which only 50,000 tons can be used for supplying food for the country. Without a mercantile marine we cannot obtain coal, petroleum, cellulose, or the other articles which we require to restore our industry, and particularly the artificial silk industry, for which we have received large orders from the United States.

As to land transport, we have only a tenth of what we had before the war. Only a small percentage of our railways are in running order. This applies both to the rolling stock and to the permanent ways. Moreover, it is necessary to reconstruct some 13,000 kilometers of roads and bridges and to rebuild a number of buildings and installations, and also to repair our electrical system. By intensive work we shall, by the end of 1946, be able to restore to use 70 percent of our rolling stock. The work of reconstructing our railways will cost 120 milliard lire and provide employment for 118,000 workers.

But for our reconstruction work we need 175,000 tons of coal and 171,000 of steel. If we had more coal, we could in 1945-46 produce a million tons of steel ourselves. We also need about half a million litres of petrol. If we could intensify our reconstruction work, for which the Allies have given or promised us their generous assistance, that would go far toward relieving unemployment in our country. (No. 15, pp. 102, 103.)

Mr. MANNIO (interpretation) (Government delegate, Finland). During the war Finland has been placed in a splendid position. This is not the place to try to describe that situation, but I should like to give you a general survey of the development of social conditions in my country during the last 6 years, and indicate briefly the measures taken for social reconstruction. I consider this a duty to those interested in my country, particularly because the publications of the International Labor Office have not been able to give much information on what happened here, in this little corner of Europe.

The destruction due to the war has been heavy in Finland. During the war, with a population of less than 4,000,000 and with a total annual increase in the masculine sex of approximately 40,000, we have lost 100,000 young men. Our territorial losses and the devastation caused by the Germans in the north of the country means a reduction of 15 percent of all our economic resources. Yet at this time we have not only to repair the consequences of the war, but also to create new possibilities of assistance for half a million evacuees, and in addition 200,000 people who have lost everything in the north of the country. (No. 24, p. 142.)

Model Aeronautics and the War Effort

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1946

Mr. RANDOLPH. Mr. Speaker, years before World War II brought its bitter, savage destruction on all mankind,

America's youth was preparing itself. So effective was this preparation that the brevity with which we ruled the air left our foes gasping. This preparation was not an organized, regimented program; it was accomplished, rather, in the democratic, American way.

Boys mowed lawns, carried newspaper routes, shoveled snow from sidewalks, and did those thousand and one different jobs with which boys earn themselves a few pennies, in order to buy the supplies necessary for the construction of frail contrivances of wood and paper with which they conquered the air. Older people smiled condescendingly at their "playing," but the records of these boys in the cockpits of our fighters and bombers, in the maintenance depots, on the assembly lines and on the drafting boards speak for themselves. While they were playing they were learning, and we now know that what they learned, they learned well.

The United States Civil Service Commission made recorded flights of an applicant's model airplane a necessary prerequisite for appointment to certain positions at the National Advisory Committee for Aeronautics laboratory at Langley Field, Va. It has also been recognized by personnel managers at the plants of aircraft manufacturers, who unanimously answered in a survey conducted upon the subject that model builders completed training courses more quickly, and by and large proved to be more efficient workers. It is also a known fact that the names of model builders are more apt to appear among the highest ranking students in flight training courses for the military services, and those familiar with the science of model aeronautics will recognize many a well-known name among those of our air heroes.

Even those too young to step from the ranks of the model builders into those of the armed forces, or into those of the vast industrial army which proved its efficiency during the war years, saw their opportunity to help. They utilized their self-trained skill in the production of thousands and thousands of identification models so necessary in many training courses.

I desire to mention some specific examples of American model builders who contributed in such large measure to the war effort. Dr. Walter Good and his brother, William Good, of Kalamazoo, Mich., among the early experimenters in radio controlled model aircraft, who won the national championship in this category in 1938, 1939, and 1940, were among those responsible for the development of the radio controlled target planes used to train our antiaircraft gunners. This development was to a large extent under the guidance of Reginald Denny, familiar to motion-picture patrons, but more familiar to those in the model world as investor, miniature engine producer, and early radio control experimenter.

Others on the staff of QST doing this valuable work were Chester Lanzo, of Cleveland, Ohio, Ross Hull, and Clinton de Soto. Dr. Walter Good also did contributory work in the development of the proximity, or VT, fuze for radar controlled missiles. William Good has been engaged in research in the field of airborne radar, and Chester Lanzo is now an electronics engineer for the National Advisory Committee for Aeronautics. Important contributions in the field of aerodynamics have been made by W. Hewitt Phillips, of Boston, Massachusetts, who in recognition of his fine work at the Langley Field laboratory of the National Advisory Committee for Aeronautics was given the Lawrence Sperry Award by the Institute of the Aeronautical Sciences for the most significant contribution to aeronautics by a young man during 1944. The efforts of Roy Marquardt, in aerodynamics on the west coast, are also noteworthy.

Numerous reports have been made of entire groups, banded together prior to the war as model airplane clubs, in which all have distinguished themselves in the air. Among the more prominent are the Skyscrapers, of Brooklyn, N. Y., and the Balsa Butchers, of Cleveland, Ohio.

These are but a few of the individuals and groups who helped; the sum total of all individual contributions is staggering, and its high value is due solely to the knowledge assimilated while the contributors were engaged in the design, construction, and flying of model aircraft.

International competition, deferred during the war, is to be resumed on a larger scale, and there is no doubt but that it will prove to be of great value in the development of amicable relations with the people of other nations. The Academy of Model Aeronautics, a division of the National Aeronautic Association, is the governing body for organized competition. It is composed of the model builders themselves. Under its fostering hand children in ever-increasing numbers will develop by means of this sport-science into the designers and fliers of the aircraft of the future, and into substantial citizens who will do all in their power to keep America first in the air.

Neglected Statues of Public Men in Washington

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. WEICHEL. Mr. Speaker, under leave to extend my remarks, I want to say that I join with the Secretary of the Interior in deploring the neglected and spattered condition of the Statue of General McPherson here in Washington. He was one of the distinguished generals of the Civil War and a native of my district. He was born near Fremont, Ohio, and he now lies buried in the cemetery which bears his name at Clyde, Ohio, alongside of which runs the great McPherson Highway. And there is included herewith the story of the neglected condition of the statues of famous men throughout the city of Washington:

[From the Washington Post of January 17, 1946]

PIGEONS GIVING ICKES THE BIRD ON STATUES

Harold Ickes has been out-curmudgeoned.

The indefatigable Interior Secretary, it was learned on good authority yesterday, has bowed to the strength of Washington's pigeon population. And he can't scare that off with a sour look.

It all came out in a letter from Ickes to a reporter for the Buffalo Evening News, who had written in behalf of the somewhat neglected and spattered statue of General McPherson. The writer, among other things, wanted to know whether it was Ickes' job or that of Commissioner John Russell Young to look out for the general, who stands on Fifteenth Street between I and K.

The Interior Secretary admitted the task was his, and what's more, he pointed out he is charged by law with performing a similar service for all of the brass of our past wars which adorns the National Capital Parks—not to mention William Jennings Bryan.

Worst of it all, Ickes said, is that he has been unable to devise any effective defense against the attacks of the winged vandals. Our mopping up operations, he said, have been marked by temporary—but only very temporary—successes.

He held out hope, however, that the post-war period may find this department able to extend ablutionary services to the statues semiannually, as was the practice prior to Pearl Harbor.

Anyway, he said, he is anything but sentimental about pigeons—except as a table delicacy.

Mr. Speaker, I trust that those who are in charge of our national parks will now give care and attention to the statues commemorating the great men who have rendered distinguished service to our country.

Shall America Be a Closed Country?

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Max Lerner from the New York newspaper PM of December 26, 1945:

SHALL AMERICA BE A CLOSED COUNTRY?

I have been turning over in my mind the meaning of President Truman's statement on speeding the admisison of refugees into the U. S. A.

The real wealth of nations is human life. We recognize that fact when we lament our war casualties, or when we speak of our young people as the base of America's future.

We recognize that our human resources count far more than our natural resources. Put it this way: the natural resources are for human beings, and they can be transmuted into wealth only by human beings. But if this is true about those who are already here as Americans, why is it not just as true about those who want desperately to come here and grow into Americans? Is their human quality—or their human need—any less than ours? Is the human contribution

they are ready to make to us any less than the human contribution our own fathers and grandfathers and great-grandfathers were ready to make when they sought entrance into this country?

President Truman has asked three of his department heads and three other agencies "to expedite the quota immigration of displaced persons and refugees from Europe to the United States." He does this "to reduce human suffering," "to set an example to the rest of the world," and in the name of "common decency and the fundamental comradeship of all human beings."

Fine. Within the limits he has set for himself, the President has given us one of the better state papers of his administration. It is, to be sure, very gingerly in its language. It hedges itself about with all sorts of apologies, denials, reassurances—no doubt to keep from rousing the wolves in Congress and the press. But taken as a whole it is a courageous and affirmative act—the first effort (along with F. D. R.'s Oswego directive) to thaw the frost that has settled on the American heart ever since 1924 in the matter of immigration exclusion. It is a good augury for what seems to be the President's reawakened liberalism.

HUNGER FOR DEMOCRACY

The President acted within his own administrative powers, and needs no authorization from Congress. The limit of 3,900 refugees a month (many of them will be children) falls within the existing quotas for Central and Balkan Europe, which are the states to which the refugees now in the American zone in Germany belong. What the President is doing is to cut the heartbreaking red tape and untangle the difficulties about visas, health examinations, and transport.

Senator CHARLES O. ANDREWS (Democrat, Florida), of the Senate Immigration Committee, seems worried in his sensitive senatorial mind as to whether these people will be "consecrated to our Constitution and our form of government." How ironic that he should express his fear about exactly this group. Someone ought to tell the Senator that these families are the victims of Hitler's racist ideas, that their homes and lives were broken by fascism, and that their hunger for a democratic way of life is accordingly even greater than his own.

Some may say about these people: Why don't they go home? The answer is that they have no homes which will receive them. I have seen a detailed report of the Jewish refugees who are in the American occupation zone in Germany. Very few of them are German—for Hitler quite literally wiped the Jews out of Germany, made Germany Judenfrei. Nor are they in the strict sense DP's—"displaced persons." They are not nationals of other countries whom the Nazis imprisoned in Germany under forced labor, waiting to go back to their native hearths.

They are Jews from Poland, Rumania, Hungary, who have tried to go home and have found no homes there, or know it is hopeless to try. Many of them want to go to Palestine, which will give them a home; but the British admit only the merest trickle, while an Anglo-American commission of inquiry which has been months in forming will now spend four more months inquiring. Many of them have looked longingly to these shores, but until now there has been no response from us. Like another Jewish Child whose birth almost 2,000 years ago made world history, their children have "no crib for their bed."

TRADITION OF ASYLUM

There is a great American tradition of granting asylum to the victims of political and racial persecution abroad. After the First World War our antiradical hysteria broke this tradition. We have a chance now to revive it. I do not mean only for those who have been exposed to Hitler's terror in the past decade, and more. For that terror is not yet over; let us not forget that.

Take Poland as an instance. When it was liberated, tens of thousands of Polish Jews found their way back to their former homes, only to be greeted by an anti-Semitic terrorism on the part of the Poles who coveted their farms and stores and houses and jobs, and who had been all-too-willing pupils of the Nazis. This terrorism is even more devastating to the spirit than was the Nazi terrorism, for it comes so cruelly just when its victims thought that at least they were freed from the Nazi grip and could stand up as human beings. Let it be said to the credit of the present Polish Government that it is trying to fight this terror, though unavailingly. But the need of asylum is a crying one.

I hope, however, that President Truman will not stop with his present statement and will go on in more militant and affirmative terms in future recommendations about immigration. He evidently fears—and has good reason to fear—that the congressional primitives will introduce bills to cut the present quotas in half. He asks them earnestly not to But what he—and we also, the people—must ask them instead is to liberalize the quotas and to end the basically racist philosophy behind the quota system.

For the real philosophy that must underlie our immigration policy is not racism, as the congressional primitives want it; nor even tolerance and pity and humanitarianism, as the President and the congressional liberals want it. The real philosophy is the premise with which I started this piece: That the wealth of America lies in its people. That the value of human beings as an enrichment to their adopted country has nothing to do with their color or their religion or their country of origin. That the greatness of America is the greatness of many streams of heredity and culture flowing into a great central ocean of tendency. That we have been from the beginning—to use the grand phrase from Walt Whitman which Louis Adamic has adopted as the title of his current book—A Nation of Nations.

This should be so obvious to everyone who has studied American history that it should scarcely need restating. Yet what we need most right now is, in the famous phrase of Justice Holmes, "education in the obvious." For a generation the alliance of reactionary labor pressures and a growing racist philosophy has shut the gates of America almost completely against further accessions from abroad to American life and culture. For the few we have admitted we have set a quota system heavily weighted in favor of the Nordic and against the non-Nordic immigrants—whatever those nonsense-terms may mean.

It is time to make hash of this Nordic nonsense. And it is time to assert again that America cannot be at the same time a closed country and a great country.

MAX LERNER.

Tidewater Oil

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1946

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shreveport (La.) Times of January 20, 1946:

TIDEWATER OIL

The Attorney General of the United States, acting on the urging of various branches of Washington bureaucracy, has filed a Federal suit against the State of California in an effort to have the tidewater-oil lands of the Pacific coast, that is, the mineral rights beneath the offshore waters, declared to be Federal property. The suit might just as well have been filed against the State of Louisiana. Louisiana has more than 6,000 miles of ocean or gulf coastland, including inlets, and the oil rights beneath the waters on those coast lines are of inestimable value.

The issue is whether California owns the oil rights under its offshore waters—and whether Louisiana owns the oil rights under its offshore waters and whether every State in the United States owns such rights for such waters—or whether those mineral rights belong to the Federal Government in Washington. In other words, the issue is whether bureaucratic agencies in Washington shall take over, in socialistic and communistic manner, the rights and properties and revenues of the States, or whether those rights and properties and revenues shall remain within the individual States in accordance with the spirit of the Constitution and the States' rights, as sovereigns, for which Americans have shed their blood in more than one war. The international principles of the rights of States in the sense of States as nations, for which World Wars I and II were fought, are the same basic principles for which the Civil War was fought. In other words, the tidewater oil issue is an issue of sacred principles of States, with the Federal bureaucracy seeking to destroy those principles.

The right of California and Louisiana and any other State to the minerals beneath the offshore waters of their areas has been fully recognized by the House of Representatives. It has passed a resolution whereby the Federal Government would surrender whatever claim it may have, in theory, to mineral rights in lands beneath waters off the coasts of the United States. There was no outstanding opposition to the resolution in the House when it was under discussion. It was accepted as built in equity and fairness.

But, after it was passed—and let it be clear that this action came after the House passed its resolution—the United States Attorney General filed his suit against the State of California's rights to minerals beneath the coastal waters, knowing, of course, that this suit would tie up drilling developments in American coastal areas totaling thousands of miles of shore line.

Now it is stated that when the House resolution reaches discussion in the Senate Judiciary Committee, before which it now lies, there will be tremendous opposition from the Government, which means from the present political administration of and under Mr. Truman. Mr. Truman never has uttered a word about the tidewater-oil problem, but it is time that he should do so for the whole case is simply one of the bureaucrats trying to take over the rights and prerogatives of States.

The oil off the shores of a State belong to that State just as the shrimp or oysters off the shores of a State come under the State's jurisdiction. The position of Louisiana in this whole situation is ominous. Shell, sulfur, gas, and oil severance taxes all are involved. If the Federal Government should win in the highest courts this attempt to intrude into the natural resources of States, the payments involved might deal not only with the present and the future, but they might be retroactive as well.

But, aside from the tremendous sums of money involved, there is the great issue of State's rights. Those rights were fundamental in all the Constitution of the United States. They are fundamental in all freedom and liberty under a republican form of government which seeks the ideals of democracy.

The effort of the Federal Government now is not simply to gain financial benefit for

the Washington Treasury, but to place the rights of centralized Federal bureaucrats over the individual rights of States. For that reason this suit by the Government must be fought to a finish by the States. Louisiana is fighting it. So is California. So should every other State with a coast line.

Secrecy and the Atomic Bomb

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 22, 1946

Mr. COFFEE. Mr. Speaker, the Capital Press of Salem, Oreg., is a progressive weekly newspaper. In its columns there appeared recently an editorial discussing attempts to impose secrecy on atomic bomb developments. The scientists of America are almost unanimous in their insistence that we do not attempt to sit on discoveries and explorations in the field of atomic energy. Many militarists, however, take the view that somehow we can prevent other nations from learning anything about the atomic bomb. In this editorial, the writer tells of the danger of attempting to maintain secrecy. The editorial is as follows:

[From the Salem (Oreg.) Capital Press, of November 30, 1945]

SECRECY

Albert Einstein, the world's greatest mathematician, is strongly in favor of a world government being organized by the three great powers—England, Russia, and the United States—made especially important now to safeguard the use of the atomic bomb. In this connection he says:

"I do not believe that the secret of the atomic bomb should be given to the United Nations Organization. I do not believe that it should be given to the Soviet Union. * * * The secret of the bomb should be committed to a world government, and the United States should immediately announce its readiness to give it to a world government. This government should be founded by the United States, the Soviet Union, and Great Britain—the only three powers with great military strength. All three of them should commit to this world government all of their military strength.***

"Since the United States and Great Britain have the secret of the atomic bomb and the Soviet Union does not, they should invite the Soviet Union to prepare and present the first draft of a constitution for the proposed world government. That action should help to dispel the distrust which the Russians already feel because the bomb is being kept a secret—chiefly to prevent their having it. * * *

"While persons who take only a step at a time may think they are approaching peace, they actually are contributing, by their slow pace, to the coming of war. We have no time to spend in this way. If war is to be averted, it must be done quickly."

In this matter, as in mathematics, Einstein seems to be about two generations ahead of the great minds of the rest of the world. He really wants peace to stay with us, while the others indicate that they merely hope that when the world is blown apart they will be the blowers rather than the blowees. They prate of peace, but do everything to incite war by holding a monstrous threat over the heads of those whom they pretend to respect and cherish, but whom they secretly hate.

Frankly, this paper does not believe that England and the United States are concealing anything from Russia. They merely think they are. Russian scientists are second to none. They probably started where the Germans left off when the invasion of Normandy interrupted their final completion of the atomic bomb. It is an even bet that the Russians right now know as much about it as we do, and could right now meet us more than half-way in the production and use of atomic bombs. They have all of the materials and the manpower to do it—and it would not cost them $2,000,000,000. This is likewise the opinion of our own scientists, who have virtually said as much and have earnestly warned against our silly and grandiose declarations about concealing it. Russia is foxy and suspicious, and has a right to be. Without their realizing it, she has placed England and the United States on the spot, and the spectacle is not comforting Their present attitude cannot fail to confirm Russia's suspicions that, given the chance to make it stick, they would be as open in their sinister antagonism to Russia as they were during the years after the First World War—until Russia stopped the Germans. So England and the United States stand in humilitating position before the eyes of a peace-hungry world looking for fairness and sincerity between nations. Bland declarations of friendship are not very convincing when made with a club in hand.

Professor Einstein has offered a constructive suggestion, and one which gives the United States and England a chance to "save face" in the ridiculous position in which they have placed themselves. The recent conference between the United States, England, and Canada, with Russia still left out, made it worse. The world cannot be deceived by soft music from the orchestra while murder is being enacted on the stage. England and the United States have a chance to square themselves, and had better take it. They may not have another.

Who Supports FEPC Legislation?

EXTENSION OF REMARKS
OF
HON. JOHN S. WOOD
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. WOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following appeal issued by the Communist Party of Jacksonville, Fla.:

AN APPEAL TO THE NEGRO PEOPLE: REGISTER DEMOCRAT

Register Democrat because the Democratic Party is the party in power in Florida. Register Democratic in order to improve conditions for workers, Negro and white. Former registered Republicans can change to Democratic now.

Register Democrat because big landowners and big businesses are trying to keep your standard of living down. Register Democratic so they can't lower it even further.

Register Democratic because your registration is a protest against the lynch murder of two Negroes in Florida. Mr. Jesse James Payne, of Madison County, and Mr. Sam MacFadden, of Suwannee County, will not have died in vain if you register Democratic.

Register Democrat because you can then vote for candidates who will support the 65-cent minimum wage bill. The South desperately needs 65-cent bottom wages for protection of both white and Negro families.

Register Democrat because you can then give real support to the bill for a Fair Employment Practice Committee, now being sabotaged by Congress. (EMORY PRICE, Congressman "representing" the Jacksonville area, is opposed to the FEPC, as well as to most other progressive legislation).

Register Democrat because today there is developing in America a movement for a third party made up of veterans, sharecroppers, trade unionists, and the Negro people. And because this alliance can only come about if the southern Negro becomes an organized group of voters, you should:

Register Democratic and vote in the 1946 Democratic primaries.

The Communist Party is proud of Benjamin J. Davis, who is a son of the good old South and a great Negro Communist leader. He was recently reelected by Negro and white workers to the City Council of New York City. We are the party that led the struggle to save the Scottsboro boys from death. We always have and always will fight segregation and discrimination. So follow us to the county courthouse and register for the Democratic primaries.

Don't wait. Register now.

For more information on the Communist Party, mail us a letter with your name and address inside.

COMMUNIST PARTY OF JACKSONVILLE.
WEST BAY STATION.

Selective-Service Awards

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an address which I delivered at the presentation of the Bronze Selective Service Medals and certificates of merit to the members of the draft boards, the appeal boards, and the appeal agents of the city of Lawrence, Mass., which took place in the city hall, on Monday evening, January 21, 1946, at which time Mayor James P. Meehan presented personally the awards:

Tonight, our community honors the men on the home front who performed one of the most urgent and difficult tasks of World War 2. Theirs was hardly a popular job and never an easy one. Confronted with thousands of individual cases, each requiring the most careful scrutiny and absolute honesty, they had to make decisions which few men would care to make. Our Nation was in greater peril than at any time in its history We had no trained men to defend our way of life against the sudden assault of ruthless aggression. In this hour of emergency, our Nation had to raise an Army, a Navy, an Air Corps from its free citizens. And so the Selective-Service System was established and thousands of mature, dependable men in every city and village in the country, were called upon to administer this great responsibility. There was no glamor to these jobs and no financial inducement. In the strict and most difficult sense of the word, it was a call to public service. No man cares to send another man off to fight and suffer and die for others. But even more than this, no American will bend the knee to any force which threatens the peace, security, and

progress which is our faith. If put to the test, we will not buy life at the price of dishonor.

And so we had to send forth the young and the strong to destroy the evil that endangered everything we had come to believe in. Our freedom must vindicate itself by measuring up to our responsibilities. The American family was faced with a deadly challenge. "Fascism and democracy cannot live side by side," our enemies shouted. "One or the other must go. Reason must die and with it that weak and confused and superficial myth which you call democracy. We have the tanks and the dive bombers and propaganda and murder factories. And what have you got to stand up to our power? A few soldiers drilling with broomsticks and behind them, a mob of 130,000,000 civilians, each one blinded by greed and deaf to all else. Democracy, you belong to the past. We shall see that you are interred there and your death will come through forced labor, helping us even as you die."

That's what our enemies believed and planned at the height of their material power. At that moment, what else could we put in the way of their mechanized armies except human beings who are easily crushed by steel? And there, David before Goliath, it might have ended except that we believed that a human being was not simply a beast of burden, to be worked to an early death. We knew that a human being has a mind and a soul and that the life of these give life to his body and continue even beyond. And as danger awakens a man from his complacency, our senses became sharper and clearer. The physical being of America was immediately threatened, but more than this, the mind and soul which gave it being, were being threatened. Kill these, and America can be taken as easily as an over-ripe plum. Our enemies knew this to be the issue. They tried to confuse and divide us so that our faith would be shaken and we would be defeated in mind and soul even before their armies paraded through our land and passed out the license numbers of our slavery.

In this psychological warfare they were successful but not quite successful enough. As a free people with a free press, accustomed to seeing all sides of a question before we make up our minds, we considered this wave of the future. We tested it in the light of fact and performance and while we did so, our enemies believed that it was a sign of our indecision. They did not know that we were separating the chaff from the wheat, picking out the truth and rejecting the propaganda, and in this searching we were coming home like prodigal sons to the root-meaning of America. What we had neglected or forgotten was coming to life again.

The hour was dark and the issue was grave. Knowing that man does not live unto himself alone, we looked to those about us. The Jones family, across the street, suddenly took on a new meaning. They had lived there for several years, but except for an occasional "Hello," they had no meaning in our lives. And so it was with the Papparado family down the block, and the Sullivans, and the Cohens, and the others we knew by face or name alone. Thousands more were members of the community and we and they were related. And the question now was not just a matter of getting ahead as individuals but of surviving together. Suddenly we realized that our lives were tied in with theirs and under the stress of this need, cooperation was born.

To defend our way of life, we needed millions of men who were fit for the exacting demands of military service. And it had to be done in the American way without prejudice and without favoritism. The requirements of the armed services had to be met on a proportional basis, without weakening the schedules of our war industries. Within these physical and occupational limitations and that of dependency, all men must be treated as equals.

For the difficult task of deciding, under these rules, as to who should go and who should be deferred, you were chosen. From ancient times we remember how King Solomon and Pontius Pilate were faced with hard decisions. Either way, they stood to put themselves in wrong, so, being politicians, they straddled the issue. You could not. In accepting your responsibilities, you put yourselves out on a limb. Some men had to go to war, others had to stay home, and you had to point the finger. This required an unrecognized brand of heroism. Tonight, your Government seeks to remedy the oversight. Being a member of a draft board was nothing short of fighting a war of nerves and bearing up under much suspicion if not outright accusations. It was well that you understood the emotional tensions of the people whose loved ones were being called to war.

You took it in stride. You kept your judgment fair and honest. For the time came when you had to send your own flesh and blood, with the same impartiality with which you sent strangers. You were governed by one and only one consideration—all personal interests must be sacrificed for the public need. You gave your time, your effort, and devotion to the job at hand and allowed nothing to come between which might affect your judgment and your sense of duty. How well and faithfully you did that job is reflected in the respect accorded you by your fellow citizens. As the war went on and the casualty lists came in, there were no personal cries against you for you had built a reputation for fairness and integrity that was above criticism. You who had to send men and those who had to give their men were closer together than ever before. It was a community sacrifice which all of us shared in varying degrees. It will remain with us as a reminder of our citizen obligations in the years to come.

Second only to the men you chose and who vindicated your judgment, in a manner beyond my power to express, I like to think next of the Selective Service System and the way in which it proved itself to the Nation and to the world.

You, under the most trying conditions, put the theory of democracy to work. You demonstrated that there is nothing which a free people cannot accomplish in a fair and effective way. The knowledge of the valuable service you have given will be a satisfaction to you for all of your days. It does not belong to the past. It stands as an inspiration to the community, an example of the cooperation which can and will solve any challenge which the future may bring. It is living proof that democracy grows.

The Nation, through this community action, is proud to present these bronze selective-service medals and these certificates of merit. In the name of President Harry S. Truman and the American family, it is our privilege to honor the boards of Lawrence.

Well done, good and faithful servants of the people.

How Long Shall We Continue To Recognize the Franco Fascist Government of Spain?

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 22, 1946

Mr. COFFEE. Mr. Speaker, recently, in the St. Louis Star-Times of November 20, 1945, there appeared an interesting letter from a reader discussing Franco and world peace. It is expressive of views entertained by numerous American citizens. The letter is as follows:

FRANCO AND WORLD PEACE

EDITOR STAR-TIMES: The greatest problem confronting the peace of the world today is the making and use of the atomic bomb. Doubtless scientists of all advanced nations have been and are still working on its development, and in time will succeed.

If all advanced nations are to have the bomb, which one do we fear most? Definitely Germany. Germany lies defeated and her leading war criminals will be punished. Hitler is, no doubt, dead, but his soul goes marching on, a menace for ages to come. His followers cannot operate in Germany, but must find other fields.

Franco was a close collaborator of Hitler and is today the world's most dangerous despot. He no doubt would welcome an opportunity to become another Hitler, keeping in view the possibilities of the atomic bomb. There is nothing today to prevent German scientists from working in Spain under the protection of Franco. There lies the danger. What can be done? There is no danger from the common people of Spain. Franco and his despotism must be forever destroyed. True, nations have not the right to interfere with the internal affairs of others, but this involves the peace and safety of the whole civilized world and should be dealt with as such.

A resolution (H. Res. 312) has been introduced in the House of Representatives by Congressman JOHN M. COFFEE which calls for a complete diplomatic and commercial break with the Franco regime. This would show the way for other nations and go a long way toward breaking down the power of the Nazi-Falange government of Spain. The resolution should have the support of every liberty-loving citizen of this country.

A. P. MERIWETHER.

ST. JACOB, ILL.

Unilateral Action

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1946

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD I include therein an article by Sumner Welles in the Washington Post of January 23, 1946, entitled "Unilateral Action."

UNILATERAL ACTION

(By Sumner Welles)

A LATIN-AMERICAN POINT OF VIEW

The Inter-American Conference at Rio de Janeiro, called off last October by the unilateral action of the United States, is now scheduled to be held soon after March 15.

In accordance with the Act of Chapultepec, signed by all of the American republics a year ago, the conference wil consider the conclusion of a treaty for the maintenance of regional peace and security.

The Department of State has submitted to all of the other American governments, except Argentina, its proposal for a military defense treaty.

The United States project differs fundamentally from the commitments embodied in the Act of Chapultepec.

The Act of Chapultepec provided that all the governments of the American republics shall consider the conclusion of such a treaty. Its provisions specifically envisaged the inclusion of Argentina.

The Act of Chapultepec further charges that the proposed treaty shall embody these principles:

"First. That all sovereign states are juridically equal amongst themselves.

"Second. That every State has the right to the respect of its individuality and independence on the part of the other members of the international community."

These stipulations are conspicuously lacking in the draft proposed by the Department of State.

Mexico, Brazil, and Ecuador have now also submitted their own treaty projects. They have sent their proposals to Argentina as well as to the other American republics. These 3 are among the 10 American republics which have already opposed the Uruguayan recommendation for intervention in the internal affairs of the sovereign American nations which was so promptly sponsored by the Department of State.

I have just received a letter from a prominent official of a great Latin-American republic, which is not Argentina. This official is one of the ablest of the younger generation of Latin-American statesmen. He has long been a firm friend of the United States as well as an enthusiastic supporter of the good-neighbor policy.

He writes:

"You will surely remember that during the San Francisco Conference, through a formal agreement entered into with the Latin-American delegates by former Secretary of State Stettinius, the Government of the United States promised to support a multilateral treaty covering the entire inter-American system as set forth in the Act of Chapultepec.

"That was the origin of the initiative for convoking a conference at Rio de Janeiro.

"The Department of State has now made a wholly different proposal. The Government of the United States has announced that it favors the conclusion of a treaty which does not embody the inter-American system but which will be limited solely to a military alliance for the defense of the continent.

"I must confess to you that this change of front is interpreted as a failure to comply with a promise made. It is regarded as a demonstration that the policy of the good neighbor is being unequivocally scrapped, and that at the same time the inter-American system itself is being abandoned.

"But even more than that, the Government of the United States has sent its draft for the military alliance which it desires to secure in Rio de Janeiro to all of the Latin-American governments with the exception of the Argentine Government.

"The impression which this has created in Latin-American diplomatic circles is concrete. It can be set forth in the following way:

"'1. The United States has proposed a treaty which is different and very much more limited than that which it had agreed upon;

"'2. By such action the United States is plainly abandoning the inter-American system;

"'3. Even in the negotiation of the treaty and prior to the Rio de Janeiro Conference, the United States is commencing by excluding—solely of its own sweet will, without any prior consultation of any kind, and without the consent of the other countries—one of the most important nations of the hemisphere.'

"By a curious coincidence the Government of Panama has now taken the initiative in inviting the other governments of America to break diplomatic relations with Nicaragua, Honduras, and Santo Domingo. This initiative, in my judgment, is intended to create a precedent for the case of Argentina. But this involves the same dangerous procedure, the procedure of seeking the exclusion from the inter-American system of nations and governments without unanimous consent, and by the sole action of a group of countries which, whether justifiably or unjustifiably, are regarded by the public as particularly susceptible to the influence of the Department of State."

These views are those of an objective and friendly Latin-American official. They deserve the very careful thought of all of us who regard inter-American solidarity as essential to the security of the Western Hemisphere.

The Department of State continues to insist that unilateral action is abhorrent to it. Yet simultaneously it resorts to unilateral action by excluding Argentina from the consideration of its inter-American treaty project.

It proclaims that the doctrine of nonintervention is "fundamental and will continue." And at the same time, the Department of State publicly asserts over the radio that intervention is all right, provided "a substantial number" of the American Republics go along.

The signs of the rapid disintegration of the inter-American system are apparent to all who are willing to see them. If there were some non-American power or influence which desired to undermine the present world influence of the United States by destroying the solidarity of the Western Hemisphere, it could not have done a better job than that accomplished by the Department of State.

Rt. Rev. Edmund D. Daly

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article which appeared in the Pilot, Boston, Mass., on January 12, 1946:

MEET YOUR PASTOR

(By Bill McMorrow)

On March 17, 1945, feast day of the patron saint of the parish, St. Patrick's in South Lawrence celebrated its diamond jubilee, rounding out 75 glorious years of Catholic history in this great industrial community. The tradition associated with St. Patrick's through the years is, of course, no secret with Catholics of our diocese, for each in a long line of illustrious pastors has done much to spread the fame of this grand old parish. Today's subject, Rt. Rev. Edmund D. Daly, the beloved pastor, is no exception, for in his own quiet way he has endeared himself to all who have known him during the 15 years of his pastorate.

Born and raised in Newton Upper Falls, Monsignor Daly was educated in the Newton schools, Boston College, class of '99, and St. John's Seminary, Brighton. Ordained to the priesthood at the Cathedral in Boston by Bishop Brady on December 18, 1903, he was immediately assigned as curate to the Blessed Sacrament Parish, Jamaica Plain, with Monsignor Connolly. This proved to be of a permanent nature, for here he spent the next quarter century completely wrapped up in his priestly duties, winning friends at every turn. In 1927 he was appointed pastor of St. Paul's, Wellesley, and remained there until May of 1931 at which time he was transferred to Lawrence to take over the reins of this large and well-known parish—St. Patrick's.

GOTHIC EDIFICE

The church here is a most beautiful edifice, but a moment's walk from the Lawrence depot of the Boston & Maine Railroad. The towering spire may be seen for miles, which, by the way, proved most beneficial to your correspondent, who, to this time, had never visited the city of Lawrence. The original church of St. Patrick's was built by Rev. William Orr, and on March 17, 1870 it was blessed. The present building, large and imposing and in Gothic style, was dedicated by Monsignor McManus on June 17, 1894, and stands today on par with any church in the diocese an impressive house of God.

Both altars are gems of construction, beautifully decorated. The stained glass windows, the different stations of the cross, the side altars of the Sacred Heart and Our Lady of Perpetual Help, the statues of the saints, and the rare altar rail in the basement, with the figures of the Angels carved thereon, standing as two sentinels, all blend to create a truly Catholic atmosphere where the parishioners may worship Almighty God, and discover comfort and satisfaction in His presence.

ACTIVE SODALITY

Catholic Action is apparently the watchword at St. Patrick's, and led by the Holy Name Society, parish activities are on an all-time high plane. Rev. William E. Mulhane is the spiritual director of the Holy Name Society, which on December 9, enrolled 1,000 men into its ranks. Think of it—1,000 Catholic men receiving Holy Communion in a body, and later being received into the society. What a tremendous response to Archbishop Cushing's request that every Catholic man be a Holy Name man, and what a tribute to Monsignor Daly and St. Patrick's Parish.

The Holy Family Sodality, directed by Rev. Edward T. Dunne, is another outstanding group, and the records of the parish reveal their great support of charities and higher education for the children of the parish. Each year, I was told, this sodality offers a scholarship to Central Catholic High School to a deserving student of the boys' class, and a similar award to Emmanuel College for one of the high school girls. This program has attracted widespread interest among the pupils, and is certainly worthy of duplication in every parish in the diocese. Father Dunne is also county director of the Scouts, and at St. Patrick's, three active troops of Boy Scouts, and two of Girl Scouts play an important role in the parish.

LEGION OF MARY

Rev. Michael J. Barry directs the Legion of Mary, the Sunday school for public-school pupils, 350 strong, and the Young Ladies' Sodality, rounding out a complete program of parish functions for every member of the family.

Rev. George P. Gallivan, a former curate here, who has been in the Army as chaplain with the late General Patton's Third Army, is expected home in the very near future. The welcome mat is out for this popular curate and Monsignor Daly and his parishioners look forward to Father Gallivan's return with keen anticipation for he has always been a popular figure here.

"The parish is distinguished by two outstanding charitable organizations," Monsignor Daly informed me, "and St. Patrick's Charitable Aid Society which is 50 years old, and the St. Vincent de Paul Conference, adequately care for the parish needs in this direction."

St. Patrick's school system, with grammar grades for both boys and girls, and the girls' high school, directed by the Sisters of Charity, Halifax, is, indeed, the pastor's pride, and rightfully so. Here again the value of paro-

chial education for the little ones is forcefully brought out, and the records of the graduates must be a source of great satisfaction not only to the pastor, but to the Sisters who labor so willingly, as well. While at St. Patrick's, it was my privilege to visit the convent and to meet Sister Mary Albert, my former teacher at St. Margaret's, whose patience and kindness will ever be a happy memory of mine. It was Sister who pointed out the annual high light, the May procession, in honor of Our Blessed Mother, a regular fixture at St. Patrick's, one the children look forward to with pleasure and joy, because in their own childish way they may pay homage to Our Heavenly Mother in this public demonstration.

SCHOOL SYSTEM

"Many vocations to the priesthood and religious life are discovered in the parish," Monsignor Daly said, "and at the moment the Maryknoll Order seems to be a prime favorite with the boys and girls who anticipate entering the priesthood or the convent." This appears to be just one more indication that our parochial schools are cradles of Catholicity for future priests and nuns.

Named domestic prelate by Pope Pius XII on December 17, 1944, Monsignor Daly is a quiet and soft spoken man, cordial and sincere. Enthusiastic about his parish societies and sodalities, particularly those of a charitable nature, he delights in St. Patrick's part in the recent Bon Secours Hospital drive in which Archbishop Cushing himself was so active, and to the archbishop's frequent visits, the complete support of Lawrence's leading paper, the Eagle-Tribune, and to the fact that every Catholic in Lawrence was conscious of the tremendous effort put forth, he attributes the success of this venture.

May the years ahead add prestige and glory to St. Patrick's history, and to the beloved pastor, Rt. Rev. Edmund D. Daly, a true exponent of the three Catholic virtues—faith, hope, and charity.

Paying the Fiddler Even When He Doesn't Make Music

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. HOFFMAN. Mr. Speaker, read the following editorial from today's Saturday Evening Post:

DON'T BLAME PETRILLO; HE'S BEEN SANCTIFIED

Columns and columns of diatribes have been directed at the portly figure of James Caesar Petrillo, whose latest ukase, as head of the American Federation of Musicians, forbade American radio listeners to hear musical programs from foreign countries. Petrillo, conceding that during the war it was a good idea to let in some foreign music in the interest of "good will and good relationships with other countries," insisted that we "should get back to normal as rapidly as possible"—normal to him meaning the rationing of music to the American public in the interest of a powerful and firmly entrenched labor union.

As remarked above, a lot of energy has been expended on abuse of Petrillo. This is wasted effort because Petrillo's only offense is to profit by the cowardice, poltroonery, and flabby brain work of politicians and judges, from executive labor boards, through Congress to the United States Supreme Court. He has made a profitable career out of making the American people look like 130,000,000 fatheads. He operates on the principle that the proprietor of a radio station or a restaurant who plays phonograph records for public hearing is under obligation to pay off certain "live musicians" who might be flogging fiddles for hire if mechanical devices had not displaced them. On this principle the trains ought to carry stand-in mule drivers in memory of the Erie Canal.

But is there any important dissent from this absurd and stultifying doctrine? Far from it. The principle has been recognized in thousands of arrangements with labor unions and has been embalmed into the law of the land by the Supreme Court of the United States in at least two leading cases. The basic idea is that almost any sort of racket becomes legal if it is adopted in a labor dispute. Thus restraints of trade by labor unions escape the antitrust laws if they can be shown to be part of a labor dispute. That's all you have to do.

It is easy to understand that a country threatened with a complete stoppage of its milk supply, or transportation, or electric-power transmission, might submit to such dictation. But the paradox is that one of the most relentless squeezes against the American public is operated by the purveyors of boogie woogie. Maybe a country which can't lay off the jive long enough to establish the right to buy its music canned, crated, or any way it likes, gets what it deserves when a Petrillo waves foreign music off the air. Anyway, it is inappropriate to blame Little Caesar for cashing in on our spinelessness.

Now that you have read it, what do you think of yourself and your Congressman and Senators?

On July 27, 1942, a bill was introduced by me to end Petrillo's graft, but my colleagues, in their wisdom and caution, have failed to give me effective support.

The great Interstate and Foreign Commerce Committee of the House is still considering—yes, considering—whether the Congress can and should make Petrillo behave.

The Truck Strike

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, seven States in the Middle West, namely, Missouri, Kansas, Nebraska, Iowa, Minnesota, North and South Dakota, have now been in the grip of a truck strike for a period of 10 weeks.

The truck operators in these States have refused to sign the horizontal contract offered by Daniel J. Tobin and ask for permission to state facts to justify their position, and the facts are, in part: That the general character of that country is one of such dense population and has few great industrial enterprises in the territory; consequently, a contract which is workable in the States of Ohio, Illinois, or Pennsylvania cannot be carried out in these seven Midwestern States. They have asked—and rightfully—for a differential. They have offered conclusive proof of the utter impossibility of the horizontal contract working in those areas.

During the war period 103 truckers in the Northwest States refused to sign Mr. Tobin's contract and gave as the reason the character of their country and asked for a differential. It was never granted. As a result, the drivers went on strike. The properties were taken over by the Office of Defense Transportation. At that time it was announced by the Government that in war the ability to pay on the part of an operator could not be a consideration. The Office of Defense Transportation took over the management of these companies, made the salary advances, and the vast number of them ran in the red under Government management to the extent that ODT had in many cases to advance funds to the owners of the truck lines.

On November 11, 1945, when the lines were returned to the owners, the owners were obliged to sign notes covering a 20-year period to pay back advances made by the ODT. According to the best authorities I can obtain, the striking drivers in these seven States desire to return to their jobs.

Under unanimous consent, I include here a letter just received from the Midwest Operators Association, who represent the seven States already mentioned:

SIOUX FALLS, S. DAK., *January 14, 1946.*
Representative CHARLES R. ROBERTSON,
Washington, D. C.

DEAR CONGRESSMAN ROBERTSON: While you were home you no doubt found that the 9-week-old truck strike was still in progress. Five thousand three hundred and seventeen over-the-road truck drivers are involved. An additional 40,000 clerks, office help, dock help, warehousemen, pick-up and delivery drivers, etc., have been thrown out of work. We operators have done everything possible in an attempt to settle this strike with the powerful Teamsters' Union. We have failed. We are as far from a solution today as we were the first week of the strike. Daniel J. Tobin stated that they were asking only $1.02 per hour. We offered 8-hour guarantee at $1.20 per hour for the over-the-road terminal drivers. They refused. M. Hoffa, their chairman, admitted that the contract would average nearly a 40-percent increase when all of the hidden conditions were enforced for work not performed.

One paragraph in the contract—Article IX reads as follows:

"The Employer shall not request nor instruct any employee to go through the picket line of a union nor to handle unfair goods."

It would appear from this paragraph that it is the intention of the Union to use the trucking industry to force employees of all business firms into the union.

Another paragraph reads as follows:

"This contract is approved as to form only by the International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America, and in doing so the international union assumes no liability whatsoever under this contract for the performance thereof or otherwise, and by such approval does not become a party to the agreement."

These are only two of the many impossible provisions in this contract.

Daniel J. Tobin has protested to the Secretary of Labor against the President appointing a fact-finding committee. We believe that every effort should be put forward to getting the President to appoint this committee and call the men back to work.

The Wilson employees in South Dakota have gone back to work because we have a labor law here in South Dakota that leaves it up to the employee as to whether or not he shall belong to a union. We feel confident

that if the drivers of other trucking companies in the seven-State area had the same opportunity that they would return to work immediately.

This is not a strike for wages particularly. It is a strike for control, one national contract, complete control of management, etc. A large percentage of the terminal-to-terminal drivers average $72 per week and the peddle runs average from $55 to $60 per week. Less than 5 percent of the truck drivers in the seven States belong to the teamsters' union and the wages being paid to these 5 percent will run from 20 to 40 percent above the other 95 percent of truck drivers.

Mr. Harry Janke, of Minot, N. Dak., who is one of our member operators, will do doubt call on you within a few days and my present plan is to be in Washington the middle of next week. I hope to have the opportunity to discuss the matter with you further if the President does not act in the meantime.

Hundreds of towns in this midwest area have been isolated and have no truck service because of this strike. Many towns do not have any rail lines. Embargoes have been placed on l. c. l. shipments at the Twin Cities, Chicago, St. Louis, Kansas City, Omaha, Sioux City, Des Moines, and Sioux Falls, S. Dak.; and many of these embargoes are still in force. Your people are being deprived of transportation. In my opinion, no public utilities should ever be allowed to discontinue service because of strikes.

I hope that you will be able to solve this strike problem and get these men back to work without delay.

Most sincerely,

MIDWEST OPERATORS ASSOCIATION,
WM. WILSON, *President.*

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the Northern Federation of Chambers of Commerce, in support of the great St. Lawrence seaway and power project:

Whereas the United States and Canada on March 19, 1941, signed an agreement to complete the Great Lakes-St. Lawrence seaway and power project; and

Whereas most of the construction work needed to complete this great development, the Nation's No. 1 postwar project, is to be undertaken in the International Rapids section of the St. Lawrence River in boundary waters of the State of New York and the Province of Ontario; and

Whereas the completion of the seaway will modernize an existing channel for commerce already improved for use by ocean cargo vessels over 90 percent of the distance from the head of the Great Lakes to the open sea; and

Whereas the dual purpose navigation and power project to be built in the International Rapids section will develop 2,200,000 horsepower of the cheapest electric power in the world, to be divided equally between the State of New York and the Province of Ontario; and

Whereas the State of New York in 1931, through the adoption of the Power Authority Act, by unanimous vote of the legislature, declared it to be the public policy of this State to develop the International Rapids section for both power and navigation, and authorized the power authority, as the accredited public agency of the State, to take over the ownership and operation of the St. Lawrence power project to be constructed in this State, upon assuming the construction costs thereof; and

Whereas the Legislature of the State of New York in March 1944 again declared by unanimous vote that New York State's power project should be completed to serve the postwar needs and interests of the people of this State; and

Whereas, President Truman and Governor Dewey in September 1945, by an exchange of telegrams reaffirmed their nonpartisan support of the development authorized by the United States-Canadian agreement of 1941 and specifically recommended the completion of the St. Lawrence seaway and the New York State power project under the terms of the Federal-State accord of February 7, 1933: Therefore, be it

Resolved, That we favor the approval of the United States-Canadian Agreement of 1941 and the prompt enactment of legislation to authorize completion of the St. Lawrence seaway and the New York State power project, in full conformance with the recommendations contained in the statements of President Truman and Governor Dewey, made public at the White House, September 27, 1945; and be it further

Resolved, That we who live in the St. Lawrence Valley and for years have seen the waste of its mighty resources declare the proposed project to be the greatest public improvement now available for postwar completion in any part of the world, and strongly favor its construction in order to provide tens of thousands of postwar jobs for returning veterans and displaced war workers, to promote the foreign trade and domestic commerce of all parts of the United States, and to furnish 4,000,000 industrial, commercial, and rural consumers in New York State with power and electricity at low rates which will permit increased use of electrical energy and electrical appliances; and be it further

Resolved, That we commend the nonpartisan support given to the St. Lawrence seaway and New York State power project by such outstanding leaders as Governors Roosevelt, Lehman, and Dewey, Senator WAGNER, President Truman, and all Presidents of the United States, regardless of party, since World War I; and be it further

Resolved, That copies of these resolutions be forwarded to the President of the United States, the Honorable Harry S. Truman; to the Governor of the State of New York, Hon. Thomas E. Dewey; to the senior Senator from the State of New York, Hon. ROBERT F. WAGNER; to the junior Senator from the State of New York, Hon. JAMES M. MEAD; and to Members of the New York delegation in the United States House of Representatives, together with a list of the civic organizations of northern New York represented at this conference.

ROLLIN NEWTON,
President, Northern Federation of Chambers of Commerce.
JOHN C. TULLOCH,
Secretary.

Terminal Leave Pay to Enlisted Men

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. BIEMILLER. Mr. Speaker, I wish to again urge prompt action on H. R. 4051, to grant terminal leave pay to enlisted men. Nothing rankles enlisted men more, and justly so, than our present policy of giving officers terminal leave pay and denying the same to enlisted men of all branches of the armed forces. This is rank discrimination, and I believe the Military Affairs Committee ought to report the bill to the floor at once so we can remedy this deplorable situation.

I wish to insert a recent editorial from the Milwaukee Journal dated January 6, 1946, commenting on the situation, as follows:

ENLISTED MEN GOT CHEATED

In the matter of terminal leaves for veterans quitting the service, there has been the most flagrant discrimination between commissioned officers and enlisted men.

Officers ready for demobilization are permitted to take terminal leaves, up to 120 days, figured on the basis of accumulated service leaves which they have not previously used. This is fair enough. It is like a civilian employee getting credit for vacations which he was unable to take because of the press of urgent duties. While the officer is still technically in the service and getting service pay, he is permitted to return to his home, don civilian clothes and take a job. At the end of his terminal leave, he gets his final discharge.

But enlisted men have not been given terminal leaves, nor pay in lieu of unused leaves. If they did not or could not take their leaves before they reached the separation center, they simply lost out. So there is no wonder that this has been a sore point with the returning enlisted veterans.

The complaints have reached Congress, and there are five bills now in the two Houses that would rectify the situation and eradicate such indefensible discrimination. They would provide for terminal leave, or pay in lieu of terminal leave, for enlisted men. But not one of the bills has yet reached the floor for action, and committees have shown no great enthusiasm for quick action.

The expense, of course, would be large. A Senate committee heard an estimate that the total would run to $2.000,0000,000 or more. That approximates the total yield of the Federal income tax in 1940, or about $60 for every family in the United States.

But if the sum total of expense seems huge and cannot be treated casually even in times of colossal Federal expenditures, it can be argued that a single additional week of war would have cost more. Or, if demobilization had been more orderly and less precipitate, which many observers feel might have been wiser, the additional pay to the servicemen might well have run beyond the two-billion mark.

Costly or not, the terminal leave bill only meets an obligation which must not be evaded, and from which there is no decent escape. It is in no sense a gratuity, but simple justice and equity to millions who served this country in its hour of need. The duty of Congress in the matter is plain.

Americanism Versus Communism

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. HOFFMAN. Mr. Speaker, pursuant to the granting of my unanimous request, I am inserting an article entitled

"Americanism Versus Communism" by former Representative Hamilton Fish, who probably knows as much or more about Communist activities and propaganda in America than almost any other American.

Mr. Fish has, for 15 years, fearlessly and ably denounced and exposed Communist tactics and objectives. For a while, he was a lone voice crying in the wilderness. Today, he should be acclaimed as a prophet who warned of the onward march of world communism and of its menace to democracy, freedom, and religion throughout the world, including America.

Mr. Fish's article is as follows:

AMERICANISM VERSUS COMMUNISM

(By Hamilton Fish, Member of Congress, 1920–44)

The ignorance of the American people regarding communism is appalling and frightening. Americans are confused between the bravery of the Russian soldiers in the war and the idealogy of the Soviet Government.

All Americans give unstinted praise to the Russian war efforts, but that does not mean that we should approve or accept any form of communism or totalitarianism in America. It is none of our business what form of government exists in Soviet Russia. But it is very much our business to preserve democracy and freedom in the United States and as far as we are able to permit the people in the liberated nations to establish governments of their own choice. The ideals of the Atlantic Charter and the "four freedoms" for which we fought are gradually being whittled away through appeasement toward aggressive Communist strategy. Our lolipop appeasement and recognition policies have succeeded in strengthening and extending communism in Poland, Bulgaria, Yugoslavia, and throughout Europe. The surrender of Secretary of State Byrnes at Moscow to the demands for Soviet control over General MacArthur opens the road for communism in Japan. Step by step, and in conference after conference, America, the greatest exponent of democracy in the world, has been out-maneuvered and forced into humiliating concessions to Soviet Russia and the recognition of governments in Communist dominated nations.

The Red hordes of communism, aided and abetted by American appeasement, are on the march in Europe and Asia. We have helped to create a Red totalitarian Frankenstein in the place of nazism which is far more dangerous to democracy and world freedom. The marriage of convenience between the British Empire and world communism has run its course. The British Empire is shaking in its boots and like a weather vain twists and turns at every breath out of Moscow.

In the recent past when you spoke of the dangers of communism, the American people were either bored or indifferent. Now, that it is engulfing Europe and reaching its tentacles out into Japan the people are waking up to the Red menace.

It is slowly dawning on the American people that the onward march of communism in Europe and Asia is affecting the liberties and destiny of America and the world.

They are no longer indifferent to the plight of so-called liberated European nations which are falling like ripe plums into Communist hands. The tragic fact is that millions of democratic and Christian people in Europe are becoming the serfs and slaves to a totalitarian Communist state. The flame of liberty is burning low in Europe. Freedom and Christianity will be unable for long to withstand the ruthless Communist aggressions backed by the Red secret police.

Once Europe is communized as a result of World War II, waged for democracy, it will be a devastating blow to private enterprise, free institutions, and constitutional government in America. Those now on strike are mostly loyal Americans but already subversive and Red leadership is showing its power in the expanding strike situation which Mr. Foster, head of the Communist Party in America, acclaims the Communists are using every effort to develop bitter class hatred and a revolutionary spirit among the strikers. For the Communists the existing strikes, some engineered and controlled by Reds, are merely dress rehearsals for a future C-day.

There can be no compromise between democracy and freedom on one side and communism and totalitarianism on the other.

World communism will put Europe back hundreds of years, liquidate the upper and middle classes, and destroy indiviual liberty for which we were told the war was fought.

Anyone who refuses to face the realities and menace of world communism is merely playing into the hands of the Communists and assuring the awful day of reckoning for civilization, Christianity, freedom, and democracy.

We have far too many defeatists among our social and wealthy classes who shrug their shoulders and are blind to the dangers of communism at home and abroad. The continuation of our State Department policy of appeasement toward the Red-front forces in Europe can only mean communism, bankruptcy, and slavery there. There can be no compromise between Americanism and communism. We do not propose to let the Communists, or Sidney Hillman's PAC, sovietize us. Let us rise above party affiliations and unite in saving America from its enemies without and from within. Above all, let us not be afraid of exposing communism and its evil purposes and defending democracy and Christianity for fear of being smeared by Communists and their fellow travelers.

Appeasement, which our international press has denounced these many years, is still appeasement even if it is demanded by the Reds instead of by the Nazis. What will we have accomplished by our tremendous sacrifices in blood and treasure if after having destroyed one form of totalitarianism we help to set up an even more dangerous one to the peace of the world and to free institutions?

What profit it a nation if it wins victories over the whole world only to lose its own soul?

I have written a book entitled "The Challenge of World Communism," in order to present the facts to the American people regarding the principles and objectives of the Red dictatorship, the worst type of despotism and tyranny that has existed in the world since the dark ages. This book will be released by the publishers this spring. Proceeds from my share of the sale of the book will go into a nonpartisan and nonprofit fund to combat the spread of communism on the American Continent and to establish a Nation-wide American anticommunism organization.

The OPA Manipulated the Citrus Fruit Situation

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1946

Mr. JENKINS. Mr. Speaker, on December 19, 1945, in a statement which may be found in the CONGRESSIONAL RECORD for that date, I charged in effect, that the Office of Price Administration had deliberately manipulated the ceiling price controls of citrus fruits in order to provide OPA with a publicity theme for one of the greatest propaganda campaigns of all time—the campaign to perpetuate price controls in the United States.

On January 5 Mr. Bowles issued a reply in which he did not attempt to deny the charges of propaganda but gave only a garbled and misleading account of the citrus fruit price situation and admitted the primary thesis of my charge—that OPA knew when it removed ceiling prices on November 19 that the price of better-grade citrus fruits would immediately go up.

Since then, OPA has completed its maneuver by reimposing ceiling prices as soon as the holiday demand was over so that it could claim credit for the low prices which naturally occur at this season of the year.

Under leave to extend my remarks in the RECORD, I include an editorial printed on January 16 by the Redlands Daily Facts, of Redlands, Calif., a newspaper published in the very heart of one of the greatest citrus growing areas in the United States:

CITRUS, THE HORRIBLE EXAMPLE

J. A. Steward, manager of MOD, documents the congressionally voiced opinion that OPA manipulated citrus price controls to provide a shining example of the horrors of removing price controls in a statement published in the Facts today.

That price controls were not suspended to help the industry market the 1945 crop of small fruit valencias is a matter of record. That the ceilings were removed when the supply of fruit was minimum and the demand maximum is also a matter of fact. Only the most naive could believe that OPA's motives were honest and open.

Having chosen the optimum moment to make a scapegoat out of citrus, OPA was ready for the next move, a Nation-wide propaganda barrage. The firing was done by OPA district directors from New York to San Francisco. In unison they cried about the price of large-size oranges, a small percentage of the offerings. They were silent about average prices and about the continued low price level on small fruit.

By mid-December the propaganda barrage achieved its purpose. OPA gained support from those who swallowed its hokum in the form of letters, telegrams, editorials, and public statements. That support put OPA in a position to petition for reinsatement of price ceilings before the natural price decline would develop in January, as it almost invariably does.

Theoretically the case was taken before a wise and impartial umpire, Judge Collett, the Director of Economic Stabilization. Actually, he was incompetent to do anything more than conduct a judicial hearing. He did not know the A B C's of citrus price ceilings, being ignorant of the fact that controls had existed at three levels—shipper, wholesaler, and retailer.

At the request of the Secretary of Agriculture, he refrained from revoking the suspension order. To explain his stand he issued an asinine opinion. He said that he would leave it to the industry to voluntarily reduce prices. If the reduction did not come, he would grant OPA's request.

How in the name of common sense did he expect industry to voluntarily reduce prices? Citrus, in common with other businesses in America, is organized on a competitive basis.

Each organization finds its prices regulated by supply and demand. They have no control over each other, and the citrus industry has no czar of its own. At the slightest whiff of collusion the Antitrust Division of the Government gets after the industry, a phenomenon that Judge Collett seems unaware of.

We can only conclude that the findings of the Economic Stabilization Director were written by the OPA propagandists and not by a genuinely judicial officer.

OPA kept up the propaganda, and a short time later was able to get the price controls reinstated. It succeeded just in the nick of time to catch the market before the annual January decline.

That OPA engages in propaganda and deception in the hope of perpetuating itself is lamentable. Until the supply of money and of goods in America approaches equilibrium, some price controls will be required to prevent inflation. The facts are well known and are justification enough for the functions of OPA. By its tactics so clearly shown in the case of citrus the bureau is undermining itself and exposing the country to danger.

Leadership

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1946

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Evening Tribune, Lawrence, Mass., on December 22, 1945:

LEADERSHIP

"To you who answered the call of your country and served in its armed forces to bring about the total defeat of the enemy I extend the heartfelt thanks of a grateful Nation. As one of the Nation's finest, you undertook the most severe task one can be called upon to perform. Because you demonstrated the fortitude, resourcefulness, and calm judgment necessary to carry out that task, we now look to you for leadership and example in further exalting our country in peace.

"HARRY S. TRUMAN.

"THE WHITE HOUSE."

The above is a copy of the testimonial letter signed by President Harry S. Truman which is to be presented to all honorably discharged men and women in the armed services who have served for any period between September 16, 1940, and the date to be established as 6 months after the duration of the present emergency.

In extending the heartfelt thanks of a grateful nation to those who served so nobly in the war just ended he voices what is firmly instilled in the hearts of all true Americans. It is fitting for all to subscribe to that expression of the President and give it practical application in all dealings with veterans of the war. The valiant service of millions of stalwart sons and daughters of this great Republic must never be forgotten. They must be made always to know and in more ways than a mere phrasing of words that their willingness to serve, make great sacrifices, and even die if necessary for their country is truly appreciated by their fellowmen who were not called upon to bear arms.

"We now look to you for leadership and example in further exalting our country in peace," has unusual significance and strikes a keynote of the utmost importance in relation to the future prosperity and happiness of this great Nation. The greatest need of this Nation in the perilous times ahead is that of sound and balanced leadership. The religious, governmental, and economic future will be no better nor worse than the standard of leadership exercised by free men and women. It is highly essential that this Nation encourage in every way possible the development of leaders in all walks of life. The challenge to the veterans of the late war can best be answered if such encouragement, support, and opportunity are afforded them. The whole system of government and economics becomes unbalanced under weak or biased leadership. Individualism among leaders must give way to a broad program that best serves all. American democracy has been put to the greatest test and has survived. Leadership must preserve the great gains that have been made, but it must be good and balanced leadership.

The men and women to whom the President directs his gratitude and his challenge have a great responsibility in this time of peace that has followed the war. They will play a great and important part in shaping the destinies of this Nation for which they fought. They will accept the responsibilities of peace with the same courageous patriotism as they did the responsibilities of war. And America will be greater because of their service in both peace and war.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1946

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include resolutions unanimously adopted by the National Grange in support of the St. Lawrence seaway and power project:

ST. LAWRENCE SEAWAY AND POWER PROJECT

RESOLUTIONS ADOPTED BY THE NATIONAL GRANGE AT ITS SEVENTY-NINTH ANNUAL SESSION AT KANSAS CITY, MO., NOVEMBER 23, 1945

Whereas the National Grange has for many years gone on record as favoring the development of the St. Lawrence River for navigation and power: Therefore be it

Resolved, That the National Grange reaffirms its support of the St. Lawrence waterway and power project and urges that Congress appropriate funds to complete this project at the earliest possible date.

ACTION TAKEN AT SEVENTY-SEVENTH AND SEVENTY-EIGHTH ANNUAL SESSIONS OF THE NATIONAL GRANGE

At its seventy-eighth annual session, at Winston-Salem, N. C., November 23, 1944, the National Grange reaffirmed resolutions adopted at its seventy-seventh annual session at Grand Rapids, Mich., November 18, 1943, as follows:

"Whereas the National Grange has for years advocated the completion of the St. Lawrence seaway, nearly 90 percent of which is already completed, and opening this wonderful artery of commerce to carry the products of the interior of our country to the markets of the world at reduced costs; and

"Whereas the completion of this project would permit the development of vast electrical energy, now going to waste in the onrushing waters of this mighty river, resulting in cheaper electric power to all our people; and

"Whereas there is legislation now pending in Congress to bring this project to completion as soon as material and labor are available: Therefore be it

"*Resolved*, That the National Grange reaffirms its position favoring completion of this project for navigation and power purposes."

Action taken by the National Grange at its recent seventy-ninth annual session at Kansas City, Mo., November 23, in support of the St. Lawrence seaway and power project, is consistent with the program favored by the Grange over a period of many years.

The Grange supported the St. Lawrence seaway treaty of 1932 and the Federal-State accord of 1933 on the power development submitted to the Committee on Foreign Relations and the Senate, 1932–34. When the United States and Canada signed the pending agreement of March 19, 1941 to complete the development, the Grange recommended legislation to authorize the project (H. R. 4927, 77th Cong.) at public hearings before the Committee on Rivers and Harbors in 1941. Legislation to implement the 1941 agreement and the 1933 accord was reintroduced in the Seventy-eighth Congress (H. R. 2280—S. 1385) and in the Seventy-ninth Congress (H. R. 671—S. J. Res. 104 and companion bills).

Mr. Albert S. Goss, master of the National Grange, has been an outstanding supporter of the development of water resources throughout the Nation for navigation, power, and other beneficial public purposes. On many occasions Mr. Goss has advocated the St. Lawrence project and on November 29, 1944 declared that "had it been developed prior to the present war, its value to the Nation would have paid the total cost several times over."

At the last congressional hearings on the St. Lawrence project, Mr. Louis J. Taber, master of the National Grange, 1923–41, testified before the Committee on Rivers and Harbors, July 17, 1941:

"The pending bill authorizes the modernization of an existing waterway, not the undertaking of an entirely new development. * * * By spending less than $200,000,000 in Federal funds, we shall thus greatly enhance the value of the investments already made by the United States and Canada on the upper lake channels, the Welland Canal, and the other great improvements now in use. In addition, we shall make available 2,200,000 horsepower of the cheapest hydroelectricity in the world, to be divided equally and distributed by public agencies of the State of New York and the Province of Ontario. * * * The use of all of our transportation facilities, including the St. Lawrence, to reduce the cost of shipping our products to market, will obviously help our entire country, not hinder it, in meeting competition in the post-war period."

In a statement presented at the congressional hearings, August 6, 1941, Mr. Fred J. Freestone, master of the New York State Grange, 1928–36, and chairman of the Executive Committee of the National Grange, 1933–41, said:

"The St. Lawrence development authorized by the pending bill will be of advantage to producers and consumers in every section of our country. Any project that helps to create low-cost transportation and low-cost power will bring benefits that are general in character and not confined to any one section."

An American Plea For the Philippines

EXTENSION OF REMARKS
OF
HON. CARLOS P. ROMULO
RESIDENT COMMISSIONER OF THE PHILIPPINES TO THE UNITED STATES
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. ROMULO. Mr. Speaker, under leave to extend my remarks, I take pleasure in inserting in the RECORD, a coast-to-coast broadcast made by Frazier Hunt over Station WOR, New York, Tuesday, January 15, and a radio interview that he had on January 18 with F. Theo Rogers, one of the best-liked Americans in the Philippines, who was tortured by the Japanese in Fort Santiago during the hateful enemy occupation of the Philippines.

I am proud to call the attention of this distinguished body to the statements made by these two Americans. They stand as a beacon light to guide us in these days when this Congress is confronted with so many difficult problems that must be solved.

Frazier Hunt is a noted American author whose writings have won for him the admiration of the American reading public. F. Theo Rogers is a fearless newspaperman who has made a name for himself in the Far East for his integrity and uncompromising advocacy of American ideals of freedom and democracy.

Frazier Hunt's broadcast and his interview with F. Theo Rogers follow:

BROADCAST BY FRAZIER HUNT

I'd like to talk a little while, right now, about the Philippine Islands—and how important they are to us, and to all the billion, seething, dreaming, awakening people of the great East.

I want to warn you at the start, that I've got a very soft spot in my heart for these lovely islands, and for the 18,000,000 gentle, sweet, and kindly people who live there. I first went to the islands in the summer of 1920. Freedom and independence was in the air. Two men, Manuel Quezon and Sergio Osmeña, were the leaders of this dream of Philippine Independence—and they were to become my close friends. They were both fairly young men then; and they poured out without stint their energies, their great talents and their determination for the ultimate winning of this goal of liberty.

It had come to them with their mother's milk; it has been nurtured and refreshened by a number of truly great Americans—soldiers and civilians alike—who gave of their own years and knowledge to make good the American pledge, that full independence would be given the islanders as soon as they were sufficiently trained to carry on their government and guarantee its safety. That handfull of men were wonderful Americans, true believers in democracy—and in the sanctity of the pledged word. Gen. Arthur MacArthur was one of them; the then Secretary of War, William Howard Taft, was another; Theodore Roosevelt was a third. They were all men of their word; and the Filipino leaders, and the plain people, as well, believed them.

And so together they started down the long trail toward the golden goal of independence. It was not a popular move in the eyes of the great European empires. It was dangerous and improper, they said, to upset the balance of their far eastern colonies. It was unfair, they claimed, for America to build here in the Philippines the idea that these native peoples would someday be free and truly independent—with their own flag and government.

Nine and a half years ago the Congress of the United States formally set up the Philippine Commonwealth, and pledged complete independence on July 4, 1946. Four years and some 5 or 6 weeks ago, the Philippines were suddenly and viciously attacked by the Japs—at dawn on the day Pearl Harbor was assaulted. Under the leadership of Douglas MacArthur, son of one of the very first and truest friends of the Filipinos, native sons proudly gave their lives, alongside tall lads from eight, ten thousand miles away. And when the President of the United States ordered General MacArthur to repair to Australia and there command an army of eventual liberation, MacArthur made his immortal pledge, "I shall return."

Once again an American kept his word—and the islands were once again free. Tens of thousands of brave Filipinos helped immeasurably in their guerrilla fighting. It took 3½ years to do the job—but it was nobly done. In the doing, Manila and all the lovely cities were destroyed. Much of it was done, through necessity, by American liberating guns and bombers. The richest parts of the islands, the fairest cities, were laid in ruins. They must be rebuilt—and America must help. Today the islands are helpless—powerless to get the machines of their life rolling again. We must vote them money—give them money—the same as we will soon be giving billions to Europe.

And we must guarantee the islands free trade with America for the next 20 years. It will take that long for the islands to find their feet, to regain their lost strength, to stand alone and walk alone. We have only to ask what our Army and Navy and Air wants in the islands—and it shall be given.

The key to the solution of the billion broken, dreaming, struggling, awakening peoples of Greater Asia and the neighboring islands lies in our cooperation, our mutual understanding, our fairness to the Filipinos. It is the pattern for empires to follow in dealing with their restless colonials. It is one of the most treasured possessions America has—the love of these 17,000,000 loyal, gentle people. We must never mar it—we must never cheapen it.

THEO ROGERS INTERVIEW ON FRAZIER HUNT PROGRAM

Mr. HUNT. I am very proud to get into this part of my program. With me, in the studio here in New York, is a very old and a very dear friend of mine. I might add, also, that he is a very wise friend—and a very brave friend, as well—a man of great inner courage and that valor of spirit, that only a few men are blessed with.

Theo Rogers landed in Manila off a transport in the late summer of 1898. He was a 16-year-old boy soldier from Boston, the youngest private in the grand old Twelfth Regulars. Save for trips home, and around the world, he has been in the islands ever since—47 years, to be exact. He is truly an old Philippine hand.

And he is much more than that; during all these years, he has served his country as loyally and courageously as he served it as a boy soldier. And the great weekly paper, the Philippine Free Press, which he and McCulloch Dick published, has for almost four decades stood on the side of decency and advancement of American-Filipino friendship and cooperation.

When the Jap hordes swept down on the islands, and entered the open city of Manila, on January 1, 1942, Theo Rogers was one of the first Americans scooped up—and the first American to be sent to the infamous dungeons of Fort Santiago Prison, in the old walled city.

He was kept there 3 months, then when the Japs found they could neither bribe him, nor break his spirit, he was sent to the Santo Tomas interment camp; finally, with health gone, but with his brave heart still beating, he was transferred to the Philippine General Hospital, where in the midst of the furious battle, he was rescued by his old friend, Maj. Don M. Higbee, of General MacArtur's staff. At that moment of rescue, and in the face of death, 8,000 Filipino men and women prisoners, sang "God Bless America."

And now this fine and brave American patriot, is here with me. Theo, I'm proud to have you on this program.

THEO ROGERS. For nearly half a century—a long time—Fate, or Destiny, cast my lot with a people whom I have learned to admire, respect, and love. The Filipino people are the most progressive and advanced people of the entire Orient, in which area more than one-half of the human race live and toil. They are the only beacon light of Christianity and Occidental culture in that vast area. (Their country is made up of a group of the most fertile, rich, and beautiful island gems of all the world.)

Their women have been hailed repeatedly as among the sweetest and most charming of the feminine world. Their men have proven their worth in all fields of endeavor.

No wonder that I should want to plead for them to our great and generous American people. During the past 4 years of agony, suffering and horror, it was my painful, and shameful, fate to be an eyewitness of what our neglect in not providing the greatest soldier of all time, Douglas MacArthur, adequate supplies, weapons, and means, to defend these wards of ours in the first great battle against our country. Today, these beautiful islands, that we were in honor bound to defend—and whom we promised to defend—now lie in utter ruins. And what are we going to do about it? We are about to give—and I repeat give—billions of dollars to other people around the world—and yet we have made no provision to help our Filipino people. We should vote at once a sum of not less than $500,000,000 for the rehabilitation of these, our most loyal comrades and allies. More than a million Filipinos were killed, or died as a result of this war—out of a population of 16,000,000. We owe them something, too. And how little $500,000,000 would be toward our obligations to them.

Douglas MacArthur pledged "I shall return." And he did return. The United States has officially pledged to stand by and rehabilitate the islands, and its people. We must do that now, immediately, or stand convicted in the eyes of the entire world, and for all future time, as deserters to our duty, and a Nation without honor. This is my plea fellow Americans, I know you will respond.

Mr. HUNT. That is very beautiful and deeply sincere, Theo Rogers. And something worth thinking about.

State Legislature of California Asks Federal Government to Declare Surplus Building Materials, etc.

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 23, 1946

Mr. DOYLE. Mr. Speaker, indicative of the tragic need of immediate release of the stresses and strain upon folks in

my native State of California, resulting from no housing is the following resolution by the Assembly of the State of California:

I agree with the objective of the resolution and ask support of the Members of this House to the same effect, primarily because it specifies there shall be given preference for veterans in the purchase thereof.

Let us put some teeth into the mouth of the surplus property pit and immediately get into the hands of these veterans these necessities of life, to which they are entitled, a preferential chance to acquire. They fought with guns for us. Now let us work in utmost good faith and with utmost diligence for them and their dependents. Nothing less is decent.

CALIFORNIA LEGISLATURE,
FIFTY-SIXTH SESSION,
Sacramento, Calif., January 18, 1946.

Hon. CLYDE G. DOYLE.
House of Representatives,
Washington, D. C.

DEAR MR. DOYLE: May I invite your attention to the enclosed copy of Assembly Joint Resolution 2, which was adopted by the California Legislature on January 17, 1946.

An acknowledgment of the receipt of this resolution would be appreciated.

Sincerely yours,
ARTHUR A. OHNIMUS.

Assembly Joint Resolution 2

Joint resolution relative to requesting the Federal Government to declare as surplus property all building materials held but not needed by the armed forces in California, and to effect the immediate release of such materials for housing construction, providing for preference to veterans in the purchase thereof

Whereas the critical housing shortage in California is a matter of grave concern to the people thereof; and

Whereas construction work has been greatly impeded by the nonavailability of essential building materials; and

Whereas large stocks of needed supplies are now lying idle in Army and Navy ordnance depots throughout California, the release of which would facilitate housing construction; and

Whereas the present procedure for declaring such materials to be surplus property is extremely slow and cumbersome, ultimate acquisition being subject to considerable and needless delay: Now, therefore, be it

Resolved by the Assembly and Senate of the State of California (jointly), That Congress and the Federal agencies charged with the disposal of surplus property are respectfully requested to declare as surplus property all building materials held but not needed by the armed forces in California, and to take such steps as may be necessary to effect the immediate release of such materials for housing construction, providing preference to veterans in the purchase thereof; and be it further

Resolved, That the chief clerk of the assembly is directed to transmit copies of this resolution to the President of the United States, the President pro tempore of the Senate of the United States, the Speaker of the House of Representatives, to each Senator and Representative from California in the Congress of the United States, to the Secretary of War, the Secretary of the Navy, and the Surplus Property Board.

Philippine Independence and Rehabilitation

EXTENSION OF REMARKS
OF

HON. CARLOS P. ROMULO

RESIDENT COMMISSIONER OF THE PHILIPPINES TO THE UNITED STATES

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1946

Mr. ROMULO. Mr. Speaker, with the unanimous consent of the House, I am inserting in the RECORD several articles that have recently appeared in the New York Times and the Washington Post. They deal with Philippine independence and Philippine rehabilitation.

Philippine independence is a settled question insofar as this Congress is concerned. The law provides that independence comes on July 4, 1946. However, the question of Philippine rehabilitation is still pending congressional action. May I commend these articles to the attention of the House, as I believe they represent American public opinion on an issue that affects the future of 18,000,000 Filipinos.

The first is an editorial appearing in the New York Times of December 29, 1945, which reads in part as follows:

Nine months after Manila was freed and 4 months after the war with Japan was ended, canceling the necessity to concentrate our energies on invasion of Japan instead of reconstruction and rehabilitation of the Philippines, little actually has been done to restore the economy of the Philippines or to give the Filipinos any real hope for the future. Congress has given little indication of any interest in revising the Philippines Independence Act of 1934 to provide for a more equitable trade relationship than is provided for in that act after establishment of independence next July 4. Several million dollars has been provided for immediate loans against future war reparations. But it is not money the Filipinos need—they have millions of Japanese pesos. It is reconstruction of their flattened sugar mills and other buildings that is vital now, a resumption of shipping and internal communications, definite assurance through legislative action that they will not be faced with a tariff wall between them and United States markets when they gain their full independence next July.

The haste of United States demobilization, brought about by public and congressional pressure, undoubtedly is partly responsible for our failure to do more for the Filipinos. Army newspapers in the Philippines would do a better service in calling attention to the necessity for immediate and extensive aid to the Filipinos than they do in protesting shipping delays in bringing soldiers home. The several hundred soldiers who staged a protest demonstration there the other day would have been doing a far better service for their country and their waiting families if they had been working to help the Filipinos rebuild their shattered homes and buildings.

The Philippines are our peculiar responsibility in the Pacific. It was United States bombs and shells that did most of the damage there. True, the damage was done in liberating the Filipinos from the Japanese, but that realization will not rebuild a shattered mill or warehouse. It must be incomprehensible to the hungry and war-shocked Filipinos that the country that could muster in their backyard such a great military force cannot move more rapidly now to rebuild the world they lost in making cause with us against a common enemy. Quick and complete action by Congress to redress this growing wrong should be among the top items on the calendar on Capitol Hill when the holiday recess is over.

The second is an article by Mr. Louis H. Pink, formerly superintendent of insurance of the State of New York, published in the New York Times on January 3, 1946:

The report from Manila by Robert Trumbull in the Times of December 30 is a fair-minded and intelligent account of conditions in the Philippines. Unfortunately it may be regarded as additional ammunition by those who seek to force the Filipinos to ask for the postponement of independence because the guerrillas have not been disarmed, the agrarian problem solved, collaborationists punished, or what not. There is always the threat that if the Filipinos do not do as each writer or public official thinks they should, financial aid may be reduced, or independence delayed.

Undoubtedly there are many disturbing conditions in the Philippines. But where are there not? There is more hope for social and economic progress and reconstruction in the Philippines than in most other war-torn areas. Progress in reconstruction, admittedly slower than it should be, is not being held back by the Army, as has been unjustly charged. The Army has done a great deal to alleviate distress and physically recreate the Philippines. No doubt it could have done even more. But the delay in adopting a policy and in providing funds lies squarely in Washington.

I doubt if Mr. Trumbull is correct in his opinion that "most Filipinos do not want unqualified independence on July 4, 1946." Business interests, whether United States, British, Chinese, or Filipino, do not want unqualified independence on July 4, 1946, or at any other time. It is not generally known in this country that most of the capital is not American or Spanish, as Mr. Trumbull intimates, but Filipino.

GOOD FAITH EXPECTED

Mr. Trumbull is undoubtedly correct in stating that all politicians think they have to be for unqualified independence in order to be elected, no matter what their own opinion may be. There is no way of knowing how the people as a whole feel. Many are poor and have little voice, but they undoubtedly expect that what they have been promised so often and so long, both by the United States and their own leaders, will be carried out in good faith. They have the same desire to decide their own destiny that prevails, with less preparation, in Korea, Java, Thailand, Indochina, and India.

The Filipinos have been preparing for independence not for 10 years, with the three war years out, but for almost half a century. While the self-governing Commonwealth began to function in 1935, we promised eventual independence when we first took over the islands and have been preparing them for self-government ever since.

OUR HELP NEEDED

There is no sound reason for delay if we carry out our promise to aid materially in the reconstruction and rebuilding of the Philippines. We can give the same financial, trade, and managerial aid to the republic as to a continuing Commonwealth. No one can deny that, while potentially rich, the islands will need our help for many years to come. It will require at least 10 years to repair the physical destruction and build a sound financial economy. We have a moral as well as a pledged obligation to supply this aid. It will always be possibe to find some

good reason why independence should be delayed, now, in 3 years, or in 10.

The Philippines might be just as well off with a Commonwealth. But the United States would not. Our prestige in the Orient and all over the world would suffer. The granting of independence, as promised, will be one of the finest things in our history.

The election of a President and Congress in the Philippines should not be delayed. There is no danger of revolt and possibility of any serious disorder is greatly magnified.

The good intentions of the United States in world affairs is sufficiently misunderstood. We cannot afford to let anything stand in the way of independence for the Philippines on July 4, 1946.

The third is an editorial published in the New York Times January 11, 1946, entitled "Philippines Problem":

July 4, 1946, will be a sad day of remembrance for the Filipinos instead of the joyous day of independence that it might have been unless Congress takes action soon to revise the Tydings-McDuffie Act of 1934. Under that act—which Congress considered equitable enough when it was passed 11 years ago and revised 4 years later—on the swiftly approaching day that the Philippine Commonwealth becomes a free and sovereign state it loses most of its preferential trade position with respect to the United States, its best customer. That is the prospect that now faces a country which was more ravaged by war than any other in the Far East and whose citizens fought more loyally and effectively on our side. We promised them much during the war. So far we have done little.

With the date for independence less than 6 months away, it is high time Congress got down to work on this problem and brought forth a reasonable solution. We owe a great deal to the Filipinos. No one can accurately assay how many American lives were saved by the intelligence of enemy dispositions sent out by the guerrillas and their operations behind the Japanese lines during the battles for Leyte, Luzon, and Mindanao. We believe the American people want Congress to be generous in its approach. It is hardly understandable why a comprehensive revision of the Tydings-McDuffie Act has not already been made. Further delay only aggravates the fears of the Filipinos and delays by that much the rebirth of hope that is as necessary in those islands as the reconstruction of their homes and economy.

The fourth is an editorial appearing in the Washington Post on January 11, 1946:

PHILIPPINE INDEPENDENCE

A recent dispatch predicts that Philippine independence which will become effective on July 4, will be followed by disorders, if not revolution. Former guerrillas are still in possession of their arms, and the proclamations of President Osmeña and of the provincial governors asking surrender of these arms have been ignored. In some sections of the islands armed bands are said to be terrorizing the peaceful inhabitants.

Reconstruction problems are also acute, being aggravated of course, by the delay of Congress in passing the bill for settlement of war-damage claims and in outlining a new trade policy between the islands and the United States. Inflation is giving officials grave concern. War has left the islands such a heritage of trouble that many Filipinos are said to be skeptical and regretful over the forthcoming dawn of independence. Some writers from Manila go so far as to say that a majority of the Filipino people no longer want unqualified independence.

We do not believe, however, that the situation justifies the suggestions repeatedly made in some quarters that the date of Philippine independence be postponed or that some other status for the islands be agreed upon. The prediction of disaster in the war-ravaged islands after July 4 seems to be predicated on the assumption that the United States-Philippine partnership will come to an abrupt end. That, of course, is an illusion. The nature of that partnership will change, but the partnership itself must continue in effect for the protection of the Philippines and for the greater security of the United States against external aggression. As we have previously pointed out, the American naval and air bases to be established in the islands will necessarily link the defense systems of two countries inextricably together.

To this extent Philippine independence will be limited. We feel that the Filipino people understand this joint-defense arrangement and overwhelmingly approve of it. Consequently, it will be only reasonable for them to ask and expect continued aid from the United States in reconstructing and stabilizing their country until the new governmental system is operating smoothly. And of course the United States could not decline such requests without undercutting the pledge that it has given to the Filipino people in addition to our own security in the Far East. The basic fact to remember is that independence for the Philippines will not take them out of the orbit of our close and immediate interests any more than the independence of Cuba broke the intimate ties between that country and our own. We think that any satisfactory approach to the islands' formidable economic and governmental problems must be made from this point of view.

Address by Hon. Robert M. La Follette, Jr., at Testimonial Dinner to Hon. Leo T. Crowley

---

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 24 (legislative day of Friday, January 18), 1946

Mr. MEAD. Mr. President, on behalf of my colleague [Mr. WAGNER] I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Wisconsin [Mr. LA FOLLETTE] at a testimonial dinner for Hon. Leo T. Crowley, at Madison, Wis., on January 10, 1946.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am honored to have a part on this occasion when the services of Leo Crowley to his country, his church, and to humanity are so fittingly recognized.

It has been my privilege to know him for many years. Since he came to Washington I have observed his work in many and varied fields of public service. It is truly remarkable when one considers the broad range of important administrative assignments which Mr. Crowley has carried during his years in Washington. These are the best evidence of his great energy, fine administrative ability, and his genius for working with people of divergent points of view and from every walk of life.

Leo Crowley was one of President Roosevelt's advisers. He was present at the inauguration in 1933 and participated with others in discussing with the President the contemplated banking holiday closing all of the banks in this country. From that time until the President's untimely death he was intimately associated with the President, advising him on political matters, on matters of domestic concern, on governmental problems, and on international relationships.

Mr. Crowley became Chairman of the Federal Deposit Insurance Corporation at the beginning of 1934. At that time deposit insurance was regarded by many as a temporary expedient to give the public a sense of financial security. The large banks of the country were passive in their attitude toward deposit insurance, feeling then that it would be of short duration, and arguing that it could not possibly become permanent since it would place a premium on unsound banking.

Many State bank supervisors were more active in their opposition, since they felt that if deposit insurance were to become permanent it would jeopardize their jurisdiction. Other Federal agencies were curiously waiting to see how the experiment worked, not wanting to be charged with its failure, but ready to move in and attempt to take it over if it succeeded.

HELPED SAVE BANKS—FDIC ONE OF MOST EFFICIENTLY OPERATED ORGANIZATIONS

As you well know, Mr. Crowley quickly developed the Federal Deposit Insurance Corporation into one of the most efficiently operated organizations in the Government. Likewise, he made it one of the most popular governmental organizations in the country. He gained the full support and backing of the State bank supervisors. He assured the banks, the public, and the Congress that deposit insurance, in place of putting a premium on unsound banking, would insist on the maintenance of sound banking practices.

He proceeded to eliminate dangerous weaknesses in the banking system that in many cases had been hanging over it since the First World War. The result is that today we have the strongest banking system we have ever had, with insistence on the highest standards of banking practices, with a greater degree of uniformity in bank supervisory practices than we have ever had, and with complete confidence in the strength and integrity of our banking system.

A recent remark of the president of a very large bank clearly indicates just how much progress has been made. This banker, on being asked by an official of a large business with many branches having large deposits in many banks about the safety of one of the banks with which he was doing business, told the official that although he, the bank president, did not know personally about this particular bank, since the bank was insured and the Federal Deposit Insurance Corporation was not raising any question about its condition, no concern need be felt.

A quotation from Mr. Crowley's letter of resignation to the President on September 29, 1945, indicates vividly the success of the Corporation. Mr. Crowley said:

"Today there are 60,000,000 insured accounts and as of June 30, 1946, the Corporation will have built up capital and surplus amounting to about $1,000,000,000. We are proud of this record; particularly of the fact that after 11½ years of deposit insurance protection the Federal Deposit Insurance Corporation could liquidate today, reimburse the Government the money it invested plus a dividend of 2 percent, and return every penny of the assessments the banks paid to the Corporation."

There is no doubt that deposit insurance will continue as a permanent part of the financial structure of this country and will at all times, regardless of what general economic conditions may be, serve as a bulwark maintaining a basic public confidence so essential to financial stability. It will not be forgotten that Federal deposit insurance

stands as a monument to the man who made it such an outstanding success.

ALIEN PROPERTY—"TRACKED DOWN" ENEMY GOODS, SUPERVISED CUSTODY

Soon after the war started in 1941 the President was faced with making provision for taking over and controlling the property located in this country and owned or controlled by enemy aliens. The experience in dealing with enemy owned property in World War I resulted in many scandals involving extensive lawsuits in the years following the war. The President was determined to guard against the possibility of even a breath of scandal in the handling of alien property during this war.

Since there was then an estimated $7,000,000,000 involved, he had at the same time to be certain that he was selecting a man competent to deal with a most difficult administrative situation. The President immediately selected Leo Crowley as a man who met all of the exacting requirements for this particular job and was finally able to persuade him to accept the appointment.

Early in 1942 the Office of Alien Property Custodian was established and there then began a quiet tracking down of all of the enemy-owned property located in this country. During the next 2 years most of this property was vested and placed under the control or supervision of the Custodian. After the completion of a substantial part of the job of vesting and establishing the policies of the Office, Mr. Crowley persuaded the President to accept his resignation as Custodian since his additional duties as Administrator of the Foreign Economic Administration were so burdensome and time consuming.

In the summer of 1943 when the entire energy and resources of the country were being concentrated on the war effort we appeared to face a complete break-down of the foreign procurement of strategic materials not available in this country and urgently needed for the war effort.

To guard against an impending disaster the President on July 15, 1943, issued an Executive order creating the Office of Economic Warfare and designating Mr. Crowley as Director.

In this Office were included the functions of procuring strategic materials from abroad; licensing exports from this country in order to conserve our resources for the war effort and keep supplies out of the hands of the enemy; Economic Warfare, which was concerned with determining enemy centers of production as objectives for strategic bombing, and calculating the enemy's productive capacity; and preclusive buying from neutrals in order to keep strategic materials out of the hands of the enemy.

Soon afterward, on September 25, the President issued another Executive order creating the Foreign Economics Administration and designating Mr. Crowley as Administrator. The activities previously transferred to the Office of Economic Warfare were transferred to this Administration, and in addition there were included the functions of the Lend-Lease Administration, and those of the Office of Foreign Economic Coordination in the State Department, together with the foreign agricultural production and procurement activities of the Department of Agriculture. There were then consolidated in a single agency activities from 14 different agencies, which resulted in centralizing in this single agency all foreign economic operations of this Government.
